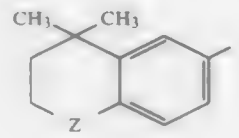
when Y represents CH, X represents a vinylene radical, an oxygen atom, a sulfur atom or NR_1 wherein R_1 is hydrogen or methyl,

when Y represents a nitrogen atom, X represents a sulfur atom, an oxygen atom or NH,

Ar represents an aromatic radical having one of the following formulas:



(a)

(b)

and

(c)

wherein

n is 0 or 1,

R_2 and R_3 represent hydrogen, linear or branched alkyl having 1–15 carbon atoms or cycloalkyl having 5–10 carbon atoms, and

Z is an oxygen atom or a sulfur atom,

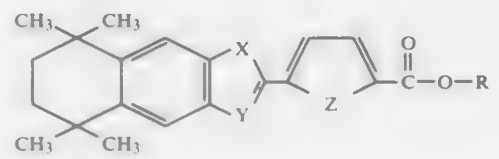
and mixtures and salts of said esters.

3. A pharmaceutical or cosmetic composition for the treatment of dermatoses comprising in an anhydrous vehicle, as the active component, a pharmaceutically or cosmetically effective amount of at least one ester of claim 1.

5,004,730

POLYCYCLIC AROMATIC ESTERS OF MACROLIDIC AND LINCOSAMIDIC ANTIBIOTICS AND PHARMACEUTICAL AND COSMETIC COMPOSITIONS CONTAINING THEM

Michel Philippe, Antony, and Henri Sebag, Paris, both of France, assignors to L'Oreal, Paris, France



Filed Nov. 3, 1988, Ser. No. 266,599

Claims priority, application Luxembourg, Nov. 4, 1987, 87040

Int. Cl.[5] **A61K** *31/70;* **C07H** *15/16, 17/08*

U.S. Cl. 514—029 **9 Claims**

1. An polycyclic aromatic ester of a macrolide or lincosamide having the formula

(I)

wherein

R represents a macrolide selected from the group consisting of:

erythromycin A substituted in the 2′ position,

roxithromycin substituted in the 2′ position,

oleandomycin substituted in the 2′ position,

oleandomycin substituted in the 4″ position,

oleandomycin substituted in the 2′ and 4″ positions,

josamycin substituted in the 9 position,

josamycin substituted in the 2′ position,

josamycin substituted in the 9 and 2′ positions,

spiramycin (I) substituted in the 2′ position,

spiramycin (I) substituted in the 4″ position,

spiramycin (I) substituted in the 2′ and 4″ positions,

spiramycin (II) substituted in the 2′ position,

spiramycin (II) substituted in the 4″ position,

spiramycin (II) substituted in the 2′ and 4″ positions,

spiramycin (III) substituted in the 2′ position,

spiramycin (III) substituted in the 4″ position,

spiramycin (III) substituted in the 2′ and 4″ positions,

or R represents a lincosamide selected from the group consisting of:

lincomycin substituted in the 3 position,

clindamycin substituted in the 3 position,

lincomycin substituted in the 2, 4 and 7 positions and

clindamycin substituted in the 2 and 4 positions,

Y represents CH or a nitrogen atom,

when Y represents CH, X represents vinylene radical, an oxygen atom, a sulfur atom or NR,

when Y represents a nitrogen atom, X represents an oxygen atom, a sulfur atom or NH,

Z represents a vinylene radical, an oxygen atom, a sulfur atom, or NR_2 and

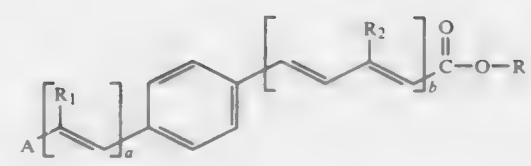
R_1 and R_2 represent hydrogen or methyl and the mixtures and salts of said esters.

3. A pharmaceutical or cosmetic composition for the treatment of dermatoses comprising in an anhydrous vehicle, as the active component, a pharmaceutically or cosmetically effective amount of at least one ester of claim 1.

5,004,731

UNSATURATED CYCLOALIPHATIC ESTERS OF MACROLIDIC AND LINCOSAMIDIC ANTIBIOTICS AND PHARMACEUTICAL AND COSMETIC COMPOSITIONS CONTAINING THEM

Michel Philippe, Antony, and Henri Sebag, Paris, both of France, assignors to Societe Anonyme Dite: L'Oreal, Paris, France



Filed Nov. 3, 1988, Ser. No. 266,598

Claims priority, application Luxembourg, Nov. 4, 1987, 87036

Int. Cl.[5] **A61K** *31/70;* **C07M** *15/16, 17/08*

U.S. Cl. 514—29 **9 Claims**

1. An unsaturated cycloaliphatic ester of a macrolide or lincosamide having the formula

(I)

wherein

R represents a macrolide selected from the group consisting of:

erythromycin A substituted in the 2′ position,

roxithromycin substituted in the 2′ position,

oleandomycin substituted in the 2′ position,

oleandomycin substituted in the 4″ position,

oleandomycin substituted in the 2′ and 4″ positions,

josamycin substituted in the 9 position,

josamycin substituted in the 2′ position,

josamycin substituted in the 9 and 2′ positions,

spiramycin (I) substituted in the 2′ position,

spiramycin (I) substituted in the 4″ position,

spiramycin (I) substituted in the 2′ and 4″ positions,

spiramycin (II) substituted in the 2′ position,

spiramycin (II) substituted in the 4″ position,

spiramycin (II) substituted in the 2′ and 4″ positions,

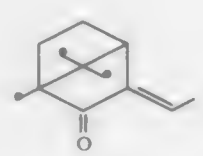
spiramycin (III) substituted in the 2′ position,

spiramycin (III) substituted in the 4″ position,

spiramycin (III) substituted in the 2′ and 4″ positions,

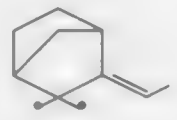
or R represents a lincosamide selected from the group consisting of:

lincomycin substituted in the 3 position,



clindamycin substituted in the 3 position,

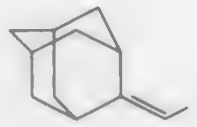
lincomycin substituted in the 2, 4 and 7 positions and



clindamycin substituted in the 2 and 4 positions,

R_1 and R_2, each independently, represent hydrogen or alkyl having 1–4 carbon atoms,

a and b are 0 or 1 with the proviso that at least one of a and b is equal to 1,
and A represents a radical selected from the group consisting of



(i)

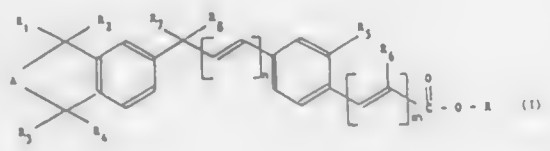
(ii)

and

(iii)

and the isomers, mixtures and salts of said ester.

3. A pharmaceutical or cosmetic composition for the treatment of dermatoses comprising in an anhydrous vehicle, as the active component, a pharmaceutically or cosmetically effective amount of at least one ester of claim 1.



5,004,732

POLYAROMATIC ESTERS OF MACROLIDIC AND LINCOSAMIDIC ANTIBIOTICS AND PHARMACEUTICAL AND COSMETIC COMPOSITIONS CONTAINING THEM

Michel Philippe, Antony, and Henri Sebag, Paris, both of France, assignors to Societe Anonyme Dite: L'Oreal, Paris, France

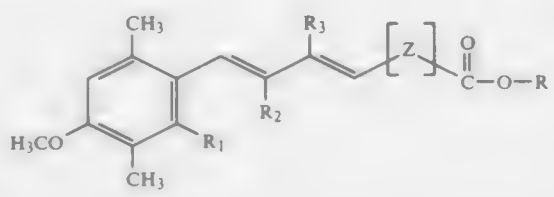
Filed Nov. 3, 1988, Ser. No. 266,596
Claims priority, application Luxembourg, Nov. 4, 1987, 87037
Int. Cl.[5] A61K *31/70;* **C07H** *15/16, 17/08*
U.S. Cl. 514—29 **9 Claims**

1. A polyaromatic ester of a macrolide or lincosamide having the formula

(I)

wherein
R represents a macrolide selected from the group consisting of:
erythromycin A substituted in the 2′ position,
roxithromycin substituted in the 2′ position,
oleandomycin substituted in the 2′ position,
oleandomycin substituted in the 4″ position,
oleandomycin substituted in the 2′ and 4″ positions,
josamycin substituted in the 9 position,
josamycin substituted in the 2′ position,
josamycin substituted in the 9 and 2′ positions,
spiramycin (I) substituted in the 2′ position,
spiramycin (I) substituted in the 4″ position,
spiramycin (I) substituted in the 2′ and 4″ positions,
spiramycin (II) substituted in the 2′ position,
spiramycin (II) substituted in the 4″ position,
spiramycin (II) substituted in the 2′ and 4″ positions,
spiramycin (III) substituted in the 2′ position,
spiramycin (III) substituted in the 4″ position,
spiramycin (III) substituted in the 2′ and 4″ positions,
or R represents a lincosamide selected from the group consisting of:
lincomycin substituted in the 3 position,
clindamycin substituted in the 3 position,
lincomycin substituted in the 2, 4 and 7 positions and
clindamycin substituted in the 2 and 4 positions,
n and m are 0 or 1 with the proviso that n and m are not simultaneously equal to 1,
A represents methylene or ethylene, unsubstituted or substituted by lower alkyl having 1–4 carbon atoms,
R_1, R_2, R_3 and R_4, each independently, represent hydrogen or alkyl having 1–6 carbon atoms, or R_1 and R_3 taken together from methylene or ethylene when A represents ethylene,
R_7 represents hydrogen, hydroxy, alkoxy having 1–4 carbon atoms or acyloxy having 1–4 carbon atoms,
R_8 represents hydrogen or alkoxy having 1–4 carbon atoms, or
R_7 and R_8 taken together form an oxo or methano radical, and
R_5 and R_6 represent hydrogen or methyl, or
R_5 and R_6, taken together, form a vinylene radical,
and the isomers, mixtures and salts of said esters.

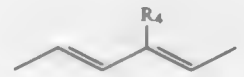
3. A pharmaceutical or cosmetic composition for the treatment of dermatoses comprising in an anhydrous vehicle, as the active component, a pharmaceutically or cosmetically effective amount of at least one ester of claim 1.



5,004,733

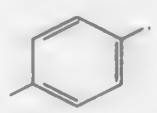
ESTERS OF THE ETRETINIC TYPE OR RELATED TO MACROLIDIC AND LINCOSAMIDIC ANTIBIOTICS AND PHARMACEUTICAL AND COSMETIC COMPOSITIONS CONTAINING SAID ESTERS

Michel Philippe, Antony, and Henri Sebag, Paris, both of France, assignors to Societe Anonyme Dite: L'Oreal, Paris, France



Filed Nov. 3, 1988, Ser. No. 266,611
Claims priority, application Luxembourg, Nov. 4, 1987, 87035
Int. Cl.[5] A61K *31/70;* **C07H** *15/16, 17/08*
U.S. Cl. 514—029 **9 Claims**

1. An ester of the etretinic type or related to a macrolide or lincosamide having the formula

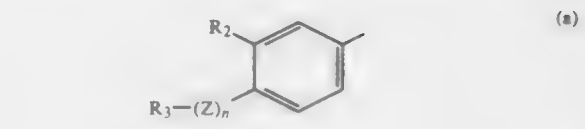


(I)

wherein
R represents a macrolide selected from the group consisting of:
erythromycin A substituted in the 2′ position,
roxithromycin substituted in the 2′position,
oleandomycin substituted in the 2′ position,
oleandomycin substituted in the 4″ position,
oleandomycin substituted in the 2′ and 4″ positions,
josamycin substituted in the 9 position,
josamycin substituted in the 2′ position,
josamycin substituted in the 9 and 2′ positions,
spiramycin (I) substituted in the 2′ position,
spiramycin (I) substituted in the 4″ position,
spiramycin (I) substituted in the 2′ and 4″ positions,
spiramycin (II) substituted in the 2′ position,
spiramycin (II) substituted in the 4″ position,
spiramycin (II) substituted in the 2′ and 4″ positions,
spiramycin (III) substituted in the 2′ position,
spiramycin (III) substituted in the 4″ position,
spiramycin (III) substituted in the 2′ and 4″ positions,
or R represents a lincosamide selected from the group consisting of:
lincomycin substituted in the 3 position,
clindamycin substituted in the 3 position,
lincomycin substituted in the 2, 4 and 7 positions and
clindamycin substituted in the 2 and 4 positions,
R_1 represents methyl,
R_2 represents hydrogen, or R_1 and R_2 together form a vinylene (—CH=CH—) radical,
R_3 represents hydrogen or alkyl having 1–4 carbon atoms, and
Z represents a divalent radical (1) of the formula

wherein R_4 represents hydrogen or alkyl having 1–4 carbon atoms or (2) of the formula the isomers, mixtures and salts of said ester.

3. A pharmaceutical or cosmetic composition for the treatment of dermatoses comprising in an anhydrous vehicle, as the active component, a pharmaceutically or cosmetically effective amount of at least one ester of claim 1.

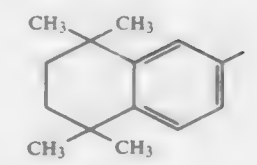


5,004,734

DIAROMATIC ESTERS OF MACROLIDIC AND LINCOSAMIDIC ANTIBIOTICS AND PHARMACEUTICAL AND COSMETIC COMPOSITIONS CONTAINING THEM

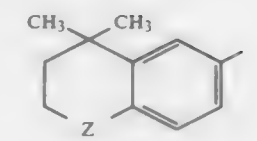
Michel Philippe, Antony, and Henri Sebag, Paris, both of France, assignors to Societe Anonyme Dite: L'Oreal, Paris, France

Filed Nov. 3, 1988, Ser. No. 266,597
Claims priority, application Luxembourg, Nov. 4, 1987, 87039
Int. Cl.[5] A61K *31/70;* **C07H** *15/16, 17/08*
U.S. Cl. 514—29 **9 Claims**



1. A diaromatic ester of a macrolide or lincosamide having the formula

(I)



wherein
R_1 represents a macrolide selected from the group consisting of:
erythromycin A substituted in the 2′ position,
roxithromycin substituted in the 2′ position,
oleandomycin substituted in the 2′ position,
oleandomycin substituted in the 4″ position,
oleandomycin substituted in the 2′ and 4″ positions.
josamycin substituted in the 9 position,
josamycin substituted in the 2′ position,
josamycin substituted in the 9 and 2′ positions,
spiramycin (I) substituted in the 2′ position,
spiramycin (I) substituted in the 4″ position,
spiramycin (I) substituted in the 2′ and 4″ positions,
spiramycin (II) substituted in the 2′ position,
spiramycin (II) substituted in the 4″ position,
spiramycin (II) substituted in the 2′ and 4″ positions,
spiramycin (III) substituted in the 2′ position,
spiramycin (III) substituted in the 4″ position,
spiramycin (III) substituted in the 2′ and 4″ positions,
or R_1 represents a lincosamide selected from the group consisting of:
lincomycin substituted in the 3 position,
clindamycin substituted in the 3 position,
lincomycin substituted in the 2, 4 and 7 positions and
clindamycin substituted in the 2 and 4 positions,
Ar represents an aromatic radical selected from

(a)

(b)

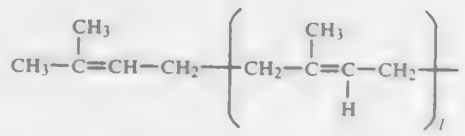
and

(c)

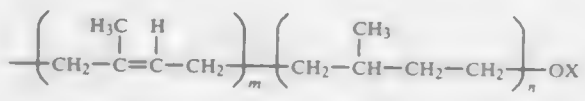
wherein
n is 0 or 1,
R_2 and R_3 represent hydrogen, linear or branched alkyl having 1–15 carbon atoms or cycloalkyl having 5–10 carbon atoms, and
Z is an atom of oxygen or sulfur.

and mixtures and salts of said esters.

3. A pharmaceutical or cosmetic composition for the treatment of dermatoses comprising in an anhydrous vehicle, as the active component, a pharmaceutically or cosmetically effective amount of at least one ester of claim 1.

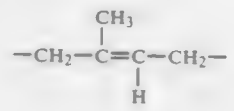


5,004,735



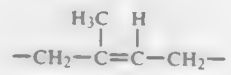
PHARMACEUTICAL COMPOSITIONS FOR THE INHIBITION OF TUMOR METASTASIS

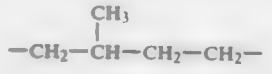
Yasushi Okamoto, Tokyo; Yoshiyuki Tahara, and Yoshio Mishima, both of Saitama, all of Japan, assignors to Nisshin Flour Milling Co., Ltd., Tokyo, Japan



Filed Jun. 29, 1989, Ser. No. 373,909
Claims priority, application Japan, Jul. 13, 1988, 63-172638
Int. Cl.[5] A61K *31/66, 31/045*
U.S. Cl 514—134 **8 Claims**

1. An oily emulsion for the inhibition of lung metastasis in a mammal which comprises an an active ingredient an effective amount to inhibit lung metastasis of one or more of polyprenols and polyprenyl phosphates of the formula





wherein

represents a trans-isoprene unit,

represents a cis-isoprene unit,

-continued

represents a dihydroisoprene unit, l is an integer of 2 to 8, m is 0 or an integer of 5 to 18, n is 0 or 1, the sum of l and m is the range of 8 to 20, X represents a hydrogen atom or $—PO_3MM'$ wherein M and M' may be the same or different and each is a hydrogen atom or a monovalent cation or both M and M' together form a divalent cation.

5,004,736

PROCEDURE FOR OBTAINING THE PREPARATION FOR THE TREATMENT OF THE DISEASE PSORIASIS: DRUG FOR THE TREATMENT OF PSORIASIS AND ITS APPLICATION

Pero Visnjic, Mose Pijade 3, 58300 Makarska, Yugoslavia

Continuation of Ser. No. 875,221, Jun. 17, 1986, abandoned. This application Jun. 23, 1989, Ser. No. 370,121
Claims priority, application Yugoslavia, Feb. 14, 1986, 221/86
Int. Cl.[5] A61K *31/62, 31/56*
U.S. Cl. 514—161 **2 Claims**

1. A process for preparing a medicinal ointment for the treatment of psoriasis, consisting of the steps of:

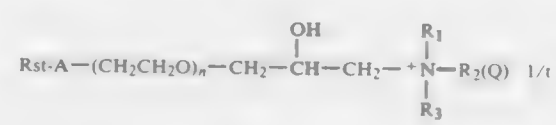
preparing a vehicle for a medicinal ointment by homogenizing the ingredients, melting at 150° C., and cooling to 85°–90° C., with stirring for 20 minutes,

emulsifying the vehicle with demineralized sterile water, sterilizing the resultant emulsion 30 minutes at 85°–90° C., cooling the emulsion to 60° C.,

adding 9-fluoro-11β,17,21-trihydroxy-16β-methyl-pregna-1,4-diene-3,20-dion-17,21-dipropionate and 6,9-difluoro-11,16,17,21-tetrahydroxy-pregna-1,4-diene-3,20-dion-21-acetate-16,17-acetonide dissolved in suitable sterile solvents to the emulsion, while stirring, said 9-fluoro-11β,17,21-trihydroxy-16β-methyl-pregna-1,4-diene-3,20-dion-17,21-dipropionate and, 6,9-difluoro-11,16,17,21-tetrahydroxy-pregna-1,4-diene-3,20-dion-21-acetate-16,17-acetonide being added in a ratio of 1:1; and then

adding the following ingredients, while stirring: gentamycin sulfate, vitamin A palmitate wherein the gentamycin sulfate is added in an amount equivalent to at least 35000 IU/100 g of the ointment, and wherein vitamin A palmitate is added in an amount equivalent to 30000 IU/100 g of the ointment, and 2,4-dihydroxy-N-(3-hydroxypropyl)-3,3-dimethylbutanamide, 0.5 g per 100 g of ointment; and then

adding salicylic acid at 7% by weight of the ointment; and homogenizing and cooling the resulting medicinal ointment.



5,004,737

QUATERNARY AMMONIUM-SUBSTITUTED STEROL DERIVATIVES

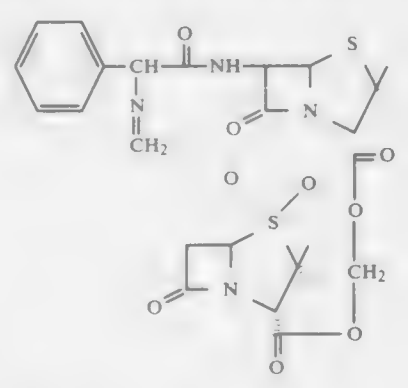
Young D. Kim, and Byung J. Ha, both of Seoul, Rep. of Korea, assignors to Pacific Chemical Co., Ltd., Seoul, Rep. of Korea

Filed Sep. 22, 1989, Ser. No. 411,411
Int. Cl.[5] A61K *31/575;* **C07J** *41/00*
U.S. Cl. 514—182 **6 Claims**

1. A quaternary ammonium-substituted sterol compound of the following formula (I):

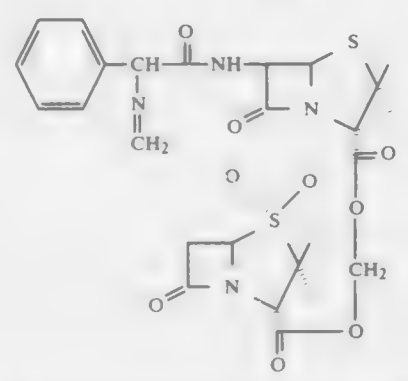
(I)

wherein Q represents an anion of a strong inorganic acid, R_1 represents alkyl or a monounsaturated alkenyl group having up to 18 carbon atoms; R_2 and R_3, the same or different from each other, are methyl or ethyl groups; t is the valence of Q; A represents an oxygen atom; n is an integer of 0 to 25; and Rst represents a sterol selected from the group consisting of sitosterol, campesterol, stigmasterol, cholesterol, and lanosterol or a stanol obtained by the reduction of the double bond between carbon atoms 5 and 6 of said sterols.



5,004,738

1,1-DIOXOPENICILLANOYL OXYMETHYL D-6-(α-(METHYLENEAMINO) PHENYLACETAMIDO)-PENICILLANATE AND A PROCESS FOR THE PREPARATION THEREOF



Young Sul Kim, Cosmos Mansion 1002, #302-62 Ichon-Dong, Yongsan-Ku, Seoul, Rep. of Korea

Filed Jul. 24, 1989, Ser. No. 383,435
Claims priority, application Rep. of Korea, Jun. 20, 1989, 89-8501
Int. Cl.[5] A61K *31/43;* **C07D** *499/08, 499/32*
U.S. Cl. 514—195 **8 Claims**

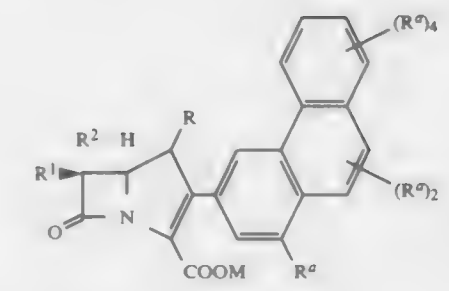
1. A pharmaceutical compound of 1,1-dioxopenicillanoyl oxymethyl-D-6-[α-(methyleneamino) phenylacetamido]-penicillanate or pharmaceutically acceptable salt thereof represented by the following formulas (I) and (I'):

(I)

(I')

wherein Me is hydrochloride, sulfuric acid, phosphoric acid, maleic acid, succinic acid, methanesulfonic acid, or p-toluenesulfonic acid.

6. The method for treating a bacterial infection in a mammal in need thereof which comprises administrating orally to said mammal an antibacterially effective amount of the pharmaceutical compound of claim 1.



5,004,739

2-PHENANTHRENYL CARBAPENEM ANTIBACTERIAL AGENTS

Frank P. DiNinno, Old Bridge; Mark L. Greenlee, Rahway, and Thomas N. Salzmann, North Plainfield, all of N.J., assignors to Merck & Co., Inc., Rahway, N.J.

Filed Jun. 26, 1990, Ser. No. 544,286
Int. Cl.[5] C07D *481/04;* **A61K** *31/40*
U.S. Cl. 514—210 **13 Claims**

1. A compound of the formula:

(I)

wherein:

R is H or CH_3;

R^1 and R^2 are independently H, $CH_3—$, $CH_3CH_2—$, $(CH_3)_2CH—$, $HOCH_2—$, $CH_3CH(OH)—$, $(CH_3)_2C(OH)—$, $FCH_2CH(OH)—$, $F_2CHCH(OH)—$, $F_3CCH(OH)—$, $CH_3CH(F)—$, $CH_3CF_2—$, or $(CH_3)_2C(F)—$;

R^q is a member selected from the group consisting of—OH, $—OCH_3$, —CN, $—C(O)NH_2$, $—OC(O)NH_2$, CHO, $—OC(O)N(CH_{33\ 3})_2$, $—SO_2NH_2$, $—SO_2N(CH_3)_2$,

(a) a trifluoromethyl group: $—CF_3$;

(b) a halogen atom: —Br, —Cl, —F, or —I;

(c) C_1–C_4 alkoxy radical: $—OC_{1-4}$ alkyl, wherein the alkyl is optionally mono-substituted by R^q, where

R^j is a member selected from the group consisting of —OH, $—OCH_3$, —CN, $—C(O)NH_2$, $—OC(O)NH_2$, CHO, $—OC(O)N(CH_{33\ 3})_2$, $—SO_2NH_245$, $—SO_2N(CH_3)_2$, $—SOCH_3$, $—SO_2CH_3$, —F, $—CF_3$, $—COOM^a$ (where M^a is hydrogen, alkali metal, methyl or phenyl), tetrazolyl (where the point of attachment is the carbon atom of the tetrazole ring and one of the nitrogen atoms is mono-substituted by M^a as defined above) and $—SO_3M^b$ (where M^b is hydrogen or an alkali metal);

(d) a hydroxy group: —OH;

(e) a carbonyloxy radical: $—O(C═O)R^s$, where

R^s is C_{1-4} alkyl or phenyl, each of which is optionally mono-substituted by R^q as defined above;

(f) a carbamoyloxy radical: $—O(C═O)N(R^y)R^z$ where

R^y and R^z are independently H, C_{1-4} alkyl (optionally mono-substituted by R^q as defined above), together a 3- to 5-membered alkylidene radical to form a ring (optionally substituted with R^q as defined above) or together a 2- to 4-membered alkylidene radical, interrupted by —O—, —S—, —S(O)— or $—S(O)_2—$, to form a ring (where the ring is optionally mono-substituted with R^q as defined above);

(g) a sulfur radical: $—S(O)_n—R^s$ where n=0–2, and R^s is defined above;

(h) a sulfamoyl group: $—SO_2N(R^y)R^z$ where R^y and R^z are as defined above;

(i) azido: N_3

(j) a formamido group: $—N(R^t)(C═O)H$, where

R^t is H or C_{1-4} alkyl, and the alkyl thereof is optionally mono-substituted by R^q as defined above;

(k) a (C_1–C_4 alkyl)carbonylamino radical: $—N(R^t)(C═O)C_{1-4}$ alkyl, where R^t is as defined above, and the alkyl group is also optionally mono-substituted by R^q as defined above;

(l) a (C_1–C_4 alkoxy) carbonylamino radical: $—N(R^t)(C═O)OC_{1-4}$ alkyl, where R^t is as defined above, and the alkyl group is also optionally mono-substituted by R^q as defined above;

(m) a ureido group: $—N(R^t)(C═O)N(R^y)R^z$ where R^t, R^y and R^z are as defined above;

(n) a sulfonamido group: $—N(R^t)SO_2R^s$, where R^s and R^t are as defined above;

(o) a cyano group: —CN;

(p) a formyl or acetalized formyl radical: —(C═O)H or $—CH(OCH_3)_2$;

(q) (C_1–C_4 alkyl)carbonyl radical wherein the carbonyl is

acetalized: $-C(OCH_3)_2C_{1-4}$ alkyl, where the alkyl is optionally mono-substituted by R^q as defined above;
(r) carbonyl radical: $-(C=O)R^x$, where R^x is as defined above;
(s) a hydroximinomethyl radical in which the oxygen or carbon atom is optionally substituted by a C_1–C_4 alkyl group: $-(C=NOR^z)R^y$ where R^y and R^z are as defined above, except they may not be joined together to form a ring;
(t) a (C_1–C_4 alkoxy) carbonyl radical: $-(C=O)OC_{1-4}$ alkyl, where the alkyl is optionally mono-substituted by R^q as defined above;
(u) a carbamoyl radical: $-(C=O)N(R^y)R^z$ where R^y and R^z are as defined above;
(v) an N-hydroxycarbamoyl or N(C_1–C_4 alkoxy)carbamoyl radical in which the nitrogen atom may be additionally substituted by a C_1–C_4 alkyl group, $-(C=O)-N(OR^y)R^z$ where R^y and R^z are as defined above, except they may not be joined together to form a ring;
(w) a thiocarbamoyl group: $-(C=S)N(R^y)(R^z)$ where R^y and R^z are as defined above;
(x) carboxyl: $-COOM^b$, where M^b is as defined above;
(y) thiocyanate: —SCN;
(z) trifluoromethylthio: $-SCF_3$;
(aa) tetrazolyl, where the point of attachment is the carbon atom of the tetrazole ring and one of the nitrogen atoms is mono-substituted by hydrogen, an alkali metal or a C_1–C_4 alkyl optionally substituted by R^q as defined above;
(ab) an anionic function selected from the group consisting of: phosphono $[P(=O)(OM^b)_2]$; alkylphosphono $\{P(=O)(OM^b)-[O(C_1-C_4$ alkyl$)]\}$; alkylphosphinyl $[P(=O)(OM^b)-(C_1-C_4$ alkyl$)]$; phosphoramido $[P(=O)(OM^b)N(R^y)R^z$ and $P(=O)(OM^b)NHR^x]$; sulfino (SO_2M^b); sulfo (SO_3M^b); acylsulfonamides selected from the structures $CONM^bSO_2R^x$, $CONM^bSO_2N(R^y)R^z$, $SO_2NM^bCON(R^y)R^z$; and SO_2NM^bCN, where R^x is phenyl or heteroaryl, where heteroaryl is a monocyclic aromatic hydrocarbon group having 5 or 6 ring atoms, in which a carbon atom is the point of attachment, in which one of the carbon atoms has been replaced by a nitrogen atom, in which one additional carbon atom is optionally replaced by a heteroatom selected from O or S, and in which from 1 to 2 additional carbon atoms are optionally replaced by a nitrogen heteroatom, and where the phenyl and heteroaryl are optionally mono-substituted by R^q, as defined above; M^b is as defined above; and R^y and R^z are as defined above;
(ac) C_5–C_7 cycloalkyl group in which one of the carbon atoms in the ring is replaced by a heteroatom selected from O, S, NH or N(C_1–C_4 alkyl) and in which one additional carbon atom may be replaced by NH or N(C_1–C_4 alkyl), and in which at least one carbon atom adjacent to each nitrogen heteroatom has both of its attached hydrogen atoms replaced by one oxygen thus forming a carbonyl moiety and there are one or two carbonyl moieties present in the ring;
(ad) C_2–C_4 alkenyl radical, optionally mono-substituted by one of the substituents (a) to (ac) above and phenyl which is optionally substituted by R^q as defined above;
(ae) C_2–C_4 alkynyl radical, optionally mono-substituted by one of the substituents (a) to (ac) above;
(af) C_1–C_4 alkyl radical;
(ag) C_1–C_4 alkyl mono-substituted by one of the substituents (a)–(ac) above;
(ah) a 2-oxazolidinonyl moiety in which the point of attachment is the nitrogen atom of the oxazolidinone ring, the ring oxygen atom is optionally replaced by a heteroatom selected from —S— and NR^t (where R^t is as defined above) and one of the saturated carbon atoms of the oxazolidinone ring is optionally mono-substituted by one of the substituents (a) to (ag) above;

M is selected from:
(i) hydrogen;
(ii) a pharmaceutically acceptable esterifying group or removable carboxyl protecting group; or
(iii) an alkali metal or other pharmaceutically acceptable cation.

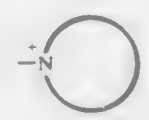
2-PHENANTHRENYL-CARBAPENEM ANTIBACTERIAL AGENTS

Frank P. Dininno, Old Bridge; Thomas N. Salzmann, North Plainfield, and Mark L. Greenlee, Rahway, all of N.J., assignors to Merck & Co., Inc., Rahway, N.J.

Filed Jun. 26, 1990, Ser. No. 543,990
Int. Cl.[5] **C07D** *487/04;* **A61K** *31/40*
U.S. Cl. 514—210 **21 Claims**

1. A compound of the formula:

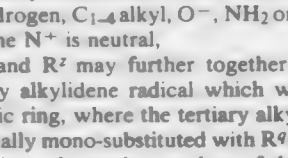
(I)



wherein:
R is H or CH_3;
R^1 and R^2 are independently H, CH_3—, CH_3CH_2—, $(CH_3)_2CH$—, $HOCH_2$—, $CH_3CH(OH)$—, $(CH_3)_2C(OH)$—, $FCH_2CH(OH)$—, $F_2CHCH(OH)$—, $F_3CCH(OH)$—, $CH_3CH(F)$—, CH_3CF_2—, or $(CH_3)_2C(F)$—;
R^q are independently selected from the group consisting of hydrogen and the radicals set out below, provided that one but not more than one R^q is selected from Type I substituents, the remaining non-hydrogen substituents being selected from Type II, and in total not more than four R^q radicals are other than hydrogen:

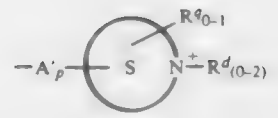
I.

(a)



where
A is $(CH_2)_m$—Q—$(CH_2)_n$, where m is 0 to 6 and n is 1 to 6 and Q is a covalent bond, O, S, SO, SO_2, NH, $-SO_2NH-$, $-NHSO_2-$, —CONH—, —NHCO—, $-SO_2N(C_1-C_4$alkyl$)-$, $-N(C_{1-C4}$alkyl$)SO_2-$, $-CON(C_1-C_4$alkyl$)-$, $-N(C_{1-C4}$alkyl$)CO-$, —CH=CH—, —CO—, —OC(O)—, —C(O)O— or $N(C_{1-C4}$alkyl) and $(CH_2)_m$ is attached to the phenanthrenyl moiety;

is a 5- or 6-membered monocyclic heterocycle or an 8-, 9- or 10-membered bicylic heterocycle, the heterocycle containing a first nitrogen in an aromatic 5- or 6-membered first ring, with attachment of the heterocycle to A by way of said first nitrogen and said first nitrogen is quaternary by virtue of the attachment and ring bonds, with the first ring containing 0 or 1 of either O or S, with the first ring containing 0 to 3 additional nitrogen atoms, with the first ring optionally fused to a 3- or 4-membered moiety to form the optional second ring, with the the moiety containing at least one carbon atom, with the moiety containing 0 or 1 of either O or S, with the moiety containing 0 to 2 nitrogen atoms, and with the moiety being saturated or unsaturated and the second ring aromatic or non-aromatic;
R^c is R^q as defined under II below, hydrogen, or $-N-R^yR^z$ (where R^y and R^z are defined in II below), but independently selected from R^q and from each other if more than one R^c is present, and is attached to a carbon ring atom or a nitrogen heteroatom the valency of which is not satisfied by the ring bonds;



(b)

where

is a 5- or 6-membered monocyclic heterocycle or an 8-, 9- or 10-membered bicyclic heterocycle, the heterocycle containing a
first nitrogen in an aromatic 5- or 6-membered first ring, with said first nitrogen quaternary by virtue of a substituent R^d in addition to the ring bonds thereto, with said first nitrogen neutral in the absence of a substituent Rd, with attachment of the heterocycle to A′ by way of a carbon atom of a ring, with the first ring containing 0 or 1 of either O or S, with the first ring containing 0 to 2 additional nitrogen atoms, with the first ring optionally fused to a 3- or 4-membered moiety to form the optional second ring, with the moiety containing at least one carbon atom, with the moiety containing 0 or 1 of either O or S, with the moiety containing 0 to 2 nitrogen atoms, and with the moiety being saturated or unsaturated and the second ring aromatic or non-aromatic;
R^c is defined above;
R^d is hydrogen, NH_2, O^- or C_1–C_4alkyl (where the alkyl group is optionally mono-substituted with R^q as defined under IIc below);
A′ is $(CH_2)_m$—Q—$(CH_2)_n$, where m is 0 to 6 and n is 0 to 6, Q is given above, and when m and n are 0 then Q is not a covalent bond;
(c) $-A_p-N^+R^y(R^w)_{(0-1)}(R^z)$ where
R^y and R^z are as defined under II below,
R^y and R^z may further be together a C_2–C_4 alkylidene radical to form a ring (optionally mono-substituted with R^q as defined below) interrupted by $N(O)R^e$ or $N^+(R^e)_2$ (where R^e is hydrogen, C_1–C_4alkyl, or C_1–C_4alkyl substituted with R^q defined below),
R^w is hydrogen, C_{1-4} alkyl, O^-, NH_2 or absent in which case the N^+ is neutral,
R^w, R^y and R^z may further together form a C_5–C_{10} tertiary alkylidene radical which with N^+ forms a bicyclic ring, where the tertiary alkylidene radical is optionally mono-substituted with R^q as defined below and where the tertiary carbon of the tertiary alkylidene radical is optionally replaced with nitrogen, N^+R^e (where R^e is defined above), or $N^+—O^-$,
p is 0 or 1, and
A is as defined above;
(d)

where

is a 5- or 6-membered monocyclic heterocycle or an 8-, 9- or 10-membered bicyclic heterocycle, the heterocycle containing a
first nitrogen in a first ring, with the first ring saturated or unsaturated and non-aromatic, with the first nitrogen quaternary by virtue of one or two substituents R^d in addition to the ring bonds thereto, with the first nitrogen alternatively neutral by virtue of zero or one substituents R^d in addition to the ring bonds thereto, with attachment of the heterocycle to A′ by way of a carbon atom or non-quaternary nitrogen atom of a ring, with the first ring containing in addition to carbon and the first nitrogen 0 to 1 of a member selected from the group consisting of the non-quaternary nitrogen of attachment, O, S, S(O), $S(O)_2$ and NR^e where R^e is defined above, with the first ring optionally fused to a 2-, 3- or 4-membered moiety to form the optional second ring, with the moiety optionally containing in addition to carbon the non-quaternary nitrogen of attachment, and with the moiety saturated or unsaturated and the second ring non-aromatic;
R^d is defined above and where more than one R^d is present on a nitrogen, at least one R^d is hydrogen or C_1–C_4alkyl;
A′ is defined above; and
p is defined above;
R^q is defined below;

II.

(a) a trifluoromethyl group: $-CF_3$;
(b) a halogen atom: —Br, —Cl, —F, or —I;
(c) C_1–C_4 alkoxy radical: $-OC_{1-4}$ alkyl, wherein the alkyl is optionally mono-substituted by R^q, where
R^q is a member selected from the group consisting of —OH, $-OCH_3$, —CN, $-C(O)NH_2$, $-OC(O)NH_2$, CHO, $-OC(O)N(CH_3)_2$, $-SO_2NH_2$, $-SO_2N(CH_3)_2$, $-SOCH_3$, $-SO_2CH_3$, —F, $-CF_3$, $-COOM^a$ (where M^a is hydrogen, alkali metal, methyl or phenyl), tetrazolyl (where the point of attachment is the carbon atom of the tetrazole ring and one of the nitrogen atoms is mono-substituted by M^a as defined above) and $-SO_3M^b$ (where M^b is hydrogen or an alkali metal);
(d) a hydroxy group: —OH;
(e) a carbonyloxy radical: $-O(C=O)R^z$, where
R^z is C_{1-4} alkyl or phenyl, each of which is optionally mono-substituted by R^q as defined above;
(f) a carbamoyloxy radical: $-O(C=O)N(R^y)R^z$ where
R^y and R^z are independently H, C_{1-4} alkyl (optionally mono-substituted by R^q as defined above), together a 3- to 5-membered alkylidene radical to form a ring (optionally substituted with R^q as defined above) or together a 2- to 4-membered alkylidene radical, interrupted by —O—, —S—, —S(O)— or $-S(O)_2-$, to

form a ring (where the ring is optionally mono-substituted with Rq as defined above);
(g) a sulfur radical: $-S(O)_n-R^z$ where n=0–2, and R^z is as defined above;
(h) a sulfamoyl group: $-SO_2N(R^y)R^z$ where R^y and R^z are as defined above;
(i) azido: N_3
(j) a formamido group: $-N(R^t)(C=O)H$, where R^t is is H or C_{1-4} alkyl, and the alkyl thereof is optionally mono-substituted by R^q as defined above;
(k) a (C_1–C_4 alkyl)carbonylamino radical: $-N(R^t)(C=O)C_{1-4}$ alkyl, where R^t is as defined above, and the alkyl group is also optionally mono-substituted by R^q as defined above;
(l) a (C_1–C_4 alkoxy) carbonylamino radical: $-N(R^t)(C=O)OC_{1-4}$ alkyl, where R^t is as defined above, and the alkyl group is also optionally mono-substituted by R^q as defined above;
(m) a ureido group: $-N(R^t)(C=O)N(R^y)R^z$ where R^t, R^y and R^z are as defined above;
(n) a sulfonamido group: $-N(R^t)SO_2R^s$, where R^s and R^t are as defined above;
(o) a cyano group: —CN;
(p) a formyl or acetalized formyl radical: —(C=O)H or $-CH(OCH_3)_2$;
(q) (C_1–C_4 alkyl)carbonyl radical wherein the carbonyl is acetalized: $-C(OCH_3)_2C_{1-4}$ alkyl, where the alkyl is optionally mono-substituted by R^q as defined above;
(r) carbonyl radical: $-(C=O)R^s$, where R^s is as defined above;
(s) a hydroximinomethyl radical in which the oxygen or carbon atom is optionally substituted by a C_1–C_4 alkyl group: $-(C=NOR^z)R^y$ where R^y and R^z are as defined above, except they may not be joined together to form a ring;
(t) a (C_1–C_4 alkoxy)carbonyl radical: $-(C=O)OC_{1-4}$ alkyl, where the alkyl is optionally mono-substituted by R^q as defined above;
(u) a carbamoyl radical: $-(C=O)N(R^y)R^z$ where R^y and R^z are as defined above;
(v) an N-hydroxycarbamoyl or $N(C_1$–C_4 alkoxy)carbamoyl radical in which the nitrogen atom may be additionally substituted by a C_1–C_4 alkyl group: $-(C=O)-N(OR^y)R^z$ where R^y and R^z are as defined above, except they may not be joined together to form a ring;
(w) a thiocarbamoyl group: $-(C=S)N(R^y)(R^z)$ where R^y and R^z are as defined above;
(x) carboxyl: $-COOM^b$, where M^b is as defined above;
(y) thiocyanate: —SCN;
(z) trifluoromethylthio: $-SCF_3$;
(aa) tetrazolyl, where the point of attachment is the carbon atom of the tetrazole ring and one of the nitrogen atoms is mono-substituted by hydrogen, an alkali metal or a C_1–C_4 alkyl optionally substituted by R^q as defined above;
(ab) an anionic function selected from the group consisting of: phosphono [$P(=O)(OM^b)_2$]; alkylphosphono {$P(=O)(OM^b)$-[$O(C_1$–C_4 alkyl)]}; alkylphosphinyl [$P(=O)(OM^b)$-(C_1–C_4alkyl)]; phosphoramido [$P(=O)(OM^b)N(R^y)R^z$ and $P(=O)(OM^b)NHR^x$]; sulfino (SO_2M^b); sulfo (SO_3M^b); acylsulfonamides selected from the structures $CONM^bSO_2R^x$, $CONM^bSO_2N(R^y)R^z$, $SO_2MN^bCON(R^y)R^z$; and SO_2NM^bCN, where
R^x is phenyl or heteroaryl, where heteroaryl is a monocyclic aromatic hydrocarbon group having 5 or 6 ring atoms, in which a carbon atom is the point of attachment, in which one of the carbon atoms has been replaced by a nitrogen atom, in which one additional carbon atom is optionally replaced by a heteroatom selected from O or S, and in which from 1 to 2 additional carbon atoms are optionally replaced by a nitrogen heteroatom, and where the phenyl and heteroaryl are optionally mono-substituted by R^q, as defined above; M^b is as defined above; and R^y and R^z are as defined above;
(ac) C_5–C_7 cycloalkyl group in which one of the carbon atoms in the ring is replaced by a heteroatom selected from O, S, NH or $N(C_1$–C_4 alkyl) and in which one additional carbon atom may be replaced by NH or $N(C_1$–C_4 alkyl), and in which at least one carbon atom adjacent to each nitrogen heteroatom has both of its attached hydrogen atoms replaced by one oxygen thus forming a carbonyl moiety and there are one or two carbonyl moieties present in the ring;
(ad) C_2–C_4 alkenyl radical, optionally mono-substituted by one of the substituents (a) to (ac) above and phenyl which is optionally substituted by R^q as defined above;
(ae) C_2–C_4 alkynyl radical, optionally mono-substituted by one of the substituents (a) to (ac) above;
(af) C_1–C_4 alkyl radical;
(ag) C_1–C_4 alkyl mono-substituted by one of the substituents (a)–(ac) above;
(ah) a 2-oxazolidinonyl moiety in which the point of attachment is the nitrogen atom of the oxazolidinone ring, the ring oxygen atom is optionally replaced by a heteroatom selected from —S— and NR^t (where R^t is as defined above) and one of the saturated carbon atoms of the oxazolidinone ring is optionally mono-substituted by one of the substituents (a) to (ag) above;
M is selected from:
(i) hydrogen;
(ii) a pharmaceutically acceptable esterifying group or removable carboxyl protecting group;
(iii) an alkali metal or other pharmaceutically acceptable cation; or
(iv) a negative charge which is balanced by a positively charged group.

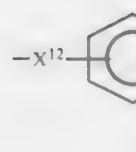
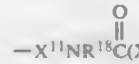
METHODS OF ANTAGONIZING CCK OR GASTRIN WITH BENZODIAZEPINE ANALOGS



Ben E. Evans, Lansdale; Mark G. Bock, and Roger M. Freidinger, both of Hatfield, all of Pa., assignors to Merck & Co., Inc., Rahway, N.J.

Division of Ser. No. 26,420, Mar. 16, 1987, Pat. No. 4,820,834, which is a continuation-in-part of Ser. No. 741,972, Jun. 10, 1985, abandoned, which is a continuation-in-part of Ser. No. 705,272, Feb. 25, 1985, abandoned, which is a continuation-in-part of Ser. No. 624,854, Jun. 26, 1984, abandoned. This application Nov. 9, 1988, Ser. No. 269,212
Int. Cl.[5] A61K *31/55*
U.S. Cl. 514—221 **15 Claims**

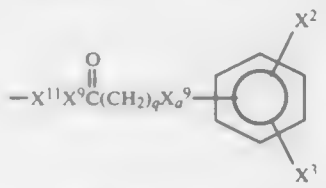


1. A method of antagonizing the binding of cholecystokinins to cholecystokinin receptors or antagonizing the binding of gastrin to gastrin receptors which comprises contacting said cholecystokinin receptors or said gastrin receptors, respectively, with a compound represented by the formula:

wherein
R^1 is H, C_1–C_6 linear or branched alkyl, loweralkenyl, lower alkynyl, $-X^{12}COOR^6$, $-X^{11}$-cycloloweralkyl, $-X^{12}NR^4R^5$, $X^{12}CONR^4R^5$, $-X^{12}CN$, or $-X^{11}CX_3^{10}$;
R^2 is H, loweralkyl, substituted or unsubstituted phenyl (wherein the substituents may be 1 or 2 or halo, loweralkyl, loweralkoxy, loweralkylthio, carboxyl, carboxyloweralkyl, nitro, $-CF_3$, or hydroxy), 2-, 3-, 4-pyridyl

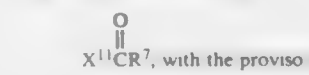
$-X^{12}SOCH_3$, $-X^{12}SO_2CH_3$, or $-X^{12}COOR^6$;
R^3 is $-X^{11}NR^{18}(CH_2)_qR^{16}$,

$-X^{11}NR^{18}C(X^{11})_qR^7$, $-X^{11}CX^9X^{11}R^7$



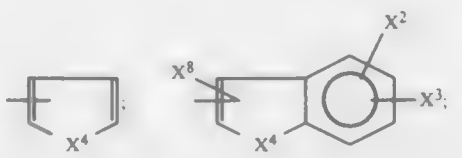
$NH(CH_2)_{2-3}NHR^7$, $-NH(CH_2)_{2-3}NHCOR^7$,

$-X^{11}X^9CCHCH_2R^7$,
$NHCOOR^{14}$,

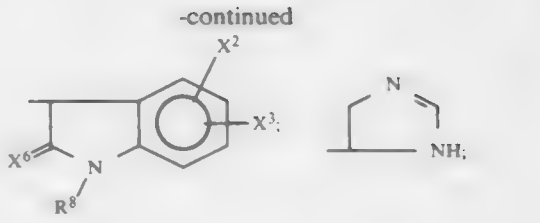


$-X^{11}X^9CX_a{}^9(X^{11})_nR^7$, $-X^{11}X^9C(=O)-CH(NH_2)-CH_2R^7$,

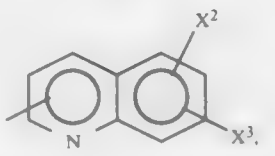
$-X^{11}X^9C(=O)(CH_2)_qX_a{}^9$



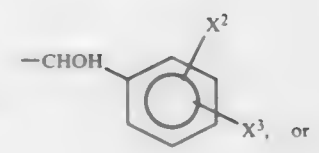
$-X^{11}NR^{18}SO_2(CH_2)_qR^7$ or



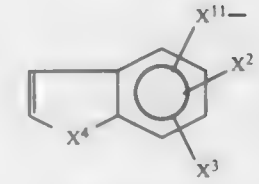
$X^{11}CR^7$, with the proviso that R^{10} is not



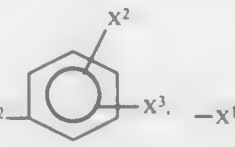
H or $-CH_3$ when R^3 is $X^{11}CR^7$;

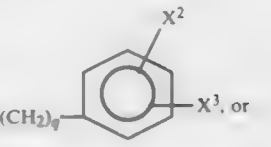


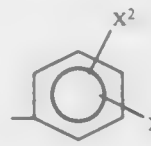
R^4 and R^5 are independently R^6 or in combination with the N of the NR^4R^5 group form an unsubstituted or mono or disubstituted, saturated or unsaturated, 4–7 membered heterocyclic ring or benzofused 4–7 membered heterocyclic ring, wherein said heterocyclic ring or said benzofused heterocyclic ring may contain a second heteroatom selected from O and NCH_3 and the substituent(s) is/are independently selected from C_{1-4} alkyl;
R^6 is H, loweralkyl, cycloloweralkyl, substituted or unsubstituted phenyl, or substituted or unsubstituted phenylloweralkyl wherein the phenyl or phenyloweralkyl substituents may be 1 or 2 of halo, loweralkyl, loweralkoxy, nitro, or CF_3;
R^7 is α- or β-naphthyl, substituted or unsubstituted phenyl (wherein the substituents may be 1 or 2 of halo, $-NO_2$—, —OH, $-X^{11}NR^4R^5$, loweralkyl, CF_3, CN, SCF_3, C≡CH, CH_2SCF_3, O $OCCH_3$, $OCHF_2$, SH, SPh, PO_3H, loweralkoxy, or loweralkylthio, COOH); 2-, 3-, 4-pyridyl,



-continued







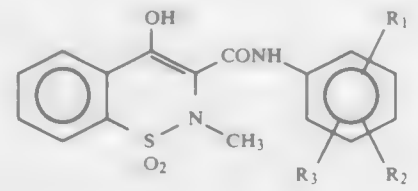
R^8 is H, loweralkyl, cycloloweralkyl, $-X^{12}CONH_2$, $-X^{12}COOR^6$, $-X^{12}$-cycloloweralkyl, $-X^{12}NR^4R^5$,

R^9 and R^{10} are independently H, —OH, or $-CH_3$;
R^{11} and R^{12} are independently loweralkyl or cycloloweralkyl;
R^{13} is H, loweralkyl, acyl, O, or cycloloweralkyl;
R^{14} is loweralkyl or phenylloweralkyl;
R^{15} is H, loweralkyl,

X^3, or $-NH_2$;

R^{16} is alpha and beta napthyl or 2-indolyl;
R^{18} is H, or loweralkyl;
p is 0 when its adjacent - - - is unsaturated and 1 when its adjacent - - - is saturated except that when R^{13} is 0, p=1 and is unsaturated;
q is 0–4;
r is 1 or 2;
X^1 is H, $-NO_2$, CF_3, CN, OH, loweralkyl, halo, loweralkylthio, loweralkoxy, $-X^{11}COOR^6$, or $-X^{11}NR^4R^5$;
X^2 and X^3 are independently H, —OH, $-NO_2$, halo, loweralkylthio, loweralkyl, or loweralkoxy;
X^4 is S, O, CH_2, or NR^8;
X^5 is H, CF_3, CN, $-COOR^6$, NO_2, or halo;
X^6 is O or HH; X^7 is O, S, HH, or NR^{15} with the proviso that

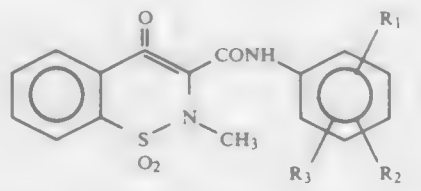
X^7 can be NR^{15} only when R^1 is not H;
X^8 is H, loweralkyl; X^9 and X_a^9 are independently NR^{18} or O;
X^{10} is F, Cl, or Br;
X^{11} is absent or C_{1-4} linear or branched alkylidene;
X^{12} is C_{1-4} linear or branched alkylidene; - - - is a saturated or unsaturated bond; with the proviso that when X^1 is Cl in the seven position, R^1 is H and R^2 is unsubstituted phenyl, then R^3 is not $NHCO(CH_2)_2C_6H_5$ or $NHCOC_6H_5$
and the pharmaceutically acceptable salts thereof



5,004,742

BENZOTHIAZINE-1,1-DIOXIDE DERIVATIVES

Toshio Satoh; Yasunori Niiro; Hisao Kakegawa, and Hitoshi Matsumoto, all of Tokushima, Japan, assignors to Nippon Hypox Laboratories Incorporated, Tokyo, Japan



Filed Aug. 14, 1989, Ser. No. 392,899
Int. Cl.[5] **A61K** *31/54;* **C07D** *279/02*
U.S. Cl. 514—226.5 **6 Claims**

1. A benzothiazine-1,1-dioxide derivative represented by the formula (I):

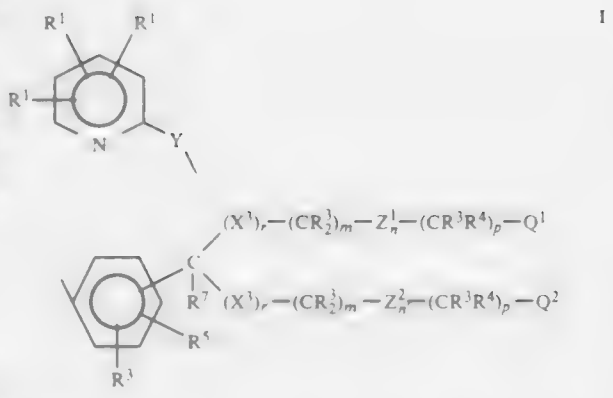
(I)

or the formula (II):

(II)

[in the formulas (I) and (II), R_1 is a carboxyl group or a tetrazoyl group, and R_2 and R_3, which can be the same or different, are each an atom or substituent selected from the group consisting of a hydrogen atom, a halogen atom, a hydroxyl group, a nitro group, a cyano group, a trifluoromethyl group, a mercapto group, a lower alkyl group, a lower alkoxy group, a lower alkylcarbonyl group, a lower alkylcarbonyloxy group and a lower tioalkoxy group], or a pharmacologically acceptable salt thereof.

3. A pharmaceutical composition comprising, as the active hyaluronidase-inhibiting ingredient, an effective amount of a benzothiazine-1,1-dioxide derivative or a pharmacologically acceptable salt thereof as defined in claim 1 together with a pharmaceutically acceptable carrier or diluent.



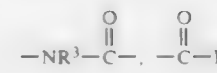
5,004,743

PYRIDYL STYRENE DIALKANOIC ACIDS AS ANTI-LEUKOTRIENE AGENTS

Robert N. Young, Senneville; Robert Zamboni, Longueuil, and Jacques Y. Gauthier, Laval, all of Canada, assignors to Merck Frosst Canada, Inc., Kirkland, Canada

Filed Nov. 25, 1987, Ser. No. 125,637
Int. Cl.[5] **C07D** *211/72, 211/70, 211/68, 279/10*
U.S. Cl. 514—227.8 **10 Claims**

1. A compound of the formula:



I

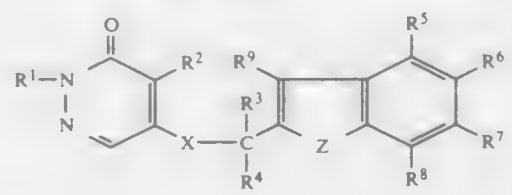
wherein:
R^1 is H, halogen, C_1–C_8 alkyl, C_2–C_8 alkenyl, C_2–C_8 alkynyl, $—CF_3$, $—SR^2$, $—S(O)R^2$, $—S(O)_2R^2$, $—NR^3R^3$, $—OR^3$, $—COOR^3$, $—(C═O)R^3$, $—C(OH)R^3R^3$, —CN, $—NO_2$, $—N_3$, substituted or unsubstituted phenyl, substituted or unsubstituted benzyl, substituted or unsubstituted 2-phenethyl, or substituted or unsubstituted pyridyl;
R^2 is C_1–C_8 alkyl, C_2–C_8 alkenyl, C_2–C_8 alkynyl, $—CF_3$, substituted or unsubstituted phenyl substituted or unsubstituted benzyl, or substituted or unsubstituted 2-phenethyl;
R^3 is H or R^2;
R^4 is H, halogen. $—NO_2$, —CN, $—OR^3$, $—SR^3$, NR^3R^3, or C_1–C_8 alkyl;
CR^3R^4 may be the radical of a naturally occurring amino acid selected from the group consisting of alanine, asparagine, aspartic acid, arginine, cysteine, glutamic acid, glutamine, glycine, histidine, isoleucine, leucine, lysine, methionine, phenylalanine, proline, serine, threonine, tryptophan, tyrosine and valine;
R^5 is H, halogen, $—NO_2$, $—N_3$, —CN, $—SR^2$, $—NR^3R^3$, $—OR^3$, C_1–C_8 alkyl, or $—(C═O)R^3$;
R^6 is $—CH_2CONR^{12}R^{12}$;
R^7 is H or C_1–C_4 alkyl;
R^{10} is $—SR^{11}$, $—OR^{12}$, or $—NR^{12}R^{12}$;
R^{11} is C_1–C_6 alkyl, $—(C═O)R^{14}$, unsubstituted phenyl, or unsubstituted benzyl;
R^{12} is H, R^{11}, or two R^{12} groups joined to the same N may form pyrrolidine, piperidine, morpholine, thiamorpholine, piperazine, or N-methylpiperazine;
R^{13} is C_1–C_8 alkyl, C_2–C_8 alkenyl, C_2–C_8 alkynyl, $—CF_3$, or unsubstituted phenyl, benzyl, or 2-phenethyl;
R^{14} is H or R^{13};
R^{15} is R^3 or halogen;
R^{16} is H, C_1–C_4 alkyl, or OH;
m and m′ are independently 0–8;
n and n′ are independently 0 or 1;
p and p′ are independently 0–8;
m+n+p is 1–10 when X^2 is O, S, S(O), or $S(O)_2$;
m+n+p is 0–10 when X^2 is CR^3R^{16};
m′+n′+p′ is 1–10 when X^3 is O, S, S(O), or $S(O)_2$;
m′+n′+p′ is 0–10 when X^3 is CR^3R^{16};
r is 0 or 1 when Z^1 is HET ($—R^3$, $—R^5$);
r is 1 when Z^1 is $—CONR^3$;
r′ is 0 or 1 when Z^2 is HET($—R^3$,$—R^5$);
r′ is 1 when Z^2 is $CONR^3$;
s is 0–3;
Q^1 and Q^2 are independently $—COOR^3$, tetrazole, $—COOR^6$, $—CONHS(O)_2R^{13}$, —CN, $—CONR^{12}R^{12}$, —CHO, $—CH_2OH$, $—COCH_2OH$, or $—NHS(O)_2R^{13}$;
X^1 is O, S, $—S(O)—$, $—S(O)_2—$, $—NR^3$, or $—CR^3R^3—$;
X^2 and X^3 are independently O, S, S(O), $S(O)_2$, or CR^3R^{16};
Y is $—CR^3═CR^3—$, $—C═C—$, $—CR^3R^3—X^1—$, $—X^1—CR^3R^3—$, $—CR^3R^3—X^1—CR^3R^3—$,

C═O.

O, S, or NR^3;
Z^1 and Z^2 are independently $—CONR^3—$or $—HET(—R^3-,—R^5)—$;
HET is

substituted phenyl, benzyl, 2-phenethyl, or pyridyl means 1 or 2 substituents on the aromatic ring selected from C_1–C_6 alkyl, R^{10}, NO_2, halogen. $—COR^7$, $—COR^{10}$, SCF_3, CN, and CF_3;
and the pharmaceutically acceptable salts thereof.

6. A method of preventing the synthesis, the action, or the release of SRS-A or leukotrienes in a mammal which comprises administering to said mammal an effective amount of a compound of claim 1.



5,004,744

PYRIDAZINONES AS PESTICIDES

Joachim Weissmüller, Monheim; Klaus-Günther Tietjen, Langenfeld; Wilhelm Stendel, Wuppertal, and Ulrike Wachendorff-Neumann, Leverkusen, all of Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany

Filed Nov. 22, 1989, Ser. No. 440,544
Claims priority, application Fed. Rep. of Germany, Dec. 13, 1988, 3841850; Jul. 18, 1989, 3923659

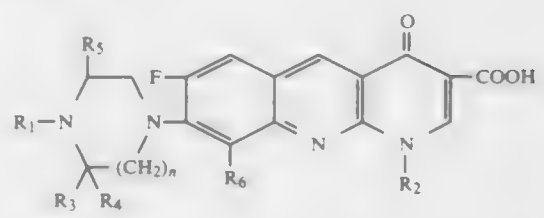
U.S. Cl. 514—247 **7 Claims**

1. A substituted pyridazinone of the formula

(I)

in which
R^1 represents straight-chain or branched alkyl having 1 to 8 carbon atoms; or represents straight-chain or branched halogenoalkyl having 1 to 6 carbon atoms and 1 to 13 identical or different halogen atoms, or represents cycloalkyl which has 3 to 7 carbon atoms or cycloalkylalkyl which has 3 to 7 carbon atoms in the cycloalkyl moiety and 1 to 4 carbon atoms in the straight-chain or branched alkyl moiety, each of which is optionally substituted on the cycloalkyl moiety by at least one substituent selected from the group consisting of alkyl having 1 to 4 carbon atoms and halogen; or represents aralkyl which has 6 to 10 carbon atoms in the aryl moiety and 1 to 4 carbon atoms in the straight-chain or branched alkyl moiety and which is optionally substituted on the aryl by at least one radical selected from the group consisting of halogen, cyano, nitro, in each case straight-chain or branched alkyl, alkoxy or alkylthio, each of which has 1 to 4 carbon atoms, or in each case straight-chain or branched halogenoalkyl, halogenoalkoxy or halogenoalkylthio, each of which has 1 to 4 carbon atoms and 1 to 9 identical or different halogen atoms,
R^2 represents fluorine, chlorine, bromine or iodine, or represents straight-chain or branched alkyl having 1 to 4 carbon atoms,
R^3 and R^4 independently of one another each represents hydrogen, or represents straight-chain or branched alkyl having 1 to 4 carbon atoms,
R^5, R^6, R^7, R^8 and R^9 independently of one another each represents hydrogen or halogen or represent in each case straight-chain or branched alkyl, alkoxy or alkylthio, each of which has 1 to 4 carbon atoms, or represent in each case straight-chain or branched halogenoalkyl, halogenoalkoxy or halogenoalkylthio, each of which has 1 to 4 carbon atoms and each of which has 1 to 9 identical or different halogen atoms,
X represents oxygen or sulphur and
Z represents a radical of the formula $—CH═CH—$, $—CH_2—O—$, —O— or —S—.

7. A method of combating pests which comprises applying thereto or to a habitat from which it is desired to exclude them a pesticidally effective amount of a compound according to claim 1.



5,004,745

BENZO[1,8]NAPHTHYRIDINE DERIVATIVES, THEIR PREPARATION AND THE COMPOSITIONS WHICH CONTAIN THEM

Michel Antoine, Paris; Michel Barreau, Montgeron; Jean-Francois Desconclois, Paris; Philippe Girard, Arpajon, and Guy Picaut, Chevilly Larue, all of France, assignors to Laboratoire Roger Bellon, Seine, France

Filed Jan. 16, 1990, Ser. No. 465,483
Claims priority, application France, Jan. 16, 1989, 89 00430; Jul. 28, 1989, 89 10218
Int. Cl.[5] **A61K** *31/495, 31/395;* **C07D** *401/14*
U.S. Cl. 514—254 **8 Claims**

1. A benzo(b)(1,8)naphthyridine compound, comprising the formula:

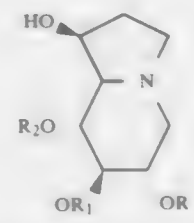
wherein,
R_1 represents a hydrogen atom or an alkyl or hydroxyalkyl radical,
R_2 represents a hydrogen atom or an alkyl, fluoroalkyl, cycloalkyl, alkoxy or alkylamino radical,
R_3 represents an alkyl radical, and
R_4 and R_5 are different and represent a hydrogen atom or an alkyl radical, or
R_3 represents a hydrogenation or an alkyl or cycloalkyl radical and
R_4 and R_5 are hydrogen atoms,
R_6 represents a hydrogen or fluorine atom and n is equal to 1 or 2,
the alkyl radicals containing 1 to 4 carbon atoms in a straight or branched chain and the cycloalkyl radicals containing 3 to 6 carbon atoms, or a pharmaceutically acceptable metal salt thereof, its addition salts with nitrogenous bases or its acid

addition salts as well as its hydrated forms and, where appropriate, its isomers and their mixtures.

8. A pharmaceutical composition comprising an effective amount of at least one compound according to claim 1, in the pure form or in combination with one or more compatible diluents or adjuvants.

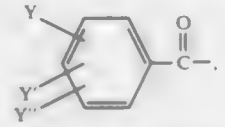
5,004,746

ANTI-RETROVIRAL CASTANOSPERMINE ESTERS



Paul S. Liu; Sai P. Sunkara, both of Cincinnati, and Terry L. Bowlin, Maineville, all of Ohio, assignors to Merrell Dow Pharmaceuticals Inc., Cincinnati, Ohio

Filed Sep. 29, 1987, Ser. No. 102,070



Int. Cl.[5] A61K *31/44*

U.S. Cl. 514—299 28 Claims

1. A method of treating a retroviral infection in a patient in need thereof which comprises administering to the patient an anti-retrovirally effective amount of a castanospermine ester of the formula:

wherein R, R_1 and R_2 are each independently hydrogen, $C_{1\text{-}10}$ alkanoyl, cyclohexanecarbonyl, $C_{1\text{-}6}$ alkoxyacetyl,

naphthalenecarbonyl optionally substituted by methyl or halogen; phenyl($C_{2\text{-}6}$ alkanoyl) wherein the phenyl is optionally substituted by methyl or halogen; cinnamoyl; pyridinecarbonyl optionally substituted by methyl or halogen; dihydropyridine carbonyl optionally substituted by C_1-C_{10} alkyl; thiophenecarbonyl optionally substituted by methyl or halogen; or furancarbonyl optionally substituted by methyl or halogen;

Y is hydrogen, $C_{1\text{-}4}$ alkyl, $C_{1\text{-}4}$ alkoxy, halogen, trifluoromethyl, $C_{1\text{-}4}$ alkylsulfonyl, $C_{1\text{-}4}$ alkylmercapto, cyano or dimethylamino; Y′ is hydrogen $C_{1\text{-}4}$ alkyl $C_{1\text{-}4}$ alkoxy, halogen or it is combined with Y to give 3,4-methylenedioxy; Y″ is hydrogen, C_{104} alkyl, $C_{1\text{-}4}$ alkoxy or halogen; with R, R_1 and R_2 being selected in such a way that at least one of them, but not more than two of them, is hydrogen; or a pharmaceutically acceptable salt thereof.

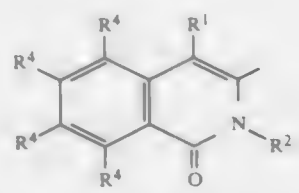
ISOQUINOLINONES

Michael J. Ashton; Andrew W. Bridge, both of Chelmsford; Robert K. Chambers, Little Waltham; Donald I. Dron, Upminster; Garry Fenton, Brentwood; Neil V. Harris, Tilbury; David J. Lythgoe, Gidea Park; Ian M. McFarlane, Dagenham; Christopher G. Newton, Chelmsford; David Riddell, Billericay; Christopher Smith, Benfleet; Keith A. J. Stuttle, Rochford, and Malcolm P. Toft, Romford, all of England, assignors to May & Baker Limited, Dagenham, England

Continuation of Ser. No. 302,389, Jan. 26, 1989, abandoned. This application Mar. 15, 1990, Ser. No. 494,956

Claims priority, application United Kingdom, Jan. 27, 1988, 8801772; Aug. 12, 1988, 8819221



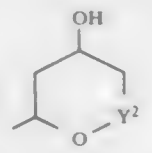
Int. Cl.[5] A61K *31/47*; C07D *405/06*

U.S. Cl. 514—309 17 Claims

1. An isoquinolinone derivative of the formula:

$$A—X—R^3 \quad (I)$$

wherein A represents a group of the formula:



(II)

wherein R^1 and R^2, which may be the same or different, each represents a cycloalkyl group containing from 3 to 8 carbon atoms, or represents a straight- or branched-chain alkyl, alkenyl or alkynyl group containing up to 6 carbon atoms, which may be substituted by up to 3 halogen atoms or by a cycloalkyl group containing from 3 to 8 carbon atoms, or represents an optionally substituted aryl or heteroaryl group, and the symbols R^4 may be the same or different and each represents a hydrogen or halogen atom or represents an optionally substituted straight- or branched-chain alkyl, alkenyl or alkynyl group containing up to 6 carbon atoms, or an optionally substituted aryl or heteroaryl group or a group of the formula R^6O— wherein R^6 represents a straight- or branched-chain alkyl group containing up to 6 carbon atoms, an aryl or an arylalkyl group containing 1 or 2 carbon atoms in the alkyl moiety, X represents an ethylene or vinylene group, R^3 represents a group of the formula:

$$—Y^1—CH_2—CH(OH)—CH_2—COOR^5 \quad (III)$$

wherein Y^1 represents a carbonyl or hydroxymethylene group or a group of the formula $—C(OR)_2—$ wherein the symbols R each represent a branched or unbranched alkyl group containing up to 6 carbon atoms or together represent a branched or unbranched alkylene chain containing 2 to 5 carbon atoms and R^5 represents a hydrogen atom or an optionally substituted alkyl group containing up to 6 carbon atoms, or R^3 represents a lactol or lactone ring of the formula:

(IV)

wherein Y^2 represents a carbonyl or hydroxymethylene group, or a pharmaceutically acceptable salt thereof when R^5 represents a hydrogen atom.

17. A pharmaceutical composition useful in the treatment of hypercholesterolaemic and hyperlipoproteinaemic states, of atherosclerosis and associated conditions and of fungal infections which comprises, as active ingredient, an effective amount of an isoquinolinone derivative of general formula I as defined in claim 1, or a pharmaceutically acceptable salt thereof, in association with a pharmaceutically acceptable carrier or coating.

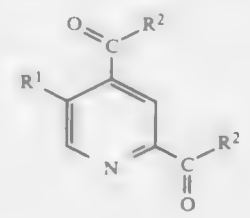
SUBSTITUTED PYRIDINE-2,4-DICARBOXYLIC ACID DERIVATIVES AND MEDICAMENTS BASED ON THESE COMPOUNDS

Ekkehard Baader, Taunus; Martin Bickel, Bad Homburg; Dietrich Brocks, Wiesbaden; Volkmar Günzler, Marburg-Cappel; Stephan Henke, Bad Soden am Taunus, and Hartmut Hanauske-Abel, Dexheim, all of Fed. Rep. of Germany, assignors to Hoechst Aktiengesellschaft, Frankfurt, Fed. Rep. of Germany



Filed Mar. 4, 1988, Ser. No. 164,406

Claims priority, application Fed. Rep. of Germany, Mar. 7, 1987, 3707429

Int. Cl.[5] A61K *31/44*; C07D *213/79*

U.S. Cl. 514—350 6 Claims

1. A substituted pyridine-2,4-dicarboxylic acid derivative of the formula I

(I)

in which:

R^1 is a substituent of the formula $—OR^3$, or $—N(R^3)_2$, in which R^3 is hydrogen or C_1-C_9-alkyl, C_1-C_9-alkenyl, C_1-C_9-alkynyl or C_1-C_9-alkylcarbonyl, the radicals thereof being optionally mono- or disubstituted by halogen, hydroxyl, nitro, cyano, amino, C_1-C_4-alkoxy, carboxyl, C_1-C_4-alkoxycarbonyl, C_1-C_4-alkylcarbonyloxy or C_1-C_4-alkyl-or C_1-C_4-dialkyl-amino, or optionally substituted by phenyl, naphthyl, thienyl, furyl, pyrrolyl or pyridyl, the aryl or heteroaryl radicals being optionally monosubstituted by halogen, carboxyl, amino, C_1-C_4-alkyl- or C_1-C_4-dialkylamino or hydroxyl, and the two substituents R^3 in $—N(R^3)_2$ being the same or different, and

R^2 denotes a substituent of the formula $—OR^4$ in which R^4 denotes hydrogen or C_1-C_{12}-alkyl, which is optionally mono- or disubstituted by halogen, hydroxyl, cyano, carboxyl, C_1-C_4-alkoxy, C_1-C_4-alkoxycarbonyl, C_1-C_4-alkylcarbonyloxy, or C_1-C_4-alkyl- or C_1-C_4-dialkylamino, or is optionally substituted by phenyl, which is optionally mono-, di- or trisubstituted by halogen, C_1-C_4-alkyl or C_1-C_4-alkoxy, the substituents being the same or different in the case of polysubstitution, or

R^4 denotes cyclohexyl, which is optionally benzo-fused, or

R^4 denotes phenyl, naphthyl, thienyl, furyl, pyrrolyl or pyridyl, the phenyl, naphthyl and pyridyl radicals being optionally mono-, di- or trisubstituted and the thienyl, furyl and pyrrolyl radicals being optionally monosubstituted by halogen, C_1-C_4-alkyl or C_1-C_4-alkoxy, the substituents being the same or different in the case of polysubstitution,

and the two radicals R^2 bonded to the pyridine skeleton via the carbonyl group in the 2- and 4- position being the same or different, and the alkyl radicals with more than 2 carbon atoms being optionally branched, or the physiologically tolerated salt, excluding 5-methoxypyridine-2,4-dicarboxylic acid-dimethyl ester.

5,004,749

CONCENTRATED AQUEOUS SOLUTION OF GLUTARALDEHYDE AND 1,2-BENZISOTHIAZOLIN-3-ONE

Russell J. Jerusik, Wilmington, Del., and Paul F. Mahon, Oldham, England, assignors to Imperial Chemical Industries plc, London, England and ICI Americas Inc., Wilmington, Del.

Filed Apr. 20, 1989, Ser. No. 340,935

Int. Cl.[5] A10N *43/80*

U.S. Cl. 514—372 14 Claims

1. A composition comprising 1,2-benzisothiazolin-3-one and water, which composition further comprises a buffering agent such that the pH of the composition is between about 3.0 and 7.0, and a sufficient amount of glutaraldehyde such that a greater amount of such 1,2-benzisothiazolin-3-one is in solution than would be present in solution if such glutaraldehyde were not present.

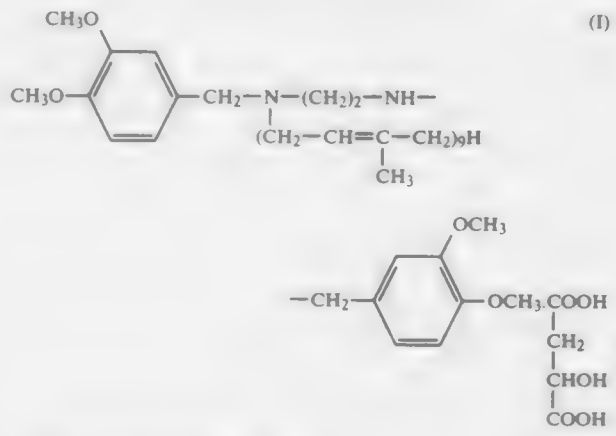
ANTI-CANCER ACTIVITY POTENTIATOR

Osamu Ogawa, Shiki; Ikuo Kishi, Ichikawa; Yoshiyuki Tahara, Tsurugashima, and Masanori Sugita, Sakado, all of Japan, assignors to Lederle (Japan) Ltd. and Nisshin Flour Milling Co., Ltd., both of Tokyo, Japan

Filed Aug. 8, 1989, Ser. No. 390,875

Claims priority, application Japan, Aug. 11, 1988, 198795



Int. Cl.[5] **A61K** *31/135*

U.S. Cl. 514—655 **8 Claims**

1. A intravenously injectable oil-in-water type micro-emulsion having an action of potentiating the activities of anti-cancer agents, said micro-emulsion comprising

fine particles of a mean diameter of not more than 1 micron of a vegetable oil or a triglyceride of a medium-chain fatty acid having 8 to 12 carbon atoms containing 0.1 to 10% (w/v) of N-solanesyl-N,N'-bis(3,4-dimethoxybenzyl)-ethylenediamine malate of formula (I) below,

(I)

an aqueous medium, and

0.05 to 25% (w/v) of physiologically acceptable phospholipid for dispersing said fine particles in said aqueous medium.

5,004,757

VIRUCIDAL LOW TOXICITY COMPOSITIONS

Raymond M. G. Boucher, Houston, Tex., assignor to Wave Energy Systems, Inc., Houston, Tex.

Filed Dec. 20, 1988, Ser. No. 286,738

Int. Cl.[5] **A61K** *31/115, 31/11*

U.S. Cl. 514—694 **16 Claims**

1. A method of deactivating viruses on an animate or inanimate surface which comprises applying to said surface an effective amount of a virucidal liquid composition comprising:

(a) a solvent consisting of water or a lower alkanol;

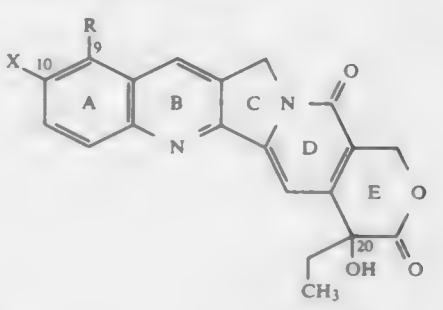
(b) a saturated monoaldehyde or dialdehyde containing from 2 to about 6 carbon atoms;

(c) an anionic surfactant with a negatively-charged hydrophilic group selected from the group consisting of alkyl sulfates, alkyl sulfonates, alcohol sulfates, alkyl aryl sulfonates, dialkyl sulfosuccinates, and mixtures thereof;

(d) buffer salts in sufficient amounts to stabilize the Ph of the virucidal solutions inside the range of from about 4 to about 7.4 wherein the ratio by weight of anionic surfactant to dialdehyde is no less than about 1 to 4 and no more than about 10 to 11.

5,004,758

WATER SOLUBLE CAMPTOTHECIN ANALOGS USEFUL FOR INHIBITING THE GROWTH OF ANIMAL TUMOR CELLS



Jeffrey C. Boehm, King of Prussia, Pa.; Sidney M. Hecht, Charlottesville, Va.; Kenneth G. Holden, Malvern, Pa.; Randall K. Johnson, Ardmore, Pa., and William D. Kingsbury, Wayne, Pa., assignors to SmithKline Beecham Corporation, Philadelphia, Pa.

Continuation-in-part of Ser. No. 127,148, Dec. 1, 1987, abandoned. This application Nov. 2, 1988, Ser. No. 266,460

Int. Cl.[5] **A61K** *31/47;* **C07D** *491/22*

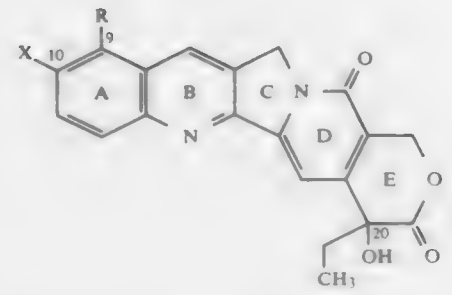
U.S. Cl. 514—283 **35 Claims**

1. A compound of the formula:

wherein:

X is hydroxy; hydrogen; $—CH_2NH_2$; or formyl;

R is hydrogen when X is CH_2NH_2 or formyl; or R is —CHO or $—CH_2R^1$ when X is hydrogen or hydroxy;



R^1 is $—O—R^2$; $—S—R^2$; $—CH_2NH_2$; cyano; $—N—R^2(R^3)$; or $—N^+—R^2(R^3)(R^4)$, provided that when R^1 is $—N^+—R^2(R^3)(R^4)$ the compound is associated with a pharmaceutically acceptable anion;

R^2, R^3 and R^4 are the same or different and are selected from H; C_{1-6} alkyl; C_{2-6} hydroxyalkyl; C_{1-6} dialkylamino-C_{2-6} alkyl; C_{1-6} alkylamino-C_{2-6} alkyl; C_{2-6} aminoalkyl or a 3–7 member unsubstituted carbocyclic ring; and

when R^1 is $—N—R^2(R^3)$, the R^2 and R^3 groups may be combined together with the nitrogen atom to which they are bonded to form a heterocyclic ring provided that such heterocyclic ring is selected from morpholino, N-methylpiperazinyl, or 4'-piperidinopiperidinyl;

or a pharmaceutically acceptable salt, hydrate or solvate thereof.

26. A method of inhibiting the growth of animal tumor cells sensitive to a compound of the formula:

wherein:

X is hydroxy; hydrogen; $—CH_2NH_2$; or formyl;

R is hydrogen when X is CH_2NH_2 or formyl; or R is —CHO or $—CH_2R^1$ when X is hydrogen or hydroxy;

R^1 is —O—R^2; —S—R^2; $—CH_2NH_2$; cyano; —N—$R^2(R^3)$; or $—N^+—R^2(R^3)(R^4)$, provided that when R^1 is $—N^+—R^2(R^3)(R^4)$ the compound is associated with a pharmaceutically acceptable anion;

R^2,R^3 and R^4 are the same or different and are selected from H; C_{1-6} alkyl C_{2-6} hydroxyalkyl; C_{1-6} dialkylamino-C_{2-6} alkyl; C_{1-6} alkylamino-C_{2-6} alkyl; C_{2-6} aminoalkyl or a 3–7 member unsubstituted carbocyclic ring; and

when R^1 is —N—$R^2(R^3)$, the R^2 and R^3 groups may be combined together with the nitrogen atom to which they are bonded to form a heterocyclic ring provided that such heterocyclic ring is selected from morpholino, N-methylpiperazinyl, or 4'-piperidinopiperidinyl;

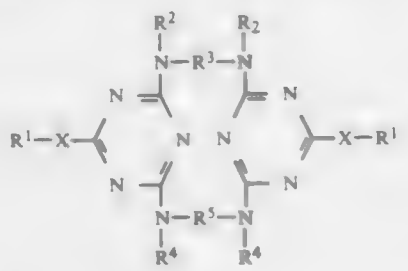
or a pharmaceutically acceptable salt, hydrate or solvate thereof, wherein such method comprises administering to an animal afflicted with said tumor cells, an effective, tumor cell growth inhibiting amount of such compound.

5,004,759

STABILISATION OF POLYPHENYLENE ETHERS WITH MACROCYCLIC POLYALKYLPIPERIDINE COMPOUNDS

Francis Mutterer, St. Louis, France, and Kurt Berger, Allschwil, Switzerland, assignors to Ciba-Geigy Corporation, Ardsley, N.Y.

Continuation of Ser. No. 12,533, Feb. 9, 1987, abandoned. This application Jun. 28, 1988, Ser. No. 213,512



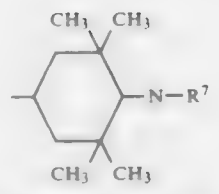
Claims priority, application Switzerland, Feb. 14, 1986, 596/86

Int. Cl.[5] C08K *5/349.2, 5/349.3*

U.S. Cl. 524—89 **6 Claims**

1. A stabilised composition comprising a polyphenylene ether with an effective light stabilizing amount of a compound of formula I

I



wherein

X is —O—, —S— or $—N(R^9)—$,

R^1 is hydrogen, C_1–C_{12}alkyl, C_2–C_4hydroxyalkyl, C_3–C_{12}alkoxyalkyl, C_3–C_{12}alkenyl, C_5–C_8cycloalkyl, phenyl, naphthyl, C_7–C_{12}alkylphenyl, C_7–C_{10}phenylalkyl or a group of formula II

II

R^2 is C_1–C_4alkyl, C_2–C_4hydroxyalkyl, C_3–C_{12}alkoxyalkyl, C_3–C_6alkenyl, C_5–C_8cycloalkyl, phenyl, naphthyl, C_7–C_{12}alkylphenyl, C_7–C_{10}phenylalkyl or a group of formula II,

R^3 is C_2–C_8alkylene, C_2–C_8azaalkylene or C_2–C_8oxaalkylene, C_6–C_8cycloalkylene, phenylene, diphenylene or xylylene,

R^4 has one of the meanings assigned to R^2,

R^5 has one of the meanings assigned to R^3,

R^6 is C_1–C_{12}alkyl, C_3–C_6alkenyl, C_2–C_4hydroxyalkyl, C_3–C_6alkoxyalkyl, C_5–C_8cycloalkyl, phenyl, naphthyl, C_7–C_{12}alkylphenyl, C_7–C_{10}phenylalkyl or a group of formula II, or R^1 and R^6, when taken together, are tetramethylene, pentamethylene or 3-oxapentamethylene, and

R^7 is hydrogen, C_1–C_4alkyl, allyl, benzyl or acetyl, with the proviso that at least one of R^1, R^2, R^4 or R^6 is a group of formula II.

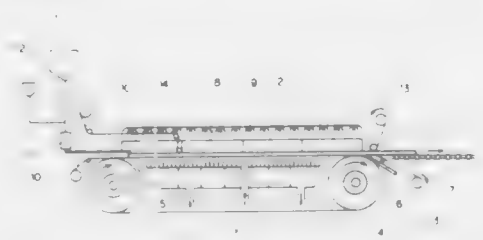
PROCESS FOR CONTINUOUSLY PREPARING ACRYLIC POLYMER GEL



Akira Yada, Kusatsu, and Shusaku Matsumoto, Kyoto, both of Japan, assignors to Dai-Ichi Kogyo Seiyaku Co., Ltd., Kyoto, Japan

Filed Jul. 25, 1988, Ser. No. 223,851

Claims priority, application Japan, Jul. 28, 1987, 62-188230

Int. Cl.[5] C08F *2/50, 20/56*

U.S. Cl. 522—3 **7 Claims**

1. A process for continuously preparing an acrylic polymer gel using a photopolymerization apparatus including a movable support and a gas tight chamber having a light permeable upper part which comprises:

(a) decreasing the dissolved oxygen in a monomer solution of at least one acrylic monomer containing a photopolymerization initiator to at most 1 mg/liter,

(b) maintaining the concentration of oxygen in the gas phase inside a gas tight chamber arranged over a moving support at not more than 1% by volume,

(c) continuously feeding a synthetic resin film onto the moving support from one end of the moving support,

(d) continuously feeding the monomer solution in the form of a thin layer onto the resin film on the moving support,

(e) irradiating the layer of the monomer solution with a light energy to initiate the polymerization and to cause the monomer solution to become substantially nonflowable,

(f) continuously feeding a synthetic resin film and bringing the resin film into contact with the upper surface of the layer of the monomer solution when the monomer solution has become substantially nonflowable,

(g) continuing the polymerization by the irradiation of light energy to produce a polymer in the form of gel, and

(h) continuously peeling off the resin films on the both sides of the produced sheet-like polymer at the other end of the moving support and continuously taking out the sheet-like polymer from the moving support.

5,004,762

RADIATION CURABLE COMPOSITIONS BASED ON 4-ACETOXYSTYRENE AND 4-HYDROXYSTYRENE HOMOPOLYMERS

Balaram Gupta, North Plainfield, N.J., assignor to Hoechst Celanese Corp., Somerville, N.J.

Filed Nov. 22, 1989, Ser. No. 441,130

The portion of the term of this patent subsequent to Oct. 4, 2005, has been disclaimed.

Int. Cl.[5] C08F *261/12, 261/02, 112/24, 120/16*

U.S. Cl. 522—121 **6 Claims**

1. A radiation curable composition comprising a blend of (A) about 30 to about 80 weight percent of a homopolymer of 4-acetoxystyrene, a homopolymer of 4-hydroxystyrene, or mixtures thereof; (B) about 20 to about 70 weight percent of a polyethylenically unsaturated radiation polymerizable compound; and (C) about 0 to about 40 weight percent of a monoethylenically unsaturated radiation polymerizable monomer, wherein the weight percents are based on the total weight of (A), (B) and (C).

5,004,763

WATER BASE ERASABLE INK COMPOSITIONS

Kiyotaka Imagawa, Osaka, Japan, assignor to Sakura Color Products Corporation, Osaka, Japan

Continuation of Ser. No. 288,578, Dec. 22, 1988, abandoned. This application Aug. 22, 1990, Ser. No. 569,764

Claims priority, application Japan, Dec. 25, 1987, 62-331021; Nov. 15, 1988, 63-288235; Nov. 15, 1988, 63-288238

Int. Cl.[5] C09D *11/10*

U.S. Cl. 523—161 **10 Claims**

1. A water base erasable ink composition consisting essentially of:

(a) water as a solvent in amounts of 50–90% by weight;

(b) a pigment dispersed in water in amounts of 1–30% by weight;

(c) an aqueous emulsion of a fatty acid ester in dry amounts of 1–20% by weight; and

(d) a water-solubilized vinyl acetate-acrylic acid copolymer which is film forming at room temperatures in amounts of 0.1–15% by weight.

5,004,764

COMPOSITION FOR VIBRATION DAMPER, PROCESS FOR MANUFACTURE THEREOF, AND VIBRATION DAMPER

Yohzoh Yamamoto; Shuichi Ishiwata, both of Ichihara; Kenji Yokoyama, and Kimio Hasegawa, both of Tokyo, all of Japan, assignors to Mitsui Petrochemical Industries, Ltd. and NEC Environment Engineering, Ltd., both of Tokyo, Japan

Filed Feb. 9, 1989, Ser. No. 308,006

Claims priority, application Japan, Feb. 12, 1988, 63-031416; Feb. 12, 1988, 63-031417; Feb. 12, 1988, 63-031418

Int. Cl.[5] C08L *63/04, 63/02*

U.S. Cl. 523—400 **11 Claims**

1. A composition for a vibration damper, which comprises:

100 parts by weight of a resin-forming component comprising (a) a compound containing an epoxy group and having an epoxy equivalent value of 50 to 2000,

and (b) a curing component comprising (i) a polyhydric phenol as a first curing compound and (ii) a second curing compound selected from the group consisting of an acid hydrazide and a urea derivative;

50 to 500 parts by weight of a scaly filler;

200 parts by weight or less of a powdery filler; and

100 parts by weight or less of a fibrous filler, wherein the amount of the hydroxyl group of the polyhydric phenol is 0.6 to 1.3 equivalents per equivalent of the epoxy group of the epoxy group-containing compound, and the amount of the second curing compound incorporated is 1 to 10 parts by weight per 100 parts by weight of the epoxy group-containing compound.

AQUEOUS DISPERSIONS OF CROSSLINKABLE SILICONES/SILICONATES

Michel Feder, Illfurth, and Jean-Marc Frances, Villeurbanne, both of France, assignors to Rhone-Poulenc Chimie, Courbevoie, France

Filed Oct. 11, 1989, Ser. No. 419,701

Claims priority, application France, Oct. 11, 1988, 88 13617

Int. Cl.[5] C08K *5/54*

U.S. Cl. 524—161 **14 Claims**

1. A composition of matter which comprises an aqueous dispersion of a silicone crosslinkable into elastomeric state by elimination of water therefrom under ambient conditions, said silicone dispersion comprising:

(A) 100 parts by weight of an oil-in-water emulsion of an α,ω-(dihydroxy)polydiorganosiloxane, stabilized with at least one anionic or nonionic surface-active agent, or admixture thereof;

(B) 0.to 15 parts by weight, calculated as the solids content, of an alkali or alkaline earth metal organosiliconate in aqueous solution; and

(C) 5 to 250 parts by weight of a nonsiliceous inorganic filler material; and said dispersion having a pH higher than 7 and a solids content of at least 40%, said aqueous dispersion being devoid of any curing catalyst.

5,004,772

ASPHALT ROOFING COMPOSITIONS ESPECIALLY ADAPTED FOR COLD APPLICATIONS

Kenneth F. Grzybowski, Temple Terrace, and Brian J. Anthony, Tampa, both of Fla., assignors to Gardner Asphalt Corporation, Tampa, Fla.

Filed Nov. 20, 1989, Ser. No. 438,846

Int. Cl.[5] C08L *9/00, 11/00, 95/00;* **C08K** *5/01*

U.S. Cl. 524—62 **3 Claims**

1. A roofing composition especially adapted for cold applications consisting essentially of:

		Parts By Weight (Based on Total Composition)
1.	asphalt having a	20–90
2.	synthetic hydrocarbon copolymer elastomer	1–30
3.	an organic hydrocarbon solvent for said asphalt and at least partially for said synthetic copolymer elastomer which is miscible with cyclohexanone	0–30
4.	cyclohexanone	4–35
5.	inert filler	0–30
6.	fiber	0–20

THERMOSETTING POLYIMIDE RESIN COMPOSITION

Jong K. Yeo; Chung S. Kim; Dong J. Lee, and Sung H. Jang, all of Chungcheongnam, Rep. of Korea, assignors to Lucky, Ltd., Seoul, Rep. of Korea

Filed Dec. 23, 1988, Ser. No. 289,308

Claims priority, application Rep. of Korea, Dec. 29, 1987, 87-15197; Dec. 31, 1987, 87-15568

Int. Cl.[5] C08K *5/24, 5/54*

U.S. Cl. 524—262 **8 Claims**

1. A thermosetting polyimide resin composition, comprising

(1) 20 to 60 parts by weight of a modified bismaleimide resin prepared by the Michael addition reaction of bismaleimides with aromatic primary diamines and aromatic secondary diamines;

(2) 40 to 80 parts by weight of an inorganic filler;

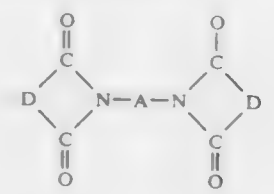
(3) 0.8 to 25 parts by weight of silicone oil; and

(4) 0.5 to 5.0 parts by weight of a mixed catalyst composed of organic peroxides and imidazole compounds.

5,004,775

POLYIMIDE RESIN LAMINATES

Larry D. Olson, Viroqua, and Jeffrey R. Kamla, West Salem, both of Wis., assignors to Allied-Signal Inc., Morris Township, Morris County, N.J.



Continuation-in-part of Ser. No. 187,158, Apr. 28, 1988, Pat. No. 4,876,325. This application Sep. 28, 1989, Ser. No. 413,883

Int. Cl.[5] C08L *79/08*

U.S. Cl. 524—371 **10 Claims**

1. A thermosetting resin composition consisting essentially of

(a) a bisimide having the formula:

where:

A comprises at least one of alkylene radicals having 1 to 20 carbon atoms, cycloalkylene radicals having 4 to 40 carbon atoms, heterocyclic radicals containing at least one of O, S, or N, phenylene or polycyclic aromatic radicals.

D is a divalent radical containing a carbon-carbon double bond

(b) a polyphenol;

(c) dicyandiamide, where the weight of (a), (b), and (c) are 80 to 98%/1 to 10%/and 0.1 to 10%, respectively, based on the total weight of (a), (b), and (c) and (d) octabromodiphenyl oxide in an effective amount up to about 5 weight percent.

5,004,776

STABILIZED CHLORINE-CONTAINING RESIN COMPOSITION

Masahiko Tadenuma, Akigawa; Tetsuhiro Miyagi, Akishima, and Tadashi Miyazawa, Sagamihara, all of Japan, assignors to Akishima Chemical Industries Co., Ltd., Tokyo, Japan

Filed Jul. 19, 1989, Ser. No. 382,484

Claims priority, application Japan, Apr. 27, 1989, 1-106068

Int. Cl.[5] C08K *11/00*

U.S. Cl. 524—377 **26 Claims**

1. A thermally stabilized chlorinecontaining resin composition comprising a chlorine-containing resin and a stabilizer consisting essentially of (a) an overbased alkaline earth metal carboxylate or phenolate complex, (b) zeolite, (c) calcium hydroxide and (d) a complex obtained by reacting hydrates of at least one metal perchlorate $Me(ClO_4)_n$ in which n is 1 or 2 selected from the group consisting of $NaClO_4$, $Mg(ClO_4)_2$, $Ca(ClO_4)_2$ and $Ba(ClO_4)_2$ with at least one compound selected from the group consisting of aliphatic dihydric and trihydric alcohols and their lower alkyl, phenyl, and benzyl monoethers at a weight ratio of 10:90 to 70:30, the complex being liquid at ordinary temperature.

26. A composition according to claim 1, wherein the component (d) of the stabilizer is a complex represented by q wherein $Me(ClO_4)_n$ is as defined in claim 1 and R is the residue of aliphatic dihydric or trihydric alcohols or their lower alkyl, phenyl or benzyl monoethers and p is an integer of 1 to 3, and q is an arbitrary number of 1–6.

1. A process for the manufacture of peptides or peptide amides, characterised in that

(a) a synthetic resin based on polystyrene which is cross-linked with from 0 to 5 mol % of divinyl benzene and wherein benzene rings of the skeletal structure are substituted by groups of the formula

(I)

in which X represents —O— or —NH— and R represents C_1-C_4-alkyl is reacted with a compound of formula W^1—AM^1—Y—H, in which Y represents —O— or —NH—, W^1 represents an N-terminal amino-protecting group and AM^1 represents the acyl radical of an amino acid sequence, consisting of from 1 of 25 amino acid residues, in which functional groups are protected or unprotected, or with a reactive functional derivative thereof, for the purpose of attaching the W^1—AM^1—residue to the —X— group of the resin,

(b) the N-terminal protecting group W^1 is removed,

(c) the freed N-terminal amino group is acylated by reaction with an acid of formula W^2—AM^2—OH, in which W^2 represents an N-terminal amino protecting group and AM^2 represents the acyl radical of an amino acid sequence, consisting of from 1 to 25 amino acid residues, in which functional groups are protected or unprotected, or with a reactive functional derivative thereof,

(d) the operation of alternate removal according to (b) and acylation according to (c) is repeated as required until the desired amino acid sequence is obtained, and

(e) the resulting peptide or peptide amide, prior to, after, or with simultaneous removal of any protecting group, is detached from the resin by acidolysis with a mild acidic agent selected from the group consisting of trifluoroacetic acid, a lower alkanecarboxylic acid, a pyridinium salt, and mixtures thereof with an inert organic diluent.

THERMOPLASTIC RESIN COMPOSITION

Kentaro Mashita; Takeshi Fujii, and Tadayuki Oomae, all of Chiba, Japan, assignors to Sumitomo Chemical Company, Ltd., Osaka, Japan

Continuation of Ser. No. 67,437, Jun. 29, 1987, abandoned, which is a continuation of Ser. No. 768,154, Aug. 22, 1985, abandoned. This application Sep. 29, 1989, Ser. No. 414,574

Claims priority, application Japan, Aug. 31, 1984, 59-183250

Int. Cl.[5] C08L *51/06, 23/14, 23/12*

U.S. Cl. 525—64 8 Claims

1. A thermoplastic resin composition consisting essentially of:

(1) 100 parts by weight of a resin composition (D) defined below, and

(2) 2 to 30 parts by weight of copolymer (C) consisting of:

(a) 99.9 to 50% by weight of ethylene and 0.1 to 50% by weight of an unsaturated epoxy compound selected from the group consisting of glycidyl acrylate, glycidyl methacrylate, glycidyl itaconate, allyl glycidyl ether, 2-methylallyl glycidyl ether and p-styryl glycidyl ether, or

(b) 99.9 to 50% by weight of ethylene, 0.1 to 50% by weight of said unsaturated epoxy compound defined above and an ethylenically unsaturated compound selected from the group consisting of vinyl acetate, methyl acrylate, ethyl acrylate, methyl methacrylate, vinyl chloride, vinylidene chloride, and isobutyl vinyl ether,

said resin composition (D) beig composed of 50 to 90 wt. % of polypropylene resin (A) which is 5-100% by weight of a grafted polymer consisting of a polypropylene and 0.05 to 20 wt. % of an unsaturated carboxylic acid or anhydride thereof, selected from the group consisting of acrylic acid, methacrylic acid, maleic acid, itaconic acid, maleic anhydride and itaconic anhydride, and

95-0% by weight of a polypropylene, and 50 to 10 wt. % of saturated polyester resin (B) composed of a dicarboxylic acid moiety, wherein at least 40 mol % of said dicarboxylic acid moiety is terephthalic acid, and a diol moiety.

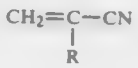
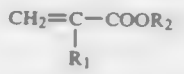
BLENDS OF HIGH NITRILE COPOLYMERS AND THERMOPLASTIC POLYMERS

Elena S. Percec, Pepper Pike, Ohio, and Doreen Y. Takigawa, Los Alamos, N. Mex., assignors to The Standard Oil Company, Cleveland, Ohio



Filed Aug. 22, 1988, Ser. No. 235,015

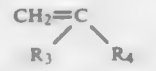
Int. Cl.[5] C08L *33/20, 51/04, 33/26, 39/04*



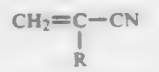
U.S. Cl. 525—77 9 Claims

1. A polymer blend comprising:

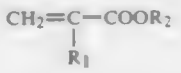
a high nitrile copolymer prepared by the polymerization of 100 parts by weight of (A) from 60 percent to 90 percent by weight of at least one nitrile having the structure



wherein R is hydrogen, a lower alkyl group having from 1 to 4 carbon atoms, or a halogen, and (B) from 10 percent to 40 percent by weight based on the combined weights of (A) and (B) of at least one member selected from the group consisting of (1) an ester having the structure



wherein R_1 is hydrogen, an alkyl group having from 1 to 6 carbon atoms, or a halogen, and R_2 is an alkyl group having



from 1 to 30 carbon atoms, (2) an alpha-olefin having the structure

wherein R_3 and R_4 are alkyl groups having from 1 to 7 carbon atoms, (3) a vinyl ether selected from the group consisting of methyl vinyl ether, ethyl vinyl ether, the propyl vinyl ethers, and the butyl vinyl ethers, (4) vinyl acetate, (5) styrene, and (6) indene, in the presence of from 0 to 40 parts by weight of (C) a rubbery polymer of a conjugated diene monomer selected from the group consisting of butadiene and isoprene and a comonomer selected from the group consisting of styrene, a monomer having the structure

wherein R has the foregoing designation, and an ester having the structure

wherein R_1 and R_2 have the foregoing respective designations, said rubbery polymer containing from 50 percent to 100 percent by weight of polymerized conjugated diene and from 0 percent to 50 percent by weight of comonomer; and

a compatible thermoplastic homopolymer or copolymer containing polar groups, consisting of the polymerization product formed from monomers selected from the group consisting of alkylacrylamides, unsaturated carboxylic acid anhydrides, vinyl pyrrolidones, heterocyclic ring compounds containing two hetero atoms, lactones and phosphorus-containing monomers that form highly crystalline polymers.

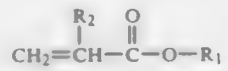
POLYMER BLENDS CONTAINING ISOCYANATE REACTING AGENTS

Gia Huynh-Ba, Hockessin, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del.

Filed Apr. 5, 1988, Ser. No. 177,663

Int. Cl.[5] C08L *23/00, 59/00, 67/02, 77/00*

U.S. Cl. 525—123 **40 Claims**



1. A composition consisting essentially of

(a) 0–95 weight percent of at least one thermoplastic polymer with a minimum number average molecular weight of 10,000 and a flexural modulus of greater than 150 kpsi, which has at least one functional group capable of reacting with an isocyanate group or which is end-capped with groups that can be removed between the melting point or glass transition temperature of the thermoplastic polymer and the decomposition point of the thermoplastic polymer to expose said at least one functional group;

(b) 100–5 weight percent of at least one thermoplastic polymer selected from the group consisting of polyesters and ethylene copolymers, wherein the thermoplastic polymer has a minimum number average molecular weight of 10,000, a flexural modulus of less than 150 kpsi, and at least one functional group capable of reacting with an isocyanate group or is end-capped with groups that can be removed between the melting point or glass transition temperature of the thermoplastic polymer and the decomposition point of the thermoplastic polymer to expose said at least one functional group, and wherein the ethylene copolymer is of the formula E/X/Y where

E is the radical formed from ethylene and E comprises 40–90 weight percent of the ethylene copolymer,

X is the radical formed from

where R_1 is an alkyl group with 2–8 carbon atoms and R_2 is a hydrogen, methyl, or ethyl group and X comprises 10–40 weight percent of the ethylene copolymer, and

Y is selected from the group consisting of glycidyl methacrylate and glycidyl acrylate and

Y comprises 0.5–20 weight percent of the ethylene copolymer,

and provided that when component (b) is present at greater than 95%, component (b) consists of at least two polymers that are incompatible with each other; and

(c) 0.3–5 weight percent, based upon the weight of (a) and (b) above, of at least one isocyanate reacting agent with functionality less than three;

provided that in a blend of component (a) with component (b), component (a) and (b) are incompatible with each other, and further provided that in all blends, there be at least 5 weight percent of component (a) or component (b) that is incompatible with at least one other polymer in the blend.

LIGHT-DIFFUSING METHACRYLIC RESIN AND PROCESS FOR PRODUCTION THEREOF

Kozo Ida, Tokyo, and Tetsuya Horiuchi, Otake, both of Japan, assignors to Mitsubishi Rayon Co., Ltd., Tokyo, Japan

Filed Nov. 28, 1988, Ser. No. 276,955

Claims priority, application Japan, Nov. 30, 1987, 62-302085

The portion of the term of this patent subsequent to Oct. 6, 2007, has been disclaimed.

Int. Cl.[5] C08F *265/04, 267/06*

U.S. Cl. 525—305 **14 Claims**

1. A light-diffusing methacrylic resin comprising a dispersion of crosslinked fine particles in a substrate polymer comprising mainly methyl methacrylate, said crosslinked fine particles being obtained by copolymerizing at least either a phenyl group containing vinyl or a phenyl group containing (meth)acrylate with a polyfunctional monomer copolymerizable therewith, and said resin being characterized in that

(1) the difference between the refractive indexes of the crosslinked fine particles and the substrate polymer is 0.02 to 0.15,

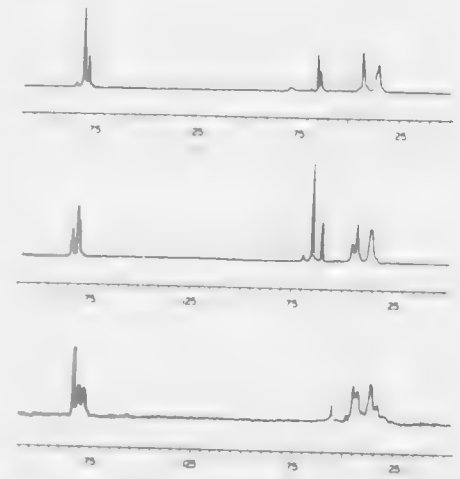
(2) the concentration by weight of the polyfunctional monomer in the crosslinked fine particles is 5 to 20%,

(3) the average particle diameter of the crosslinked fine particles in the light-diffusing methacrylic resin is 5 to 20 μ, the percentage of particles having a particle diameter of 2 μ or less being less than 1% by weight in the total amount of the crosslinked fin particles to be mixed, the percentage of particles having a particle diameter of 30 μ or more being less than 0.5% by weight of the total amount of the crosslinked fine particles to be mixed, and

(4) the concentration by weight of the crosslinked fine particles in the light-diffusing methacrylic resin is 0.08 to 10%.

5,004,786

PROCESS FOR PRODUCING SULFOMETHYLAMIDE POLYMERS



Dodd W. Fong, Naperville, and David J. Kowalski, LaGrange Park, both of Ill., assignors to Nalco Chemical Company, Naperville, Ill.

Continuation of Ser. No. 179,442, Apr. 8, 1988, abandoned, which is a continuation of Ser. No. 4,841, Jan. 12, 1987, Pat. No. 4,762,894. This application Oct. 6, 1989, Ser. No. 418,984

The portion of the term of this patent subsequent to Jun. 5, 2007, has been disclaimed.

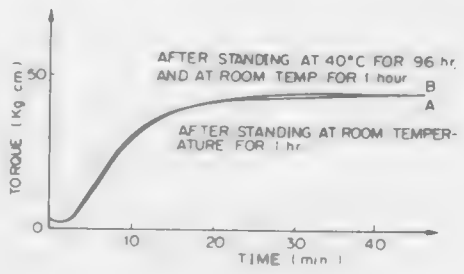
Int. Cl.[5] C08F *8/34*

U.S. Cl. 525—344 **1 Claim**

1. A method of reacting polyacrylamide with formaldehyde and bisulfite to produce a terpolymer containing sulfomethyl acrylamide/acrylamide/acrylate, wherein the initial pH of the reaction mixture is less than about 12, and wherein the polyacrylamide, formaldehyde, and bisulfite reactants are heated together and agitated, and the reaction temperature is maintained at from 110° C. to about 250° C.

5,004,787

VULCANIZABLE RUBBER COMPOSITION WITH TRIAZINE THIOLS



Tetsuo Tojo, Chiba; Keiji Okada, Ichihara; Takashi Nakahara, and Yoshiharu Kikuchi, both of Ichihara, all of Japan, assignors to Mitsui Petrochemical Industries, Ltd., Tokyo, Japan

Filed May 19, 1988, Ser. No. 195,908

Claims priority, application Japan, May 22, 1987, 62-123665

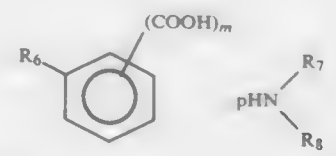
U.S. Cl. 525—332.1 **15 Claims**

1. A vulcanizable rubber composition comprising:

(a) a chlorine-containing rubber;

(b) as a vulcanization agent, a triazinethiol having the formula:

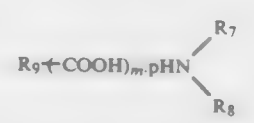


(II)

wherein R_1 represents $—NR_4R_5$, $—OR_4$ or $—SR_4$, where R_4 and R_5 independently represent a hydrogen atom, an alkyl group or an aryl group, the vulcanization agent present in a ratio of 0.001 to 0.025 mol per 100 g of the chlorine-containing rubber; and

(c) as a vulcanization aid, at least one component selected from the group consisting of:

(c-1) aromatic carboxylic acid amine salts having the formula:



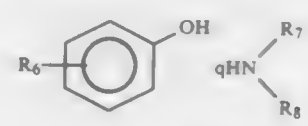
(III)

wherein m is a number of 1 to 3, p is a number of 1 to 3; m≧p;

R_6 represents a hydrogen atom, an alkyl group, a halogen, a nitro group, a cyano group or a hydroxy group;

R_7 and R_8 each represent a hydrogen atom, an alkyl or cycloalkyl group or an aryl group, and R_7 and R_8 may be bonded to each other to form a ring,

(c-2) aliphatic carboxylic acid amine salts having the formula:



(IV)

wherein m, p, R_7, and R_8 are as defined above;

R_9 represents a monovalent to trivalent hydrocarbon group or a direct bond, and

(c-3) phenolamine salts having the formula:

(V)

wherein R_6, R_7 and R_8 are as described above, and g represents a number of 1 or 2.

U.S. Cl. 528—15 10 Claims

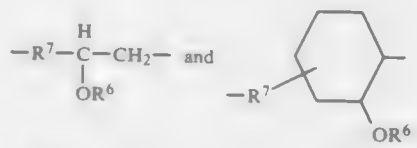
1. A room temperature-curable composition comprising

(a) 100 parts by weight of a siloxane-amide block copolymer represented by the formula (1)

(1)

wherein

Y represents a hydrolyzable group containing organosilyl group of the formula $—SiR^5_aX_{3-a}$



in which

R^5 represents a substituted or unsubstituted monovalent hydrocarbon group,

a is an integer of 0, 1 or 2, and

X is directly bonded to the silicon atom and represents a hydrolyzable group or a hydroxyl group,

R^1 represents a divalent group selected from the group consisting of

and

in which

R^6 represents a hydrogen atom, a substituted or unsubstituted monovalent hydrocarbon group, or an organosilyl group of the formula $—SiR^8_bX_{3-b}$

in which

R^8 represents a substituted or unsubstituted monovalent hydrocarbon group,

b is an integer of 0, 1. 2, or 3, and

X is the same as defined above, and

R^7 represents a substituted or unsubstituted divalent hydrocarbon group which has 1 to 8 carbon atoms and may contain an ether bond including an oxygen or sulfur atom,

R^2 represents a substituted or unsubstituted divalent hydrocarbon group,

R^3 represents a substituted or unsubstituted monovalent hydrocarbon group,

R^4 represents a substituted or unsubstituted divalent aromatic hydrocarbon group, and

m and n each independently is a number of 1 or more;

(b) 0 to 25 parts by weight of a crosslinking agent; and

(c) 0.01 to 3 parts by weight of a curing catalyst.

1. A melt-moldable aromatic polythioetherimide, comprising at least 50 mol % of a repeating unit having the formula (I):

(I)

wherein Ar represents:

wherein A represents O, CO, SO, SO_2 or C_yH_{2y}, y represents an integer of from 1 to 10; Y represents an alkyl group having form 1 to 20 carbon atoms, an aralkyl group having from 7 to 20 carbon atoms, a cycloalkyl group having from 3 to 20 carbon atoms, an aryl group having from 6 to 20 carbon atoms, a halogen atom or a nitro group; and a, b, c and d each represents 0 or an integer of from 1 to 4, with the total of the repeating unit or units being 100 mol %.

5,004,801

POLYMER OF DITHIOETHER-LINKED PHTHALONITRILE

Teddy M. Keller, Alexandria, Va., and Thomas R. Price, deceased, late of Fort Washington, Md. (by Carolyn R. Price, legal representative), assignors to The United States of America as represented by the Secretary of the Navy, Washington, D.C.

Filed Nov. 21, 1988, Ser. No. 274,216

Int. Cl.[5] C08G *83/00*

U.S. Cl. 528—360 6 Claims

1. A polymer of a phthalonitrile monomer represented by the formula:

wherein A is selected from the group consisting of an aliphatic hydrocarbon having from 2 to 30 carbon atoms, a cyclic hydrocarbon having from 4 to 30 carbon atoms, and mixtures thereof.

5,004,802

100KDA PROTEIN FROM BLOOD WHICH BINDS TO AND INHIBITS THE ACTIVITY OF PLASMINOGEN ACTIVATORS

Cornelis Kluft, Sassenheim, Netherlands, assignor to Nederlandse Centrale Organisatie Voor Toegepast-Natuurwetenschappelijk Orderzoel, The Hague, Netherlands

Filed Jul. 11, 1986, Ser. No. 884,418

Claims priority, application Netherlands, Jul. 12, 1985, 8502017

Int. Cl.[5] A61K *37/02;* C07K *15/06, 15/14*

U.S. Cl. 530—380 1 Claim

1. A protein called plasminogen activator binding protein purified so as to be free from contamination with materials that interfere with the plasminogen activator binding activity of the protein, having at least the following properties;

(a) it has a molecular mass of about 100,000 daltons as determined by gel chromatography on ULTROGEL ® ACA 44;

(b) it has an electrophoretic mobility in agarose at pH 8.6 equal to that of plasma β-globulins;

(c) it migrates to an isoelectric point of from 6.5 to 7.5;

(d) the protein binds specifically and reversibly to urokinase having a free active center;

(e) the protein binds specifically and reversibly to t-PA having a free active center and specific Kringle-2; and

(f) the protein is thermostable so that it remains its plasminogen activator binding activity when heated to up to at least 56° C.

5,004,803

PRODUCTION OF PROCOAGULANT PROTEINS

Randal J. Kaufman, Boston, and Debra Pittman, Arlington, both of Mass., assignors to Genetics Institute, Inc., Cambridge, Mass.

Filed Nov. 14, 1988, Ser. No. 270,882

Int. Cl.[5] C07K *13/00;* C12N *5/06;* C07H *15/12;* C11N *15/64*

U.S. Cl. 530—383 5 Claims

1. A DNA encoding a procoagulant-active protein characterized by a peptide sequence of human Factor VIII except within the B domain where it is characterized by peptide sequence of human Factor V.

5,004,804

METHOD AND COMPOSITION FOR PREPARATION OF FACTOR VIIIC

George Kuo; Frank Masiarz, both of San Francisco; Martha Truett, Oakland, and Pablo Valenzuela, San Francisco, all of Calif., assignors to Nordisk Gentofte, Gentofte, Denmark

Filed Jan. 12, 1984, Ser. No. 570,062

Int. Cl.[5] C07K *15/28*

U.S. Cl. 530—387 3 Claims

1. Monoclonal antibodies prepared in response to an immunogen and specifically binding to said immunogen, said immunogen consisting of a protein composition substantially free of other proteins and consisting of a complex of an 80kd and 77kd protein calcium bridged with a 92.5kd protein exhibiting a biological activity of Factor VIIIC.

5,004,805

HEPATOCYTE GROWTH FACTOR

Eiichi Gohda, 1-51-2-31 Kinkodai; Hirohito Tsubouchi, 1925 Harara-cho, both of Kagoshima-shi, Kagoshima-ken; Hiroyuki Nakayama, Kagoshima; Shuichi Hirono, Kagoshima; Kozo Takahashi, Kagoshima; Shuji Hashimoto, 6-49-3 Murasakibaru, and Yasushi Daikuhara, 4-14-10-41 Meiwa, both of Kagoshima-shi, Kagoshima-ken, all of Japan, assignors to Shuji Hashimoto; Yasushi Daikuhara; Eiichi Gohda; Hirohito Tsubouchi, all of Kagoshima and Mitsubishi Kasei Corporation, Tokyo, all of, Japan

Filed Jun. 4, 1987, Ser. No. 58,211

Claims priority, application Japan, Jul. 14, 1986, 61-166495

Int. Cl.[5] C07K *7/10, 15/00*

U.S. Cl. 530—399 3 Claims

1. A substantially purified and isolated human hepatocyte growth factor, comprising a proteinaceous substance which exhibits the following physicochemical properties and physiological activity:

(i) having a molecular weight which is estimated to be approximately 76,000–92,000 by SDS-PAGE analysis, under non-reductive conditions;

(ii) having HGF activity;

(iii) said HGF activity being inactivated by heat treatment for 10 minutes at 80° C.;

(iv) said HGF activity being lost by digestion with trypsin or with chymotrypsin; and

(v) having such a high affinity for heparin that when adsorbed by Heparin-Sepharose column, said growth factor is not eluted therefrom below 0.8M NaCl in a PBS(−) buffer at pH 7.4 containing 0.013% Triton X-100.

5,004,806

NITROCELLULOSE FILTRATION TO REMOVE PROTEINS FROM POLYNUCLEOTIDES

Viola T. Kung, Menlo Park, Calif., assignor to Molecular Devices Corporation, Palo Alto, Calif.

Filed Oct. 17, 1988, Ser. No. 258,895

Int. Cl.[5] C12N *15/10;* C07K *3/18, 3/26, 3/28*

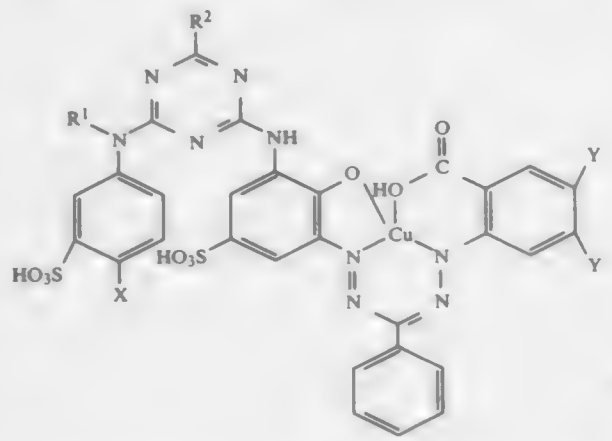
U.S. Cl. 530—415 20 Claims

1. A method for quantitatively removing microgram quantities of proteins from a solution containing picogram quantities of polydeoxyribonucleotides having at least about 300 nucleotides per strand and microgram quantities of proteins comprising filtering the solution through a nitrocellulose membrane at neutral or basic pH.

5,004,807

COPPER FORMAZAN REACTIVE DYES CONTAINING A MONOFLUOROTRIAZINE OR MONOCHLOROTRIAZINE GROUP

Klaus Pandl, Ludwigshafen, and Manfred Patsch, Wachenheim, both of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Ludwigshafen, Fed. Rep. of Germany



Filed Nov. 4, 1988, Ser. No. 267,347

Claims priority, application Fed. Rep. of Germany, Nov. 5, 1987, 3737536

Int. Cl.[5] C09B *62/095, 50/00, 67/24;* **D06P** *3/66*

U.S. Cl. 534—618 **2 Claims**

1. A copper formazan reactive dye of the formula

where X is cyano, Cl, C_1–C_4-alkyl or C_1–C_4-alkoxy, one of the two radicals Y and Z is hydrogen and the other is hydroxysulfonyl, R^1 is hydrogen and R^2 is fluorine or chlorine, or a salt thereof.

5,004,808

AMINOALKYL-DERIVATIVES OF HYDROXYALKYL-CELLULOSES

Mansour Yalpani, and Magdy M. Abdel-Malik, both of Kirkland, Canada, assignors to Domtar Inc.

Filed Jul. 7, 1988, Ser. No. 216,129

Int. Cl.[5] C08B *11/02, 11/145, 11/193, 11/20*

U.S. Cl. 536—56 **32 Claims**

1. A product comprising a water soluble, (high molecular weight) (aminoalkyl) aminoalkyl - derivative of hydroxyalkyl cellulose,

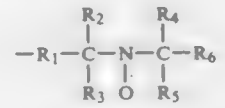
said aminoalkyl derivative being selected from the group consisting of: amide and amine linked by an alkyl having at least one carbon atom, to the oxygen of the hydroxy group of said hydroxyalkyl cellulose, thereby replacing said hydrogen of the hydroxy group of said hydroxyalkyl, said hydroxyalkyl being a side chain of said cellulose, (said molecular weight being at least 50,000 daltons) said alkyl of said aminoalkyl derivative and said alkyl of said hydroxyalkyl may contain other compatible functional groups and at least one of the hydrogen of said NH_2 of said amino being optionally substituted with alkyl and alkyl having other functional groups said other functional groups not hindering the functionality of the amino groups nor the portioning properties of said aminoalkyl derivatives.

5,004,809

NITROXIDE LABELED NUCLEOTIDES AND NITROXIDE LABELED HYBRIDIZATION PROBES

Albert M. Bobst, and Gary T. Pauley, both of Cincinnati, Ohio, assignors to University of Cincinnati, Cincinnati, Ohio

Filed Feb. 4, 1986, Ser. No. 826,064



Int. Cl.[5] C07H *17/00*

U.S. Cl. 536—29 **11 Claims**

1. A 5'-triphosphate nucleotide wherein the base is selected from the group consisting of uracil and cytosine,

said base substituted at the C-5 position of the pyrimidine ring with a carbon atom,

said carbon atom further substituted with a nitroxide containing moiety wherein said nitroxide containing moiety has the following formula:

wherein R_1 represents C_1–C_{15} alkylene;

R_2 and R_4 represent a moiety selected from the group consisting of C_1–C_{15} alkyl and C_2–C_{15} alkylene;

R_3, R_5, R_6 represents C_1–C_5 alkyl.

5,004,810

ANTIVIRAL OLIGOMERS

Kenneth G. Draper, Madison, N.J., assignor to Schering Corporation, Kenilworth, N.J.

Filed Sep. 30, 1988, Ser. No. 252,225

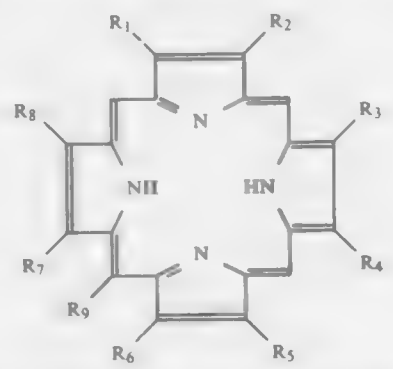
Int. Cl.[5] C07H *15/12, 47/00*

U.S. Cl. 536—27 **3 Claims**

1. An oligomer capable of hybridizing to the second translation initiation region downstream from the 5' end of messenger RNA coding for a herpes simplex virus Vmw65 transactivating protein and substantially inhibiting translation of such messenger RNA, which oligomer comprises bases substantially complementary to such translation initiation region linked by a backbone comprising ribose phosphate, deoxyribose phosphate, ribose alkylphosphonate, deoxyribose alkylphosphonate, ribose arylphosphonate or deoxyribose arylphosphonate.

5,004,811

TETRAPYRROLE AMINOCARBOXYLIC ACIDS



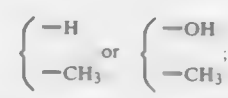
Jerry C. Bommer, Ogden, and Bruce F. Burnham, Logan, both of Utah, assignors to Nippon Petrochemicals Company, Ltd., Tokyo, Japan

Filed Dec. 24, 1987, Ser. No. 137,750

Int. Cl.[5] C07B *47/00*

U.S. Cl. 540—145 **32 Claims**

1. A fluorescent mono-, di-, tri- or tetramide of amino acid and a carboxy containing tetrapyrrole compound of the formula:

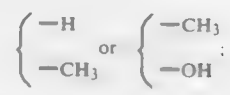


I

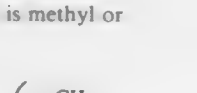
or the corresponding di- or tetrahydrotetrapyrroles, said amide

linkage being formed between the amino group of the amino acid and a carboxy-containing substituent attached to the tetrapyrrole; wherein

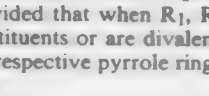
R_1 is methyl,



R_2 is H, vinyl, ethyl,

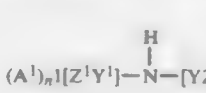


$CH_2CH_2CO_2H$, or =CHCHO;



R_3 is methyl,

R_4 is H, vinyl, ethyl,



$CH_2CH_2CO_2H$, =CHCHO, or

R_5 is methyl;

R_6 is H, $CH_2CH_2CO_2H$, $CH_2CH_2CO_2R$ or CO_2H;

R_7 is $CH_2CH_2CO_2H$, $CH_2CH_2CO_2R$ or

R_8 is methyl or

R_9 is H, COOH, CH_2COOH or methyl;

provided that when R_1, R_2, R_3, R_4, R_7 and R_8 represent two substituents or are divalent and attached to the same carbon, the respective pyrrole ring to which attached is a dihydropyrrole;

with the proviso that at least one of R_1–R_9 includes a free carboxyl group; and salts thereof; and wherein the amino acid has the formula:

II

wherein

each A^1 and A may be the same or different and are selected from the group consisting of COOH, SO_3H or OH with the proviso that said compound contains at least one COOH or SO_3H;

Z^1 and Z are independently an alkylene chain containing from 0–5 carbon atoms in the principal chain and up to a total of 8 carbon atoms;

Y^1 and Y are independently an alkylene chain containing from 0–5 carbon atoms in the principal chain and up to a total of 8 carbon atoms with the proviso that when both A and A^1 are other than SO_3H, then one of Y^1 or Y must contain at least one carbon atom in the principal chain; or

Y^1 and Y taken together with the nitrogen to which they are attached form an N-heterocycle containing from 4–9 ring carbon atoms and up to a total of about 15 carbon atoms; or

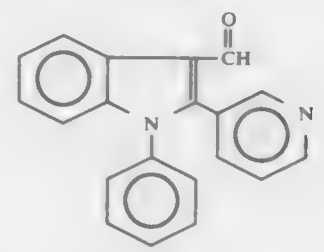
Y^1Z^1 or YZ individually may form a cycloalkyl group containing from 5 to 10 ring carbon atoms and up to a total of about 16 carbon atoms;

n^1 and n are independently 0, 1 or 2; and

$n^1+n=2$.

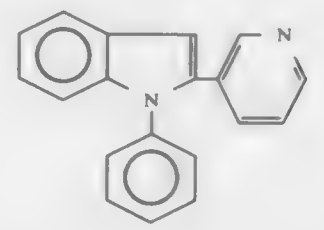
5,004,812

DIRECT POSITIVE DIMETHINE CYANINE DYES CONTAINING 1-ARYL-2-HETEROARYL INDOLE NUCLEUS



Thomas D. Weaver, Rochester, N.Y., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del.

Division of Ser. No. 304,574, Jan. 31, 1989, Pat. No. 4,927,933, Division of Ser. No. 66,552, Jun. 26, 1987, Pat. No. 4,839,271. This application Jan. 22, 1990, Ser. No. 479,484



Int. Cl.[5] C07C *401/00*

U.S. Cl. 546—201 **2 Claims**

1. 3-formyl-1-phenyl-2(3-pyridyl)-1H-indole having the formula:

2. 1-phenyl-2-(3-pyridyl-1H-indole having the formula:

METHOD FOR PREPARATION OF NEPHRITOGENOSIDE

Seiichi Shibata, 40-11, Takadanobaba 4-chome, Shinjuku-ku, Tokyo, Japan

Filed Jul. 18, 1989, Ser. No. 381,493
Claims priority, application Japan, Jul. 21, 1988, 63-180378
Int. Cl.[5] C07K *9/00*
U.S. Cl. 530—322 10 Claims

1. A method for preparation of nephritogenoside, which comprises:

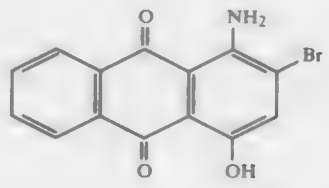
(a) treating nephritogenoside-containing animal organ tissue containing many microvessels with a nonionic surface active agent in an EDTA containing physiological salt solution;

(b) washing the precipitates thus obtained in a physiological salt solution and water in succession to remove said nonionic surface active agent, EDTA, and salt components;

(c) digesting the washed precipitates with trypsin;

(d) centrifuging the digested liquid to recover the supernatant liquid; and

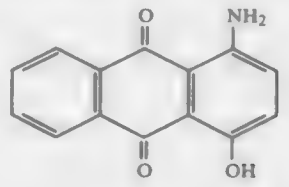
(e) subjecting the supernatant liquid to a chromatography treatment to separate nephritogenoside.



5,004,819

PREPARATION OF 1-AMINO-2-BROMO-4-HYDROXYANTHRAQUINONE

Gerhard Epple, Weisenheim, Fed. Rep. of Germany, assignor to BASF Aktiengesellschaft, Ludwigshafen, Fed. Rep. of Germany



Filed Nov. 17, 1989, Ser. No. 437,660
Claims priority, application Fed. Rep. of Germany, Dec. 14, 1988, 3841988
Int. Cl.[5] C07C *97/24*
U.S. Cl. 552—244 4 Claims

1. A process for preparing 1-amino-2-bromo-4-hydroxyanthraquinone (I)

(I)

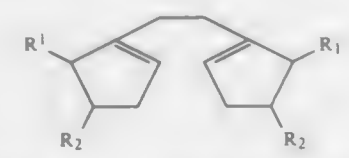
by brominating 1-amino-4-hydroxyanthraquinone (II)

(II)

in a solvent consisting essentially of an inert aprotic organic liquid.

5,004,820

PREPARATION OF CHIRAL METALLOCENE DIHALIDES



Stephen L. Buchwald, and Robert B. Grossman, both of Somerville, Mass., assignors to Massachusetts Institute of Technology, Cambridge, Mass.

Filed Aug. 7, 1989, Ser. No. 390,062
Int. Cl.[5] C07F *00/00*
U.S. Cl. 556—53 **3 Claims**

1. A process for preparing a chiral metallocene dihalide compound

comprising reacting a compound represented by the formula:

I

wherein both R_1 and R_2, which can be the same or different, represent a hydrocarbyl radical such as alkyl, alkenyl, aryl, alkylaryl, or arylalkyl radicals having from 1 to 20 carbon atoms, and R_2 also represents hydrogen, or R_1 and R_2 are joined together with the two carbon atoms of the cyclopentadienyl ring form a C_4–C_6 ring; with potassium hydride followed by condensation with MX_4 or its bis(tetrahydrofuran) adduct,

wherein X is a halogen selected from the group consisting of chlorine, bromine and iodine, and M represents zirconium or hafnium, except M is not zirconium when X is bromine, and recovering the resulting product.

5,004,821

PRODUCTION OF PHENYLARSINES

Hartmut Hofmann, Gottingen, Fed. Rep. of Germany, assignor to PPM Pure Metals GmbH, Langelsheim, Fed. Rep. of Germany

Division of Ser. No. 336,415, Apr. 11, 1989, abandoned. This application Dec. 27, 1989, Ser. No. 456,233
Claims priority, application Fed. Rep. of Germany, Apr. 13, 1988, 3812180
Int. Cl.[5] C07F *9/66*
U.S. Cl. 556—70 **6 Claims**

1. A process for the production of a phenylarsine, comprising

mixing phenylarsonic acid with substantially pure zinc in chip or tablet form in a solvent;

cooling the mixture while adding substantially pure hydrochloric acid thereto, said hydrochloric acid being added at a slow rate such that the formation of hydrogen is only slight to form the phenylarsine;

separating and drying the phenylarsine by phase separation and extraction; and

all of the foregoing steps being performed in the absence of oxygen.

LOW PRESSURE RHODIUM CATALYZED HYDROFORMYLATION OF OLEFINS

Thomas J. Devon; Gerald W. Phillips; Thomas A. Puckette; Jerome L. Stavinoha, and Jeffrey J. Vanderbilt, all of Longview, Tex., assignors to Eastman Kodak Company, Rochester, N.Y.

Division of Ser. No. 288,596, Dec. 22, 1988, Pat. No. 4,960,949. This application Feb. 23, 1990, Ser. No. 483,839
Int. Cl.[5] C07F *15/00, 9/66, 9/90, 9/94*
U.S. Cl. 556—136 **4 Claims**

1. The catalyst comprising rhodium complexed with:

(a) a ligand of the formula

wherein

Ar is selected from aromatic ring compounds having 6 up to 14 carbon atoms;

the x bonds and the y bonds are attached to adjacent carbon atoms on the ring structure;

each R, when present as a substituent, is independently selected from alkyl, alkoxy, aryloxy, aryl, aralkyl, alkaryl, alkoxyalkyl, cycloaliphatic, halogen (except Cl, Br or I on the aromatic nucleus on the carbon atom adjacent to the carbon atoms bearing the x and/or y bonds), alkanoyl, alkanoyloxy, alkoxycarbonyl, formyl, carboxylate moieties, sulfonic acid derivatives, or amino moieties;

n is a whole number in the range of 0–4 wherein Ar is phenyl; 0–6 wherein Ar is naphthyl; and 0–8 where Ar is phenanthryl or anthracenyl;

each R_1 and R_2 is independently selected from alkyl, aryl, aralkyl, alkaryl, cycloaliphatic radicals and substituted derivatives thereof;

each R_3 and R_4 is independently selected from hydrogen and the R_1 substituents;

each of the above alkyl groups or moieties is straight or branched chain of 1–20 carbons, preferably 1–8 carbons;

each aryl group contains 6–10 ring carbons;

each cycloaliphatic group contains from 4–8 ring carbons; and

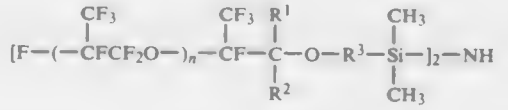
each Y is independently selected from elements P, As, Sb and Bi;

in a molar ratio of ligand/Rh of about 1/1;

(b) H in an atomic ratio of H/Rh of about 1/1; and

(c) carbon monoxide in a molar ratio of CO/Rh of about 2/1.

5,004,824



FLUORINE-CONTAINING ORGANOSILICON COMPOUND

Akio Takaoka, and Hiroshi Inomata, both of Takasaki, Japan, assignors to Shin-Etsu Chemical Co., Ltd., Tokyo, Japan

Filed Jun. 28, 1989, Ser. No. 372,528
Claims priority, application Japan, Jun. 29, 1988, 63-162172
Int. Cl.[5] C07F *7/10*
U.S. Cl. 556—412 **2 Claims**

1. A fluorine-containing organosilicon compound represented by Formula (I):

(I)

wherein n represents an integer from 1 to 4, R^1 and R^2 may be the same or different and each represent a hydrogen atom or a fluorine atom, and R^3 represents an alkylene group having 1 to 6 carbon atoms.

5,004,825

PROCESS FOR PREPARING DI(FLUOROALKYL CONTAINING GROUP-SUBSTITUTED ALKYL) PHOSPHATE SALT

Tutomu Yoshida, and Shigeharu Iida, both of Osaka, Japan, assignors to Daikin Industries Ltd., Osaka, Japan

Continuation-in-part of Ser. No. 184,673, Apr. 22, 1988, abandoned. This application Jul. 18, 1989, Ser. No. 381,324
Claims priority, application Japan, Apr. 22, 1987, 62-100868
Int. Cl.[5] C07F *9/02*
U.S. Cl. 558—131 **10 Claims**

1. A process for preparing a di(fluoroalkyl containing group-substituted alkyl) phosphate salt of the formula:

$$[R_f\text{—}A^1_k\text{—}(CH_2)_m\text{—}O]_2PO\text{—}OA^2 \quad \text{(I)}$$

which comprises hydrolyzing a mon-sec. or tert.-alkyl or alkenyl di(fluoroalkyl containing group-substituted alkyl) phosphate of the formula:

$$[R_f\text{—}A^1_k\text{—}(CH_2)_m\text{—}O]_2PO\text{—}OR \quad \text{(II)}$$

with a base selected from the group consisting of an alkali hydroxide, an ammonium hydroxide and an amine, at a temperature of 80° to 100° C., the base being used in an amount of 1 to 10 equivalents per mole of the alkyl or alkenyl di(fluoroalkyl containing group-substituted alkyl) phosphate (II), wherein

each R_f is independently a perfluoroalkyl group or ω-hydroperfluoroalkyl group having 3 to 21 carbon atoms and may be linear, branched, cyclic or a combination thereof,

each A^1 is independently a divalent group which is selected from the group consisting of —COO—, SO_2—, —O—, $—(CH_2)_3—O—$, —S—, $—(CH_2)_p—NR'—$, $—CH_2CH(OR')—$, —CO—NR′— or $—SO_2—NR'—$in which R′ is a hydrogen or an alkyl group having 1 to 5 carbon atoms, and p is a integer of 1 to 6,

A^2 is an alkaline metal or an ammonium group which may be substituted with an alkyl and/or hydroxyalkyl group,

R is a secondary or tertiary alkyl or alkenyl group having 3 to 9 carbon atoms,

k is 0 to 1, and

m is an integer of 1 to 4.

9. A process for preparing a di(fluoroalkyl containing group-substituted alkyl) phosphate salt of formula (I)

$$[R_f\text{—}A^1_k\text{—}(CH_2)_m\text{—}O]_2PO\text{—}OA^2 \quad \text{(I)}$$

which comprises:

reacting a secondary or tertiary alcohol with phosphoryl trihalide in a molar ratio of the secondary or tertiary alcohol to the phosphoryl trihalide of 0.9:1 to 1:1 at a temperature of room temperature to 70° C. to produce a phosphoryl monoalkoxide dihalide,

reacting the phosphoryl monoalkoxide dihalide with a fluoroalkyl containing group-substituted alcohol in a molar ratio of said dihalide to the fluoroalkyl containing group-substituted alcohol of 1:2 to 1.2:2 at a temperature of 80° to 100° C. to produce a mono sec.- or tert.-alkyl di(fluoroalkyl containing group-substituted alkyl) phosphate of formula (II)

$$[R_f\text{—}A^1_k\text{—}(CH_2)_m\text{—}O]_2PO\text{—}OR \quad \text{(II)}$$

and

hydrolyzing the mono-sec.- or tert.-alkyl di(fluoroalkyl containing group-substituted alkyl) phosphate of formula (II) with a base at a temperature of 80° to 100° C., the base being used in an amount of 1 to 10 equivalent per mole of the alkyl or alkenyl di(fluoroalkyl containing group-substituted alkyl) phosphate of formula (II),

wherein each R_f is independently a perfluoroalkyl group or ω-hydroperfluoroalkyl group having 3 to 21 carbon atoms

and may be linear, branched, cyclic or a combination thereof,

each A^1 is independently a divalent group which is selected from the group consisting of —COO—, SO_2—, —O—, $—(CH_2)_3—O—$, —S—, $—(CH_2)_p—NR'—$, $—CH_2C-H(OR')—$, —CO—NR'— or $—SO_2—NR'—$ in which R' is a hydrogen or an alkyl group having 1 to 5 carbon atoms, and p is a integer of 1 to 6,

A^2 is an alkaline metal or an ammonium group which may be substituted with an alkyl and/or hydroxyalkyl group,

R is a secondary or tertiary alkyl or alkenyl group having 3 to 9 carbon atoms,

k is 0 to 1, and

m is an integer of 1 to 4.

10. A process for preparing a di(fluoroalkyl containing group-substituted alkyl) phosphate salt of the formula:

$$[R_f—A^1_k—(CH_2)_m—O]_2PO—OA^2 \quad (I)$$

which comprises reacting a secondary or tertiary alcohol of the formula:

$$ROH \quad (V)$$

with a phosphoryl trihalide of the formula:

$$POX_3 \quad (VI)$$

in a molar ratio of the secondary or tertiary alcohol to the phosphoryl trihalide of 0.9:1 to 1:1 at a temperature of room temperature to 70° C. to produce a phosphoryl monoalkoxide dihalide of the formula:

$$RO—POX_2 \quad (IV)$$

and reacting the phosphoryl monoalkoxide dihalide of the formula (IV) with a fluoroalkyl containing group-substituted alcohol of the formula:

$$R_f—A^1_k—(CH_2)_m—OH \quad (III)$$

in a molar ratio of said dihalide to the fluoroalkyl containing group-substituted alcohol of 1:2 to 1.2:2 at a temperature of 80° to 100° C. to produce an alkyl ester of di(fluoroalkyl containing group-substituted alkyl) phosphate of the formula:

$$[R_f—A^1_k—(CH_2)_m—O]_2PO—OR \quad (II)$$

and then hydrolyzing the alkyl ester of di(fluoroalkyl containing group-substituted alkyl) phosphate of the formula (II) with a base selected from the group consisting of an alkali hydroxide, an ammonium hydroxide and an amine, at a temperature of 80° to 100° C., the base being used in an amount of 1 to 10 equivalent per mole of the alkyl or alkenyl di(fluoroalkyl containing group-substituted alkyl) phosphate of formula (II), wherein each R_f is independently a perfluoroalkyl group or ω-hydroperfluoroalkyl group having 3 to 21 carbon atoms,

each A^1 is independently a divalent group which is selected from the group consisting of —COO—, SO_2—, —O—, $—(CH_2)_3—O—$, —S—, $—(CH_2)_p—NR'—$, $—CH_2C-H(OR')—$, —CO—NR'— or $—SO_2—NR'—$ in which R' is a hydrogen or an alkyl group having 1 to 5 carbon atoms, and p is a integer of 1 to 6,

A^2 is an alkaline metal or an ammonium group which optionally have an alkyl and/or hydroxyalkyl substituent,

R is a secondary or tertiary alkyl or alkenyl group having 3 to 9 carbons,

each X is independently halogen,

k is 0 to 1, and

m is an integer of 1 to 4.

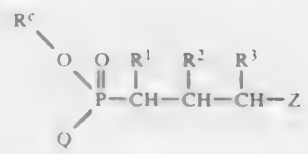
SUBSTITUTED PROPANE-PHOSPHONOUS ACID COMPOUNDS

John G. Dingwall, Pantaleon; Josef Ehrenfreund, Allschwil, both of Switzerland; Roger G. Hall, Manchester, and James Jack, Cheshire, both of England, assignors to Ciba-Geigy Corporation, Ardsley, N.Y.



Division of Ser. No. 203,851, Jun. 7, 1988, Pat. No. 4,908,465, which is a division of Ser. No. 940,836, Dec. 12, 1986, Pat. No. 4,772,738, which is a division of Ser. No. 787,300, Oct. 15, 1985, Pat. No. 4,656,298. This application Dec. 1, 1989, Ser. No. 444,466

Claims priority, application United Kingdom, Dec. 10, 1984, 8425872

Int. Cl.[5] **C07F** *9/30, 9/32*

U.S. Cl. 558—169 **1 Claim**

1. A compound having the formula II

(II)

in which one of the groups R^1, R^2 and R^3 represents hydrogen, C_1–C_8alkyl, C_3–C_6-cycloalkyl, phenyl either unsubstituted or substituted by halogen, C_1–C_4alkyl, C_1–C_4alkoxy and/or trifluoromethyl, or phenyl-C_1–C_4alkyl either unsubstituted or substituted in the phenyl moiety by halogen, C_1–C_4alkyl, C_1–C_4alkoxy and/or trifluoromethyl, and the other two are hydrogen, Q denotes a group having the formula

$$—C(C_1\text{-}C_4\text{alkyl})(OR^a)OR^b,$$

in which R^a and R^b are each C_1–C_4alkyl, R^c is C_1–C_4alkyl and Z denotes $—NH_2$, or a pharmaceutically acceptable salt thereof.

5,004,827

CATALYTIC VAPOR PHASE PROCESS FOR PRODUCING DIHYDROCARBYL CARBONATES

Gerald L. Curnutt, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich.

Continuation-in-part of Ser. No. 871,725, Jun. 6, 1986, abandoned. This application Sep. 17, 1987, Ser. No. 97,882

Int. Cl.[4] **C07C** *68/00, 69/96*

U.S. Cl. 558—277 **13 Claims**

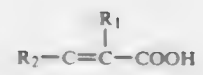
1. A process comprising contacting oxygen, carbon monoxide and an alkanol, which can be vaporized under the reaction conditions, in the vapor phase, in the presence of a heterogeneous catalyst which consists essentially of a metal halide or a mixed metal halide impregnated on activated carbon under reaction conditions sufficient to produce a dihydrocarbyl carbonate.

5,004,828

HYDROXY-FUNCTIONAL POLYESTER DILUENTS AS ADDITIVES IN COATING COMPOSITIONS

John Mathai, Chicago, Ill., assignor to The Sherwin-Williams Company, Cleveland, Ohio

Filed Apr. 27, 1987, Ser. No. 43,051



Int. Cl.[5] **C07C** *69/52*

U.S. Cl. 560—224 **2 Claims**

1. A hydroxy-functional polyester diluent having a number average molecular weight less than about 500 characterized as having an average of at least one hydroxyl group per molecule and an average of at least one polymerizable double bond per molecule derived from the reaction of:

(a) at least one triol having a molecular weight less than about 200,

(b) at least one low molecular weight unsaturated monocarboxylic acid having the formula:

wherein R_1 is either hydrogen or an alkyl group of 1 to 3 carbon atoms and R_2 is an aliphatic group of 1 to 4 carbon atoms or an aryl group, and

(c) at least one low molecular weight saturated monocarboxylic acid having the formula:

R—COOH

wherein R is hydrogen or a branched alkyl or straight chain alkyl or cyclic alkyl of 1 to 6 carbon atoms;

said triol being present in a stoichiometric amount to provide excess hydroxyl groups and said unsaturated monocarboxylic acid being present in amounts sufficient to provide at least one ethylenically unsaturated group for each molecule of triol.

METHOD OF PREPARING TRIFLUOROMETHANESULFONIC ACID ANHYDRIDE

Minoru Aramaki, Tokyo; Takashi Suenaga; Hiroaki Sakaguchi, and Takanori Hamana, both of Ube, all of Japan, assignors to Central Glass Company, Limited, Ube, Japan

Filed Apr. 9, 1990, Ser. No. 506,206

Claims priority, application Japan, Apr. 10, 1989, 1-90375

Int. Cl.[5] **B01D** *3/34;* **C07C** *303/00, 303/44*

U.S. Cl. 562—113 **17 Claims**

1. A method of preparing trifluoromethanesulfonic acid anhydride, comprising the steps of:

reacting trifluoromethanesulfonic acid with phosphorus pentaoxide and removing trifluoromethanesulfonic acid anhydride formed by the reaction by distillation while leaving a residue of the distillation;

adding an aqueous solution of phosphoric acid to the residue of said distillation so as to obtain a fluidic mixture; and

subjecting said fluidic mixture to distillation to thereby recover unreacted trifluoromethanesulfonic acid contained in said residue.

5,004,830

PROCESS FOR OXIDATION OF ALKYL AROMATIC COMPOUNDS

Chang M. Park, and Wayne P. Schammel, both of Naperville, Ill., assignors to Amoco Corporation, Chicago, Ill.

Filed Nov. 29, 1989, Ser. No. 443,556

Int. Cl.[5] **C07C** *51/215*

U.S. Cl. 562—413 **6 Claims**

1. A batch, semi-continuous or continuous liquid phase process for production of aromatic polycarboxylic acid by oxidation in at least two reactors of an alkyl aromatic hydrocarbon wherein the alkyl group of said alkyl aromatic hydrocarbon contains from 1 to 5 carbon atoms and the number of alkyl groups is from 2 to 4, in the presence of a bromine-cobalt-manganese catalyst, which process comprises:

(a) preparing in a first reactor a liquid reaction mixture containing water, an aliphatic C_2–C_6 monocarboxylic acid and said alkyl aromatic hydrocarbon, wherein water concentration is in the range of from about 0 to about 15 wt.%, wherein mole ratio of bromine to cobalt plus manganese of said catalyst is in the range of from about 0.25 to about 1.2,

(b) injecting an oxygen-containing gas into said first reactor at a rate of from about 1.5 to about 2.7 moles of oxygen per alkyl group,

(c) oxidizing in said first reactor said alkyl aromatic hydrocarbon in an exothermic reaction at a temperature of from about 200° F. to about 350° F. at a reactor pressure of from about 150 psig to about 500 psig, and oxygen partial pressure is at least 1.5 psia, to prepare mono-acids and mono-aldehydes,

(d) controlling said temperature and said pressure within said ranges by means of a liquid phase heat exchanger, wherein a portion of said liquid reaction mixture is removed from said first reactor, cooled in said heat exchanger and returned to said first reactor as a liquid,

(e) transferring a portion of first reactor liquid phase to a second oxidation reactor, wherein water concentration is in the range of from about 0 to about 20 wt.%, wherein mole ratio of bromine to cobalt plus manganese of said catalyst is in the range of from about 0.25 to about 1.2, 1

(f) injecting an oxygen-containing gas into said second reactor at a mole ratio of from about 1.5 to about 2.7 moles of oxygen per alkyl group,

(g) oxidizing said portion of first reactor liquid phase in said second oxidation reactor and in succeeding oxidation reactors necessary to complete said oxidation of said alkyl aromatic hydrocarbon at a temperature within the range of from about 275° F. to about 450° F. pressure within the range of from about 75 psig. to about 450 psig and oxygen partial pressure of at least 1.5 psia, wherein temperature and pressure in said second reactor are controlled by means of a liquid phase heat exchanger wherein a portion of the reaction mixture in said second reactor is removed from said second reactor, cooled in said heat exchanger, and returned to said second reactor as a liquid,

(h) recovering said aromatic polycarboxylic acid as product.

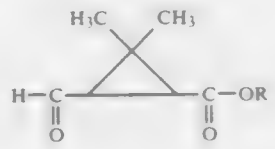
PROCESS FOR PREPARING SEMI-CARONIC ALDEHYDES

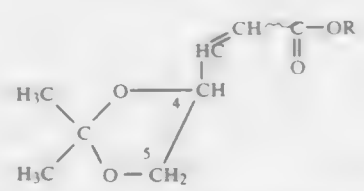
Alain Krief, Wepion, and Willy Dumont, Salet-Anhee, both of Belgium, assignors to Roussel Uclaf, Paris, France



Filed Dec. 9, 1988, Ser. No. 282,382

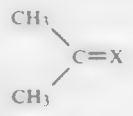
Claims priority, application France, Dec. 11, 1987, 87 17296

Int. Cl.[5] C07C *45/58*



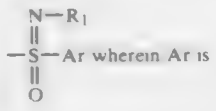
U.S. Cl. 568—486 **19 Claims**

1. A process for the preparation of compounds of the formula

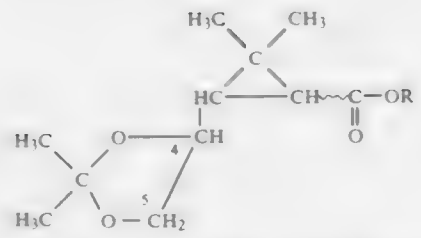


I

with cis or trans structure in racemic or optically active form wherein R is selected from the group consisting of hydrogen, alkyl of 1 to 4 carbon atoms and aryl of 6 to 12 carbon atoms comprising reacting an optically active isomer, or racemate of the formula

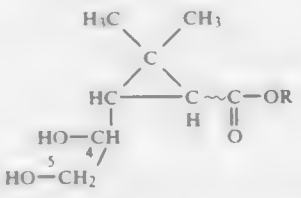


II



wherein R has the above definition and the wavy line indicates Z geometry with a gem-dimethyl cyclopropanation agent of the formula

wherein X is selected from the group consisting of $—P(Ar)_3$, $S(Ar)_2$, $Se(Ar)_2$, $—As(Ar)_2$ and



aryl and R_1 is hydrogen or alkyl of 1 to 5 carbon atoms to obtain a compound of the formula

III

wherein R has the above definition and the cyclopropane ring has the trans configuration and hydrolyzing the compound of formula III with a mineral or organic acid to obtain a compound of the formula

IV

and then cleaving the 4,5 bond under oxidizing conditions to obtain the corresponding compound of formula I.

RECOVERY OF HEXABROMOCYCLODODECANE PARTICLES

Phillip R. Beaver, Baton Rouge, La.; Peter M. DiGiacinto, Seabrook, Tex.; Donald O. Hutchinson, and Julio J. Vega, both of Baton Rouge, La., assignors to Ethyl Corporation, Richmond, Va.

Filed Dec. 27, 1989, Ser. No. 457,960

Int. Cl.^{5} C07C *23/02*

U.S. Cl. 570—186 **24 Claims**

1. A method for obtaining an improved product from a composition, said composition comprising:

(i) solid particles comprising hexabromocyclododecane;

(ii) a solvent or mixture of solvents used in the production of hexabromocyclododecane; and

(iii) one or more members selected from the group consisting essentially of dodecyl bromides, hydrogen bromide, lower alkyl bromides and bromine;

said method comprising

(1) forming an admixture of said composition and water;

(2) heating said admixture for a time and at a temperature and a pressure, which time, temperature and pressure are sufficient to remove at least a portion of said solvent from said admixture and to form agglomerates with at least a portion of said particles; and

(3) recovering from said admixture a product comprising said particles and agglomerates;

wherein said forming and said heating are effective to enhance the removal of at least a portion of said solvent and/or said one or more members so as to obtain said improved product.

5,004,848

METHOD OF ELEVATING THE MELTING POINT OF A HEXABROMOCYCLODODECANE PRODUCT

Phillip R. Beaver, Baton Rouge, La., assignor to Ethyl Corporation, Richmond, Va.

Filed Feb. 5, 1990, Ser. No. 475,384

Int. Cl.^{5} C07C *17/12*

U.S. Cl. 570—206 **17 Claims**

1. A method for elevating the melting point of hexabromocyclododecane product obtained from a reaction mass formed by admixing bromine and cyclododecatriene in a solvent system comprising the admixture of a lower alkyl alcohol and a lower alkyl halogenated hydrocarbon, said method comprising the steps of:

(1) maintaining said reaction mass

(a) at a temperature of at least about 40° C.,

(b) at a loading factor of at least about 40%, and

(c) at a weight ratio of said halogenated hydrocarbon to said alcohol of about 3/97 to about 90/10,

at least until there is formed a composition comprising first particles predominant in a first hexabromocyclododecane isomer and second particles of one or more other hexabromocyclododecane isomers, said first particles being larger in size and heavier in mass than said second particles and said first isomer having a higher melting point than each of said one or more other isomers; and

(2) processing said composition to produce said HBCD product, said processing comprises separating said first and second particles according to size or mass so as to preferentially retain said first particles in said hexabromocyclododecane product.

5,004,849

MANUFACTURE OF PERCHLOROETHYLENE AND TRICHLOROETHYLENE BY CATALYTIC OXYCHLORINATION, AND IMPROVED CATALYSTS THEREFOR

Robert P. Hirschmann; William Q. Beard, Jr., both of Wichita; Eric L. Mainz, Colwich; Earl B. Smith, Newton, all of Kans., and Barry M. Little, Castlewood, S. Dak., assignors to Vulcan Chemicals, Wichita, Kans.

Filed Dec. 15, 1989, Ser. No. 451,303

Int. Cl.^{5} C07C *17/15, 19/156*

U.S. Cl. 570—224 **5 Claims**

1. In a process for the production of trichloroethylene and perchloroethylene by catalytic oxychlorination of a C_2 hydrocarbon or a partially chlorinated derivative thereof in a reaction zone comprising a fluidized bed of microspheroidal particles of catalyst maintained at a temperature between 370° and 470° C. and a pressure between 1 and 20 atmospheres and providing a superficial reaction zone residence time of 2 to 60 seconds, the improvement which comprises using as the catalyst a catalyst composition comprising a mixture of copper chloride, potassium chloride and magnesium chloride deposited in a catalytically active amount on a microspheroidal support comprising from 90 to 99.8 percent alumina and from 0.2 to 10 percent silica and having an initial surface area X in excess of 20 and less than 100 m^2/g, (a) the ratio of copper chloride, to potassium chloride in said salt mixture being between 0.5:1 and 5.0:1, the copper chloride being calculated as copper (II) chloride and (b) the ratio of $MgCl_2$ to KCl in said salt mixture being between 0.5:1 and 2.0:1, said salt mixture being deposited on said microspheroidal support at a catalyst loading Y which is dependent on the initial surface area X of said microspheroidal support, wherein Y is calculated from the equation

$$Y \text{ (expressed in weight percent)} = (0.102X + 12.57) \pm 20\%,$$

X being a figure corresponding to the initial surface area of the support expressed in square meters per gram.

BLENDED GASOLINES

Ewert J. A. Wilson, Albany, Ky., assignor to Interstate Chemical, Inc., Jupiter, Fla.

Filed Dec. 8, 1989, Ser. No. 447,543

Int. Cl.^{5} C07C *7/20*; C10L *1/16*

U.S. Cl. 585—1 **24 Claims**

1. A process for producing gasoline, comprising the steps of:

(a) blending liquid components comprising a low-weight hydrocarbon component, a natural gasoline component, and a toluene component; and,

(b) withdrawing a vapor stream of light-weight hydrocarbons from said liquid components, whereby the vapor pressure of the resulting blended liquid product will be decreased.

5,004,851

PROCESS TO PRODUCE AROMATICS OF LOW ACID-WASH COLOR

George R. Durham, Baton Rouge, and Randy S. Hebert, Donaldsonville, both of La., assignors to The Dow Chemical Company, Midland, Mich.

Continuation of Ser. No. 98,837, Sep. 21, 1987, abandoned. This application Nov. 22, 1988, Ser. No. 275,665

Int. Cl.^{5} C07C *7/163*

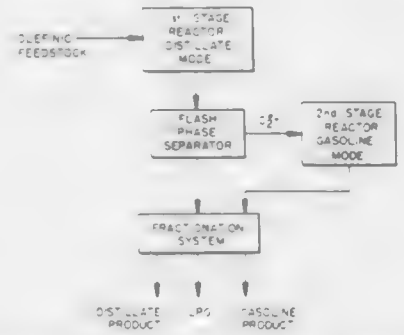
U.S. Cl. 585—260 **20 Claims**

1. A process to produce benzene or toluene with an acid wash color of two or less from a stream containing primarily benzene or toluene with impurities which include olefins, said process comprising sequentially the steps of:

(1) fractionally distilling said stream such that the purity of the benzene or toluene is increased to at least about 99 percent by weight; and

(2) passing said stream after said distillation step in a liquid phase over a hydrogenation catalyst with a sufficient amount of hydrogen and under conditions such that substantially all olefins remaining in the stream are hydrogenated to paraffins but little benzene or toluene is hydrogenated.

5,004,852



TWO-STAGE PROCESS FOR CONVERSION OF OLEFINS TO HIGH OCTANE GASOLINE

Mohsen N. Harandi, Lawrenceville, N.J., assignor to Mobil Oil Corp., Fairfax, Va.

Filed Aug. 24, 1989, Ser. No. 399,182

Int. Cl.^{5} C07C *2/12, 15/02*

U.S. Cl. 585—322 **10 Claims**

1. A continuous process for converting an olefinic feedstock containing ethylene and C_3+olefins by catalytic oligomerization and aromatization to produce high octane gasoline which comprises the steps of:

(a) contacting the olefinic feedstock in a first catalytic oligomerization zone with a crystalline zeolite oligomerization catalyst at pressure of about 240 to 2900 kPa (20 to 400 psig), temperature of about 170° to 510° C. and WHSV of about 0.1 to about 50 hr^{-1} to convert C_3+olefins to a first reaction zone effluent stream rich in oligomerized gasoline range hydrocarbons;

(b) flashing the first reaction zone effluent stream to separate said first reaction zone effluent stream into a liquid stream rich in C_5+ gasoline and a vapor stream rich in ethylene; and

(c) contacting the vapor stream from step (b) in a second catalytic reaction zone with a crystalline zeolite aromatization catalyst to pressure of about 150 to 1500 kPa (10 to 200 psig), temperature of about 510° to 820° C. (950° to 1500° F.) and WHSV of about 0.3 to 300 hr^{-1} to convert ethylene and other lower olefins to a second reactor effluent stream rich in aromatic gasoline.

5,004,853

CONTINUOUS PROCESS FOR THE PRODUCTION OF 2,6-DIMETHYLNAPHTHALENE

Paul T. Barger, Arlington Heights; Timothy J. Barder, Addison; David Y. Lin, Hinsdale, and Simon H. Hobbs, Chicago, all of Ill., assignors to UOP, Des Plaines, Ill.

Continuation-in-part of Ser. No. 174,561, Mar. 29, 1988, Pat. No. 4,835,334. This application Mar. 27, 1989, Ser. No. 328,654

The portion of the term of this patent subsequent to May 30, 2006, has been disclaimed.

Int. Cl.^{5} C07C *5/22*

U.S. Cl. 585—481 **18 Claims**

8. A continuous process for the production of 2,6-dimethylnaphthalenes including a two-stage adsorptive separation zone which comprises the steps of:

(a) passing a feed mixture of a feed stream comprising a mixture of dimethylnaphthalene isomers including 2,6, 2,7, and 1,7 isomers and the isomerization reaction zone product stream of step (e) below, into a fractionation means;

(b) separating the feed mixture in the fractionation means into hydrocarbon fraction having a boiling point higher than DMN isomers, a hydrocarbon fraction having a boiling point higher than DMN isomers, and into a first process stream fraction comprising dimethylnaphthalene isomers including 2,6, 1,7, and 2,7 isomers of dimethylnaphthalene;

(c) passing the first process stream into a two-stage adsorptive separation zone comprising a first stage employing a first stage adsorbent comprising a potassium-exchanged X-zeolite and a first stage desorbent material and operating at 2,6-dimethylnaphthalene rejective conditions to produce a first stage extract and raffinate product, with at least a portion of the raffinate product of the first stage being fed to a second stage, employing a second stage adsorbent comprising a carbon material and a second stage desorbent material and operating at 2,6-dimethylnaphthalene adsorptive conditions, thereby producing a second stage extract product containing purified 2,6-dimethylnaphthalene and a second stage raffinate stream;

(d) recovering the second stage extract stream containing purified 2,6-dimethylnaphthalene;

(e) feeding the first stage extract stream and the second stage raffinate stream into an isomerization reaction zone operating at isomerization reaction conditions including a temperature of from 300° to 450° C., a pressure of from 1 to 20 atmospheres, and a liquid hourly space velocity of from 0.5 to 5 hr^{-1} and into contact with an isomerization catalyst comprising from 10.0 to 60.0 wt. % of a crystalline aluminosilicate and from 0.1 to 5.0 wt. % of a platinum group metal component to produce an isomerization reaction zone product stream having a 2,6-dimethylnaphthalene concentration greater than that of the feed entering the isomerization reaction step; and

(f) passing the isomerization reaction zone product into the fractionation means of step (a).

5,004,854

PSEUDOCUMENE AND MESITYLENE PRODUCTION AND COPRODUCTION THEREOF WITH XYLENE

Tsoung Y. Yan, Philadelphia, Pa., assignor to Mobil Oil Corp., Fairfax, Va.

Filed Dec. 4, 1986, Ser. No. 937,845

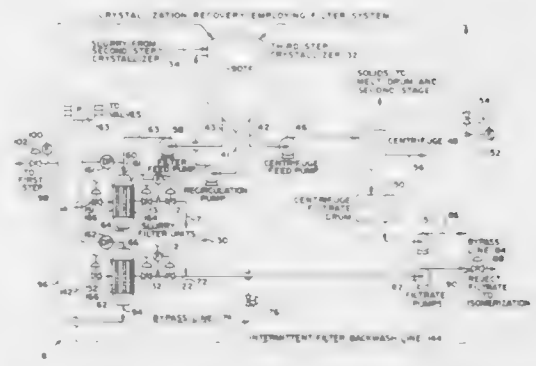
U.S. Cl. 585—741 **4 Claims**

1. A process for isomerizing isomerizable hydrocarbons to form an isomerization product which process comprises contacting the isomerizable hydrocarbons with a bed of catalyst particles comprising a refractory inorganic-oxide support, from about 1 to 15 mass % of a Friedel-Crafts metal halide and from about 0.01 to 2 mass % on an elemental basis of a surface-layer platinum-group metal component, wherein the average concentration of platinum-group metal component on a 100-micron surface layer of the catalyst particles is at least 1.5 times the average magnitude of the concentration of platinum-group metal component in the central core of the catalyst particles.

5,004,860



FILTER SYSTEM

John S. Hansen, League City, and William A. Waranius, Texas City, both of Tex., assignors to Amoco Corporation, Chicago, Ill.

Filed Jul. 28, 1986, Ser. No. 890,127

Int. Cl.[5] C07C *7/14*

U.S. Cl. 585—812 **32 Claims**

1. In a method for extracting high purity solid para-xylene crystals from a mother liquor feed slurry of mixed xylenes in liquid and crystal form in a separation unit of the type which includes a crystallization stage where the mother liquor slurry is cooled in at least one crystallizer to crystallize liquid para-xylene into solid crystals, an isomerization stage where xylenes, such as ortho-xylene and meta-xylene, are reacted over a catalyst bed to convert these xylenes into para-xylene, and a distillation stage where the mixed xylenes are separated form the impurities, the improvement comprising the steps of: withdrawing a portion of the liquid-crystal slurry from the crystallizer and passing the withdrawn portion of the liquid-crystal slurry to a filter system located outside of the aforesaid crystallizer, while at the same time withdrawing a portion of the liquid-crystal slurry from the crystallizer and supplying same to a centrifuge where solid crystal para-xylene is extracted from the liquid-crystal slurry; where, in such filter system, the aforesaid withdrawn portion of the liquid-crystal slurry is separated to form an essentially crystal-free liquid filtrate and a higher crystal concentrate liquid-crystal slurry where the essentially crystal-free liquid filtrate separated from the aforesaid withdrawn portion of the liquid-crystal slurry in the filter system is supplied to an isomerization stage thereby to increase the amount of solid para-xylene crystals extracted from the centrifuge over time and the higher crystal concentration liquid-crystal slurry separated from the aforesaid withdrawn portion of the liquid-crystal slurry in the filter system is either recycled to the crystallizer or passed to the centrifuge.

18. In an apparatus for extracting high purity solid para-xylene crystals from a mother liquor feed slurry of mixed xylenes in liquid and crystal form including a separation unit of the type which includes a crystallization stage where the mother liquor slurry is cooled in at least one crystallizer to crystallize liquid para-xylene into solid crystals, an isomerization stage where xylenes, such as ortho-xylene and meta-xylene, are reacted over a catalyst bed to convert these xylenes into para-xylene, and a distillation stage where the mixed xylenes are separated from the impurities, the improvement comprising a filter system located outside of the aforesaid crystallizer; means for withdrawing a portion of the liquid-crystal slurry from said crystallizer and passing the withdrawn portion of the liquid-crystal slurry to said filter system wherein the withdrawn portion of the liquid-crystal slurry is separated to form an essentially crystal-free liquid filtrate and a higher crystal concentration liquid-crystal slurry; a centrifuge; means for withdrawing a portion of the liquid-crystal slurry from said crystallizer and supplying same to said centrifuge where solid crystal para-xylene is extracted from the liquid-crystal slurry;

and means for supplying essentially crystal-free liquid filtrate separated from the aforesaid withdrawn portion of the liquid-crystal slurry in said filter system to said isomerization stage thereby to increase the amount of solid para-xylene crystals extracted from said centrifuge over time, and means for passing the higher crystal concentration liquid-crystal slurry separated from the aforesaid withdrawn portion of the liquid-crystal slurry in the filter system to either the crystallizer or the centrifuge.

5,004,861

PROCESS FOR PERVAPORIZATION USING MEMBRANE SEPARATING MEANS

Mordechai Pasternak, Spring Valley; Craig R. Bartels, and John Reale, Jr., both of Wappingers Falls, all of N.Y., assignors to Texaco Inc., White Plains, N.Y.

Filed Jul. 5, 1988, Ser. No. 214,987

The portion of the term of this patent subsequent to Jan. 17, 2006, has been disclaimed.

Int. Cl.[5] **C07C** *7/144;* **B01D** *13/00*

U.S. Cl. 585—818 **9 Claims**

1. The method of separating water from a charge aqueous mixture of hydrocarbon and organic oxygenate which comprises

maintaining a non-porous membrane separating layer of (i) a blend of polyvinyl alcohol and a polyacrylic acid or consisting of (ii) cast polyvinyl alcohol which has been cross-linked with an aliphatic polyaldehyde containing at least three carbon atoms including those in said aldehyde groups;

maintaining a pressure drop across said non-porous separating layer;

passing a charge water-containing solution of hydrocarbon and organic oxygenate into contact with the high pressure side of said non-porous separating layer whereby at least a portion of said water in said charge aqueous mixture and a lesser portion of hydrocarbon and organic oxygenate pass by pervaporation through said non-porous separating layer as a lean mixture containing more water and less hydrocarbon and organic oxygenate than are present in said charge aqueous mixture and said charge aqueous mixture is converted to a rich liquid containing less water and more hydrocarbon and organic oxygenate than are present in said charge aqueous mixture;

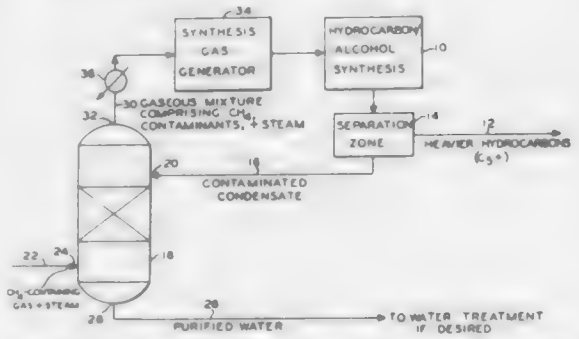
recovering from the low pressure side of said non-porous separating layer said lean mixture containing more water and less hydrocarbon and organic oxygenate than are present in said charge aqueous mixture, said lean mixture being recovered in vapor phase at a pressure below the vapor pressure thereof; and

recovering from the high pressure side of said non-porous separating layer said rich liquid containing a lower water content and a higher hydrocarbon and organic oxygenate content than are present in said charge aqueous mixture.

5,004,862

PROCESS FOR RECYCLING AND PURIFYING CONDENSATE FROM A HYDROCARBON OR ALCOHOL SYNTHESIS PROCESS

Henry W. Hildinger, R.D. 1 Box D21 Cora La., Chester, N.J. 07930, and Edwin D. Carlson, 63 Castlewood Trail, Sparta, N.J. 07871



Filed Jun. 27, 1988, Ser. No. 211,745

Int. Cl.[5] **C07C** *7/00*

U.S. Cl. 585—867 **6 Claims**

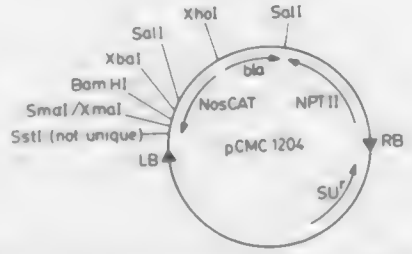
1. A process for purifying a condensate stream from a hydrocarbon synthesis or alcohol synthesis process which comprises:

(a) contacting the condensate with a hot gaseous mixture comprising methane and steam to strip contaminants from the condensate, said contaminants comprising lower molecular weight hydrocarbons and oxygenates;

(b) recovering a gaseous stream comprising the contaminants and the gaseous mixture; and

(c) separately recovering purified water.

5,004,863



GENETIC ENGINEERING OF COTTON PLANTS AND LINES

Paul F. Umbeck, Madison, Wis., assignor to Agracetus, Middleton, Wis.

Filed Dec. 3, 1986, Ser. No. 937,384

Int. Cl.[5] **C12N** *15/00;* **A01H** *5/00, 5/10*

U.S. Cl. 800—205 **16 Claims**

1. A method of of introducing genes into cotton plants and plant lines comprising the steps of:

exposing hypocotyl tissue of immature cotton plants to a culture of transformation competent non-oncogenic *Agrobacterium tumefaciens* harboring a Ti plasmid having a T-DNA region including both a foreign chimeric gene and a selection agent resistance gene, both genes including appropriate regulatory sequences so as to be expressed in the cells of cotton plants;

culturing the exposed tissue in the presence of a selection agent for which the resistance gene encodes for resistance so as to select for plant cells transformed with the T-DNA region;

inducing somatic embryo formation in the exposed tissue in culture; and

regenerating the somatic embryos into whole cotton plants.

5,004,864

DOMINANT AMYLOSE-EXTENDER MUTANT OF MAIZE

Donald S. Robertson, and Philip S. Stinard, both of Ames, Iowa, assignors to Iowa State University Research Foundation, Inc., Ames, Iowa

Filed Nov. 28, 1988, Ser. No. 276,882

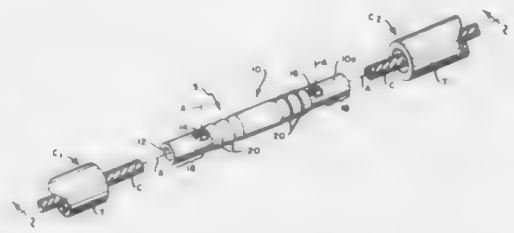
Int. Cl.[5] **A01H** *5/00;* **C12N** *15/00*

U.S. Cl. 800—235 **11 Claims**

1. High amylose starch maize seeds containing at the *amylose-extender* (ae) locus at least one dominant mutant allele Ae-5180.

ELECTRICAL

5,004,865



SPLICING DEVICE FOR FLUID-COOLED ELECTRIC CABLES

Theodore A. Krupnicki, 565 Adams Rd., Webster, N.Y. 14580

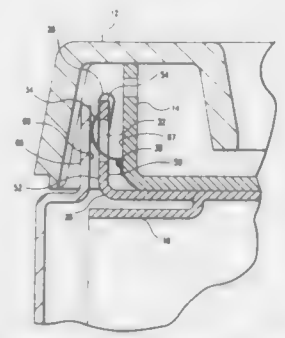
Filed Oct. 10, 1989, Ser. No. 418,499

Int. Cl.[5] **H01B** *7/34*

U.S. Cl. 174—15.7 **5 Claims**

5. Apparatus for splicing together two lengths of fluid-cooled electric cable, said apparatus comprising an electrically conductive tubular member defined by an endless wall encircling an axis, said wall having a pair of apertures formed therein, said apertures being spaced inwardly from the respective ends of said member, the distal ends of said tubular member being adapted to be crimped closed by a crimping tool, said holes being located to be tilted relative to said axis after said ends have been crimped closed.

5,004,866



SELF-CONTAINED GROUNDING STRIP

Kevin K. Cooke, Delray Beach; John R. Dewitt, Boca Raton; Paul J. Galinis, Boynton Beach, and Walter B. Koteff, Boca Raton, all of Fla., assignors to International Business Machines Corp., Armonk, N.Y.

Filed Oct. 27, 1989, Ser. No. 428,140

Int. Cl.[5] **H05K** *9/00*

U.S. Cl. 174—35 GC **10 Claims**

1 Apparatus for electromagnetically shielding electronic equipment comprising:

first and second spaced apart housing members and means defining a gap there between;

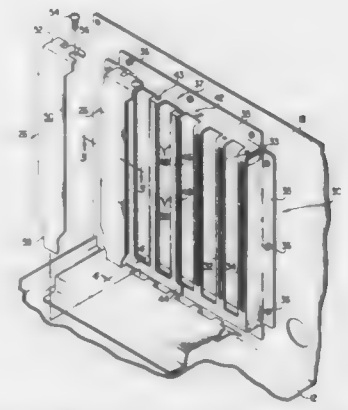
an interposer between said means defining said gap;

a spring member on said interposer and having portions thereof facing and extending towards said means defining said gap;

and a cover member for embracing said means defining said gap, and cam means associated with said cover member to effect closure of said gap to bias said first and second housing members against said spring member.

5,004,867

PERSONAL COMPUTER EXPANSION SLOT SEAL AND METHOD



Thomas R. Mast, Austin, Tex., assignor to Compuadd Corporation, Dallas, Tex.

Continuation of Ser. No. 270,266, Nov. 14, 1988, Pat. No. 4,873,395. This application May 25, 1989, Ser. No. 356,689

The portion of the term of this patent subsequent to Oct. 24, 2006, has been disclaimed.

Int. Cl.[5] **H05K** *9/00*

U.S. Cl. 174—35 GC **7 Claims**

1. An apparatus for retarding the escape of radio frequency from an electronic circuit chassis having four walls, said apparatus comprising:

at least one expansion slot for receiving additional electronic circuits, said expansion slot having edges defining a slot opening and adaptable to be affixed to one wall of said chassis;

a slot cover attached to said expansion slot and substantially overlying said slot opening;

sealing means disposed along the edges of said slot opening and between said expansion slot and said slot cover for sealing said slot opening and retarding the escape of radio frequency from said chassis; and

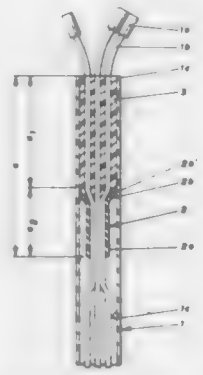
a spring-loaded retainer attachable to a chassis wall and engaging the base of said slot cover for forcing said slot cover against said sealing means and said expansion slot.

5,004,868

SEALING ARRANGEMENT FOR AN ELECTRICAL CABLE

Aydin Singor, Balve, Fed. Rep. of Germany, assignor to Leopold Kostal GmbH & Co. KG, Ludenscheid, Fed. Rep. of Germany

Filed Apr. 6, 1990, Ser. No. 505,891



Claims priority, application Fed. Rep. of Germany, Apr. 7, 1989, 3911285

Int. Cl.[5] **H02G** *15/013*

U.S. Cl. 174—76 **3 Claims**

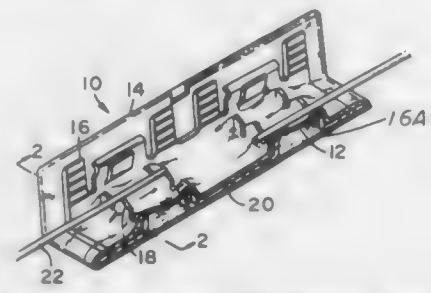
1. In combination with an electrical cable, a sealing arrangement comprising: an insulating hose (1*c*) having one or more insulated electrical conductors (1*b*) within the electrical cable, the end portions of said conductors protruding from said insulating hose by a length determined by connections to be made; a pourable sealing compound (3) for sealing said insulating hose at at least one end thereof; and a presealing element (2) located in said insulating hose, said presealing element comprising an elastic sheath (2) which encloses all the individual conductors (1*b*) at a predetermined location (a2), said sheath having a tubular portion (2*a*) which presses said conductors

(1*b*) closely together and a funnel-shaped portion (2*b*) joined with said tubular portion (2*a*), the outer edge (2*b'*) of said

funnel-shaped portion (2*b*) fitting tightly against the inside wall of 1*c'*) of the insulating hose (1*c*).

5,004,869

ELECTRICAL CONNECTOR CONTAINING ADIPIC ACID POLYESTER SEALANT COMPOSITION



Francis F. Koblitz; Thomas M. O'Shea, both of York; Beverly A. Stoner, Glen Rock, and Joseph J. Yula, York, all of Pa., assignors to AMP, Incorporated, Harrisburg, Pa.

Continuation-in-part of Ser. No. 767,566, Aug. 20, 1985, Pat. No. 4,714,801, which is a continuation of Ser. No. 620,411, Jun. 14, 1984, abandoned. This application Dec. 21, 1987, Ser. No. 136,143

The portion of the term of this patent subsequent to Dec. 22, 2004, has been disclaimed.

Int. Cl.[5] H01R *4/20*

U.S. Cl. 174—84 C **20 Claims**

1. A moisture-proof electrical connector for sealingly connecting transmission means therein comprising

(a) a connector body having a receiving means for accepting and receiving a transmission means; and

(b) a sealant composition disposed along or adjacent to the receiving means, said sealant composition comprising:

(i) polymeric adipic acid polyester in an amount at least about 50% by weight of the composition;

(ii) silica thickening agent dispersed in said polymer;

(iii) organofunctional coupling agent; and

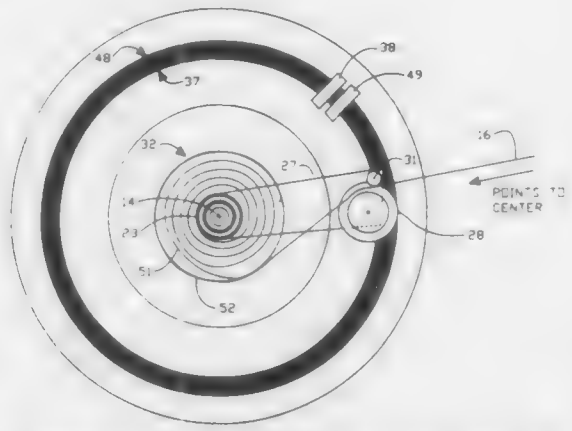
(iv) polyfunctional bridging agent, said silica thickening agent and said coupling and said bridging agents being present in amounts sufficient to cause gelation of said composition.

5,004,870

POLAR CO-ORDINATE DIGITIZER

John J. Osborn, 2960 Paradise Dr., Tiburon, Calif. 94950

Filed Apr. 11, 1990, Ser. No. 508,248



Int. Cl.[5] G08C *21/00*

U.S. Cl. 178—18 **7 Claims**

1. A polar co-ordinate digitizer for digitizing angle and length parameters of a planar form being traced by a stylus using a relatively fixed base support at the origin axis of the polar co-ordinate system of the digitizer, the system comprising a cord connected to the stylus extensible from the base support for providing said length parameter and a cord guide through which said cord extends and is pivoted substantially at said origin to provide said angle parameter, the improvement comprising:

angle detecting means including a first disk affixed for rotation with a shaft means which is mounted for rotation at said origin axis, the disk having an annular periphery with a first bar-type pattern, and pulley means rotatable with said disk which bears against said cord and serves as said cord guide, angular movement of said cord rotating said cord guide and associated first disk an angle proportional to said cord angle;

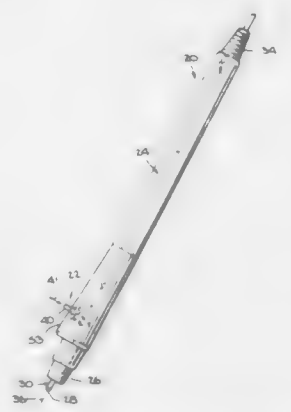
a fixed bar pattern superimposed on said first bar-type pattern, the relationship between the moving bars of said

annular periphery and said fixed bar pattern being indicative of rotation of said first disk whereby said angle parameter is determined;

means for sensing the extended length of said cord, including a drum on which said cord is wrapped, mounted for rotation on said shaft means and rotatable with respect to said shaft means and including spring biasing means connected between said drum and said shaft means for restraining extension of said cord from said drum and tending to move said shaft in a rotary direction to bias said pulley means against said cord, said cord sensing means including a second disk fixed for rotation with said drum and having an annular periphery with a second bartype pattern; and

a relatively fixed bar pattern superimposed on said second bar-type pattern, the relationship between the moving bars of said annular periphery and said fixed bar pattern being indicative of rotation of said second disk whereby said length parameter is determined.

5,004,871



DIGITIZER STYLUS HAVING SIDE SWITCH

Alexander M. Purcell, Guilford, Conn., assignor to Summagraphics Corporation, Seymour, Conn.

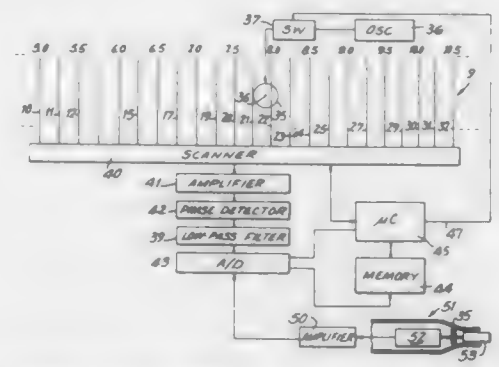
Filed Nov. 13, 1989, Ser. No. 436,196

Int. Cl.[5] G08L *21/00*

U.S. Cl. 178—18 **27 Claims**

1. A stylus comprising an elongated housing and a device responsive to pressure or force applied thereto transversely of said housing to provide an output related to the magnitude of such applied pressure or force.

5,004,872



DIGITIZER TABLET WITH PRESSURE STYLUS

Daniel G. Lasley, Newtown, Conn., assignor to Summagraphics Corporation, Seymour, Conn.

Filed Nov. 14, 1989, Ser. No. 437,018

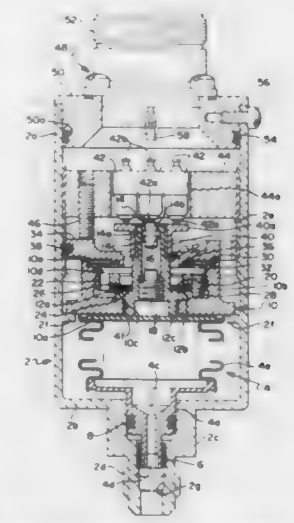
Int. Cl.[5] G08C *21/00*

U.S. Cl. 178—18 **22 Claims**

1. In a digitizer tablet comprising an electrode array, a pointing device whose position is to be located with respect to the array and whose applied pressure is to be determined with respect to the tablet, and means for energizing the array and tablet to generate position and pressure signals representative, respectively, of the pointing device position and pressure, said pointing device having a linear transducer for converting applied pointing device pressure into electrical signals linearly related to the applied pressure, the improvement comprising:

(a) means for processing the transducer electrical signals to convert their linear relation to pointing device pressure to a substantially logarithmic relation.

5,004,873



PLURAL SET POINT PRESSURE RESPONSIVE SWITCHING APPARATUS UTILIZING A SINGLE PRESSURE SENSING DRIVER ELEMENT

Robert H. Schnut, Carmel, N.Y., assignor to Eaton Corporation, Cleveland, Ohio

Filed Sep. 20, 1989, Ser. No. 410,174

Int. Cl.[5] H01H *35/32*

U.S. Cl. 200—83 P **24 Claims**

1. A plural set point pressure switch comprising:

a pressure responsive driving element;

an actuator driven by said driving element;

a plurality of electric switches operated by said actuator;

a plurality of force responsive means blocking movement of said actuator and respectively sequentially unblocking said actuator for driven movement at respective predetermined pressure values;

a plurality of stop means respectively associated with said plurality of force responsive means, said stop means respectively sequentially arresting said driven movement of said actuator at respective increments of travel wherein said actuator operates a respective switch in each said increment of travel;

a plurality of separate adjustment means each individually respectively associated with said plurality of force responsive means and said plurality of stop means for adjustibly applying an individual initial force to each respective said force responsive means.

5,004,874

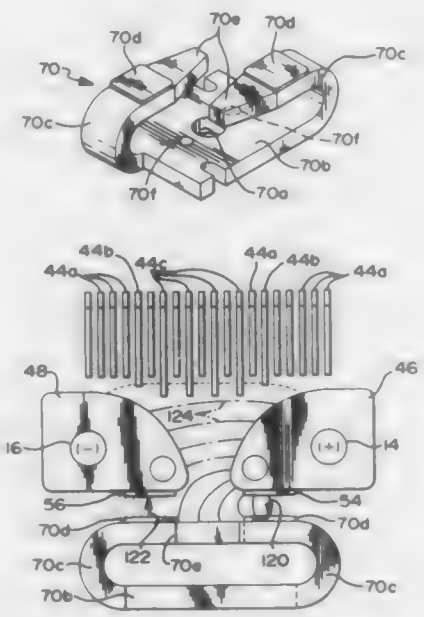
DIRECT CURRENT SWITCHING APPARATUS

Peter J. Theisen, West Bend; Daniel A. Wycklendt, Milwaukee; Mark A. Juds, New Berlin, and Peter K. Moldovan, Cascade, all of Wis., assignors to Eaton Corporation, Cleveland, Ohio

Filed Nov. 13, 1989, Ser. No. 435,228

Int. Cl.[5] H01H *33/04, 33/18*

U.S. Cl. 200—144 R **27 Claims**



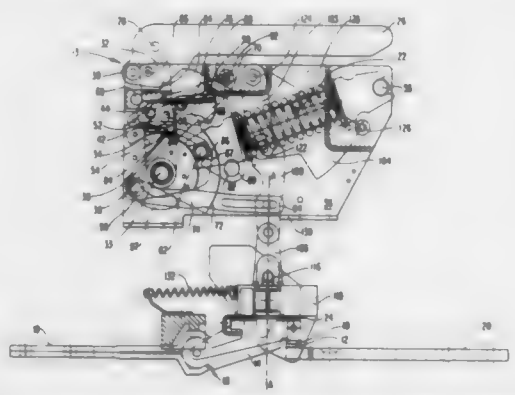
1. Direct current switching apparatus comprising:

a pair of arc extinguishing chambers each comprising a spaced pair of fixed conductors, respective conductors of one said chamber conductively connected to respective corresponding conductors of an other said chamber and to respective power terminals of said apparatus;

a first stationary contact conductively mounted on one of said conductors in said one chamber and a second stationary contact conductively mounted on an opposite one of said conductors in said other chamber; and

a movable contact extending within each said chamber movable into and out of bridging engagement with said first and second stationary contacts, said movable contact

establishing first and second arcs between said movable contact and said first and second stationary contacts, respectively, upon movement out of bridging engagement therewith, said first arc transferring from said movable



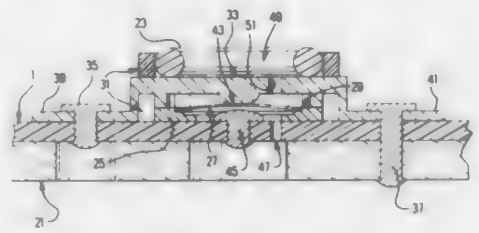
contact to an opposite said conductor in said one chamber establishing a current path comprising said first arc directly between said respective spaced pair of conductors, eliminating said second arc.

5,004,875

STORED ENERGY CONTACT OPERATING MECHANISM

G. Lawrence Moody; David A. Leone, both of Lawrenceville, and Mark E. Bell, Atlanta, all of Ga., assignors to Siemens Energy & Automation, Inc., Alpharetta, Ga.

Filed Oct. 11, 1988, Ser. No. 255,[illegible]
Int. Cl.[5] H01H *5/00*
U.S. Cl. 200—400 12 Claims



1. A circuit breaker that permits selective compression of a spring, comprising:
a support structure;
a first contact and a second contact for carrying current, the contacts being adapted to be opened and closed;
means for storing energy including:
a rotatable member being rotatable in a first direction about and supported by a first shaft supported by the support structure;
a second shaft supported by the rotatable member such that the second shaft is substantially parallel to the first shaft and offset from the first shaft;
a third shaft supported by the support structure such that the third shaft is substantially parallel to the first shaft and offset from the first shaft;
a fourth shaft supported by the rotatable member such that the fourth shaft is substantially parallel to the first shaft and offset from the first shaft;
a latch member rotatable about the third shaft, the latch member defining a first surface for resting upon the second shaft, the first surface defining a latch opening for engaging the second shaft;
the spring being coupled to the support structure and the second shaft, such that the spring is compressed to store energy when the rotatable member is rotated in the first direction, and the second shaft is engaged by the latch opening in response to the spring being compressed a predetermined distance;
a first stop latch which restricts the latch members from rotating such that the latch opening maintains engagement with the second shaft;
means for rotating the rotatable member in the first direction; and
means for opening and closing the contacts, wherein the means is coupled to the fourth shaft such that energy stored in the compressed spring can be utilized to close the contacts.

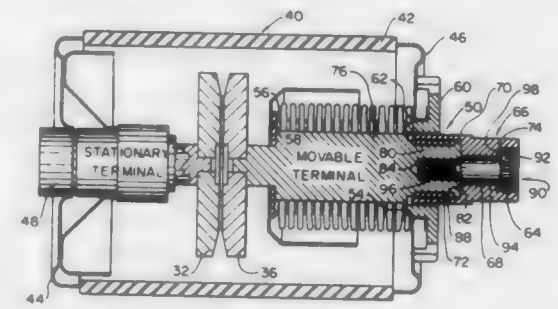
5,004,876

PRESSURE RESPONSIVE SWITCH PARTICULARLY ADAPTABLE FOR OPERATION AS A NORMALLY OPEN OR A NORMALLY CLOSED SWITCH

Dale R. Sogge, Randolph, Mass.; Edward F. O'Brien, Providence, and David A. Czarn, Cumberland, both of R.I., assignors to Texas Instruments Incorporated, Dallas, Tex.

Filed Dec. 20, 1988, Ser. No. 286,726
Int. Cl.[5] H01H *35/34*
U.S. Cl. 200—83 P 14 Claims

1. A pressure responsive switch, which comprises:
(a) an upper contact assembly comprising a first electrically insulating body having a first hollow central region and a first electrically conducting member having a depending contact ember extending into said first hollow central region;
(b) a lower contact assembly comprising a second electrically insulating body having a second hollow central region and a second electrically conducting member having an upwardly extending contact member extending into said second hollow region; and
(c) a pressure responsive snap acting member responsive to predetermined pressure thereagainst to switch from one of an upwardly extending and a downwardly extending condition to the other of said conditions and a third electrically conducting member, said snap acting member and said third member being sandwiched between said upper and lower contact assemblies, said third member including an aperture with at least one of said contact members received therein and electrically insulated from said other contact member, said snap acting member being positioned over said aperture in said third member and between said depending and upwardly extending contact members, at least one of said first and second electrically



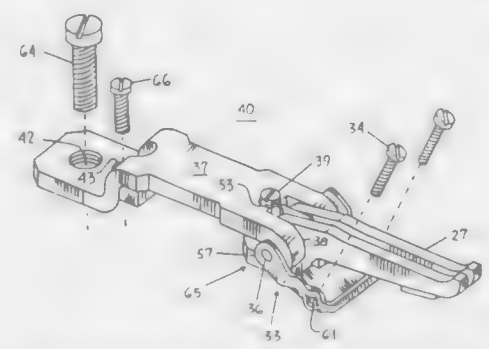
conducting members extending internally and externally of its respective insulating body.

5,004,877

VACUUM INTERRUPTER

Simon Yin, Fremont, Calif., assignor to Square D Company, Palatine, Ill.

Filed Oct. 3, 1988, Ser. No. 252,679
Int. Cl.[5] H01H *33/66*
U.S. Cl. 200—144 B 28 Claims



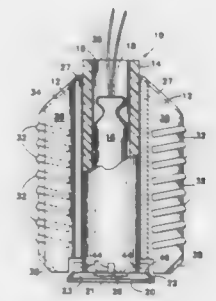
1. A vacuum interrupter, comprising:
a cylindrical envelope;
an endcap hermetically sealed at each circumferential edge of said cylindrical envelope;
a stationary terminal rigidly mounted in a central portion of one endcap; and
a movable terminal mounted for axial movement along its central longitudinal axis in a central position of an opposite endcap, said movable terminal comprising a rotatable external portion in electrical contact with a non-rotatable internal portion, said rotatable external portion being fixed relative to said non-rotatable internal portion along said central longitudinal axis when said external portion rotates relative to said internal portion.

5,004,878

MOLDED CASE CIRCUIT BREAKER MOVABLE CONTACT ARM ARRANGEMENT

Raymond K. Seymour, Plainville; Marshall B. Hart, Middletown; Gary D. Magnon, Bristol; Michael C. von Kannewurff, West Willington, and Dennis J. Doughty, Plainville, all of Conn., assignors to General Electric Company, New York, N.Y.

Filed Mar. 30, 1989, Ser. No. 330,521
Int. Cl.[5] H01H *33/02*
U.S. Cl. 200—144 R 10 Claims



1. A current limiting circuit interrupter comprising:
a molded plastic case and cover;
a movable contact arm support within said case having load terminal screw receiving means formed at one end and movable contact arm attachment means formed at an opposite end thereof;
a movable contact arm supported within said movable contact arm attachment means and arranged for driving a movable contact out of electric connection with a fixed contact upon occurrence of an intense overcurrent condition through said contacts; and
a shunt clip attached to said movable contact arm support and abutting said movable contact arm to thereby maintain electric connection between said movable contact arm support and said movable contact arm when said movable contact is driven out of electric connection with said fixed contact.

5,004,879

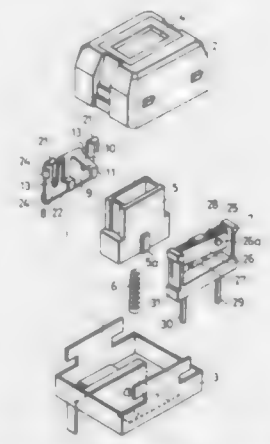
SWITCH HOUSING WITH RESILIENT RETAINERS

Everett A. Bernhardt, Oregon City, and Robert C. Winters, Lake Oswego, both of Oreg., assignors to Sentrol, Inc., Portland, Oreg.

Filed Dec. 7, 1989, Ser. No. 447,536
Int. Cl.[5] H01H *9/02*
U.S. Cl. 200—295 21 Claims

1. A switch housing for insertion into a cavity comprising:
(a) hollow body means for holding a switch, said hollow body means having a cylindrical surface and being free from openings in said cylindrical surface;
(b) a wing of resilient material extending from said cylindrical surface of said hollow body means and formed integrally therewith, said wing being resiliently movable with respect thereto between a position in which said wing extends away from said hollow body means and a position in which said wing is located alongside said body means; and
(c) means for biasing said wing to exert pressure outwardly away from said body means against an interior surface of said cavity for retaining said housing in said cavity.

5,004,880



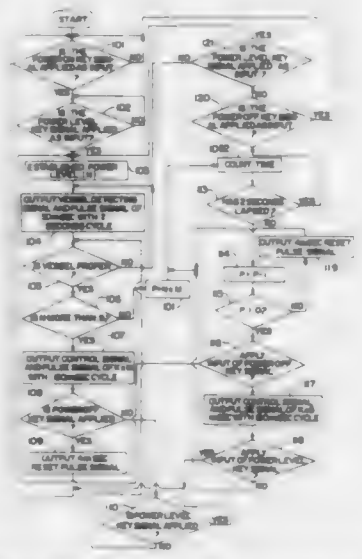
CLICK-TYPE PUSH BUTTON SWITCH WITH IMPROVED LEAF SPRING

Yoshirou Koutaka, Iwaki, Japan, assignor to Alps Electric Co., Ltd., Tokyo, Japan

Continuation of Ser. No. 348,616, May 5, 1989, abandoned. This application Jul. 20, 1990, Ser. No. 560,509
Claims priority, application Japan, Jul. 25, 1988, 63-97345[U]
Int. Cl.[5] H01H *13/02*
U.S. Cl. 200—521 1 Claim

1. In a push button switch including a casing unit composed of
a first casing and a second casing,
a switch device provided in said casing unit,
a stem slidably supported by said casing unit for switching on and off said switch device,
biasing means for normally elastically biasing said stem in such a direction as to restore an initial condition of said stem,
and a clicking leaf spring adapted to abut against said stem for giving a click feeling to an operator upon depression of said stem;
an improvement wherein said clicking leaf spring comprises:

a base portion having opposite ends abutting against opposed inner surfaces of said first casing and said second casing and thereby being held between said first casing and said second casing, said base portion further having at least two curved portions formed at opposite side edges adapted to elastically abut against the inner surface of said first casing such that said base portion may be fixedly positioned in said first casing with respect to a lateral direction.



and a spring portion split from said base portion by a pair of slits having closed ends, the straight-line distance between said spring portion being bent such that said spring portion is removed from both said first casing and said second casing, thereby allowing said spring portion to bend at said spring fulcrum, thus increasing the effective length of said spring portion.

5,004,881

METHOD AND CIRCUIT FOR CONTROLLING POWER LEVEL IN THE ELECTROMAGNETIC INDUCTION COOKER

Min Ki Lee, Changwon, Rep. of Korea, assignor to Goldstar Co., Ltd., Seoul, Rep. of Korea

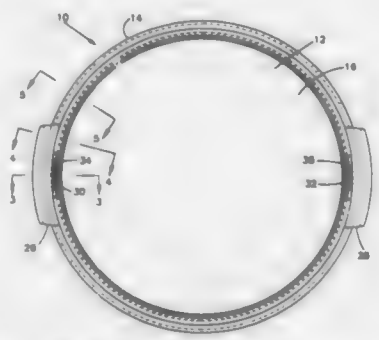
Filed Nov. 22, 1989, Ser. No. 440,264
Int. Cl.[5] H05B *6/06*
U.S. Cl. 219—10.77 **4 Claims**

1. A method of controlling a power level of an EI cooker by turning a power transistor off and on to alternate a direction of current flowing in a working coil, the power transistor being turned on and off according to pulse signals received from a central processing unit, comprising the steps of:

(a) establishing a power level for the EI cooker;

(b) determining if the established power level is greater than or equal to a predetermined power level;

(c) controlling a pulse width of the pulse signals from the central processing unit by multiplying a variable (K) with the established power level repeatedly when said step (b) determines that the established power level is greater than or equal to the predetermined power level; and



(d) controlling a duty cycle of the pulse signals from the central processing unit by multiplying variables (M) with the established power level thereby generating pulse signals with a certain duty cycle according to the multiplication of variables (M) with the established power level when said step (b) determines that the established power level is less than the predetermined power level.

5,004,882

MICROWAVABLE METAL BAKING PAN WITH INSULATING GIRDLE

John R. Nottingham; John W. Spirk, Jr., both of Moreland Hills, and Paul E. Brokaw, Euclid, all of Ohio, assignors to G & S Metal Products Company, Inc., Cleveland, Ohio

Filed Sep. 13, 1989, Ser. No. 406,687
Int. Cl.[5] H05B *6/80*
U.S. Cl. 219—10.55 E **8 Claims**

1. A cooking utensil for use inside microwave or conventional ovens having side walls, said utensil comprising:

a metal vessel having a lip encircling its mouth; and

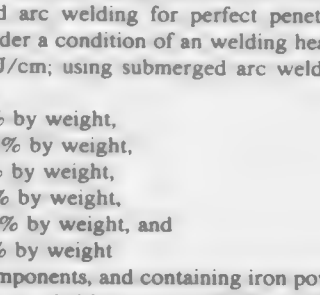
a girdle of a both electrically and thermally insulating material, said girdle encircling and fastened to said lip, whereby spacing of said vessel from the sides of said oven is provided about the entire lip, wherein said girdle includes:

a shoulder receiving said lip; and

a rib retaining said lip against said shoulder, whereby said girdle is snap-fit attached to said vessel.

5,004,883

METHOD OF FABRICATING PLURAL SHAPED PARTS FROM A WORKPIECE



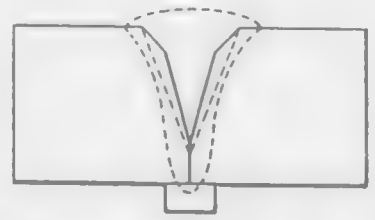
Andrew F. Brown, and Peter B. Webber, both of Whittier, Calif., assignors to Calcor Space Facility, Inc., Whittier, Calif.

Filed Oct. 4, 1989, Ser. No. 416,961
Int. Cl.[5] B23H *7/06, 9/00*
U.S. Cl. 219—69.12 **15 Claims**

1. In a method of forming separate parts from a single workpiece, the steps of:

(1) cutting said workpiece in the direction of a first axis of the workpiece and along interrupted lines in a plane normal to said first workpiece axis conforming substantially to certain part outlines in such a way that the workpiece sections between the cuts remain integrally joined to the remainder of the workpiece, and

(2) thereafter cutting said workpiece in the direction of a second axis normal to said first workpiece axis and along lines in a plane normal to said second workpiece axis conforming substantially to certain other part outlines in such a way that the cuts made in this cutting step (2) intersect all of the cuts made in cutting step (1) so as to



form separate shaped pieces separated from one another and from the remainder of the workpiece and having outlines when viewed in certain mutually perpendicular directions conforming substantially to said certain part outlines, respectively.

METHOD OF SUBMERGED ARC WELDING A THICK STEEL PLATE WITH LARGE HEAT INPUT AND SUBMERGED ARC WELDING FLUX

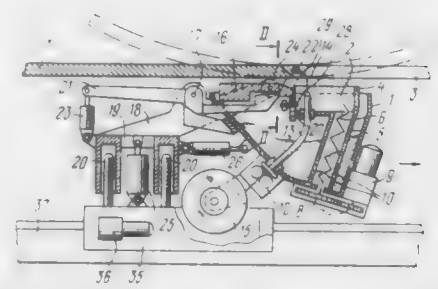
Shuichi Sakaguchi; Tadamasa Yamaguchi, and Itaru Yamashita, all of Chiba, Japan, assignors to Kawasaki Steel Corporation, Kobe, Japan

Filed Dec. 22, 1989, Ser. No. 454,920
Claims priority, application Japan, Dec. 28, 1988, 329458
Int. Cl.[5] B23K *9/18*
U.S. Cl. 219—73 **3 Claims**

1. A method of arc welding of thick steel plates with a large heat input and flux for submerged arc welding which comprises:

forming a groove having a multi-angle shape which has at least two different angular inclinations when a single side submerged arc welding for perfect penetration is conducted under a condition of an welding heat input of 100 to 1000 kJ/cm; using submerged arc welding flux composed by

SiO_2: 5 to 28% by weight,
MgO: 15 to 35% by weight,
CaO: 5 to 15% by weight,
CaF_2: 2 to 20% by weight,
Al_2O_3: 5 to 15% by weight, and
TiO_2: 2 to 10% by weight



as the main components, and containing iron powder by 30 % by weight or less and either or both of Si and Mn in the metallic form by 10 % by weight, said submerged arc welding flux having a particles size distribution arranged such that the proportion of the particles which have a size finer than 36 mesh is 20 % by weight or less and the proportion of the particles which have a size 14 mesh or finer but 36 mesh or rougher is 60 % by weight or more; and conducting said welding.

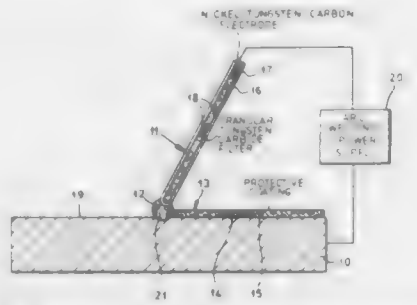
METHOD OF APPLYING WEAR-RESISTANT LAYER AND CONSUMABLE ELECTRODE FOR CARRYING OUT THE METHOD

Dieter Born, Ratingen; Peter Knauf, Mettmann, and Hans-Joachim Retelsdorf, Zirndorf, all of Fed. Rep. of Germany, assignors to Durum Verschleissschutz GmbH, Krefeld, Fed. Rep. of Germany

Filed May 18, 1990, Ser. No. 526,230
Claims priority, application Fed. Rep. of Germany, May 20, 1989, 3916559; Mar. 14, 1990, 4008091
Int. Cl.[5] B23K *9/04*
U.S. Cl. 219—76.14 **10 Claims**



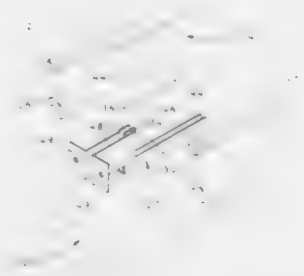
1. A process for applying a wear-resistant layer to an electrically conductive surface, comprising the steps of:

(a) juxtaposing with said surface a consumable rod-shaped electrode comprised of a nickel tube and, within said tube, a filling consisting of:

50 to 40 percent by weight nickel,
45 to 55 percent by weight tungsten,

0.1 to 1.5 percent by weight boron,
3 to 4 percent by weight carbon, and
0 to 2 percent by weight silicon,
the sum of carbon, boron and silicon being substantially 5 percent by weight, and including a fluxing agent and tungsten carbide particles in said filling of a grain size of 0.3 to 2.0 mm in said tube, the compositions of said nickel tube and said filling making up 100% of said layer;

(b) depositing said layer on said substrate by arc welding deposition from said rod-shaped electrode so that said



layer is formed as a nickel-alloy matrix containing tungsten carbide grains as inclusions; and

(c) controlling arc welding parameters of said arc welding deposition so that a voltage of 22 to 26 volts is applied across said rod-shaped electrode and said substrate and a current of 70 to 150 amperes passes between said rod-shaped electrode and said substrate, and such that there is practically no solubilization of said tungsten carbide grains in said nickel-allow matrix during the arc welding deposition.

5,004,887
HEATING APPARATUS HAVING CURIE EFFECT HEATER

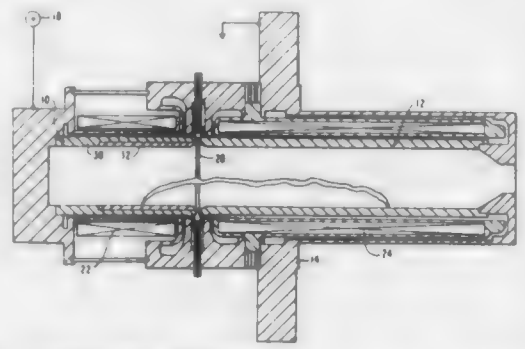
Michael J. McKee, New Cumberland; William D. Miknis; Joseph M. Pawlikowski, both of Lancaster, and William E. Zelko, Dauphin, all of Pa., assignors to AMP Incorporated, Harrisburg, Pa.

Filed Jul. 24, 1989, Ser. No. 384,331
Int. Cl.[5] B23K *1/00*
U.S. Cl. 219—85.16 **19 Claims**

15. A soldering apparatus for soldering an array of first coplanar conductors, such as the conductors in a flat cable, to an array of second conductors, such as spaced-apart terminal pads on a substrate, the apparatus comprising a work holder for holding the first and second conductors adjacent to each other and in registry, a heater bar assembly which is mounted on a fixture means and is normally spaced from the work holder, the fixture means having a heater bar assembly moving means for moving the heater bar assembly to the work holder thereby to bring the heater bar assembly into engagement with the conductors on the work holder, the apparatus being characterized in that:

the heater bar assembly comprises an insulating support member and a bi-metallic self-regulating Curie effect heater, the support member having a supporting edge and two major surfaces extending from the supporting edge,

the heater having a non-magnetic layer having a relatively high conductivity and a magnetic layer having a relatively low conductivity, the heater having opposite ends and having heater terminals at the ends, the heater being folded, end to end, on a fold line which is substantially mid-way between the ends so that the heater terminals are adjacent to each other, the folded heater comprising two substantially parallel aligned sections which extend from the heater terminals to the fold, the two sections having their non-magnetic surfaces opposed to, and proximate to, each other and having their magnetic surfaces remote from each other and facing in opposite directions, the heater having insulating material between the opposed non-magnetic surfaces,



the heater being secured to the support member with the supporting edge against the magnetic material of one of the folded sections, with the supporting edge extending from the terminals to the fold, and with the magnetic material of the other folded section facing away from the support member whereby,

upon placement of the first and second conductors in the work holder, moving the heater bar assembly towards the work holder and positioning the supporting edge adjacent to the conductors so that the magnetic material of the other folded section is against the conductors, and passing a high frequency current through the heater, the first and second conductors will be soldered to each other.

5,004,888
PLASMA TORCH WITH EXTENDED LIFE ELECTRODES

Charles B. Wolf, Irwin; Shyam V. Dighe, North Huntingdon; Paul E. Martin, West Mifflin; Raymond F. Taylor, Jr., Penn Township, and William J. Melilli, Belle Vernon, all of Pa., assignors to Westinghouse Electric Corp., Pittsburgh, Pa.

Filed Dec. 21, 1989, Ser. No. 454,495
Int. Cl.[5] B23K *9/00*
U.S. Cl. 219—121.520 **20 Claims**

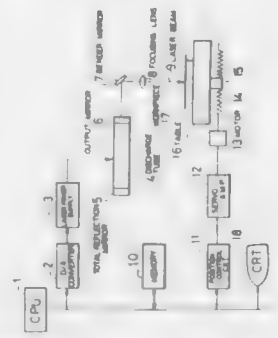
1. A plasma torch comprising:

first and second tubular electrodes arranged substantially colinearly along an axis with adjacent ends defining a gap therebetween;

means for initiating an arc across said gap;

means for supplying a gas to be heated through said gap into space within said tubular electrodes and causing the arc to extend to respective arcing portions of said electrodes' inner surfaces that are less than the entire extent of said inner surfaces;

means for rotating the arc so it moves circumferentially about said electrodes' surfaces and heats gas therebetween;



one of said electrodes being open to allow heated gas to exit the torch;

at least one of said first and second electrodes comprising a shell consisting principally of a first conductive metal and said arcing portion consisting principally of a conductive metal that is more durable than said first conductive metal under the arcing conditions of the heated gas located on an inner surface of said shell.

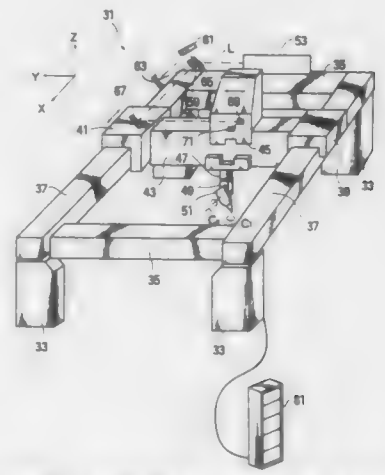
METHOD OF EVALUATING QUALITY OF A LASER BEAM IN A LASER PROCESSING MACHINE

Gnian C. Lim, Auburn Hills, Mich., assignor to Amada Company, Limited, Japan

Filed Feb. 20, 1990, Ser. No. 481,514
Int. Cl.[5] B23K *26/00*
U.S. Cl. 219—121.83 **7 Claims**

1. A method of evaluating quality of a laser beam in a laser processing machine which comprises a frame, and the laser processing head supported on the frame free to move in the X-, Y-, and Z-axis directions and free to rotate about a vertical axis and a horizontal axis, the method comprising the steps of:

(a) mounting a dynamical laser beam analyzer on the frame of the laser processing machine;



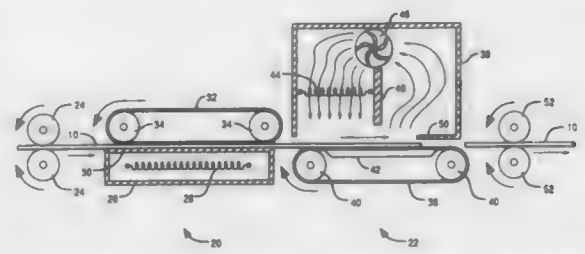
(b) moving the laser processing head in the X-, Y-, and/or Z-axis directions so that the head is positioned in front of the dynamical laser beam analyzer;

(c) rotating the laser processing head about the vertical axis and/or the horizontal axis so that a tip section is directed to a beam entrance section of the dynamical laser beam analyzer;

(d) detecting an instantaneous profile of a laser beam by means of the dynamical laser beam analyzer;

(e) repeating the detection of the step (d);

(f) calculating values of a beam stability parameter of the laser beam profiles, each value of the beam stability parameter corresponding to one of the laser beam profiles;



(g) calculating a standard deviation of the beam stability parameters from the values of the beam stability parameter calculated in the step (f).

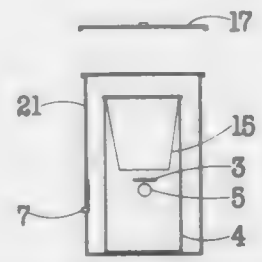
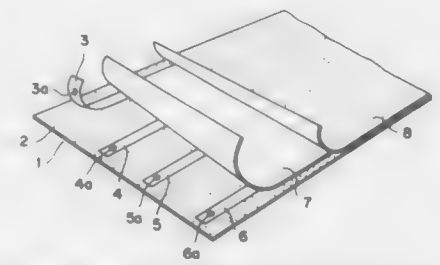
RADIANT ELEMENT
Gerhard Goessler, Oberderdingen; Eugen Wilde, Knittlingen, and Rolf Seeburger, Salzfeld, all of Fed. Rep. of Germany, assignors to E.G.O. Elektro-Geraete Blanc U. Fischer, Fed. Rep. of Germany
Filed Nov. 29, 1989, Ser. No. 443,559
Claims priority, application Fed. Rep. of Germany, Nov. 30, 1988, 3840360
Int. Cl.[5] H05B 3/74
U.S. Cl. 219—464 7 Claims

1. A radiant element, particularly for glass ceramic hotplates, comprising:
means for coupling the radiant element to a source of electrical energy;
the radiant element defining a heating area;
at least two electric visible light radiator heating means connected in parallel and arranged in different heating zones of said heating area;
selection switching means for selectively switching one or both of said heating means in said different heating zones to said source;
temporarily operable damping means for damping energization of the heating means for a limited time following each switching in of the heating means, said damping means having a resistor located in said heating area; and,
means for connecting said resistor in series with both said heating means in said different zones for said limited time and disconnecting said resistor when said limited time has elapsed, whereupon both heating means are connected without an interconnected series resistor to said source of energy.



5,004,893
HIGH-SPEED, HIGH TEMPERATURE RESISTANCE HEATER AND METHOD OF MAKING SAME
Brooke N. Westover, 1044 Fleming Dr., Pensacola, Fla. 32514
Filed Nov. 7, 1988, Ser. No. 268,188
Int. Cl.[5] H05B 3/10
U.S. Cl. 219—505 8 Claims

1. A high-speed high temperature electrical resistance heater comprising, in combination:
(a) a composite, non-homogeneous body having an essentially electrically-conducting material and an essentially electrically insulating material,
(b) one of said materials being constituted as a porous matrix,
(c) the other of said materials permeating said matrix of said one material,
(d) said electrically-conducting material having nodes and connective threads interconnecting said nodes, and
(e) means for effecting electrical connections to different places on said electrically-conducting material,
(f) said matrix comprising a body having a generally cylindrical outer surface,
(g) said body having a through bore of stepped configuration, the dimension of the inner portion of the bore being



greater than those of the outer portions thereof, to thereby form an annular bridge in said body, intermediate its ends.

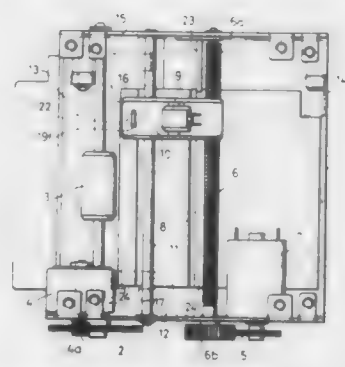
OPTICAL DOCUMENT SCANNING AND MARK SENSING
Robert Serrell, Princeton; J. Lamar Smith, Hopewell, both of N.J., and Frederick L. Kurst, Centreville, Md., assignors to Educational Testing Service, Princeton, N.J.
Filed Jul. 26, 1989, Ser. No. 385,382
Int. Cl.[5] G06K 5/00, 7/10
U.S. Cl. 235—437 10 Claims



1. Method of optically scanning a document having rows of material to be scanned comprising, in combination, the steps of:
(a) transporting the document beneath a camera, the document having generally parallel sides, the camera scanning the document along a direction substantially parallel to one of the sides;
(b) automatically providing a measure of document size in at least a direction parallel to the direction of scanning at each row of material to be scanned but before scanning each row of material; and,
(c) automatically adjusting the scanning of each row of material to be scanned to compensate for random variations in shrinkage and expansion of document size.

5,004,897
AUTOMATIC CONNECTING DEVICE DESIGNED FOR THE QUICK AND MOMENTARY SUPPLY OF POWER TO ELECTRONIC CIRCUITS
Alain Biggio, Limonest, and Jacques Landrevie, La Chambre, both of France, assignors to Aliflex Europe S.A., France
Continuation-in-part of Ser. No. 765,261, Aug. 13, 1985, abandoned. This application Aug. 15, 1988, Ser. No. 232,629
Int. Cl.[5] G06K 7/15, 19/77
U.S. Cl. 235—441 8 Claims

1. A quick automatic connection device comprising:
an electronic chip having a contact surface, said contact surface having a plurality of conducting areas from one another and arranged about a central axis;
a sensor having a like plurality of electrically conductive tips, each engageable with one of said plurality of conducting areas when said sensor is pressed against said contact surface;
alignment means for rotating said sensor with respect to said contact surface to assure each of said electrically conductive tips engage with a respective one of said conducting areas when said sensor is pressed against said contact surface independent of the rotational orientation between said sensor and said electronic chip; and
electronic circuit means associated with said sensor for sensing the total rotational orientation of said sensor with respect to said electronic chip to identify the particular conducting area to which each of said plurality of electrically conductive tips is engaged.

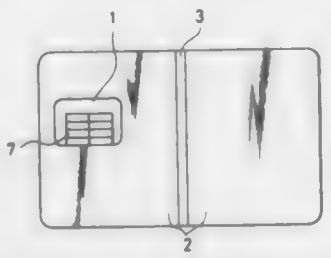
OPTICAL READING DEVICE
Hiroshi Ihsikawa; Kazuo Hasegawa, both of Furukawa, and Masaki Gotoh, Sendai, all of Japan, assignors to Alps Electric Co., Ltd., Tokyo, Japan
Filed Aug. 9, 1989, Ser. No. 392,232
Claims priority, application Japan, Nov. 25, 1988, 63-296286; Nov. 25, 1988, 63-296287; Nov. 25, 1988, 63-296288; Nov. 25, 1988, 63-296289; Dec. 15, 1988, 63-315027; Dec. 15, 1988, 63-315028; Feb. 2, 1989, 1-22666; Feb. 6, 1989, 1-25907; Feb. 6, 1989, 1-25908; Feb. 6, 1989, 1-25909
Int. Cl.[5] G06K 13/00
U.S. Cl. 235—475 25 Claims

1. An optical reading device, comprising:



a holding member having a sensor of the reflecting type carried thereon;
a supporting means provided on said holding member in a spaced relationship by a predetermined distance from a location of said sensor;
an engaging member supported for pivotal motion by said supporting means;
at least one of said engaging member and said holding member having a toothed portion formed thereon;
a screw shaft having a spiral groove formed on an outer periphery thereof such that said spiral groove may be meshed by said toothed portion in a direction perpendicular to an axis of pivotal motion of said engaging member;
a first driving means for rotating said screw shaft to move said holding member in the opposite directions together with said engaging member along said screw shaft;
a medium guiding means for guiding a record medium, on which information to be read by said sensor when said holding member is moved in one or the other direction by said first driving means is optically recorded, in a predetermined plane;
a second driving means for feeding the record medium in said predetermined plane in a direction perpendicular to the direction in which said holding member is moved by said first driving means;
a guide shaft disposed in parallel to said screw shaft for guiding said sensor when said holding member is moved in one or the other direction;
a contact element provided on said holding member for assuring a minimum distance between said sensor and a surface of the record medium to be read by said sensor; and
a resilient member disposed between said holding member and said engaging member for urging said holding member and said engaging member with respect to a location at which a guide portion formed either on said holding member or on said engaging member is slidably contacted with said guide shaft such that said contact element of said holding member may be resiliently contacted with a sliding face provided by the record medium or said medium guiding means and said toothed portion on said holding member or said engaging member may be resiliently engaged with said spiral groove of said screw shaft.

METHOD AND SYSTEM FOR CONTROLLING GAIN AND OFFSET IN RADIATION MEASUREMENT APPARATUS

Tsutomu Yamakawa, Tochigi, and Hiroaki Kobayashi, Ootawara, both of Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Jun. 13, 1989, Ser. No. 365,385
Claims priority, application Japan, Jun. 17, 1988, 63-150913; Jun. 17, 1988, 63-150914; Aug. 19, 1988, 63-206081; Aug. 19, 1988, 63-206082; Aug. 31, 1988, 63-218920
Int. Cl.[5] H01J *40/14;* **G01T** *1/20*
U.S. Cl. 250—207 **8 Claims**

6. A method of controlling gain and offset in a radiation measurement apparatus during radiation measurement, the method comprising the steps of:
generating at least one first standard light signal during a first period and generating at least one second standard light signal during a second period, the amplitude of said first standard light signal being different from the amplitude of said second standard light signal;
converting light from said generating means and light indicative of said radiation measurement into measurement light signals;
detecting at least one first measurement light signal during said first period from light including said at least one first standard light signal, and detecting at least one second measurement light signal during said second period from light including said at least one second standard light signal;
determining whether or not said detected first and second measurement light signals each include a radiation light signal representing radiation measurement;
obtaining from said first and second measurement light signals first and second correction values when said first and second measurement light signals are determined to not include any radiation light signal representing radiation measurement, said first and second correction values

each corresponding respectively to said first and second standard light signals; and

controlling the gain in accordance with said first correction value and controlling the offset in accordance with said first and second correction values.

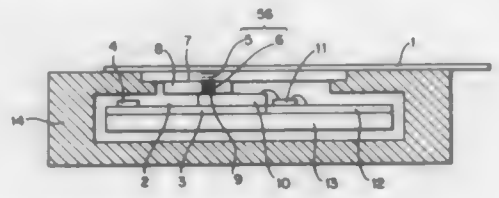
CONTACT TYPE IMAGE SENSOR WITH A FIBER ARRAY COATED IN PART WITH AN ABSORBER



Atsushi Yoshinouchi, Kitakatsuragi; Masataka Itoh, Nara, and Shuhei Tsuchimoto, Kitakatsuragi, all of Japan, assignors to Sharp Kabushiki Kaisha, Japan

Filed Nov. 8, 1989, Ser. No. 432,995

Claims priority, application Japan, Nov. 10, 1988, 63-286533; Feb. 28, 1989, 1-49650; Apr. 6, 1989, 1-89173

Int. Cl.[5] H01J *40/14*

U.S. Cl. 250—208.1 **9 Claims**

1. A contact type image sensor comprising:

a light-detecting element array formed on a substrate,

a light source for irradiating an original to be read, and

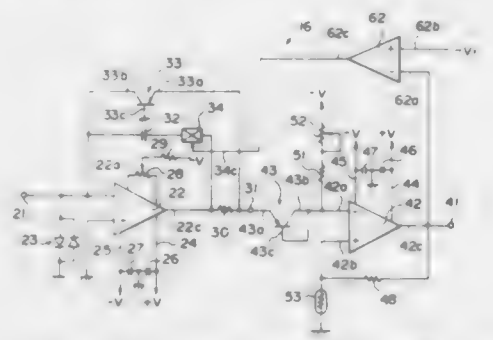
an optical fiber array disposed between said light-detecting element array and said original to be read,

said optical fiber array including an optical fiber array member that is composed of optical fibers not coated with an absorber and an optical fiber array member that is composed of optical fibers coated with an absorber, said optical fiber array being disposed between said light-detecting element array and said original to be read, and

said light source being disposed to direct light onto said original from which it is then reflected via said optical fiber array to said light-detecting element array.

5,004,906

LOGARITHMIC AMPLIFIER, AND IMAGE READ-OUT APPARATUS USING THE SAME



Yoshimi Takasaki, and Kazuo Horikawa, both of Kanagawa, Japan, assignors to Fuji Photo Film Co., Ltd., Kanagawa, Japan

Filed Jan. 18, 1990, Ser. No. 466,837

Claims priority, application Japan, Jan. 20, 1989, 1-11386

Int. Cl.[5] H01J *40/14*

U.S. Cl. 250—214 A **19 Claims**

1. A logarithmic amplifier comprising an amplifier, which is provided with a feedback circuit and a logarithmic conversion device in said feedback circuit of said amplifier,

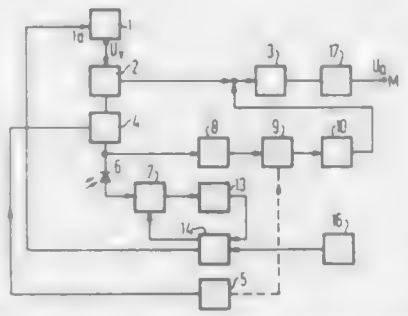
wherein the improvement comprises the provision of:

(i) an oscillation preventing circuit which is provided with a capacitor connected in parallel with said logarithmic conversion device, and

(ii) a control circuit which controls said oscillation preventing circuit in accordance with the current fed into said logarithmic amplifier, so that the amount of certain components in the output from said amplifier, which components are fed back to the input terminal of said amplifier through said oscillation preventing circuit, decreases as the current fed into said logarithmic amplifier becomes smaller.

5,004,907

CIRCUIT FOR DETERMINING POWER OF RECEIVED LIGHT HAVING SUPERIMPOSITION OF LOW FREQUENCY CURRENT



Karl-Heinz Prasse, Mittenwald, Fed. Rep. of Germany, assignor to Siemens Aktiengesellschaft, Berlin and Munich, Fed. Rep. of Germany

Filed Sep. 15, 1989, Ser. No. 407,741

Claims priority, application European Pat. Off., Sep. 15, 1989, 88115133.6

Int. Cl.[5] H01J *40/14*

U.S. Cl. 250—214 AG **20 Claims**

1. A circuit for determining light power received by a photodiode of an optical receiver, wherein bias voltage of said photodiode is controlled by a control means depending on the received light power, comprising:

(a) modulation means for superimposing a low-frequency current having a constant amplitude on a photoelectric current of said photodiode;

(b) rectifier means operatively connected to the photodiode for rectifying a low-frequency voltage resulting from the superimposition of said low-frequency current; and

(c) an output terminal connected to an output of the rectifier means.

5,004,908

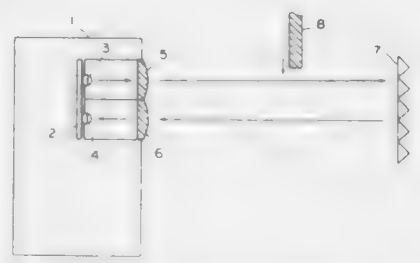
REFLECTION TYPE PHOTOELECTRIC SWITCH FOR DETECTING THE PRESENCE OF AN OBJECT

Arata Nakamura, Kyoto, Japan, assignor to Omron Tateisi Electronics Co., Kyoto, Japan

Filed Dec. 28, 1987, Ser. No. 138,052

Claims priority, application Japan, Dec. 26, 1986, 61-312456

Int. Cl.[5] G01V *9/04*



U.S. Cl. 250—221 **12 Claims**

1. A reflection type photoelectric switch which detects the presence of an object, comprising:

light emitting means for emitting a substantially single light beam having first and second different wavelengths into a space in which the object may be detected, wherein said light emitting means comprises a single light emitting diode which emits light at said first and second wavelengths.

a reflector for reflecting said substantially single light beam at different rates with respect to said first and second wavelengths,

light receiving means for sensing said first and second wavelengths of the reflected light beam and which generates outputs in response to said first and second wavelengths, and

means for analyzing said outputs generated by said light receiving means to generate an output representing the existance in the space of the object detected by the photoelectric switch.

5,004,909

METHOD AND APPARATUS FOR INSPECTING SIDEWALLS OF BOTTLES USING STRIPE PATTERN ILLUMINATION

Hiroyuki Fukuchi, Yokohama, Japan, assignor to Kirin Beer Kabushiki Kaisha, Tokyo, Japan

Filed May 26, 1989, Ser. No. 357,265

Claims priority, application Japan, May 30, 1988, 63-130154

Int. Cl.[5] G01N *9/04*

U.S. Cl. 250—223 B **40 Claims**

1. A method of inspecting the sidewalls of bottles comprising the steps of:

illuminating the sidewall of a bottle by light in a pattern of alternating shadowed and illuminated stripes to transmit an image of alternating dark and light stripes therethrough;

photoelectrically converting the image transmitted through the sidewall of the bottle;

scanning the photoelectrically converted transmitted light image along a scan line in a direction transverse to the dark and light stripes;

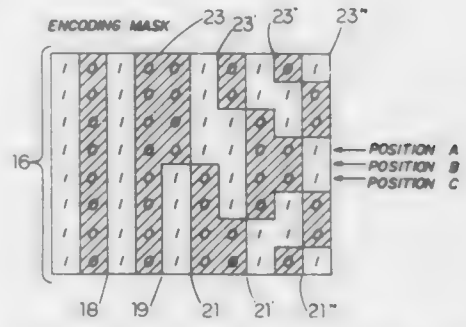
sensing the brightness at at least three points near one another along said scan line, said at least three points comprising a central point and outer points on both sides of said central point;

comparing the brightness of said at least three points with each other;

detecting a defect point at said central one of said at least three points when the brightness of the central point differs from the brightness of each of the outer points on both sides of the central point by more than a set value; and

judging the presence of a defect on the sidewall of the bottle based on the defect point.

5,004,910



METHOD OF DECODING ENCODED RELATIVE SPECTRAL DATA

Eric M. Arnett, South Bend, Ind., assignor to Allied-Signal Inc., Morristown, N.J.

Filed Aug. 4, 1989, Ser. No. 389,481

Int. Cl.[5] G01J *3/50*; G01D *5/34*

U.S. Cl. 250—226 **4 Claims**

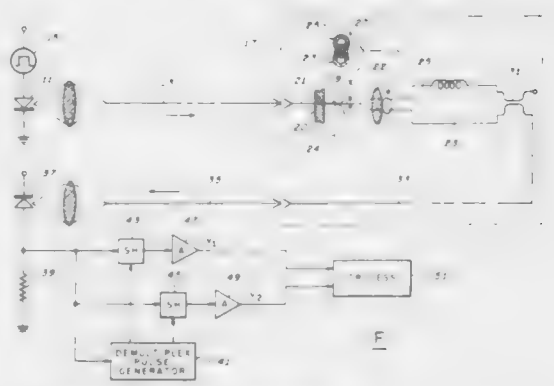
1. A method of decoding a relative spectrum data for a plurality of positions that have been encoded by a wave length multiplexer sensor, said method comprising the steps of:

generating a spectrum of light having at least a predetermined band-width, said spectrum being made up of segments of a plurality of individual bits;

modulating the individual bits of said spectrum to produce a modulated spectrum having data bits derived from on/off and off/on transitions relating to a plurality of adjacent data bits, said modulated spectrum having a start data bit with a constant width which precedes each segment of the spectrum of light represented by said data bits, said start data bit being identified by an always on field followed by an always off field; and

locating the center of each data bit through a transition edge to determine the difference between adjacent data bits and thereby determining the location of the next transition edge in the plurality of data bits.

5,004,911



TIME MULTIPLEXED FIBER OPTIC SENSOR

Rudolph C. Dankwort, and Charles D. Klem, both of Phoenix, Ariz., assignors to Honeywell Inc., Minneapolis, Minn.

Filed Jun. 20, 1989, Ser. No. 368,626

Int. Cl.[5] H01J *5/16*

U.S. Cl. 250—227.21 **4 Claims**

1. A fiber optic sensor comprising:

means for receiving optical signals from a first light propagation path;

means coupled to said receiving means for deflecting said receiving means for a reference position in accordance

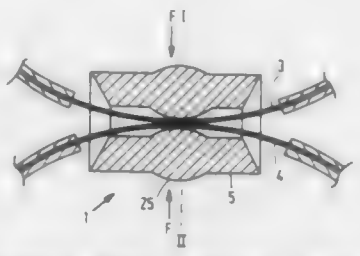
with a measured parameter, thereby providing a deflected optical signal;

delay means responsive to said deflected optical signal for providing first and second optical signals with a time delay interval therebetween, said first and second optical signals having relative intensities that are functions of said measured parameter; and

means for coupling said first and second optical signals to propagate along a second light propagation path.

5,004,912

FIBER-OPTICAL PRESSURE SENSOR WITH CONTACTING LIGHTWAVE CONDUCTORS



Gerhard Martens, Henstedt-Ulzburg; Jürgen Kordts, Norderstedt, and Georg Weidinger, Hamburg, all of Fed. Rep. of Germany, assignors to U.S. Philips Corp., New York, N.Y.

Filed Sep. 21, 1989, Ser. No. 410,695

Claims priority, application Fed. Rep. of Germany, Sep. 24, 1988, 3832569

Int. Cl.[5] H01J *5/16*

U.S. Cl. 250—227.14 **10 Claims**

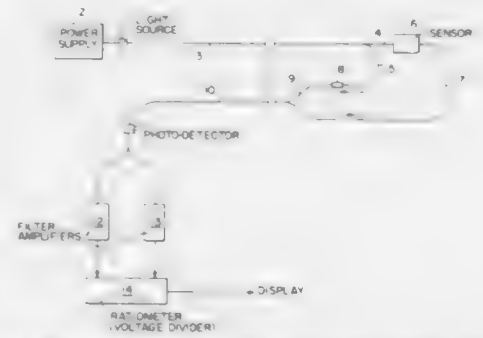
1. A fiber-optical sensor, comprising a light transmitter device (6) which couples transmitted light into at least one first lightwave conductor, and also comprising a light receiver device (7) which receives light from the first lightwave conductor and at least one second lightwaveconductor, the lightwave conductors (3, 4) comprising adjacently situated portions between which light can be coupled, and wherein the light transmitter device (6) couples a first transmitted light into the first lightwave conductor (3, 4) and a second transmitted light into the second lightwave conductor (4, 3), the adjacently situated portions (1) of the lightwave conductors (3, 4) being accommodated together in an envelope (5) via which a pressure or force acts on the lightwave conductors (3, 4), portions of the lightwave conductors (3, 4) contacting one another in a light-transferring manner under the influence of said pressure or force.

5,004,913

REMOTE MEASUREMENT OF PHYSICAL VARIABLES WITH FIBER OPTIC SYSTEMS - METHODS, MATERIALS AND DEVICES

Marcos Kleinerman, 24 Jerome St., Southbridge, Mass. 01550

Continuation-in-part of Ser. No. 608,932, May 14, 1984, Pat. No. 4,708,494, which is a continuation of Ser. No. 405,732, Aug. 6, 1982, abandoned. This application Mar. 12, 1985, Ser. No. 711,062



Int. Cl.[5] G01N *21/64;* **G01K** *11/12;* **G02B** *5/14;* **G01L** *7/02*

U.S. Cl. 250—227.21 **28 Claims**

1. A method for sensing variations in the magnitude of a physical parameter by use of a probe, and an interrogating light of suitable wavelength or wavelengths injected into said probe with an intensity P_o, comprising the steps of:

(a) exposing a light-transmitting probe to said physical parameter, said probe characterized by an ability to attenuate within said probe an interrogating light of suitable wavelength and an intensity P_o entering the probe to an intensity $P_o(1-\alpha)$, where α is a parameter-dependent fraction smaller than unity, and to substantially convert the fraction αP_o of the intensity of the interrogating light into a light separable from the interrogating light, at least part of the intensity of which is emitted from the probe at wavelengths λ_1 different from the wavelength of the interrogating light.

(b) injecting into the probe interrogating light of intensity P_o and of a wavelength or wavelengths within a suitable spectral region, thereby converting the fraction αP_o of the intensity of said injected interrogating light into emitted light at least part of the intensity of which is emitted from the probe at the wavelengths λ_1 different from the wavelength or wavelengths of the interrogating light, the value of α varying with the magnitude of said parameter, and

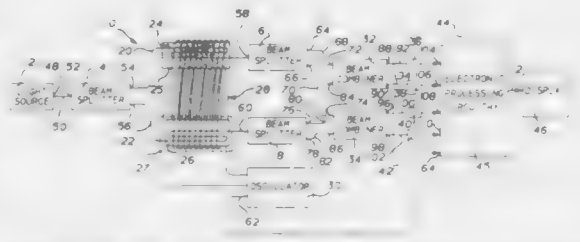
said emitted light having an intensity varying with the value of α;

(c) directing a fraction of the intensity of said emitted light to photodetector means;

(d) sensing the variations of the intensity of said emitted light received by said photodetector means, said variations being an indicator of the variations of the magnitude of the physical parameter; and

(e) thereby sensing the variations in the magnitude of the physical parameter from the variations of the intensity of said emitted light received by said photodetector means.

5,004,914



FIBER-OPTIC INTERFEROMETRIC CHEMICAL SENSOR

Victor Vali, Laguna Hills; David B. Chang, Tustin, and Patrick C. Brownrigg, Long Beach, all of Calif., assignors to Hughes Aircraft Company, Los Angeles, Calif.

Filed Apr. 20, 1990, Ser. No. 511,666

Int. Cl.[5] H01J *5/16*

U.S. Cl. 250—227.27 **15 Claims**

1. An apparatus for detecting presence of a given chemical vapor, said apparatus comprising:

a light source;

a first substrate exposed to the chemical vapor;

collector means on the first substrate for collecting the chemical vapor onto the substrate;

a first optical fiber on the first substrate and coupled to the light source;

a second substrate isolated from the chemical vapor;

a second optical fiber on the second substrate and coupled to the light source;

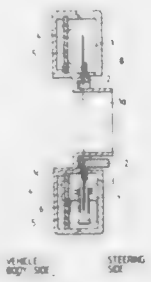
magnetic field generator means for subjecting both first and second substrates to an oscillating magnetic field;

said first and second substrates being constructed so that the dimensions thereof change in response to the oscillating magnetic field thereby altering characteristics of light from the light source passing through the first and second optical fibers, characteristics of the light in the first optical fiber being different from the characteristics of the light in the second optical fiber when the first substrate is exposed to said given chemical vapor whereby said first optical fiber provides an optical sensor signal and said second optical fiber generates an optical reference output signal; and

means for comparing said optical sensor signal with said optical reference output signal and for providing an output signal, based on said comparing, which is indicative of the presence of said given chemical vapor.

5,004,915

STEERING ANGLE SENSOR APPARATUS



Keiichi Umehara; Hisashi Hirose, and Kazuo Kono, all of Aichi, Japan, assignors to Kabushiki Kaisha Tokai Rika Denki Seisakusho, Aichi, Japan

Filed Aug. 9, 1989, Ser. No. 391,022

Claims priority, application Japan, Aug. 12, 1988, 105976[U]

Int. Cl.[5] G01D *5/34*

U.S. Cl. 250—231.14 **10 Claims**

1. A steering angle sensor apparatus for mounting on a vehicle steering apparatus which includes a steering shaft that rotates during a steering operation and a stationary member, said steering angle sensor apparatus comprising:

disc means, for attachment to one of the steering shaft and the stationary member, including indications for indicating steering rotational angle;

a circuit substrate, for attachment to the other one of the steering shaft and the stationary member, including circuit elements forming a steering angle sensor circuit;

sensor means, operatively coupled to said sensor circuit, for reading said indications, at least one element of said sensor means being attached to said circuit substrate;

cover means for enclosing said disc means, said circuit substrate and said sensor means; and

said circuit substrate being positioned within said cover means to confront a surface of said disc means.

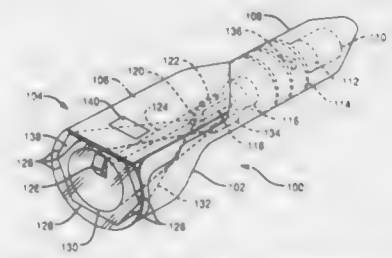
5,004,916

SCANNING SYSTEM HAVING AUTOMATIC LASER SHUTDOWN UPON DETECTION OF DEFECTIVE SCANNING ELEMENT MOTION

Donald A. Collins, Jr., Ithaca, N.Y., assignor to NCR Corporation, Dayton, Ohio

Filed Jul. 28, 1989, Ser. No. 387,551

Int. Cl.[5] H01J *3/14*



U.S. Cl. 250—235 **18 Claims**

1. A method of laser shutdown in a laser scanning system capable of reading the likes of a bar code comprising the steps of:

moving a scanning element by a motor coupled to said scanning element;

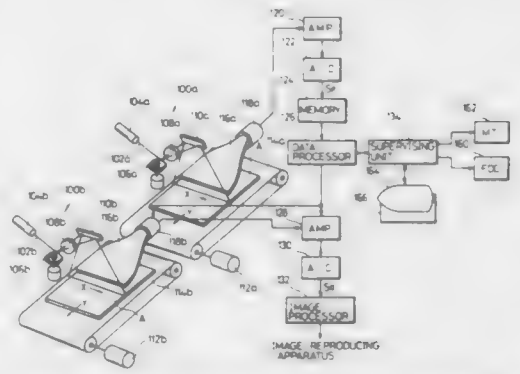
producing a laser beam for focus upon and deflection by said scanning element, said laser beam thus being able to scan the likes of a bar code;

driving said motor, and outputting signals from sensors coupled to said motor corresponding to scanning element movement; and

receiving signals from said sensors and automatically shutting down the operation of said laser when the amount of movement of said scanning element is below a threshold.

5,004,917

RADIATION IMAGE INFORMATION READING APPARATUS



Kunimasa Shimizu; Masao Shigyo, and Hiroshi Tanaka, all of Kanagawa, Japan, assignors to Fuji Photo Film Co., Ltd., Kanagawa, Japan

Filed Apr. 12, 1990, Ser. No. 508,678

Claims priority, application Japan, Apr. 17, 1989, 1-96762

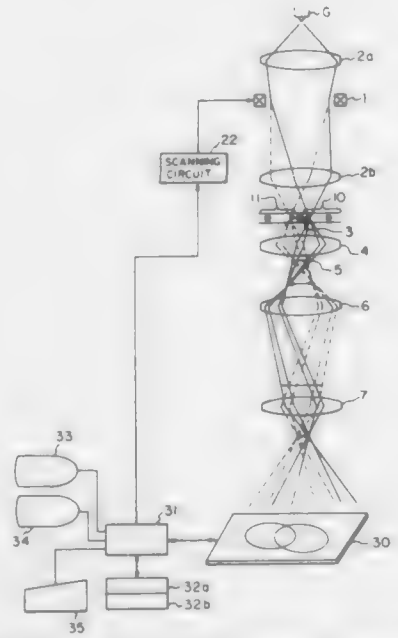
Int. Cl.[5] H01J *3/14*

U.S. Cl. 250—236 **4 Claims**

1. A radiation image information reading apparatus for photoelectrically reading radiation image information from a recording medium which stores the radiation image information, comprising:

processing means for establishing reading conditions and/or image processing conditions based on the radiation image information which has been read from the recording medium;

determining means for determining whether said reading conditions and/or said image processing conditions fall outside of a predetermined range or not; and



storage means for holding the radiation image information and data used to establish the reading conditions and/or the image processing conditions if the reading conditions and/or the image processing conditions fall outside of said predetermined range.

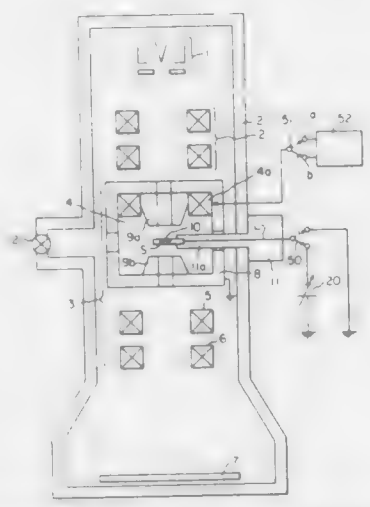
DIFFERENTIAL PHASE CONTRAST SCANNING TRANSMISSION ELECTRON MICROSCOPE

Katsushige Tsuno, and Masao Inoue, both of Tokyo, Japan, assignors to Jeol Ltd., Tokyo, Japan

Filed Jan. 24, 1990, Ser. No. 468,750
Claims priority, application Japan, Jan. 25, 1989, 1-15[illegible]
Int. Cl.[5] H01J *37/28*
U.S. Cl. 250—311 **4 Claims**



1. A differential phase contrast scanning transmission electron microscope, comprising:
an electron beam source for producing an electron beam;
a condenser lens for focusing the electron beam onto a specimen;
a scanning means for causing the electron beam to scan the surface of the specimen in two dimensions;
a two-dimensional image pickup means disposed in the path of the electron beam transmitted through the specimen;
a lens means for projecting a diffraction image onto the electron incident surface of the image pickup means, the diffraction image being created from electrons transmitted through the specimen;
a means for superimposing at least two diffraction images which are created by the image pickup means when the electron beam impinges on the specimen surface in at least two different positions, respectively;
a first display means which displays the superimposed diffraction image;
an arithmetic means which divides the region covered by the image pickup means into plural parts by at least one arbitrarily moveable boundary line and produces a signal indicating the difference between the relative number of electrons impinging on the plural parts, respectively;
an arbitrarily moveable pointing means for pointing positions on a viewing screen of said first display means which correspond to points of intersection between said diffraction images;
means for establishing the position of said arbitrarily moveable boundary line according to the signal which indicates the positions pointed by said pointing means; and
a second display means which displays an image of the specimen according to the differential signal from the arithmetic means and a signal related to the scanning means.

5,004,919

TRANSMISSION ELECTRON MICROSCOPE

Yukihito Kondo, Tokyo, Japan, assignor to Jeol, Ltd., Tokyo, Japan

Filed Jul. 2, 1990, Ser. No. 547,477
Claims priority, application Japan, Jul. 5, 1989, 1-173836; Aug. 11, 1989, 1-208185; Aug. 11, 1989, 1-208186; Oct. 4, 1989, 1-259495
Int. Cl.[5] H01J *37/26*
U.S. Cl. 250—311 **12 Claims**

1. A transmission electron microscope comprising:
an electron gun producing an electron beam;
a condenser lens system which focuses the electron beam onto a specimen;
an imaging lens system consisting of an objective lens, an intermediate lens, and a projector lens;
a display means upon which an image created by the electrons emitted from the specimen is displayed;
a voltage-applying means for applying a negative voltage to the specimen placed between the magnetic pole pieces of the objective lens; and
means for irradiating the specimen with exciting rays to induce photoelectrons from the lower surface of the specimen, whereby the photoelectrons emitted from the specimen are imaged by the imaging lens system.

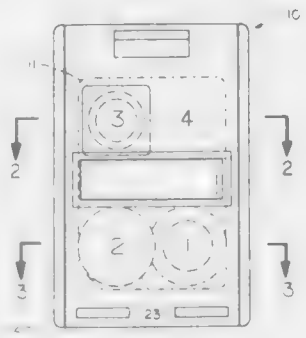
METHOD OF PREPARING MEMBRANE FILTERS FOR TRANSMISSION ELECTRON MICROSCOPY

Richard J. Lee, Murrysville; Barbara A. Smith, Apollo; Robert G. Theys, Monroeville; Robert A. Theys, Pittsburgh, all of Pa., and Judy A. Murphy, St. Louis, Mo., assignors to RJ Lee Group, Inc., Monroeville, Pa.

Continuation of Ser. No. 359,150, May 31, 1989, abandoned. This application Jun. 12, 1990, Ser. No. 537,156
Int. Cl.[5] G01N *1/28*
U.S. Cl. 250—304 **14 Claims**



1. The method for preparing specimens for viewing particles and/or fibers captured upon membrane filters with a TEM comprising the following steps:
(a) mounting a section of the membrane filter on a glass slide with a quick drying liquid applied between the filter membrane and the slide which liquid will not release the filter membrane when the slide is immersed in a selected solvent and such that the liquid will not render the filter membrane resistant to the selected solvent, the face of the membrane filter that has collected the particles and/or fibers to be observed facing away from the glass slide,
(b) drying the assembly,
(c) vacuum coating the filter section surface with carbon to replicate the surface of the membrane filter and the particles and fibers thereupon,
(d) scoring the carbon coated membrane filter section into small sections,
(e) immersing the assembly in the selected solvent which will attack the filter material causing the carbon film squares to float off of the membrane filter, and
(f) capturing the film squares for use as transmission electron microscope specimens.

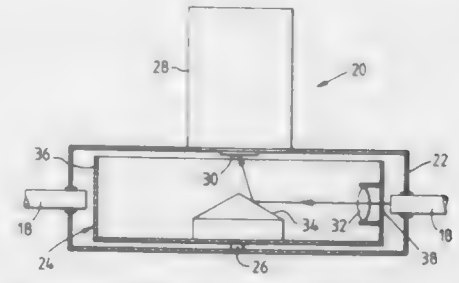
5,004,921

MIXED FIELD PERSONNEL DOSIMETRY METHOD AND APPARATUS FOR DETERMINATION OF RISK RELATED QUANTITY VIA A NEARLY TISSUE EQUIVALENT MULTI-ELEMENT THERMOLUMINESCENT DOSIMETER

Marko Moscovitch, Beachwood, Ohio, assignor to Solon Technologies, Inc., Solon, Ohio

Continuation-in-part of Ser. No. 216,343, Jul. 7, 1988. This application Nov. 6, 1989, Ser. No. 432,590
Int. Cl.[5] G01T *1/02, 1/11*
U.S. Cl. 250—337 **6 Claims**

1. A dosimetry method comprising
using a dosimeter to monitor exposure to a mixed radiation field composed of photons and neutrons, the dosimeter including first and second elements sensitive to photons and insensitive to neutrons and a third element sensitive to photons and neutrons, and first and second filters for said first and second elements having different photon attenuation characteristics and a third filter for said third element having a photon attenuation characteristic different from the photon attenuation characteristic of the first filter;
heating the radiated dosimeter to obtain thermoluminescence emission of the elements; and quantitatively relating the emission to the radiation incident on the dosimeter, said quantitatively relating including
determining a neutron component of incident radiation by taking the difference between the response of the first and third elements with one of the responses being weighted as a function of photon energy.



5,004,922

OPTICAL FIBER SCANNING SYSTEM FOR HEAT SENSING

Stanley A. Edwards, Wallasey, United Kingdom, assignor to United Kingdom Atomic Energy Authority, London, England

Filed Oct. 16, 1989, Ser. No. 421,940
Int. Cl.[5] G08B *17/12*
U.S. Cl. 250—340 **8 Claims**

1. A scanning system for the detection of heat sources within an area to be maintained under surveillance, comprising two or more scanning units, optical scanning means for each scanning unit for cyclically scanning at least part of said area, a radiation sensor responsive to radiation indicative of a heat source and located remotely from the scanning units, optical fibre transmission elements each associated with a respective scanning unit for transmitting radiation received by the associated scanning unit to the radiation sensor which is thereby common to all of the scanning units, the transmission elements being arranged at their outlet ends in spaced relation, a masking member interposed between the outlet ends and the common radiation sensor for gating the radiation transmitted by each optical fibre transmission element so that radiation from only one transmission element at a time is incident on the radiation sensor, the masking member having an opening and being movable in a cyclic fashion to bring the opening into registry for a dwell period, one at a time, with each transmission element so that the radiation transmitted by the respective transmission element may impinge on the common sensor for that period, the masking member being arranged such that each transmission element is gated in turn to the common sensor for a period equivalent to a complete cycle of the associated scanning unit, and control circuitry so arranged that cycle completion pulses generated at the scanning units trigger indexing of the masking member from one scanning unit to the next scanning unit.

CAPILLARY FLOW DEVICE

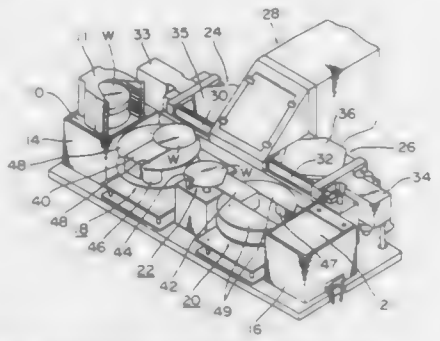
Robert S. Hillman, Cupertino; Michael E. Cobb, Sunnyvale; Jimmy D. Allen, Los Altos; Ian Gibbons, Menlo Park; Vladimir E. Ostoich, San Jose, and Laura J. Winfrey, Belmont, all of Calif., assignors to Biotrack, Inc., Mountain View, Calif.

Division of Ser. No. 177,625, Apr. 5, 1988, which is a division of Ser. No. 880,793, Jul. 1, 1986, which is a continuation-in-part of Ser. No. 762,748, Aug. 5, 1985. This application Jan. 30, 1990, Ser. No. 472,130
Int. Cl.[5] G01N *21/49, 21/05*
U.S. Cl. 250—341 **5 Claims**

1. A control device capable of detecting depletion of a particle-containing fluid from a sample reservoir in a device comprising a sample reservoir and a capillary exiting said reservoir, which comprises:
a light source located so as to impinge on said fluid in said reservoir;
a light detector located in close proximity to said capillary so as to collect light which is reflected by said particles into said capillary and thereafter further reflected by said particles so as to pass out through the walls of said capillary;
a signal generator operably attached to said light source, wherein a detectable signal is imposed on the output of said light source; and
a filter operably attached to the output of said light detector,

wherein said detectable signal is isolated from other light sources which may impinge upon said light detector.

5,004,924



WAFER TRANSPORT APPARATUS FOR ION IMPLANTATION APPARATUS

Issei Imahashi, Tokyo, Japan, assignor to Tokyo Electron Limited, Tokyo, Japan

Continuation of Ser. No. 145,689, Jan. 15, 1988, Pat. No. 4,873,447, which is a continuation of Ser. No. 848,567, Apr. 7, 1986, abandoned. This application Mar. 9, 1989, Ser. No. 321,223

Int. Cl.[5] G21K *5/10*

U.S. Cl. 250—442.1 **6 Claims**

1. An ion implantation apparatus, comprising:

a vacuum processing chamber in which a wafer is subjected to ion implantation processing;

first and second auxiliary vacuum chambers each of which is hermetically sealable from or connectable to the outer atmosphere and vacuum processing chamber, and each of which is constructed to temporarily store the wafer;

first wafer transfer means for transferring a wafer into the vacuum processing chamber from the first auxiliary vacuum chamber;

second wafer transfer means for transferring the wafer to the second auxiliary vacuum chamber from the vacuum processing chamber;

driving means for driving the first and second wafer transfer means in a mutually synchronized manner said driving means being connected to the first and second wafer transfer means to move them at the same time so that two wafers are simultaneously transferred to the vacuum processing chamber and second auxiliary vacuum chamber from the first auxiliary vacuum chamber and vacuum processing chamber;

wafer cassette supporting means for supporting a cassette containing a plurality of wafers at a location outside of said first auxiliary vacuum chamber; and

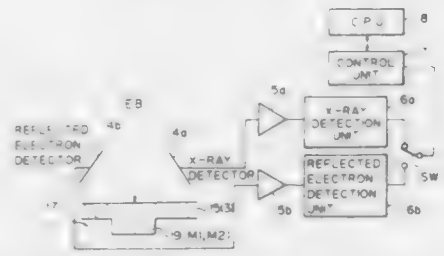
wafer transport means for transporting the wafer into the first auxiliary vacuum chamber from the cassette one by one.

5,004,925

METHOD AND APPARATUS FOR DETECTING ALIGNMENT MARK OF SEMICONDUCTOR DEVICE

Yasushi Takahashi, Kawasaki, and Hiroshi Yasuda, Yokohama, both of Japan, assignors to Fujitsu Limited, Kawasaki, Japan

Filed Mar. 6, 1990, Ser. No. 489,224



Claims priority, application Japan, Mar. 6, 1989, 1-52136

Int. Cl.[5] H01J *37/30*

U.S. Cl. 250—491.1 **19 Claims**

1. A method of detecting a flat surface alignment mark, of a semiconductor device having a main surface, the flat surface alignment mark comprising a level difference alignment mark in said main surface and a portion of a leveling metal layer on said main surface which forms a flat surface above said level-difference alignment mark common with said main surface, wherein said method comprises:

a step of irradiating and scanning charged particles onto a region of said main surface of said device encompassing said flat surface alignment mark; and

a step of detecting information generated from the region of said flat surface alignment mark in accordance with the thickness of the metal layer portion in said level difference alignment mark, so that the position of said flat surface alignment mark is detected.

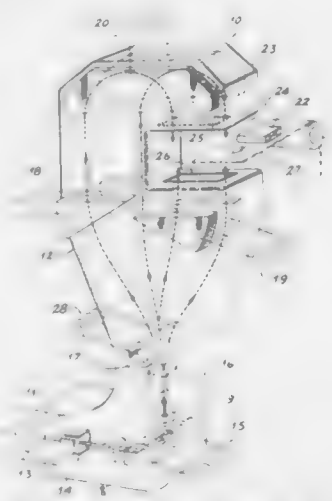
DEVICE FOR THE IRRADIATION OF A PRODUCT ON BOTH FACES



Michel Vassenaix, Sceaux, and Jacques Milcamps, Clamart, both of France, assignors to CGR MeV, Buc, France

Filed Sep. 8, 1989, Ser. No. 404,631

Claims priority, application France, Sep. 16, 1988, 88 12118

Int. Cl.[5] H01J *37/304*

U.S. Cl. 250—492.3 **3 Claims**

1. A device for the dual-faced irradiation of a product, including a charged particle accelerator associated with a modulator so as to emit a charged particle beam in pulse form, a horn-shaped, vacuum-sealed scanning chamber, said chamber having, at the widest end, an aperture occupying half of the cone, and provided with two windows transparent to the beam, said aperture being used for the passage of the product to be irradiated, said device comprising:

magnetic scanning means associated with the scanning chamber for causing an angular deflection, on either side of an axis, of the particle beam for the duration of the beam pulse;

first magnetic deflection means associated with the scanning chamber for converting the divergent angular scanning into parallel scanning;

second magnetic deflection means associated with the scanning chamber for obtaining a 180° deflection of the parallel scanning beam corresponding to that part of the scanning chamber that does not have the aperture; and

means for synchronizing both the deflection of the beam and the occurrence of the beam pulse;

wherein the magnetic scanning means comprises a magnet with circular pole pieces, the winding of which is supplied with a current that is variable in the course of the duration of a pulse.

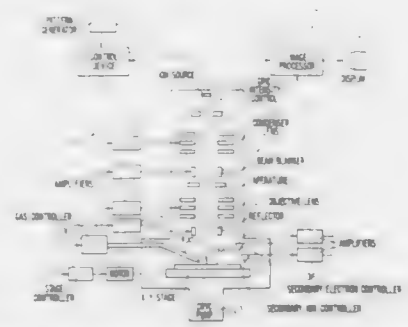
PROCESS FOR FORMING A FINE PATTERN HAVING A HIGH ASPECT RATIO



Kenji Nakagawa, Isehara, Japan, assignor to Fujitsu Limited, Kawasaki, Japan

Continuation of Ser. No. 282,505, Dec. 12, 1988, abandoned. This application May 25, 1990, Ser. No. 529,744

Claims priority, application Japan, Dec. 10, 1987, 62-314761

Int. Cl.[5] H01J *37/302, 37/304*

U.S. Cl. 250—492.2 **20 Claims**

1. A process for forming a desired, fine pattern by a focused-ion beam (FIB) system, comprising the steps of:

(a) mounting a sample in the FIB system;

(b) scanning an ion beam on the sample while supplying a reaction gas over the sample at a first scanning condition to deposit a material from the reaction gas onto the sample, the deposited material forming a first pattern including material in excess of the desired pattern and forming a sloped foot about the periphery of the desired fine pattern; and

(c) repeatedly performing a cycle comprising the following steps until the desired, fine pattern without a sloped foot along the entire periphery thereof is obtained:

(i) scanning an ion beam at least along the periphery of the first pattern at a second scanning condition to acquire an image of the first pattern;

(ii) comparing the acquired image of the first pattern with the desired, fine pattern to detect excess material of the first pattern which should be removed; and

(iii) scanning an ion beam onto said excess material of the first pattern at a third scanning condition to remove at least a part thereof, wherein said scanning at each of the second scanning condition and at the third scanning condition is performed along the entire periphery of the desired pattern at least once;

wherein said steps (b) and (c) are carried out in said FIB system.

Claims priority, application Japan, Jun. 4, 1988, 63-136651; Jun. 14, 1988, 63-144846; Aug. 5, 1988, 63-196815; Aug. 31, 1988, 63-218165

Int. Cl.[5] G01N *21/86*

U.S. Cl. 250—561 **37 Claims**

1. An optical system for detecting the shape of a three-dimensional object, comprising:

a collimating lens for converting a laser beam to a parallel beam of light;

a scanning optical system comprising.

a deflection mirror on which the parallel light beam is incident and which reflects the incident parallel beam in a predetermined direction, as a deflection beam.

a parabolic mirror on which the deflection beam is incident and which reflects the deflection beam as a scanning beam, in a direction normal to the object and incident on the object, for scanning the object with a scanning light beam spot, the scanning light beam spot being reflected by the scanned object and producing a scanned object, diffused reflection beam,

a further mirror disposed adjacent the surface of the object and with the reflecting surface thereof disposed at a predetermined, small angle of inclination with respect to the normal to the surface of the object whereby the reflecting surface thereof is substantially normal to the surface of the object, the scanned object, diffused reflection beam being incident on said further mirror and the further mirror reflecting same in a predetermined direction as a scanned object, diffused and reflected reflection beam, and

an image forming, converging lens on which the diffused and reflected reflection beam is incident and which converges same to a point in a first predetermined focal plane and thereby forms an image of the object, as illuminated by the scanning light beam spot, in the first, predetermined focal plane, and

a first optical detector positioned at the point in the first, predetermined focal plane at which the diffused and reflected beam is converged, for detecting the beam spot

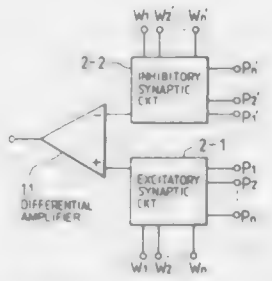
UNIT CIRCUIT FOR CONSTRUCTING A NEURAL NETWORK AND A SEMICONDUCTOR INTEGRATED CIRCUIT HAVING THE SAME



Yoshito Nejime, Hachioji, Japan, assignor to Hitachi, Ltd., Tokyo, Japan

Filed Jun. 27, 1989, Ser. No. 373,261

Claims priority, application Japan, Jul. 1, 1988, 63-162513

Int. Cl.[5] G06G *7/12*

U.S. Cl. 307—201 **19 Claims**

1. A unit circuit for constructing a neural network comprising:

a differential amplifier which includes an output terminal, an inverting input terminal and a noninverting input terminal;

an excitory synapse circuit which is connected to the noninverting input terminal of said differential amplifier; and

an inhibitory synapse circuit which is connected to the inverting input terminal of said differential amplifier,

wherein each of said excitory and inhibitory synapse circuits includes a plurality of current switches, a regulated current source array which is configured of regulated current source circuits being equal in number to the number of said current switches, said regulated current source circuits determining values of currents that flow through said current switches, and includes one load resistor which is connected to all of said current switches, and

wherein input terminals of each synapse circuit are responsive to inputs which turn "on" and "off" the respective current switches and to which input terminals external inputs or outputs of other unit circuits are applied, said regulated current source circuits having current values which can be respectively altered by voltages externally applied independently of one another.

SEMICONDUCTOR INTEGRATED CIRCUIT AND TEST METHOD FOR CHARACTERISTICS

Kouichi Furuta, Nara, Japan, assignor to Sharp Kabushiki Kaisha, Osaka, Japan

Filed Jan. 27, 1989, Ser. No. 302,469

Claims priority, application Japan, Jan. 27, 1988, 63-16502

Int. Cl.[5] H03K *3/33, 3/335*

U.S. Cl. 307—303 **14 Claims**

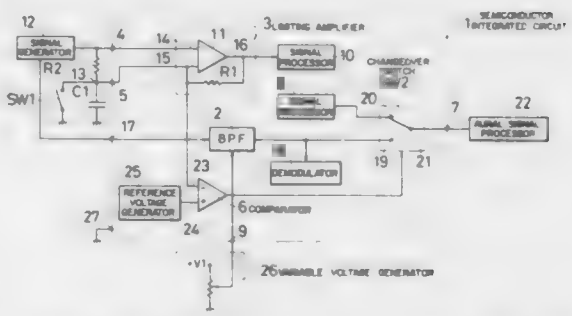
1. A semiconductor integrated circuit comprising:

a first connecting terminal operatively connected to,

a first signal processing circuit for receiving a signal from the first connecting terminal to perform a predetermined function,

a second connecting terminal connected to the first signal processing circuit for supplying means for setting to a predetermined first level a signal during the predetermined function of the first signal processing circuit,

a third connecting terminal,



a second signal processing circuit for generating a signal by performing a predetermined function,

a fourth connecting terminal,

a changing circuit that has characteristics that can be changed so as to have a characteristic corresponding to a signal given to the fourth connecting terminal,

a switch for selectively connecting the outputs of the second signal processing circuit and changing circuit in response to a control signal to apply signals to the third connecting terminal, and

control signal generating means for responding to a signal applied to the second connecting terminal, for applying a

control signal to the switch for actuating the switch to set the switch in a first mode in order to apply the output of the second signal processing circuit to the third connecting terminal when the second connecting terminal is at the predetermined first level, and also in a second mode to change the switch in order to apply an output of the changing circuit to the third connecting terminal when the second connecting terminal is at a predetermined second level.

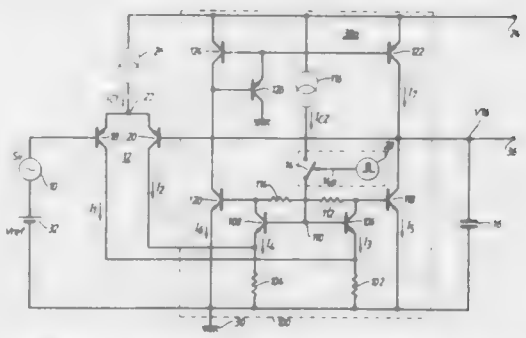
SAMPLE AND HOLD CIRCUIT



Akihiro Murayama, Yokohama, and Takeshi Koyama, Tokyo, both of Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Continuation of Ser. No. 402,455, Sep. 5, 1989, abandoned, which is a continuation of Ser. No. 186,305, Apr. 26, 1988, abandoned. This application Mar. 21, 1990, Ser. No. 500,091

Claims priority, application Japan, Apr. 28, 1987, 62-103245

Int. Cl.[5] G11C *27/02*

U.S. Cl. 307—353 **12 Claims**

1. A sample and hold circuit for sampling an input signal having a variable input voltage, comprising:

input means for supplying the input signal;

holding capacitor means for storing a charge voltage in response to a charge current supplied thereto when a charge voltage stored previously therein is lower than the input voltage and for producing a discharge current when the previous stored charge voltage is higher than the input voltage;

differential circuit means having a first differential transistor and a second differential transistor for comparing the voltage levels of the input voltage and the charge voltage, and generating a differential current in response thereto;

first constant current source connected to said differential circuit means for supplying a constant current thereto;

current amplifier means for generating the charge current in response to the differential current when the previous stored charge voltage is lower than the input voltage and for amplifying the discharge current when the previous stored charge voltage is higher than the input voltage;

a switch means for selectively activating and deactivating the current amplifier means; and

wherein the current amplifier means further includes a discharge and charge control circuit for coupling a first transistor which is denominated as a first discharge transistor, to said first differential transistor and also for coupling a second transistor which is denominated as first charge transistor to said second differential transistor, and which is provided as a means for providing a means for charging and discharging said holding capacitor means, and

a second constant current source coupled in series to the switch means for supplying said discharge and charge control circuit with a second constant current independently from said first constant current source.

5,004,936

NON-LOADING OUTPUT DRIVER CIRCUIT

Bernhard H. Andresen, Dallas, Tex., assignor to Texas Instruments Incorporated, Dallas, Tex.

Filed Mar. 31, 1989, Ser. No. 332,261

Int. Cl.[5] H03K *19/003, 19/094, 17/16, 17/687*

U.S. Cl. 307—443 **30 Claims**

1. A non-loading output driver circuit for supplying an output signal to a data bus, wherein the data bus may be active when the output driver circuit is inactive, comprising:

output signal circuitry including:

a first semiconductor region of a first conductivity type electrically coupled to an output terminal for supplying the output signal to the data bus; and

a second semiconductor region of a second conductivity type adjacent said first semiconductor region and coupled to a reference voltage level, wherein forward biasing said first semiconductor region with respect to said second semiconductor region creates a conduction path between said first and second semiconductor regions; and

switching circuitry for alternatively connecting said reference voltage level between a supply voltage signal and the output signal.

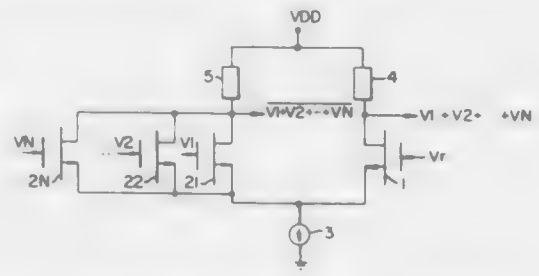
MOS ANALOG NOR AMPLIFIER AND CURRENT SOURCE THEREFOR

Sheau-Jiung Lee, Taipei, China, assignor to Acer Incorporated, Taipei, Taiwan

Filed Mar. 3, 1989, Ser. No. 318,[illegible]3

Int. Cl.[5] H03K *19/003*

U.S. Cl. 307—443 **10 Claims**



1. An MOS analog NOR amplifier comprising:

a constant current source,

a reference MOS transistor having a source, a gate and a drain terminal, wherein the source terminal of said reference MOS transistor is connected to a first terminal of said constant current source, said gate terminal is connected to a constant reference voltage and said drain terminal is connected to a first terminal of a first pull-up means, and

a plurality of input MOS transistors each of which has a source, a gate and a drain terminal, wherein the source terminal of each of said input MOS transistors is connected to said first terminal of said constant current source and the drain terminal of the same is connected to a first terminal of a second pull-up means;

wherein in response to a logic "1" or a logic "0" signal applied at the gate terminal of each of said input MOS transistors, an output signal is generated at the drain terminals of said plurality of input MOS transistors which is the same response as that of a standard NOR gate and an

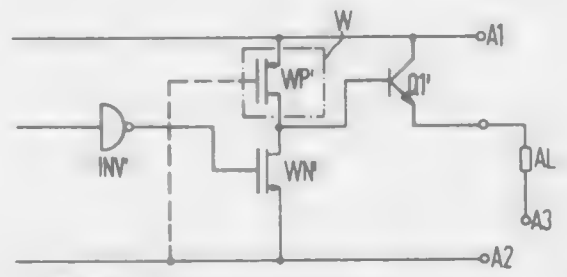
output signal is generated at the drain terminal of said reference MOS transistor which is the same response as that of a standard OR gate; and

wherein said reference MOS transistor and said plurality of input MOS transistors are NMOS transistors, and said first and second pull-up means are PMOS transistors with respective second terminals thereof being coupled to a V_{DD} source; and

wherein a second terminal of said constant current source is connected to ground.

5,004,939

CMOS-ECL CONVERTER



Michael Stegherr, Neubiberg, Fed. Rep. of Germany, assignor to Siemens Aktiengesellschaft, Berlin and Munich, Fed. Rep. of Germany

Filed May 17, 1990, Ser. No. 524,443

Claims priority, application Fed. Rep. of Germany, May 30, 1989, 39175[illegible]

Int. Cl.[5] H03K *17/30, 19/17*

U.S. Cl. 307—475 **8 Claims**

8. A CMOS-ECL converter comprising:

an input, an output, and first, second and third terminals for voltage supply;

said first terminal connected to a reference potential, said third terminal connected to a potential that is negative with respect to the reference potential, and said second terminal connected to a potential that is negative with respect to the voltage potential at said third terminal;

first and second field-effect transistors, said first field-effect transistor being an n-channel field-effect transistor and said second field-effect transistor being a p-channel field effect transistor, each of said field-effect transistors including a controlled current path and a gate, said gate of said first field effect transistor connected to said input, said controlled current paths connected in series between said first and second terminals for voltage supply, and said gate of said second field-effect transistor connected to the second terminal for voltage supply;

an npn bipolar output transistor including a base connected to the junction of said controlled current paths of said first and second field-effect transistors, a collector connected to the first terminal for a voltage supply, and an emitter connected to said output; and

a load connected between said output and said third terminal for voltage supply.

DIRECT DRIVE VALVE FORCE MOTOR WITH GAIN SHAPING PROVISION

Robert D. Vanderlaan, Kalamazoo, Mich., assignor to Pneumo Abex Corporation, Boston, Mass.

Filed Sep. 21, 1987, Ser. No. 98,075

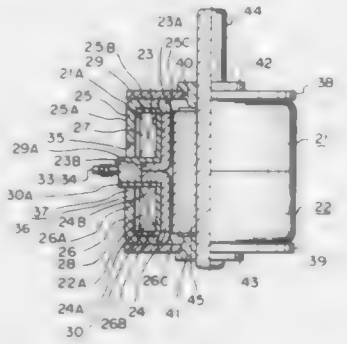
Int. Cl.[5] H02K *33/12*

U.S. Cl. 310—36 **23 Claims**

1. A limited angle torque motor comprising a rotor assembly, a stator assembly surrounding said rotor assembly, said rotor assembly and stator assembly being mounted for relative rotation, said rotor assembly including permanent magnet means magnetized in the diametrical direction, and said stator assembly including circumferentially spaced stator magnetic poles, stator coil means wrapped about said magnetic poles which when excited by direct or pulse width modulated current produce a cross flux between said stator assembly and rotor magnet means causes said rotor assembly to rotate relative to said stator assembly through a limited rotational angle range, an outer magnetic housing surrounding said stator coil means defining a magnetic return path for the magnetic field with is produced when said stator coil means is excited, air gap means in said magnetic return path which causes the magnetic flux produced by said permanent magnet means to follow a primary magnetic flux path from said permanent magnet means through said stator magnetic poles that produces a magnetic reluctance torque urging said rotor assembly to a null position, and means defining a secondary magnetic flux path of relatively small cross-section area compared to said primary magnetic flux path from said permanent magnet means through said stator magnetic poles and magnetic housing that increases the rotational and torque gains in a localized area about such null position, said means defining a secondary magnetic flux path comprising magnetic means for bridging said air gap means at one or more points along the length of said air gap means, said magnetic means having a relatively small cross-sectional area which becomes saturated at a specified level of applied current, whereby increases in current above such specified level will be redirected into said primary magnetic flux path to provide reduced rotational and torque gains at higher current levels outside such null position.

5,004,941

STEPPER MOTOR WITH INPUT CONNECTOR ARRAY



Yoshiyuki Ohzeki, and Kazuo Amikura, both of Tokyo, Japan, assignors to Copal Co., Ltd., Tokyo, Japan

Filed Dec. 7, 1989, Ser. No. 447,225

Claims priority, application Japan, Dec. 9, 1988, 63-160208[U]

Int. Cl.[5] H02K *1/18, 19/02*

U.S. Cl. 310—49 R **6 Claims**

4. A stepper motor comprising:

a. a rotor made of magnetic material;

b. a rotatable output shaft having said rotor mounted thereon;

c. a pair of stator units, each comprising:

i. a first yoke having an axially elongated cylindrical portion including circumferentially spaced, axially elongated magnetic pole pieces annularly positioned about said output shaft and a radially outwardly extending annular ring-shaped portion;

ii. a second yoke including a generally cylindrical wall portion of greater diameter than said cylindrical portion of said first yoke defining a cylindrical exterior of said stator unit and a radially inwardly extending annular portion having magnetic pole pieces in spaced alternating arrangement with said magnetic pole pieces of said first yoke;

iii. a bobbin retained between said cylindrical portion of said first yoke and said radial portion of said second yoke, said bobbin including:

(1) a generally cylindrical axially elongated core;

(2) a pair of planar radially extending annular flanges on respective axial ends of said core;

(a) an outwardly facing surface of said flange which is farther from said remaining stator unit of said pair being in facing complemental contact with said radially extending portion of said second yoke;

(b) a radially outwardly facing edge of said flange which is farther from said remaining stator unit of said pair being in facing complemental contact with said cylindrical wall portion of said second yoke;

(c) an inner annular surface of said cylindrical core being in facing complemental contact with said cylindrical portion of said first yoke;

(d) said flange which is closer to said remaining stator unit of said pair

(i) facingly contacting said radially outwardly extending annular ring-shaped portion of said first yoke;

(ii) having a solid rectangular lug formed integrally therewith, said lug extending radially outwardly from said flange and extending axially from an axially outwardly facing surface of said flange axially away from said flange;

(3) conductor placed about said bobbin core;

d. said stator units adjoining by

i. respective axially facing surfaces of said annular ring-shaped portions of said first yokes facingly contacting one another;

ii. respective exterior cylindrical surfaces of said cylindrical wall portions of said second yokes contacting one with another to define a generally closed cylindrical exterior of said stepper motor;

e. said rectangular lugs of said respective bobbins of said respective stator units protruding through a common rectangular opening in said generally closed cylindrical exterior of said stepper motor;

f. said lugs of said respective bobbins being in facing complemental contact along lug planar surfaces perpendicular to the output shaft;

g. axially extending angularly outwardly facing end surfaces of said lugs facingly contacting axially extending surfaces of said rectangular opening;

h. respective annular ring-shaped portions of said first yokes of said respective stator units abuttingly contacting substantially the entirety of radially inwardly facing surfaces of said lugs;

i. means for electrically connecting said annularly disposed sinous electrically conductive material with an external source of electrical power, extending radially outwardly from a radially outwardly facing surface of one of said lugs;

j. said sinous electrically conductive material annularly would about said bobbin core connected to connecting means extending from said lug which are integral with said respective bobbins independently of connection of said stator units.

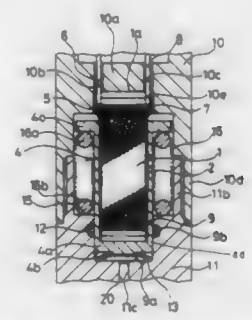
PIEZOELECTRIC TYPE ACTUATOR



Masahiro Tomita, Anjo; Satoshi Hayashi, Kuwana; Shinro Oda, Kuwana; Akira Fujii, Kuwana, and Masayoshi Tanigawa, Kariya, all of Japan, assignors to Nippondenso Co., Ltd., Kariya, Japan

Filed Sep. 22, 1989, Ser. No. 410,525

Claims priority, application Japan, Sep. 26, 1988, 63-239949

Int. Cl.[5] H01L *41/08*

U.S. Cl. 310—328 **14 Claims**

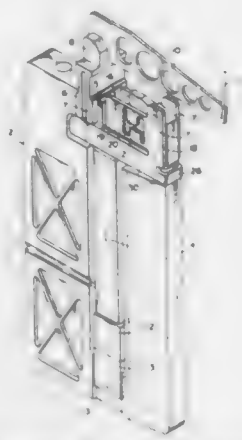
1. A piezoelectric type actuator comprising:

a piezoelectric laminate comprising alternately superimposed piezoelectric plates as piezoelectric elements and metallic electrode plates;

a first spring means for exerting a compressive force on said piezoelectric laminate and having a relatively small spring constant and relatively long effective stroke;

a second spring means for exerting a compressive force on said piezoelectric laminate and having a relatively large spring constant and relatively short effective stroke;

said first spring means and second spring means being positioned in parallel with each other, and positioned so that an expanding stroke of said first spring means is equal to an expanding stroke of said second spring means when a length of said piezoelectric laminate after deforming is less than a maximum expanding length of said second spring means, so that the compressive force caused by said second spring means is dominant, and the compressive force caused by said first spring means becomes dominant when



the length of said piezoelectric laminate after deforming exceeds the maximum expanding length of said second spring means.

PARALLEL FOUR-LINK MECHANISM

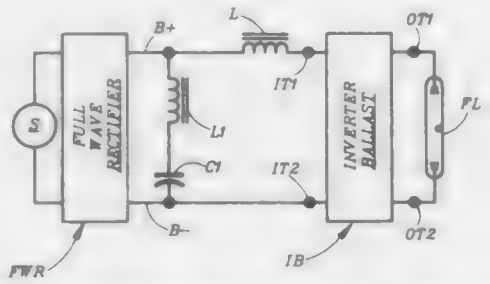
Atsuo Sakaida, Gifu; Yoshiyuki Ikezaki, Nagoya; Akira Iriguchi, Nagoya, and Toshio Inose, Nagoya, all of Japan, assignors to Brother Kogyo Kabushiki Kaisha, Nagoya, Japan

Filed Jul. 5, 1990, Ser. No. 548,097
Claims priority, application Japan, Jul. 6, 1989, 1-175162
Int. Cl.[5] H01L *41/08*
U.S. Cl. 310—328 8 Claims

1 A parallel four-link mechanism integrally formed by a predetermined elastic material, adapted to be positioned in a motion conversion mechanism for converting mechanical expansion and compression of a predetermined material in a predetermined direction to a motion in the desired direction, for regulating the mechanical expansion and compression so as not to be skewed from said predetermined direction by means of the elastic deformation therof in accordance with the mechanical expansion and compression, comprising a pair of plate portions oppositely located which respectively include one pair of links arranged in parallel with each other, another pair of links arranged in parallel with each other, and hinge sections provided between said links adjacently located for respectively connecting said links, said parallel four-link mechanism is arranged in such a manner that the stress generated on the opposed inner surfaces of one pair of hinge sections which are diagonally disposed becomes smaller than that generated on the outer surfaces of another pair of hinge sections which are diagonally disposed when said parallel four-link mechanism is deformed in accordance with the mechanical expansion and compression of said predetermined material.

5,004,947

FLUORESCENT LAMP BALLAST WITH HIGH POWER FACTOR



Ole K. Nilssen, Caesar Dr., Barrington, Ill. 60010

Continuation of Ser. No. 820,120, Jan. 21, 1986, abandoned. This application Oct. 31, 1989, Ser. No. 430,900
Int. Cl.[5] H04B *41/14*
U.S. Cl. 315—224 12 Claims

1. A ballast means adapted to be powered from the AC voltage on an ordinary electric utility power line and operative to power a gas discharge lamp, comprising:

rectifier means operative to connect with the power line and to provide a unidirectional current at a pair of DC terminals; a DC voltage being present across the DC terminals;

L-C circuit means connected with the DC terminals and operative to provide an effective short circuit across the DC terminals for any current having frequency about equal to twice the frequency of the AC voltage, thereby to cause the DC voltage to have an instantaneous absolute magnitude that is substantially equal to that of said AC voltage over at least half of the total duration of each half-cycle of this AC voltage; and

inverter ballast means connected with the DC terminals and operative to convert the DC voltage provided therefrom such as to provide at a pair of ballast output terminals a magnitude-limited alternating current for powering a gas discharge lamp.

5,004,948

LUMINESCENT MATERIAL, ESPECIALLY FOR APPLICATION IN MERCURY VAPOR GAS DISCHARGE LIGHT SOURCES, AND MERCURY VAPOR GAS DISCHARGE LIGHT SOURCE

Péter Kinczel; László Balázs, and Gábor Sajó, all of Budapest, Hungary, assignors to Tungsram Reszvenytarsasag (Tungsram RT), Budapest, Hungary

Filed Mar. 22, 1989, Ser. No. 327,326
Claims priority, application Hungary, Mar. 28, 1988, 1532/88
Int. Cl.[5] H01J *63/04*
U.S. Cl. 313—486 14 Claims

1. A luminescent material, especially for application in mercury vapor gas discharge light sources, comprising

a first component for luminescing red light under influence of incident optical radiation and

a second component for luminescing under influence of said incident optical radiation in the spectral range from 520 to 560 nm including colors from green to yellow, said second component including

a first phase of garnet crystallization system consisted of yttrium aluminate activated by trivalent cerium and determined by the general structural formula

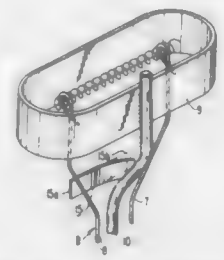
$$Y_{3-a}Ce_aAl_5O_{12}$$

wherein the value of the index a lies in the range $0.0003 < a < 0.1$, and

a second phase of hexagonal crystallization system consisted of a mixed rare earth aluminate of general structural formula

$$La_bCe_{1-b}Al_{11}O_{18}$$

wherein the value of the index b lies in the range $0 < b < 1$, and



said second phase is present in an amount ranging from the amounts detectable by means of X-ray diffractometry to the double amount of said first phase.

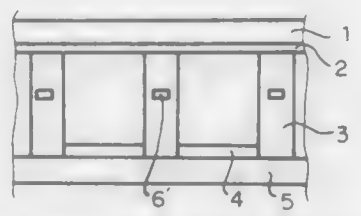
5,004,949

FLUORESCENT LAMP WITH GROUNDED ELECTRODE GUARD

Frank M. Latassa, Morgantown, and Thomas O. Leyh, Bridgeport, both of W. Va., assignors to North American Philips Corporation, New York, N.Y.

Continuation-in-part of Ser. No. 200,382, May 31, 1988, Pat. No. 4,891,551. This application Dec. 22, 1989, Ser. No. 456,027
Int. Cl.[5] H01J *61/10*
U.S. Cl. 313—492 6 Claims

1. In a fluorescent lamp having an electrode, a conductive element for supplying voltage to said electrode, and a metallic guard partially surrounding said electrode for shielding material ejected from said electrode, a discharge arc being maintained in said lamp during lamp operation, the improvement comprising:



a bimetal strip for electrically connecting said conductive element and said metallic guard during lamp operation, said bimetal strip being arranged such that upon starting of said lamp heat from said discharge arc causes said strip to bend and electrically connect said conductive element and said metallic guard for maintaining said metallic guard and said electrode at the same potential during lamp operation irrespective of electrode polarity.

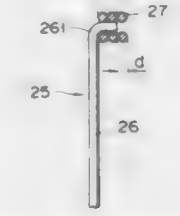
5,004,950

PLASMA DISPLAY PANEL ARRANGED WITH AUXILIARY ELECTRODE

Seung-Woo Lee, Seoul, Rep. of Korea, assignor to Samsung Electron Devices Co., Ltd., Kyonggi, Rep. of Korea

Filed Sep. 6, 1989, Ser. No. 403,345
Claims priority, application Rep. of Korea, Sep. 16, 1988, 88-15299
Int. Cl.[5] H01J *17/49*
U.S. Cl. 313—582 4 Claims

1. In a plasma display panel having front and rear substrates supported in spaced relationship from each other to define a gap therebetween, said substrates having opposed surfaces which face each other across said gap, an anode and a cathode formed respectively on said substrate surfaces, means for creating a seal between said substrates so that said gap is sealed, a quantity of gas confined in said sealed gap, means for effecting a voltage differential between said anode and said cathode which is sufficient to cause movement of ions in a first direction across said gap from said anode to said cathode, and auxiliary electrode means disposed in said gap for permitting introduction of priming ions into said gap before said voltage differential is effected between said anode and said cathode, the improvement comprising:



means operable while said voltage differential exists between said anode and said cathode for producing in said gap an electric field which forcibly urges ions in said gap in a second direction approximately perpendicular to said first direction, said electric field producing means including means for applying an AC voltage to said auxiliary electrode means while said voltage differential exists between said anode and said cathode.

5,004,951

SINGLE SIDE-SEALED METAL VAPOR DISCHARGE LAMP

Kazuo Honda, Hiratsuka; Atsushi Matsuura, Yokohama, and Hisanori Sano, Yokosuka, all of Japan, assignors to Toshiba Lighting & Technology Corporation, Tokyo, Japan

Filed Jan. 26, 1990, Ser. No. 470,681
Claims priority, application Japan, Jan. 31, 1989, 1-21054; Mar. 31, 1989, 1-83647; Mar. 31, 1989, 1-83652
Int. Cl.[5] H01J *61/00, 61/04*
U.S. Cl. 313—631 10 Claims

1. A single side-sealed metal vapor discharge lamp comprising:

an arc tube having a sealed section at one end and an envelope at the other end, the envelope defining a discharge region containing a rare gas for starting and a filled gas containing mercury and light emitting metal;

a pair of metal foils sealed in the sealed section; and

a pair of electrode means each comprised of a rod and a coil mounted on a forward end portion of the rod, the rod being inserted at one end into the sealed section and connected to the corresponding metal foil and the other end portions of the rods being bent and situated opposite to each other in the discharge region, and the coils of the electrode means being mounted on the bent forward end portions of the rods by at least one turn, situated, opposed to each other in the discharge region, and made of a higer melting point material than a surface material of the bent forward end portions of the rods, where the following inequalities are satisfied:

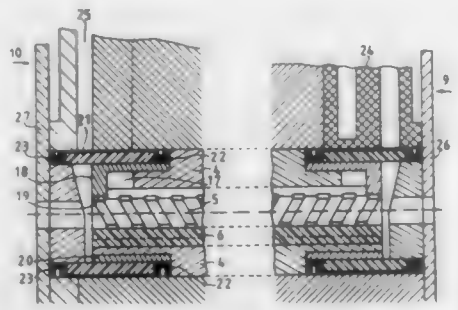
$$L1 \leqq 3d$$

$$d/2 \leqq L2 - L1 \leqq 3d$$

where

L1: the length from the bent portion to the forward end of the electrode rod;

L2: the length of the coil; and



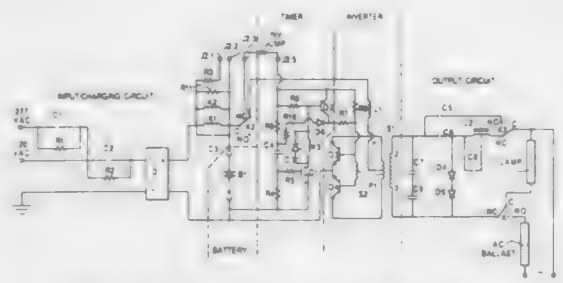
d: the wire diameter of the coil.

5,004,952

VACUUM-TIGHT WINDOW FOR MICROWAVE ELECTRON TUBE AND TRAVELLING WAVE TUBE INCLUDING THIS WINDOW

Jacques Tikes, Orsay; Joel Le Fur, Chilly-Mazarin, and Pierre Nugues, Auneaux, all of France, assignors to Thomson-CSF, Puteaux, France

Filed Nov. 3, 1989, Ser. No. 431,390
Claims priority, application France, Nov. 4, 1988, 8814417
Int. Cl.[5] H01J *23/42*
U.S. Cl. 315—3.5 6 Claims



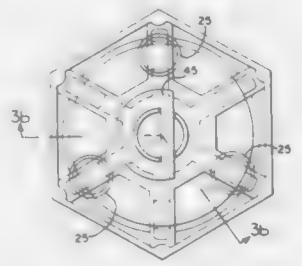
1. A vacuum-tight window for a microwave electron tube, said tube comprising, firstly, a zone under vacuum, form by a source of electrons, a focusing unit called a "delay line" and a collector of electrons and, secondly, at least one external transmission circuit through which a microwave signal interferes with the beam of electrons crossing said delay line, which is cylindrical, wherein said vacuum-tight window is cylindrical and is coaxial with a chamber which encases the delay line, and integrated with said chamber by brazing and wherein said window is made of ceramic material transparent to microwaves and further comprising a metallic flexible ring at each of the ends of said ceramic cylinder with a first ring being brazed to the chamber of the delay line and the second ring being brazed to at least one of said source and a collector sub-assembly coaxial with the delay line and wherein a microwave transmission antenna in the form of a metallic cylinder passes through the ceramic of the window with said antenna being formed by a metallic strip connected, at right angles, to said metallic cylinder which fits a clearance inserted in the chamber.

5,004,953

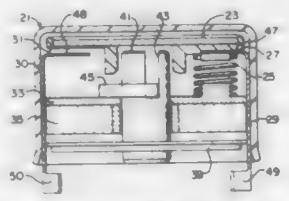
EMERGENCY LIGHTING BALLAST FOR COMPACT FLUORESCENT LAMPS WITH INTEGRAL STARTERS

Charles W. McDonald, Memphis, Tenn., assignor to The Bodine Company, Collierville, Tenn.

Filed Jun. 30, 1989, Ser. No. 374,451
Int. Cl.[5] H05B *37/00*
U.S. Cl. 315—86 11 Claims



1. A method for operating a fluorescent lamp having a starter with power supplied by a battery comprising:
generating an alternating current from energy supplied by the battery;
supplying the alternating current as a starting current to the lamp for a selected period of time; and
at the end of the selected period of time, generating a direct current from the alternating current by effecting half-wave rectification of the alternating current, and supplying the direct current to the lamp in place of the alternating current.



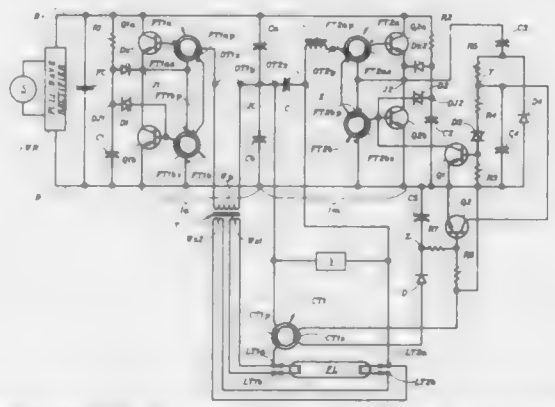
5,004,954

CURRENT SENSING RELAY

Lawrence P. Kleven, Attleboro; Edward A. Agranat, Weston; Jerry Crisafulli, Brookline; Hugh Robinson, Wenham; David J. Smith, Needham; Thomas Wiseley, Acton; Richard C. Fortier, Concord; Severne Johnson, Seattle, and Marvin Menzin, Lexington, all of Mass., assignors to Texas Instruments Incorporated, Dallas, Tex.

Filed Dec. 21, 1989, Ser. No. 454,592
Int. Cl.[5] H05B *41/36;* H01H *63/10, 67/00*
U.S. Cl. 315—106 36 Claims

1. A relay for disconnecting fluorescent lamp filaments from the associated filament circuit, which comprises, in combination:
(a) a housing,
(b) a magnetic flux producing device disposed within said housing,
(c) slug means disposed within said housing and movable toward said magnetic flux producing device in response to magnetic flux from said magnetic flux producing device, and
(d) a plurality of switches within said housing, each said switch including a contact and a contact terminal, said slug means normally biasing each said contact against its associated contact terminal to maintain each of said switches in the normally closed state.



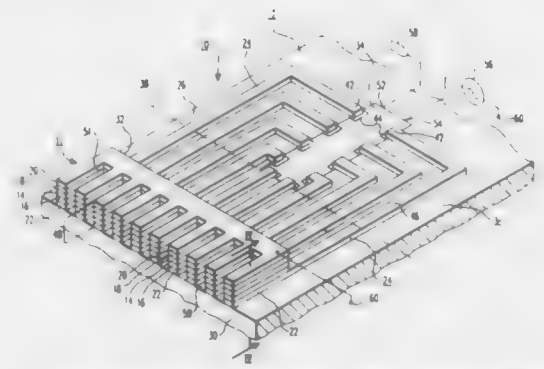
5,004,955

ELECTRONIC BALLAST WITH SHOCK PROTECTION FEATURE

Ole K. Nilssen, Caesar Dr., Barrington, Ill. 60010

Division of Ser. No. 830,270, Feb. 18, 1986. This application Dec. 12, 1989, Ser. No. 448,880
Int. Cl.[5] H05B *41/29*
U.S. Cl. 315—119 11 Claims

1. A combination comprising:
an AC current source powered from a DC voltage and operable, except after having been provided with a disable signal at a set of disable terminals, to provide an AC output current from a pair of output terminals;
gas discharge lamp connected with the output terminals and normally operative to constitute an adequate load for the AC current source, thereby to cause the magnitude of the voltage across the output terminals to stay below a first level for as long as the lamp is indeed so operative;
voltage-limiting means effectively connected across the output terminals and operative, in case the lamp were to fail to constitute said adequate load, to prevent the magnitude of the voltage between the output terminals from exceeding a second level, the second level being (i) higher than the first level, and (ii) substantially independent of the magnitude of the DC voltage; and



control means connected in circuit between the output terminals and the disable terminals, the control means being operative: (i) to sense the presence of the AC output current when it is flowing through the lamp, and (ii) to provide said disable signal in case the AC output current were to fail to flow through the lamp for longer than a brief period of time;
thereby to prevent the voltage-limiting means from having to absorb power for longer than this brief period.

5,004,956

THIN FILM ELECTROLUMINESCENT EDGE EMITTER STRUCTURE ON A SILCON SUBSTRATE

Zoltan K. Kun, Churchill Boro; Michael W. Cresswell, Plum Boro, and Richard H. Hopkins, Murrysville Boro, all of Pa., assignors to Westinghouse Electric Corp., Pittsburgh, Pa.

Continuation-in-part of Ser. No. 235,143, Aug. 23, 1988. This application Nov. 18, 1988, Ser. No. 273,296
Int. Cl.[5] G09G *3/10;* H01J *7/62, 63/04*
U.S. Cl. 315—169.3 2 Claims

1. A thin film electroluminescent edge emitter assembly comprising:
(a) a substrate having a configuration to define a top surface and at least one lateral edge surface;
(b) at least one integrated circuit being composed of semiconductor material and formed within an interior portion of said substrate, said integrated circuit having a logic signal input, an excitation voltage input, a plurality of output leads and internal means for providing an excitation voltage from said excitation voltage input to selected output leads in response to preselected logic signals provided to said internal means at said logic signal input; and
(c) a plurality of pixels formed on said top surface of said substrate and being defined by a composite laminar structure which includes a plurality of laterally-spaced, longitudinally-extending control electrodes disposed either upon said top surface or within the interior of said substrate, a dielectric layer disposed above said substrate and on said plurality of control electrodes, a common electrode layer disposed above said dielectric layer, and a phosphor layer interposed between said dielectric layer and said common electrode layer;
(d) each of said plurality of pixels having a light-emitting face located adjacent said substrate lateral edge surface of said substrate and including one control electrode having one end terminating adjacent said lateral edge and its other opposite end connected to one of said output leads of said integrated circuit;
(e) selected ones of said pixels being responsive to said excitation voltage provided to said selected control electrodes from said integrated circuit via said output leads thereof to radiate a light signal emitted at said selected pixels light-emitting faces.

5,004,957

DIMMING CONTROL CIRCUIT

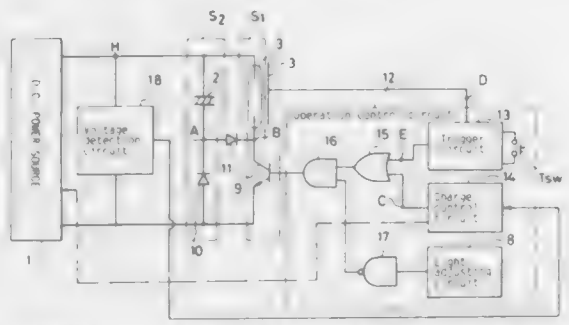
David W. Cunningham, Los Angeles, Calif., assignor to Lee Colortran, Inc., Burbank, Calif.

Filed Jan. 6, 1989, Ser. No. 294,378
Int. Cl.[5] H05B *37/02*
U.S. Cl. 315—199 18 Claims

1. A dimming circuit for lighting devices comprising:
a pair of silicon controlled rectifiers (SCR) connected in parallel opposed circuit relation, each SCR having a control electrode,
a phase control signal generator connected to the control electrode of each SCR for switching the SCR on and off,
a source of electric power connected to the input to the dimming circuit,
inductive means connected in series circuit relationship with the source of power and the pair of SCR's, and
means for controlling the signal generator such that one or both of the SCR's are turned on and off by means of pulses from the generator having a frequency of approximately 50–60 Hz and a predetermined pulse duration to control the intensity of the light provided by the lighting devices and to suppress the acoustic noise generated by the lighting devices.

5,004,958

STROBE APPARATUS



Shinji Hirata, Toyonaka, Japan, assignor to West Electric Company, Ltd., Osaka, Japan

Filed Aug. 2, 1989, Ser. No. 388,378
Claims priority, application Japan, Aug. 3, 1988, 63-193784
Int. Cl.[5] H05B *41/14*
U.S. Cl. 315—241 P 7 Claims

1. A strobe apparatus comprising:
a DC power source;

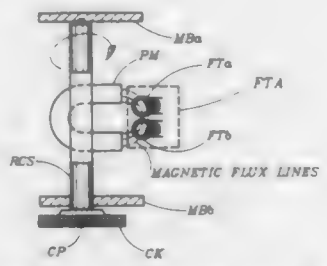
a first series connection of a strobe tube and a semiconductor switching device, said semiconductor switching device having a control electrode and being controlled by a controlling potential on the control electrode only, said first series connection being connected across said DC power source;

a second series connection of a main capacitor and a first diode of reverse direction with regards to charging of said main capacitor, said second series connection being connected across said DC power source;

a second diode of forward direction with regard to charging of said main capacitor, connected between a first junction point between said main capacitor and said first diode and a second junction point between said strobe tube and said switching device; and

an operation control circuit for controlling timings to turn on and off said switching device and a timing to excite said strobe tube, whereby said main capacitor is charged and discharged by turning on and off said switching device.

5,004,959



FLUORESCENT LAMP BALLAST WITH ADJUSTABLE LAMP CURRENT

Ole K. Nilssen, Caesar Dr., Barrington, Ill. 60010

Continuation of Ser. No. 853,872, Apr. 21, 1986, abandoned. This application Mar. 26, 1990, Ser. No. 498,498

Int. Cl.[5] H05B *41/29, 41/38*

U.S. Cl. 315—291 **20 Claims**

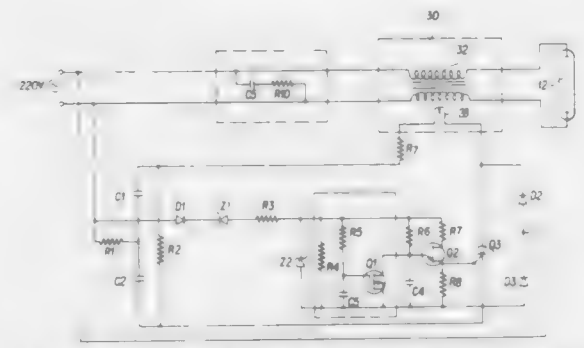
1. In a ballast for a gas discharge lamp, the ballast being adapted by way of a source of AC voltage to provide lamp operating current to the gas discharge lamp, the improvement comprising:

lamp current control means: (i) connected with the source of AC voltage, (ii) receptive of magnetic flux, and (iii) operative in response to this magnetic flux to control of the frequency of the AC voltage;

current-limiting means connected with the AC voltage and operative to provide the lamp operating current, the magnitude of the lamp operating current being dependent on the frequency of the AC voltage; and

magnetic flux means magnetically coupled with the charging control means and adapted to provide controllable magnetic flux to this control means, thereby to permit control of the frequency of the AC voltage and thereby the magnitude of the lamp operating current; the lamp operating current being defined as the current that is actually flowing through the gas discharge lamp.

5,004,960



IGNITION DEVICE FOR A GAS DISCHARGE LAMP

David J. Cockram, and Edgar S. R. Cockram, both of Johannesburg, South Africa, assignors to Actronic Lighting CC, Edenvale, South Africa

Continuation-in-part of Ser. No. 181,496, Apr. 13, 1988, abandoned. This application Dec. 28, 1989, Ser. No. 458,086

Int. Cl.[5] H05B *41/36*

U.S. Cl. 315—307 **8 Claims**

1. An ignition device for a gas discharge which is driven by a source of electrical current having a periodic waveform, the device comprising a voltage multiplier which is adapted to be connected to the source and to provide an output having a higher voltage than that of the source; a pulse generator adapted to be driven by the output and to produce trigger pulses; sensing means for sensing the voltage of the source and for enabling the pulse generator when the voltage of the source exceeds a predetermined level, wherein the sensing means comprises a voltage dependent semiconductor device; timing means associated with the sensing means and the pulse generator and adapted to synchronize the enabling of the pulse generator with the occurrence of the peak in the waveform of the electrical source; and a resonant network having a primary winding to which the trigger pulses from the pulse generator are applied and a secondary winding which is in circuit with the lamp and which applies high-voltage ignition pulses to the lamp when the trigger pulses are applied to the primary winding, the ignition device thereby providing ignition pulses to the lamp automatically whenever the voltage of the source increases beyond the predetermined level, the ignition pulses being synchronized with peaks in the waveform of the electrical source.

5,004,961

WINDOW OPERATOR CONTROL

John M. Berner, Golden Valley, and Thomas A. Roman, St. Anthony, both of Minn., assignors to Truth Incorporated, Owatonna, Minn.

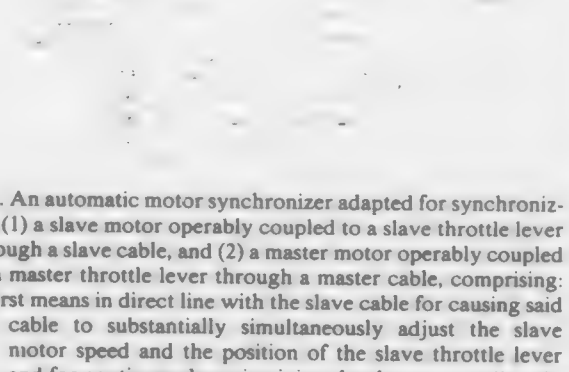
Division of Ser. No. 285,661, Dec. 16, 1988, Pat. No. 4,933,613. This application Apr. 19, 1990, Ser. No. 511,193

Int. Cl.[5] H02P *1/58*

U.S. Cl. 318—65 **6 Claims**

1. A control for operating a window operator having an electrically controlled drive for moving a window in preselected incremental movements between fully open and closed positions, comprising:

means for receiving a command to selectively move the window in a direction to the open position or the closed position;



means for determining when the drive has moved the window a preselected incremental distance, less than a distance between fully open and closed positions;

control means coupled to said receiving means and said determining means for enabling energization of the electrically controlled drive when a command is received by said receiving means until the drive has moved the window said preselected incremental distance and thereafter inhibiting energization of the drive until another command is received to move the window a subsequent incremental distance in the selected direction.

6. A window operator power control circuit for operating a window operator having a motor drive for moving a window between open and closed positions, comprising:

means for receiving bipolar electrical power to power the motor drive to selectively move the window in a direction to the open or closed position;

first and second transistors coupled between said receiving means and the motor drive;

means coupled to said receiving means and said transistors for driving said transistors if power is received by said receiving means;

a limit switch for sensing a desired movement of the window; and

means coupling said limit switch and said driving means for disabling said driving means to drive said transistors to uncouple the receiving means for the motor drive when said desired movement is sensed by said switch means.

5,004,962

AUTOMATIC MOTOR SYNCHRONIZER

Jack G. Fonss, San Jose; Howard Z. Silverberg, Los Gatos, and Martin H. Gardiner, Sunnyvale, all of Calif., assignors to Arrow Marine, Inc., Santa Clara, Calif.

Filed Dec. 28, 1989, Ser. No. 458,085

Int. Cl.[5] B63H *25/02*

U.S. Cl. 318—85 **21 Claims**

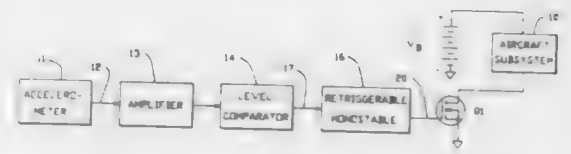
1. An automatic motor synchronizer adapted for synchronizing (1) a slave motor operably coupled to a slave throttle lever through a slave cable, and (2) a master motor operably coupled to a master throttle lever through a master cable, comprising:

first means in direct line with the slave cable for causing said cable to substantially simultaneously adjust the slave motor speed and the position of the slave throttle lever and for continuously maintaining the slave motor directly coupled to the slave throttle lever;

second means for determining the difference in speed between the master motor and the slave motor;

third means for driving the first means responsive to the second means.

5,004,963



ACCELEROMETER BASED POWER CONTROL APPARATUS FOR AIRCRAFT SUBSYSTEM

Wayne R. Hay, Pleasant Hill, Calif., assignor to Systron Donner Corporation, Concord, Calif.

Filed Mar. 13, 1990, Ser. No. 493,136

Int. Cl.[5] H02J *7/00;* **H01H** *35/14*

U.S. Cl. 320—13 **4 Claims**

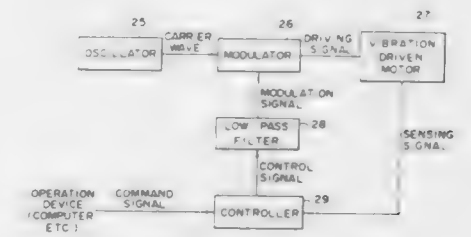
1. Power control apparatus for an aircraft subsystem comprising:

self-contained and independent electrical battery means carried by said aircraft, said aircraft subsystem being powered exclusively by said battery means;

switching means responsive to vibration or acceleration of said aircraft for electrically connecting said battery means to said aircraft subsystem to power said subsystem, whereby said battery means powers said subsystem only during flight of said aircraft to prolong battery life.

5,004,964

CONTROL APPARATUS FOR VIBRATION DRIVEN MOTOR



Kenichi Kataoka, Yokohama, and Takayuki Tsukimoto, Kawasaki, both of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Jun. 18, 1990, Ser. No. 539,344

Claims priority, application Japan, Jun. 19, 1989, 1-156557

Int. Cl.[5] H02N *2/00*

U.S. Cl. 318—128 **15 Claims**

1. A vibration driven motor comprising:

(a) a vibration member;

(b) an electro-mechanical energy conversion element connected to said vibration member and responsive to an applied driving signal for reproducing a vibration in said vibration in said variation member, thereby to cause relative movement between said vibration member and a frictional member in contact with said vibration member;

(c) a modulating member functionally connected to said element for applying to said element said driving signal having a frequency for generating an nth-order (where n is an integer) vibration in said vibration member;

(d) a detecting member for generating a detecting signal corresponding to a vibrating state of said vibration member;

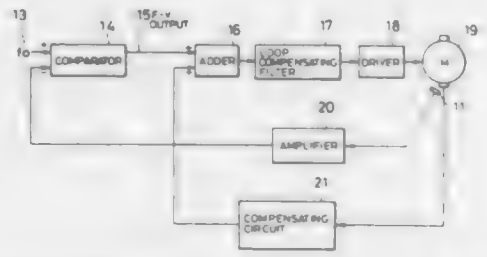
(e) a comparator for receiving said detecting signal and a reference signal and producing a signal corresponding to a difference between said detecting signal and said reference signal; and

(f) a filter connected to said modulating member for filtering frequencies of not more than a smaller value of $|n-(n-1)|$ and $|(n+1)-n|$ (where n is a frequency of said driving signal for generating the nth-order vibration in said vibration member, $(n+1)$ is a frequency of said driving signal for generating the $(n+1)$th-order vibration in said vibration member, and $(n-1)$ is a frequency of said driving signal for generating the $(n-1)$th-order vibration in said vibration member) represented by difference signals from said comparator, and for causing said modulating member to receive an electrical signal corresponding to the filtered frequencies,

wherein said driving signal is modulated by said modulating member in accordance with the electrical signal from said filter.

5,004,965

BRUSHLESS MOTOR WITH TORQUE COMPENSATION



Mitsuhiro Otokawa, and Hiroyuki Takimoto, both of Yokohama, Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed May 18, 1988, Ser. No. 195,647

Claims priority, application Japan, May 20, 1987, 62-121150; May 20, 1987, 62-121151; May 20, 1987, 62-121153

Int. Cl.[5] H02P *6/02*

U.S. Cl. 318—254 **3 Claims**

1. In a brushless motor which includes a rotor, comprising:

speed detecting means for detecting the rotating speed of said rotor;

synthesizing means or synthesizing the output wave forms of inverse electromotive forces of different phases of the brushless motor and outputting a synthesized wave form;

detector means for demodulating the synthesized wave form obtained from said synthesizing means and outputting a demodulated wave form;

inverter means for inverting the demodulated wave form from said detector means and outputting it;

comparator means for comparing a predetermined rotation speed with the speed detected by said speed detecting means and generating a voltage corresponding to the difference of speed obtained from said comparison and outputting it;

adding means for adding the output from said inverter means to the output from said comparator means and outputting it; and

drive control means for controlling the current supplied to said motor according to the output from said adding means.

3. In a brushless motor comprising:

speed detecting means for non-linearly detecting a speed of a rotor, said speed detecting means including a speed detecting magnet having magnetic poles for a frequency generator and provided on a periphery of said rotor, and a magnetic resistance device for detecting magnetic fields of said magnetic poles, said magnetic poles being spaced from each other in accordance with a pattern of torque ripple, denser at the position of higher torque and coarse at the position of lower torque;

comparator means for comparing a predetermined rotating speed with the speed detected by said speed detecting means and converting the difference between said speeds obtained by the comparison into a voltage value corresponding to the difference between said speeds, and outputting the voltage value; and

drive control means for controlling current supplied to the motor on the basis of the voltage value from said comparator means.

METHOD AND DEVICE FOR CONTROLLING SLIDE MOTION OF A VEHICLE SEAT

Hiromitsu Ogasawara, Akishima, Japan, assignor to Tachi-S Co., Ltd., Tokyo, Japan

Filed Mar. 16, 1990, Ser. No. 495,3[illegible]

Int. Cl.[5] G05B *19/42*

U.S. Cl. 318—568.1 **9 Claims**

1. A method for controlling a slide motion of a vehicle seat, in which said seat is slidingly moved between a seating position and backward position by a drive of a motor through a operation of a switch means, said seating position being able to be preset according to a seating taste of an occupant who sits on the seat and said backward position being defined where said seat is to be moved backwardly and stopped at a point away from a front of the vehicle to permit said occupant to climb onto or descend from said seat without hindrance of projected parts or fittings mounted in said vehicle, said method comprising the steps of:

detecting and memorizing a rotation number of said motor which is produced to cause said seat to move from a preset point of said seating position to said backward position; and

causing said motor to rotate by a number equal to said memorized rotation number, so as to automatically return said seat to said preset point of said seating position;

said step of detecting and memorizing said motor rotation number involving counting said rotation number by means of a counter being actuated in response to a rotation sensor provided on said motor, said rotation sensor being adapted to detect said rotation umber of said motor, wherein said method further includes the steps of:

providing a switch means having a first switch area for energizing said motor to rotate in a direction to cause said seat to move to said backward position and a second direction opposite to said first direction so as to return said seat to said seating position;

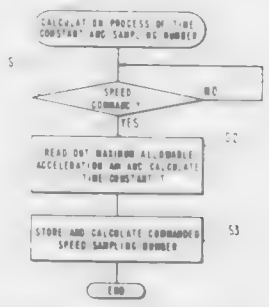
r[illegible]tting said rotation number to zero in said counter when turning on said first switch area of said switch means, prior to said seat being caused by said motor to move to said backward position, in order that said counter starts to count up said rotation number from zero in response to said rotation sensor detecting rotation of said motor starting to rotate in said first direction;

causing said counter to memorize a total number of thus-counted-up rotations of said motor when said seat reaches said backward position; and

permitting return of said seat from said backward position to said seating position by turning on said second switch area of said switch means, in which case, said counter counts down said memorized total rotation number and said seat is returned to said seating position until said total rotation number is counted down to zero by said counter.

5,004,968

METHOD FOR ACCELERATION AND DECELERATION CONTROL OF SERVOMOTORS



Toru Mizuno, Tama, and Ryuichi Hara, Oshino, both of Japan, assignors to Fanuc Ltd., Minamitsuru, Japan

PCT No. PCT/JP88/01241, § 371 Date Jul. 5, 1989, § 102(e) Date Jul. 5, 1989, PCT Pub. No. WO89/06066, PCT Pub. Date Jun. 29, 1989

PCT Filed Dec. 9, 1988, Ser. No. 381,396

Int. Cl.[5] H02P *5/00*

U.S. Cl. 318—615 **11 Claims**

1. A method for controlling acceleration and deceleration of at least one servomotor mounted to a machine, said method comprising the steps of:

(a) sampling, at a predetermined sampling period, a commanded speed for the servomotor;

(b) varying a time constant for acceleration/deceleration control by dividing the commanded speed sampled in step (a) by a predetermined maximum allowable acceleration/deceleration of the machine after the commanded speed is sampled in step (a); and

(c) controlling acceleration/deceleration of the at least one servomotor in accordance with the time constant varied in step (b) and the commanded speed sampled in step (a).

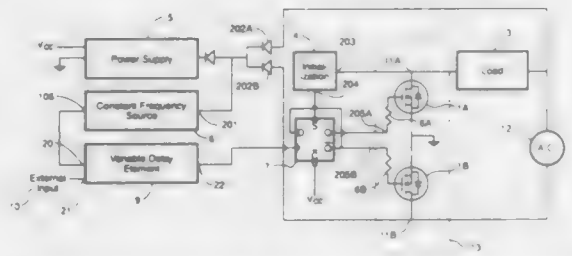
5,004,969

PHASE CONTROL SWITCHING CIRCUIT WITHOUT ZERO CROSSING DETECTION

David J. Schanin, Carlos, Calif., assignor to Bayview Technology Group, Inc., San Carlos, Calif.

Filed Oct. 16, 1989, Ser. No. 422,396

Int. Cl.[5] G05F *1/445*



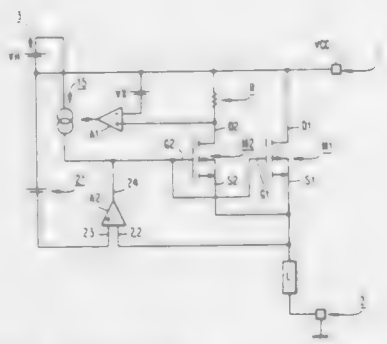
U.S. Cl. 323—235 **14 Claims**

1. A phase control power switching circuit for controlling the phase angle of current flow through a load from an alternating current source, said circuit comprising:

a pair of voltage controlled switches in inverse series connection between said load and said alternating current source for controlling the current flow through said load;

drive means for driving said voltage controlled switches in an inverse fashion to ensure that one switch is always in a conducting mode and that one switch is always in a non-conducting mode; and

toggle means for toggling said drive means so that each of said voltage controlled switches alternates between the



conducting mode and the non-conducting mode when the phase angle of current flow is determined to be proper.

5,004,970

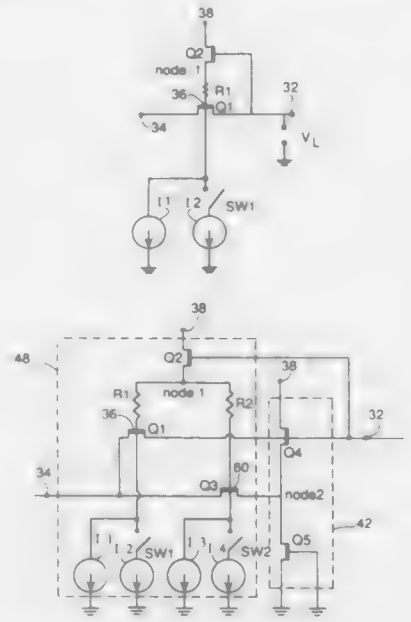
DEVICE AND A PROCESS FOR DETECTING CURRENT FLOW IN A MOS TRANSISTOR

Michel Barou, Voreppe, France, assignor to SGS-Thomson Microelectronics S.A., Gentilly, France

Filed Jan. 19, 1990, Ser. No. 467,459
Claims priority, application France, Jan. 20, 1989, 89 01230
Int. Cl.[5] G05F *1/573*
U.S. Cl. 323—277 5 Claims

1. A device for detecting the flow of current lower than a given threshold current in a load, wherein the load is series connected through the source and drain terminals of a MOS transistor to a supply source, and the gate of the MOS transistor is connected to a control source, said device comprising:

means for detecting a voltage drop across the source and drain terminals of the MOS transistor; and



a control loop for imposing an appropriate gate voltage to the MOS transistor as soon as the voltage drop across said source and drain terminals tends to decrease below a predetermined level.

5,004,971

FLOATING TRANSISTOR SWITCH

Mark E. Fitzpatrick, San Jose, and Robert C. Burd, Sunnyvale, both of Calif., assignors to Gazelle Microcircuits, Inc., Santa Clara, Calif.

Filed Apr. 5, 1990, Ser. No. 505,858
Int. Cl.[5] G05F *1/46, 3/08*
U.S. Cl. 323—312 15 Claims

1. A switch comprising:

a first terminal;

a second terminal;

a first transistor having a first current handling terminal coupled to said first terminal and a second current handling terminal coupled to said second terminal, said first transistor having a current control terminal; and

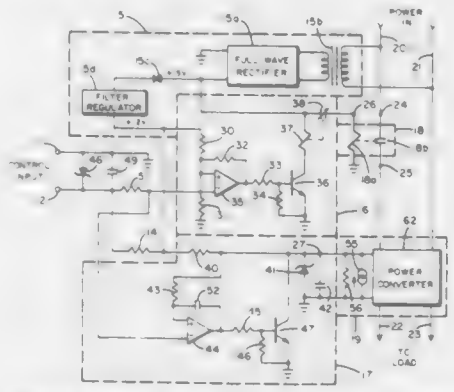
a first biasing means having an output terminal coupled to said current control terminal of said first transistor, said first biasing means having a control terminal coupled to said first terminal,

said first biasing means being configured to generate a first voltage at said output terminal which creates a first predetermined voltage differential between said current control terminal of said first transistor and said first current handling terminal of said first transistor for turning on said first transistor despite variations in voltage at said first terminal,

said first biasing means also being configured to generate a second voltage at said output terminal required to turn off said first transistor.

5,004,972

INTEGRATED POWER LEVEL CONTROL AND ON/OFF FUNCTION CIRCUIT



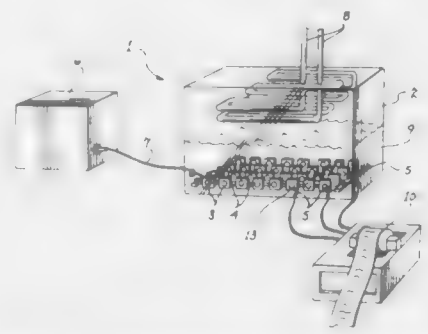
Roger R. Roth, Minnetonka, Minn., assignor to Honeywell Inc., Minneapolis, Minn.

Filed Dec. 26, 1989, Ser. No. 457,221
Int. Cl.[5] G05F *5/02;* G05B *24/02*
U.S. Cl. 323—320 3 Claims

1. In an electric power control system including a load power control circuit for varying the level of power supplied to a load by a power source according to the value of a variable impedance connected across control terminals of said load power control circuit, said load power control circuit of the type providing at its control terminals an output voltage varying in response to the value of the impedance across the control

terminals, an improvement for switching the power from the load responsive to a preselected voltage across the control terminals, and comprising

(a) a voltage sensor receiving the voltage across the load power control circuit control terminals and providing an output signal having a first preselected voltage responsive to the load power control circuit control terminals voltage falling within a preselected range, and a second preselected voltage otherwise; and



(b) a switch means having a pair of power terminals for series connection with the load power control circuit, the power source, and the load and having a control terminal receiving the voltage sensor's output signal and responsive to the first preselected voltage, for forming an electrical connection between the pair of power terminals, and responsive to the second preselected voltage, for opening the electrical connection between the pair of power terminals.

5,004,973

METHOD AND APPARATUS FOR MAINTAINING ELECTRICALLY OPERATING DEVICE TEMPERATURES

Richard Taraci; Brian Taraci, both of Phoenix, and Imre Gorgenyi, Scottsdale, all of Ariz., assignors to Thermal Management, Inc., Tempe, Ariz.

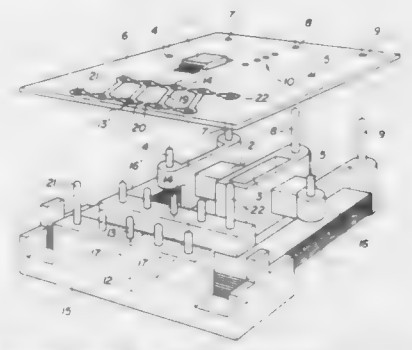
Filed Jul. 13, 1989, Ser. No. 379,083
Int. Cl.[5] G01R *31/02;* H01L *23/44*
U.S. Cl. 324—158 R 20 Claims

1. A method for maintaining an electrically operating device at a desired temperature during operation of the device, comprising the steps of:

a. installing the device in a bath of a first inert liquid having a boiling point less than the desired device temperature;

b. electrically operating the device, thereby generating heat which is transferred to the bath by nucleate boiling of the liquid;

c. monitoring the device temperature until it stabilizes at a temperature near the boiling point of the first inert liquid and below a desired device temperature; and



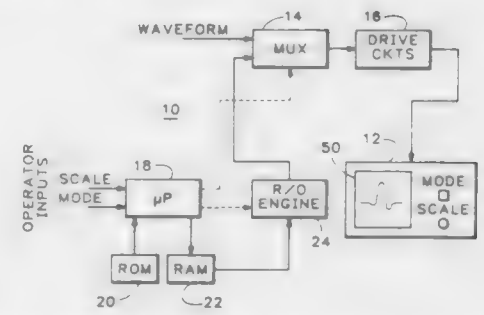
d. adding, incrementally, to the bath a second inert liquid having a boiling point greater than the desired device temperature to modify the rate of nucleate boiling of the first inert liquid while simultaneously monitoring the device temperature until it reaches the desired device temperature.

5,004,974

ELECTRIC CURRENT SENSING DEVICE

Pierr Cattaneo, Saint-Julien, and Claude Gudel, Entrembières, both of France, assignors to Liasons Electroniques-Mecaniques, Switzerland

Filed Sep. 11, 1989, Ser. No. 405,554
Claims priority, application Switzerland, May 30, 1989, 2031/89
Int. Cl.[5] G01R *1/20*
U.S. Cl. 324—117 R 7 Claims



1. An electric sensing device for measuring a current flowing in at least one primary conductor and/or for producing a representation of this current, the device including at least one magnetic circuit, coupled with the said primary conductor, and a device for detecting or measuring the magnetic flux in the said circuit, said primary conductor comprising several substantially U-shaped conductor portions, said portions being arranged to each partially surround a section of the said magnetic circuit and being arranged for connection to a connecting device, said connecting device being selected among several connecting devices having each conductor element arranged for connecting certain of the said conductor portion together so as to form with the said conductor portions at least one primary winding having a respective chosen number of turns.

5,004,975

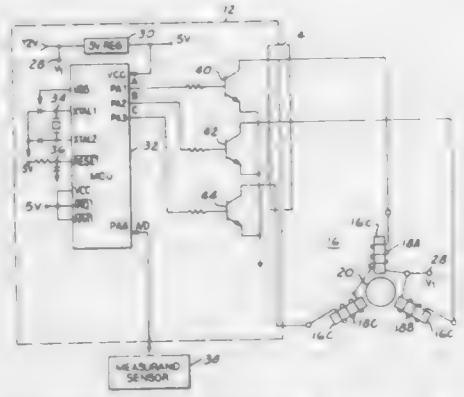
ADJUSTABLE ELECTRONIC GRATICULES FOR MEASURING WAVEFORM DISTORTIONS

Dale A. Jordan, Hillsboro, Oreg., assignor to Tektronix, Inc., Beaverton, Oreg.

Filed Jun. 28, 1990, Ser. No. 546,270
Int. Cl.[5] G01R *31/22, 13/30*
U.S. Cl. 324—121 R 2 Claims

1. An apparatus for measuring distortions of a waveform using adjustable electronic graticules comprising:

means for generating a display list based upon operator



inputs of measurement mode and scale factor that represents a graticule and a measurement value;
means for generating from the display list electronic signals for the graticule and the measurement value; and
means for displaying the graticule and the measurement value together with the waveform.

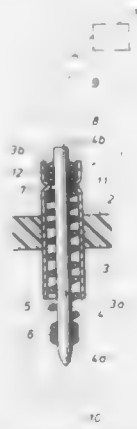
5,004,976

WYE WINDING RADIAL AIR-CORE GAUGE SYSTEM

Paul A. Markow, Huntsville; William Nolle, Hazel Green, and Charles L. Bell, Huntsville, all of Ala., assignors to Chrysler Corporation, Highland Park, Mich.

Filed Nov. 3, 1989, Ser. No. 431,129
Int. Cl.[5] G01R *1/00*
U.S. Cl. 324—154 R **7 Claims**

1. A wye winding type air-core gauge system for generating a movable electromagnetic field in a direction and of a field strength proportional to a magnitude and a direction of input electrical signals representing changes in magnitude of a measurand emanating from a measurand source, said system comprising:
(a) wye-coil, radial air-core gauge means for providing a visual angular displacement indicative of changes in magnitude of the measurand;
(b) sensor means having an input terminal connected to said measurand source for sensing the changes in magnitude of the measurand and to produce therefrom a series of electrical signals in a chosen format representing changes in magnitude of the measurand; and
(c) control means adapted to receive said series of electrical signals and to produce therefrom combinations of maximum amounts of a voltage signal to a chosen coil of said gauge means and a series of pulse width modulated (PWM) signals at a chosen frequency and of durations to a selected second or third coil of said gauge in response to changes of magnitude of said series of magnitude signals for generating control signals to the chosen and selected coils of said gauge means which cause the occurrences of the visual angular displacements indicative of changes in magnitude of the measurand.



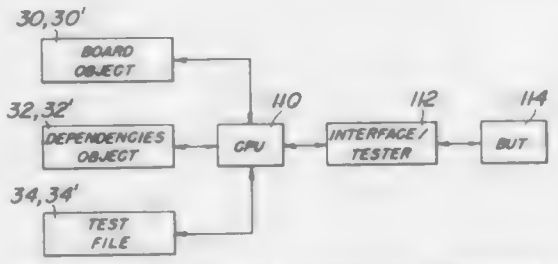
5,004,977

CONTACT PROBE

Toshio Kazama, Kanagawa, Japan, assignor to NHK Spring Co., Ltd., Yokohama, Japan

Filed Oct. 20, 1989, Ser. No. 424,511
Claims priority, application Japan, Oct. 24, 1988, 63-138376[U]; Mar. 3, 1989, 1-24651[U], May 1, 1989, 1-112691
Int. Cl.[4] G01R *1/06, 31/02*
U.S. Cl. 324—158 P **5 Claims**

1. A contact probe, comprising:
an elongated electroconductive needle member having a forward end, said needle member having a smooth, uninterrupted exterior surface;
a tubular holder having an open end, said tubular holder slidably receiving said needle member;
a compression coil spring coiled around said needle member whereby said needle member can slide within said coil spring, said coil spring having a first portion thereof engaged with said tubular holder and a second portion thereof secured to said needle member to thereby urge the



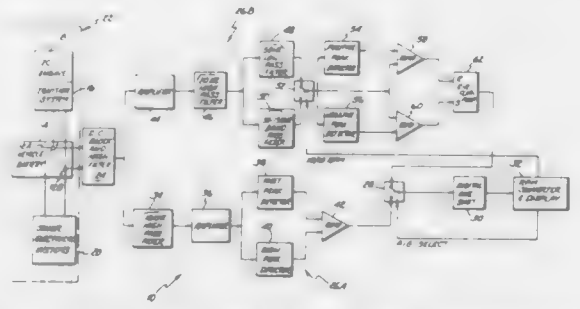
forward end of said needle member to project from said open end of said tubular member;
stopper means secured to said needle for restricting the extent to which said forward end of said needle member projects from said open end of said tubular holder; and
lead means for electrically connecting said needle member to an external circuit.

5,004,978

METHOD FOR REGENERATING IN-CIRCUIT TEST SEQUENCES FOR CIRCUIT BOARD COMPONENTS

Carroll E. Morris, Jr., Fort Collins; Robert E. Balliew, Loveland; Mark A. Mathieu, Loveland, and Darrell B. Johnsrud, Loveland, all of Colo., assignors to Hewlett-Packard Company, Palo Alto, Calif.

Filed Mar. 29, 1990, Ser. No. 501,991
Int. Cl.[5] G01R *31/28*
U.S. Cl. 324—158 R **15 Claims**



1. Method of operating an in-circuit-tester comprising the steps of:
(a) providing in the in-circuit tester information defining details of a circuit board, including data indicative of devices to be tested on the board;
(b) generating, according to at least the information provided in step (a), test sequences for the devices to be tested on the board;
(c) automatically determining, for each device for which a test sequence was generated in step (b), whether other devices on the board affect the test sequence for the device to be tested and identifying the other devices; and,
(d) storing data indicative of the results of step (c) in a memory associated with the in-circuit tester;
the in-circuit tester thereby having stored in the memory, data indicative of the other devices that should be considered in deciding whether to generate new test sequence(s) for each device.

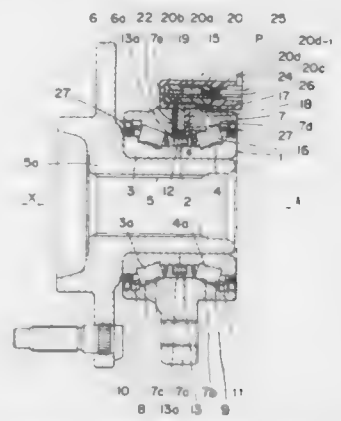
5,004,979

BATTERY TACH

Joseph A. Marino, Waukesha; Surender K. Makhija, Brookfield; Majid Taghikhani, Milwaukee, and Peter A. Puetz, Waukesha, all of Wis., assignors to Bear Automotive Service Equipment Company, New Berlin, Wis.

Continuation of Ser. No. 116,634, Nov. 3, 1987, abandoned. This application Mar. 16, 1990, Ser. No. 496,103
Int. Cl.[5] G01P *3/42*
U.S. Cl. 324—160 **29 Claims**

1. A circuit for providing an output signal representative of speed of an internal combustion engine of the type having an electrical ignition system connected to a battery, the circuit comprising:
means for deriving directly from the battery an input signal representative of time-varying components in battery current, where battery current is the current flow appearing at a battery terminal;
means for filtering the input signal to produce a filtered signal comprising time-varying components of the input signal having frequencies within a range of frequencies associated with a time-varying signal impressed upon the battery current by operation of the ignition system; and
means for suppressing components in the filtered signal not associated with ignition system operation to produce the output signal as a function of engine speed.



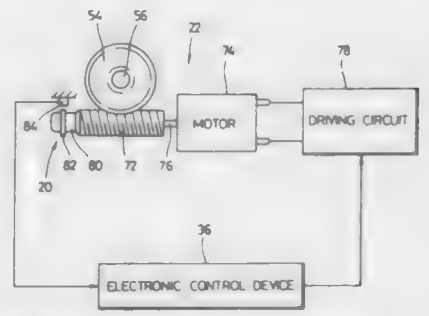
5,004,980

WHEEL BEARING APPARATUS PROVIDED WITH COMPACT WHEEL ROTATION SPEED DETECTOR LYING WITHIN THE OUTSIDE PERIPHERY OF THE BEARING APPARATUS

Tomoyasu Ida; Makoto Nohara, and Nobuyuki Seo, all of Osaka, Japan, assignors to Koyo Seiko Co., Ltd., Osaka, Japan

Filed Sep. 27, 1989, Ser. No. 413,387
Claims priority, application Japan, Jun. 2, 1989, 1-141778
Int. Cl.[5] G01P *3/48*
U.S. Cl. 324—166 **9 Claims**

1. A wheel bearing apparatus which comprises: an inside member having a main body lying along an axis, a flange projecting radially outwardly on one end of said main body for mounting the wheel bearing apparatus on a wheel, said flange having a radially outer edge, and a detected member which has multiple projections placed at regular intervals around the circumference of the main body; an outside member which is placed on the same axis as the inside member and adapted to be fixed to a chassis; multiple rolling elements which are placed between raceway surfaces of the inside member and raceway surfaces of the outside member so as to roll in the circumferential direction on the raceway surfaces; and a wheel rotation speed detector which is mounted on the outside member and which includes a detector end portion having a sensor in spaced opposed relation to the detected member of the inside member, and a circuit housing which is connected to the detector end portion and contains a circuit for processing a signal input from the sensor, so that the rotation of the inside member is detected by the wheel rotational speed detector;
said wheel rotation speed detector having a simplified L-shape, and the detector end portion being embedded in the outside member and extending substantially in the radial direction of the outside member so as to be in spaced opposed relation to the detected member, and the circuit housing is provided on the outside surface of the outside member in parallel with the axial direction of the outside member being inside, in the radial direction, the radially outer edge of the flange;



said outside member having at least one flange projecting in the radial direction of the outside member and having radially outer edges, and a surface portion on the outside surface of the outside member positioned radially inwardly of said radially outer edges of said flanges and extending in parallel with the axial direction of the outside member, said circuit housing of said rotational speed detector being mounted on said surface portion and lying inside, in the radial direction, of said radially outer edges of said flanges and having a connector portion at an end of the circuit housing, said connector portion having an opening which faces neither the flange of said outside member nor the flange of said inside member.

5,004,981

DETECTOR DIVICE FOR SIMULTANEOUSLY DETECTING BOTH THE DIRECTION AND NUMBER OF ROTATIONS OF ROTATING MEMBER

Toru Hashimoto; Masato Takabatake; Masashi Chino, and Akira Takahashi, all of Kyoto, Japan, assignors to Mitsubishi Jidosha Kogyo Kabushiki Kaisha, Tokyo, Japan

Filed Nov. 9, 1989, Ser. No. 434,082
Claims priority, application Japan, Nov. 18, 1988, 63-290242; Nov. 18, 1988, 63-290243; Oct. 27, 1989, 1-278348
Int. Cl.[5] G01B *7/30;* **G01P** *3/487;* **G05D** *13/00;* **F02D** *9/00*
U.S. Cl. 324—207.22 **22 Claims**

14. A sensor for detecting direction and number of revolu-

tions of a rotating member which is rotated in forward and reverse directions, comprising:

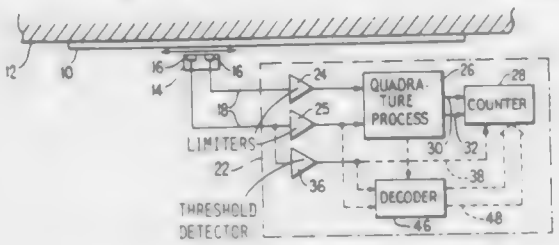
a magnetic assembly arranged around an outer peripheral surface of the rotating member, the magnet assembly including first and second ring magnets of identical shape, securely arranged and surrounding the outer peripheral surface of the rotating member and spaced apart from each other at a predetermined distance in an axial direction of the rotating member, the first and second ring magnets each having a north pole region magnetized to be a north magnetic pole and extending over one circumferential portion of an outer peripheral surface thereof and a south pole region magnetized to be a south magnetic pole and extending over another circumferential portion of the other peripheral surface thereof, the north and south pole regions of the first ring magnet being shifted in rotational phase by a predetermined number of degrees in a circumferential direction of the rotating member from the north and south pole regions of the second ring magnet, respectively; and

magnetism detecting means for detecting changes in polarity caused by movement of the north and south pole regions of the first and second ring magnets, at a predetermined circumferential position relative to the circumferential direction of the rotating member when the first and second ring magnets are rotated together with the rotating member, and for outputting a result of the detection, the magnetism detecting means including a first magnetic probe securely arranged in the vicinity of the outer peripheral surface of the first ring magnet and always opposed to same, and a second magnetic probe securely arranged in the vicinity of the outer peripheral surface of the second ring magnet and always opposed to same, the first magnetic probe outputting a binary signal of a different level depending on whether it is opposed to the north or south pole region of the first ring magnet, the second magnetic probe being located at the same circumferential position as the first magnetic probe with respect to the circumferential direction of the rotating member, and outputting a binary signal of a different level depending on whether it is opposed to the north or south region of the second ring magnet.

5,004,982

SCALES FOR POSITION DETERMINING APPARATUS HAVING MARKS OF DIFFERENT AMPLITUDES THEREON

Raymond J. Chaney, Berkeley; David R. McMurtry, Wotton-Under-Edge, and David Wilson, Stonehouse, all of United Kingdom, assignors to RIENSHAW plc, Gloucestershire, United Kingdom



Continuation of Ser. No. 264,965, filed as PCT GB88/00119 on Feb. 24, 1988, published as WO88/06717 on Sept. 7, 1988, abandoned.

This application Jul. 23, 1990, Ser. No. 555,792

Claims priority, application United Kingdom, Feb. 24, 1987, 8704204; Mar. 6, 1987, 8705304; Mar. 21, 1987, 8706789

Int. Cl.[5] G01B *7/14*

U.S. Cl. 324—207.22 **8 Claims**

1. A scale for a position determination device comprising:

a track,

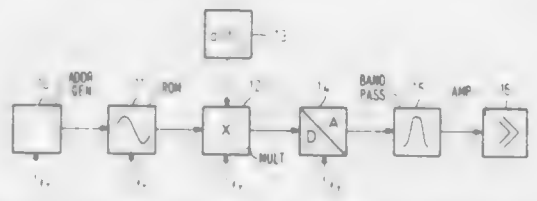
a series of marks spaced along the track and recorded on the track as a signal of varying amplitude,

said marks comprising first marks having a first amplitude with coding groups of marks interspersed therewith, each coding group including a plurality of second marks having a second amplitude which is distinguishable from the first amplitude,

the marks within a said group being arranged in a code to provide information relating to the positions of selected ones of the first marks.

5,004,983

CIRCUIT ARRANGEMENT FOR GENERATING RF SIGNALS FOR MR EXAMINATIONS



Roland Proksa; Peter Roschmann, both of Hamburg, Fed. Rep. of Germany, and Noel J. M. van den Berg, Zoetermeer, Netherlands, assignors to U.S. Philips Corporation, New York, N.Y.

Filed Jun. 1, 1989, Ser. No. 359,620

Claims priority, application Fed. Rep. of Germany, Jun. 30, 1988, 3821984

Int. Cl.[5] G01R *33/20*

U.S. Cl. 324—322 **20 Claims**

1. A circuit arrangement for generating rf signals at a Larmor frequency "f_L" for transmission into an examination zone during MR examinations, comprising a read-only memory in which samples of a sinusoidal waveform are stored in the form of a series of data words, an address generator means for reading data words from the read-only memory with a clock frequency "f_T" such that cycles of the sinusoidal waveform are read out from said read-only memory with a frequency "f_S", there being at least two data words read from the read-only memory for each cycle of the sinusoidal waveform, and a digital-to-analog converter which succeeds the read-only memory, wherein "f_T" and "f_S" are chosen such that a frequency spectrum at the output of the digital-to-analog converter comprises a spectral line at the Larmor frequency f_L, and wherein $f_L > f_S$.

MAGNETIC FIELD PICKUP ASSEMBLY FOR DIAGNOSITICS ON SPECIFIC ENGINE

Thomas P. Becker, Kenosha, Wis.; Sohrab S. Rameshk, Libertyville, Ill., and Matthew M. Crass, Kenosha, Wis., assignors to Snap-on Tools Corporation, Kenosha, Wis.

Filed Sep. 8, 1989, Ser. No. 404,430

Int. Cl.[5] F02P *17/00*

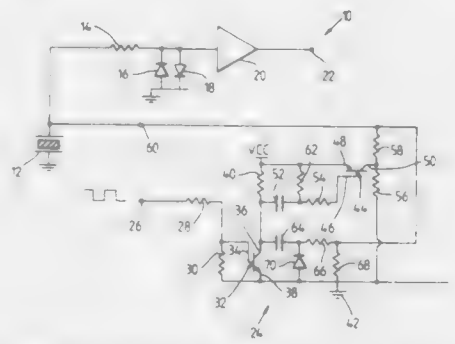
U.S. Cl. 324—402 **10 Claims**

1. An inductive pickup assembly for sensing the electromagnetic fields of ignition coils of an automotive engine having a plurality of such ignition coils, direct access to which ignition coils is prevented by associated engine housing structure mounted by fastening means, said pickup assembly comprising:

a frame disposable on the housing structure in a predetermined configuration, said frame having a plurality of locating members adapted for cooperation with fastening means accurately to position said frame in said predetermined configuration, and a plurality of inductive coil sensing means equal in number to the ignition coils and carried by said frame in predetermined positions such that when said frame is disposed in its predetermined configuration on the housing structure said sensing means are respectively properly positioned for sensing the electromagnetic fields of the ignition coils, each of said sensing means including a helical sensing coil of electrically conductive wire having an axis extending between opposite ends of the sensing coil, and a magnetizable metal shield covering only one end of said sensing coil.

5,004,985

METHOD AND APPARATUS FOR TESTING THE RESPONSE OF A STRESS WAVE SENSOR



Trevor J. Holroyd, and Timothy E. Tracey, both of Derby, England, assignors to Stresswave Technology Limited, Derby, England

Filed Mar. 15, 1990, Ser. No. 493,708

Claims priority, application United Kingdom, Apr. 21, 1989, 8909155

Int. Cl.[5] G01R *29/22*

U.S. Cl. 324—727 **14 Claims**

1. A method of testing the response of a stress wave sensor, the stress wave sensor comprising a transducer and an amplifier arranged electrically in series,

the method comprising supplying to the sensor at a point electrically between the transducer and the amplifier at least one first electrical pulse having a relatively large amplitude such that it causes an operative transducer to oscillate, an operative transducer caused to oscillate by the at least one electrical pulse generating an additional electrical pulse,

supplying the first electrical pulse and any additional electrical pulse generated by the transducer to the amplifier, an operative amplifier amplifying the first electrical pulse and any additional electrical pulse to produce an output signal,

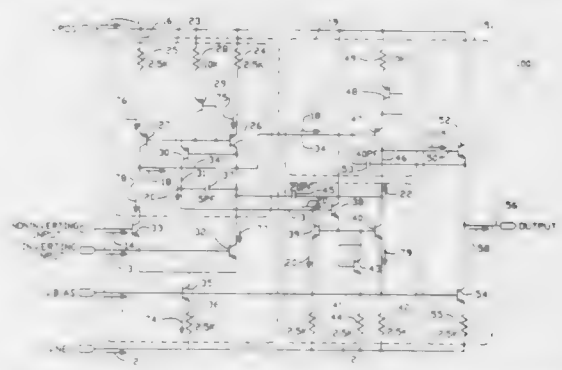
determining from the output signal of the amplifier if any one or more of the transducer and amplifier are not operating satisfactorily, an inoperative amplifier not amplifying the first electrical pulse and any additional electrical pulse and not producing an output signal, the lack of an output signal from the amplifier indicating that the amplifier is inoperative,

supplying to the sensor at the point electrically between the transducer and the amplifier a second electrical pulse having a relatively small predetermined amplitude such that it does not saturate the amplifier,

supplying the second electrical pulse to the amplifier,

and determining from the output signal of the amplifier corresponding to the second electrical pulse the gain of the amplifier.

5,004,986



OP-AMP WITH INTERNALLY GENERATED BIAS AND PRECISION VOLTAGE REFERENCE USING SAME

Mark W. Bohrer, Saratoga, Calif., assignor to Advanced Micro Devices, Inc., Sunnyvale, Calif.

Filed Oct. 2, 1989, Ser. No. 415,896

Int. Cl.[5] H03F *3/45*

U.S. Cl. 330—257 **24 Claims**

13. A method of converting a first and a second input signal into an output signal, comprising the steps of:

accepting said first and second input signals;

generating an intermediate signal as a function of said first and second input signals;

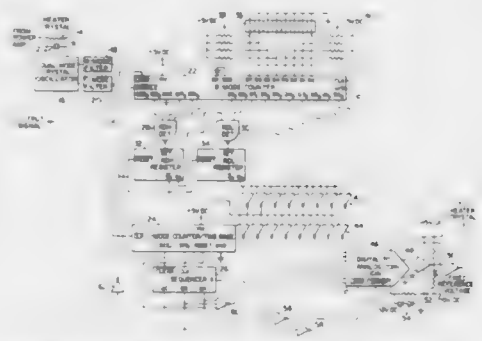
establishing a stable reference whose stability is independent of fluctuations of said input signals;

generating a control signal according to said stable reference and independently of fluctuations of said input signals;

producing a current signal according to said control signal and independently of fluctuations of said input signals; and

converting said intermediate signal to said output signal according to said current signal.

5,004,987



TEMPERATURE COMPENSATED CRYSTAL RESONATOR FOUND IN A DUAL-MODE OSCILLATOR

Leslie C. Hurley, Carlisle, Pa., assignor to Piezo Crystal Company, Carlisle, Pa.

Filed May 19, 1989, Ser. No. 363,595

Int. Cl.[5] H03B *5/32;* **H03L** *1/02;* **G05D** *23/20*

U.S. Cl. 331—70 **18 Claims**

1. A circuit for controlling an output of a dual-mode oscillator including a crystal resonator, wherein the output of the dual-mode oscillator comprises a first signal and a second signal, comprising:

first counting means for counting in accordance with the first signal to produce a first output defining a time period;

second counting means for counting in accordance with the

second signal for the time period defined by the first output to produce a second output defining a temperature of the crystal resonator; and

processing means for processing the second output to derive a temperature control signal for selectively adjusting the temperature of the crystal resonator

---

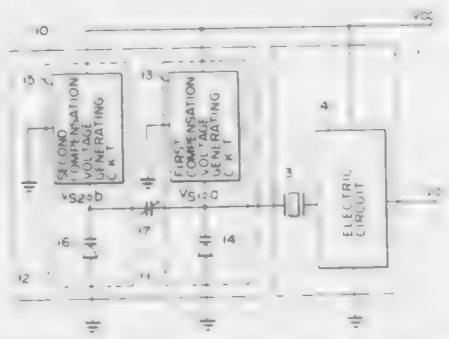
QUARTZ CRYSTAL OSCILLATOR WITH TEMPERATURE-COMPENSATED FREQUENCY CHARACTERISTICS



Yoshifusa Ueno; Takihei Tanzawa, and Takayuki Suzuki, all of Tokorozawa, Japan, assignors to Nihon Dempa Kogyo Co., Ltd., Tokyo, Japan

Filed Jul. 19, 1989, Ser. No. 382,107

Claims priority, application Japan, Jul. 25, 1988, 63-186276; Sep. 30, 1988, 63-248632; Dec. 31, 1988, 63-335049

Int. Cl.[5] H03B *5/04*

U.S. Cl. 331—116 R **12 Claims**

1. A temperature-compensated crystal oscillator, for providing a signal oscillating at a predetermined frequency, said crystal oscillator having frequency-temperature characteristics depending upon temperature, the frequency of the signal provided by said oscillator being determined by said frequency-temperature characteristics, said oscillator comprising:

oscillating circuit means for providing an oscillating signal, said oscillating circuit means having a quartz crystal vibrator as an oscillating element, said oscillating circuit means having a rated temperature range and given frequency-temperature characteristics; and

temperature compensating means coupled to said quartz crystal vibrator for compensating the frequency-temperature characteristics of said oscillating circuit means, said temperature compensating means including:

first temperature compensating means for compensating the frequency-temperature characteristics of the oscillating circuit means within a rated temperature range of said oscillating circuit means to obtain compensated frequency-temperature characteristics; and

second temperature compensating means for further compensating said compensated frequency-temperature characteristics in a specific temperature region of said compensated frequency-temperature characteristics, said specific temperature region being within said rated temperature range and extending over only a part of said rated temperature range, to obtain desired frequency-temperature characteristics for the crystal oscillator.

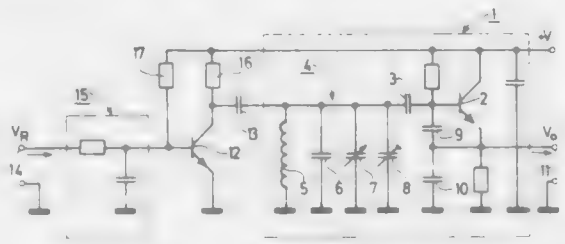
OSCILLATOR FOR CONTROLLING A MIXER STAGE IN A TUNER



Rudolf Hasler, Vienna, Austria, assignor to U.S. Philips Corp., New York, N.Y.

Filed Dec. 13, 1989, Ser. No. 450,338

Claims priority, application Austria, Dec. 19, 1988, 3081/88

Int. Cl.[5] H03B *5/00*

U.S. Cl. 331—117 R **2 Claims**

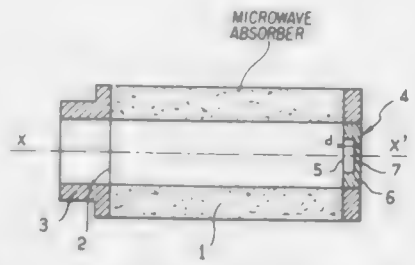
1. An oscillator, for controlling a mixer stage in a tuner which oscillator comprises:

an active circuit element and a parallel resonant circuit including a variable capacitance which is variable in dependence upon a fine-tuning control signal, characterized in that;

the variable capacitance is comprised of a transistor separate from the active element whose collector is capacitively coupled to the parallel resonant circuit and whose base and emitter are connected to ground for alternating current, in that the operating point of the transistor is chosen to be such that both its base-emitter junction and its base-collector junction are forward biased, and in that the fine-tuning control signal is applied to the base-emitter path of the transistor, said fine-tuning control signal within its control range driving the base-collector junction further into conduction on the one hand and into its cut-off region on the other hand.

5,004,990

MICROWAVE LOAD IN SMALL-LENGTH OVERSIZED WAVEGUIDE FORM



Jean-Pierre Bergero, Limeil Brevannes, and Claude Couasnard, Meudon La Foret, both of France, assignors to Thomson Tubes Electroniques, Boulogne Billancourt, France

Filed Nov. 13, 1989, Ser. No. 436,006

Claims priority, application France, Nov. 15, 1988, 88 14800

Int. Cl.[5] H01P *1/26*

U.S. Cl. 333—22 R **12 Claims**

1. A microwave load for attenuation of waves with low losses that are propagated in an oversized waveguide comprising:

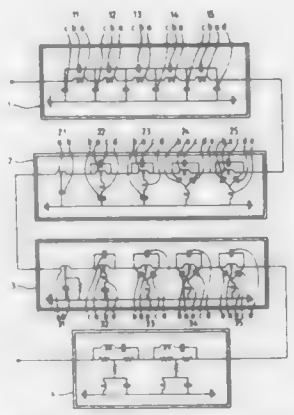
a body of absorbent material having a longitudinal axis and an interior cross section substantially equal to or larger than an interior cross section of the oversized waveguide, the body forming a waveguide section and having a first open end connected to the oversized waveguide and a second open end; and

a mode reflecting and converting device closing the second end of the body and having a part thereof which is oriented substantially transversely to the longitudinal axis, the part facing an interior of the body;

wherein the part comprises at least one offset portion forming one of a recess and projection defining at least two distinct reflecting planes for converting a mode of waves located at the second end of the body into at least one mode of higher losses and for reflecting converted waves towards the first end for absorption.

5,004,991

LOW PASS FILTER SYSTEM FOR AN ELECTRICAL CIRCUIT



Béla Teleki, Newcastle under Lyme, United Kingdom; Alan G. Holden, Chesire, England, and Leang H. Chong, Penang, Malaysia, assignors to Johnson Matthey Public Limited Company, London, England

Filed Apr. 3, 1987, Ser. No. 33,969

Claims priority, application United Kingdom, Apr. 4, 1986, 8608298.

Int. Cl.[5] H03H *7/075*

U.S. Cl. 333—168 **7 Claims**

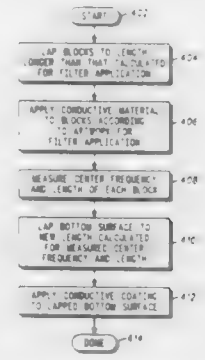
1. A low pass filter system for filtering from an electrical circuit unwanted signals having a frequency above a pre-selected frequency whilst allowing passage to a passband of signals whose frequency is below the pre-selected frequency, the system comprising:

a low pass filter having an input and a filtered output;

a first group delay means having an input connected to the filtered output of the filter and having an output, said first group delay means comprises a plurality of combinations of inductance and capacitance elements, each said combination being tuned to affect a particular frequency group of the passband of signals such that the cumulative effect of the combination is to impart a delay to at least 90% of said passband of signals passing through said first group delay means; and

at least one additional group delay means having an input connected to the output of the first group delay means and having an output, said additional group delay means comprising a plurality of combinations of inductance and capacitance elements, each said combination being tuned to affect a particular frequency group of the passband of signals such that the cumulative effect of the combinations is to impart delay to at least 90% of the passband of signals and the cumulative effect of the first and the additional group delay means together is to impart sufficient extra delay to said passband of signals at the output of the additional group delay means to bring the delay provided to at least 90% of the wanted signals to within 20 ns of the delay provided to the passband signal having a highest frequency.

5,004,992



MULTI-RESONATOR CERAMIC FILTER AND METHOD FOR TUNING AND ADJUSTING THE RESONATORS THEREOF

Steven E. Grieco, and Douglas A. Morris, both of Albuquerque, N. Mex., assignors to Motorola, Inc., Schaumburg, Ill.

Filed May 25, 1990, Ser. No. 529,098

Int. Cl.[5] H01P *1/202*

U.S. Cl. 333—202 **8 Claims**

1. A method manufacturing a filter with a predetermined center frequency, said method comprising the steps of:

producing dielectric means comprised of a dielectric material having top, side and bottom surfaces, said dielectric means further having at least two holes extending from the top surface toward the bottom surface thereof and spatially disposed at a predetermined distance from one another, the side and bottom surfaces of said dielectric means selectively covered with a conductive material to provide a transmission line resonator for each of said at least two holes, and said at least two holes having a length that is greater than a predetermined length producing the predetermined center frequency, and said dielectric means having at least two measurable frequency related characteristics;

producing an artwork mask for adjusting the frequency related characteristics of the dielectric means;

applying conductive material to the top surface of said dielectric means in accordance with the artwork mask;

measuring one of the frequency related characteristic of said dielectric means to obtain a measurement;

removing the conductive material and a layer of the dielectric material from the bottom surface, said layer having a thickness related to the measurement; and

applying conductive material to the bottom surface of said dielectric means.

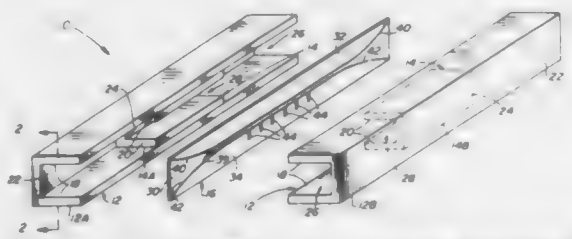
5,004,993

CONSTRICTED SPLIT BLOCK WAVEGUIDE LOW PASS FILTER WITH PRINTED CIRCUIT FILTER SUBSTRATE

John Reindel, San Diego, Calif., assignor to The United States of America as represented by the Secretary of the Navy, Washington, D.C.

Filed Sep. 19, 1989, Ser. No. 410,385

Int. Cl.[5] H01P *1/207*



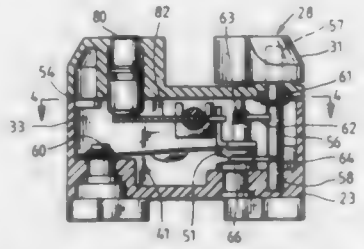
U.S. Cl. 333—208 **16 Claims**

1. A waveguide low pass filter, comprising:

(a) an outer waveguide;

(b) an inner waveguide shorter in length than, and disposed within, said outer waveguide so as to form a constriction

within said outer waveguide limiting the propagation of energy to the fundamental TE_{10} mode; and



(c) a slotted ridge filter array mounted longitudinally through said outer and inner waveguides.

5,004,994

PUSH-TO-TRIP HIGH-AMP CIRCUIT BREAKER

Jacek M. Korczynski, Niles, and Thomas J. Stack, Chicago, both of Ill., assignors to Cooper Industries, Inc., Houston, Tex.

Filed May 24, 1990, Ser. No. 528,312
Int. Cl.[5] H01H *71/16*
U.S. Cl. 337—66 **11 Claims**

1. A high amperage circuit breaker comprising
a pair of spaced terminals being placed in series with the circuit to be protected;
a heat resistant electrical insulating plastic housing defining a body cavity, said body cavity having a base, a front wall, a rear wall and two side walls,
a cover to close said housing;
a rectangular thermally activated bistable mechanical element in said cavity, at least one dimple formed on said bistable element;
a first contact being connected to one of said terminals, said first contact also connected to one end of said bistable element by means wherein the one end of said bistable element always remains stationary with respect to the first contact and in electrical contact with the first contact;
a second electrical contact attached to the other end of said bistable element;
said other end of said bistable element being free to move in a relatively vertical direction;
a third contact electrically connected to said other terminal and being positioned relative to said second contact wherein said second and third contact are normally in electrical contact with each other when the bistable element is in a first position, and said first position being to close the circuit of the circuit breaker;
said bistable element having a predetermined current response to quickly deflect when there is a predetermined over current, said deflection causing said other end of said bistable element to move from said first position to a second position and to cause said second contact to separate from said third contact by a predetermined distance to open the circuit of the circuit breaker;
a reset mechanism to maintain the predetermined distance between said second contact and said third contact until the circuit breaker is manually reset; and
a manual trip means to open the circuit of the circuit breaker.

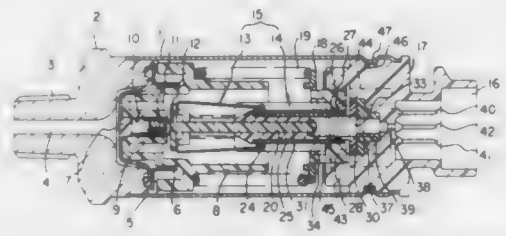
FUSE ASSEMBLY FOR CAR

Ying C. Lo, No. 46, Lane 130, Ming-Tzwu Rd., Miau-Li, Taiwan

Filed Mar. 22, 1990, Ser. No. 497,284
Int. Cl.[5] H01H *85/32*
U.S. Cl. 337—266 **3 Claims**



1. A fuse assembly for a car comprising:
a cross-sectionally generally rectangular hollow insulating housing including an open bottom, a central receiving room, two side receiving rooms both communicating with said central receiving room, said and a top **44**, said top having two diametrically opposite angulate surfaces **46**, and two through holes respectively communicating with said two side rooms;
two conducting plates respectively received in said two side rooms, respectively having two cornered surfaces **53** respectively complementary to said angulate surfaces, and each of which includes a first end inserted in one of said two top holes **44** and a second opposite end protruding beyond said open bottom to be adapted to be inserted to a fuse assembly socket for said car; and
a fuse positioned in said central room and having two ends thereof respectively connected to and integrally formed with said two conducting plates, in which:
said fuse assembly further includes an indicating bulb generally positioned in said central room and between said top and said fuse **60** and having two diametrically disposed electrodes **72** respectively generally positioned in said two side rooms and respectively having two U-shaped portions having two angled portions respectively firmly clamped between said cornered surfaces **53** and said angulate surface **46**, and
said top and said first ends of said two conducting plates clamp therebetween said two electrodes in order to generally position said indicating bulb in said central room.

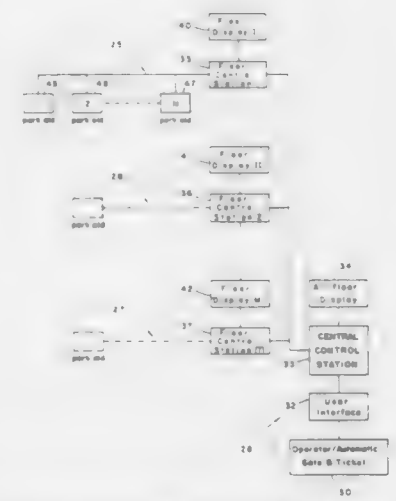
HYDRAULIC ACTUATING APPARATUS

Toshiji Shibazaki; Masaru Okano; Naoto Kishida; Yoshihiro Ozaki, and Kunihiko Iyama, all of Saitama, Japan, assignors to Toyo Denso Kabushiki Kaisha, Tokyo, Japan

Filed Aug. 28, 1989, Ser. No. 399,057
Claims priority, application Japan, Aug. 26, 1988, 63-111837[U]; Aug. 26, 1988, 63-111838[U]; Nov. 22, 1988, 63-152668[U]
Int. Cl.[5] H01C *10/10, 10/30*
U.S. Cl. 338—36 **9 Claims**

1. A hydraulic actuating apparatus for sensing hydraulic pressure, comprising:



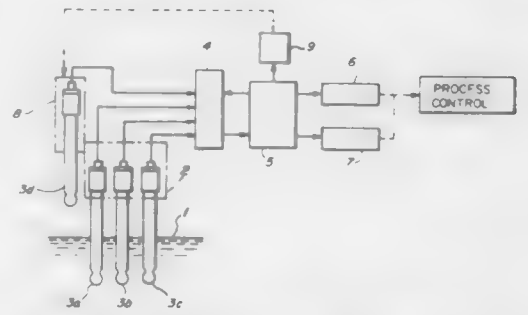
a slider which is movable in proportion to the hydraulic pressure;
a variable resistor unit having a resistance value which changes in response to movement of said slider;
resilient means which is resiliently deformable by movement of said slider and which exerts a restoring force opposing the movement of said slider caused by said hydraulic pressure; and
adjusting means for setting an initial resistance value of said variable resistor unit, said variable resistor unit having a portion which is in contact with said adjusting means.

5,004,997

PARKING AID DEVICE

Ben Z. Shisgal, Carmiel, and Tzvi Tzelnick, Tel Aviv, both of Israel, assignors to Insys Ltd., Carmiel, Israel

Filed Jan. 22, 1990, Ser. No. 468,292
Int. Cl.[5] B60Q *1/00;* **G08G** *1/14*
U.S. Cl. 340—436 **17 Claims**



1. An electronic parking-aid device for guiding a motorist when parking a vehicle in a parking bay, the device comprising:
a housing adapted to be fixed to a wall at an end of the parking bay and containing therein means for connecting to a source of electric power,
transmitter means for transmitting a first signal towards an approaching vehicle so as to reflect a second signal from an approaching surface of the vehicle,
receiver means for receiving the second signal,
computing means coupled to the transmitting and receiving means and responsive to the first and second signals for computing the distance of the approaching surface of the vehicle from the wall,
logic means coupled to the computing means for comparing the computed distance with a first predetermined threshold and generating a first output signal if the computed distance is less than the first threshold, and
first indication means coupled to the logic means and responsive to the first output signal for indicating to the motorist to stop.

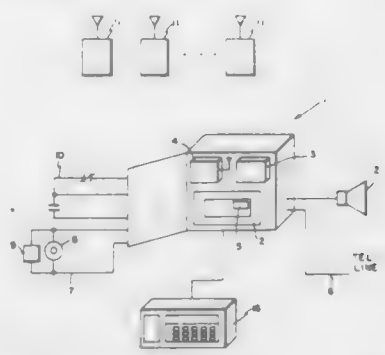
5,004,998

ION-MEASURING APPARATUS FOR USE IN PROCESS

Yoshio Horii, Miyanohigashi, Japan, assignor to Horiba, Ltd., Kyoto, Japan

Filed Dec. 7, 1989, Ser. No. 447,221
Claims priority, application Japan, Dec. 14, 1988, 63-316778
Int. Cl.[5] G08B *21/00;* **G01N** *27/26*
U.S. Cl. 340—507 **24 Claims**

1. An ion measuring apparatus for the monitoring of a sample from a production process, comprising:
a plurality of ion measuring electrodes for respectively measuring the ion content of the sample and providing an output measurement signal based on outputs from each of the electrodes;
means for determining a failure of one of the electrodes, and
means for excluding the failed electrode output form the output measurement signal

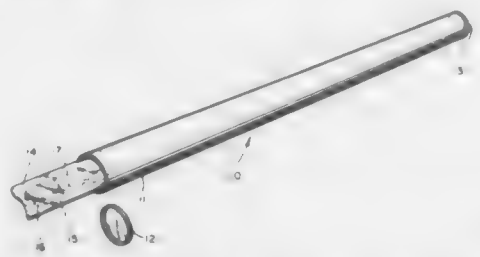


9. The ion measuring apparatus of claim 1 further including an alarm that is responsive to a detection of a failure of an electrode.

5,004,999

EXTENDED RF RANGE ALARM SYSTEM

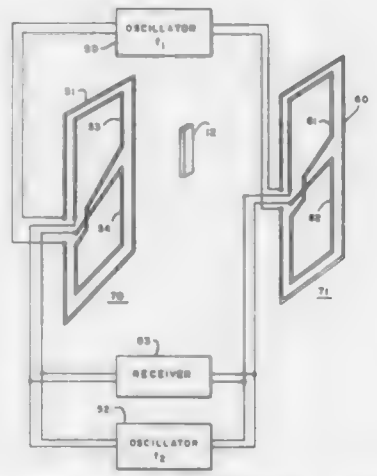
Jon P. Hartmann, Santa Ana, and Ted W. Glasener, Orange, both of Calif., assignors to Honeywell, Inc., Minneapolis, Minn.



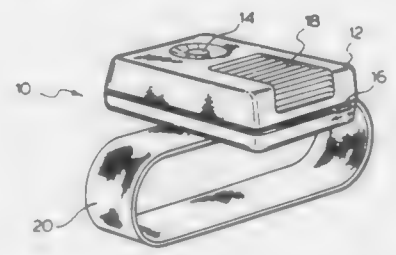
Filed Dec. 21, 1989, Ser. No. 454,329
Int. Cl.[5] G08B *1/08*
U.S. Cl. 340—539 **10 Claims**

1. An alarm system comprising:
a central control including an RF receiver for receiving message information from remote locations;
one or more RF transmitters for generating alarm message information to be transmitted to said receiver, each said transmitter comprising:
an RF energy generator for generating RF signals having an average signal strength which is a predetermined level;
a message source for providing said message information to modulate said RF signals; and
means for modulating said RF signals with said message information to produce modulated RF pulses of contiguous data bits, each of said pulses having an instantaneous level of RF field strength substantially greater than said

predetermined level and wherein said average signal is calculated over a cycle said cycle comprising the on-time of one of said pulses and the off-time between said pulses.



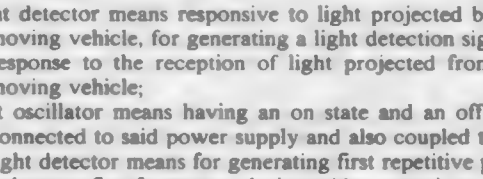
5,005,000
KIT CONTAINING COMPONENTS FOR AN ALARM SCREEN ASSEMBLY
Dennis E. Riordan, Los Angeles, Calif.
Filed Dec. 12, 1986, Ser. No. 941,166
Int. Cl.[5] G08B *13/00*
U.S. Cl. 340—550 **1 Claim**



1. A process for making an alarm screen mesh comprising the steps of:
a. weaving a screen mesh with a plurality of parallel strands of conductive wire so that each of said plurality of strands of conductive wire is interwoven into said screen mesh with each of said plurality of strands of conductive wire having a first end and a second end;
b. cutting a rectangular sheet from said screen mesh and trimming opposite sides of said rectangular sheet in order to leave projecting lengths of each of said plurality of parallel strands of conductive wire into said rectangular sheet;
c. mechanically coupling alternating pairs of said first ends and second ends of said plurality of strands of conductive wire to adjacent strands of conductive wire in order to form a mechanically-coupled plurality of strands of conductive wire to form a sinuous path in said rectangular sheet;
d. mechanically coupling one end of a continuous strand of conductive wire to one end of said mechanically-coupled plurality of strands of conductive wire; and
e. using said mechanically-coupled plurality of strands of conductive wire to pull said continuous strand of conductive wire through said rectangular sheet whereby said continuous strand of conductive wire is interwoven into said screen mesh along said sinuous path of said rectangular sheet.

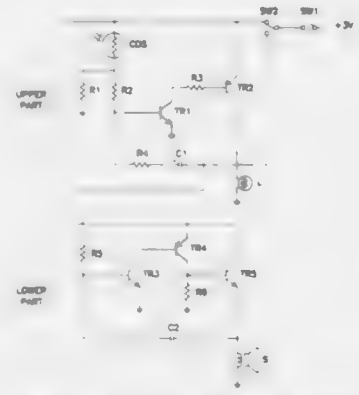
5,005,001
FIELD GENERATION AND RECEPTION SYSTEM FOR ELECTRONIC ARTICLE SURVEILLANCE
Robert A. Cordery, Danbury, Conn., assignor to Pitney Bowes Inc., Stamford, Conn.
Filed Apr. 5, 1990, Ser. No. 505,079
Int. Cl.[5] G08B *13/24*
U.S. Cl. 340—551 **4 Claims**

1. In a system for detecting the presence of a ferromagnetic marker in an interrogation zone, including first and second generating means for generating first and second magnetic fields, respectively, at first and second frequencies, respectively, and wherein said second frequency is substantially lower than said first frequency, the improvement wherein said first generating means comprises means for generating an alternating field at said first frequency and said second generating means comprises means for generating a rotating field at said second frequency.



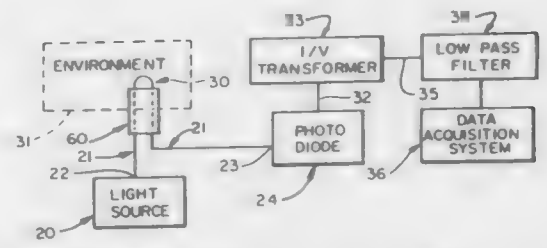
5,005,002
HAND HELD SAFETY SIREN
Rachel Halperin, 100 Antibes Drive, Suite 1105, North York, Ontario, M2R 3N1, Canada
Filed Jan. 5, 1990, Ser. No. 461,413
Int. Cl.[5] G08B *15/00*
U.S. Cl. 340—574 **2 Claims**

1. A hand held alarm device for personal use comprising a housing having a top surface, bottom surface and side surfaces, an alarm circuitry contained within said housing and a activating switch located on the op surface of said housing, said activating switch being provided in a recessed area surrounding said switch, said recessed area being enlarged relative to said switch, said housing having a attaching means for releasably attaching the alarm device to a hand such that the activating switch is maintained in a position to be within reach of the fingers of a user, even after a fright response.



5,005,003
METHOD OF DETECTING FIRE IN AN EARLY STAGE
Peter Ryser, Stafa, and Sigfrid Strassler, Baden-Dattwil, both of Switzerland, assignors to Cerberus AG, Switzerland
Filed Mar. 29, 1989, Ser. No. 330,187
Claims priority, application Switzerland, Mar. 30, 1988, 1193/88; Dec. 23, 1988, 4760/88
Int. Cl.[5] G08B *17/00*
U.S. Cl. 340—587 **25 Claims**

1. A fire alarm for the early detection of fires comprising:
a first sensing means for sensing a first fire related phenomenon having a first electrical output, where said first sensing means is sensitive to temperature fluctuations having frequency components in the range of 0.1 to 20 Hz;
a second sensing means for sensing a second fire related phenomenon, different from the first fire related phenomenon, having a second electrical output;
a means for combining the first and second electrical output from the first and the second sensing means respectively for generating a third output;



and a housing containing the first sensing means having means for optimizing the flow of air to the first sensing means.

5,005,004
LIGHT ACTIVATED VEHICLE SENSOR WITH FLASHING LIGHT AND PULSING SOUND ALARM
Michael P. Udofot, 1346 LaSalle Ave. S., Minneapolis, Minn. 55403
Filed Oct. 21, 1988, Ser. No. 260,597
Int. Cl.[5] G08B *21/00*
U.S. Cl. 340—600 **5 Claims**

1. A light activated signaling system for detecting the presence of a lighted moving vehicle and signaling the presence of the signaling system to the operator of the moving vehicle and for indicating the presence of the moving vehicle to the operator of the signaling system comprising:
a power supply for powering said system, said power supply having a positive supply terminal and a ground potential terminal;
light detector means responsive to light projected by said moving vehicle, for generating a light detection signal in response to the reception of light projected from said moving vehicle;
first oscillator means having an on state and an off state, connected to said power supply and also coupled to said light detector means for generating first repetitive power pulses at a first frequency, during said on state in response to said light detection signal, and not generating said repetitive power pulses, during said off state representative of the absence of said light detection signal,
light source means connected to said first oscillator means for converting said first repetitive power pulses to light pulses and for projecting said light pulses toward said moving vehicle;
second oscillator means coupled to said first oscillator means for generating second power pulses at a second fixed frequency higher than said first frequency, in response to said on state,
said second oscillator means operating during the one state of said first oscillator means and not operating during said off state;
audio transducer means coupled to said second oscillator means for converting said second power pulses to sound energy,
wherein said light detector means comprises,
a photo resistive detector (CDS) connected in series with a variable resistor (R_1) across said power supply terminal (+3, and) the junction between said photo-resistive detector and said variable resistor defining a control node, wherein said first oscillator means comprises
a first npn transistor (TR_1) having a base, a collector and an emitter;
a second npn transistor (TR_2) having a base, a collector and an emitter, said emitter being connected to said positive supply terminal (+3V);
a bias resistor (R_2) connected between said base of said first transistor and said control node for supplying a bias current to said first transistor when said photo-resistive detector is illuminated;
a base supply resistor (R_3) connected between said collector of said first transistor and said base of said second transistor for supplying current to the base of second transistor (TR_2);
a series connected timing resistor (R_4) connected to a timing capacitor (C_1) forming a feed base path connected between said base of said first transistor (TR_1) and said collector of said second transistor (TTR_2), whereby said first repetitive power pulses are produced at said first frequency, whereby said first frequency is proportional to the time constant of said feedback path, at said collector of said second transistor (TR_{10}) when said photo-resistive detector biases said first transistor TR_1 into conduction.

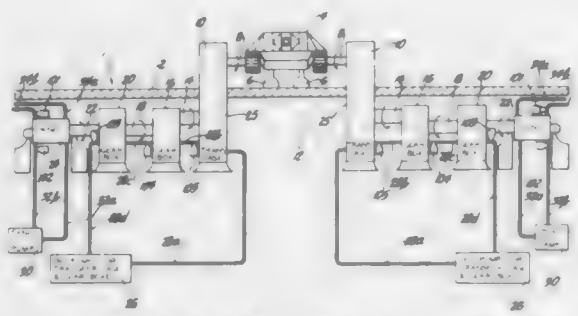
FIBER OPTIC PROBE SYSTEM
Charles E. Brossia, 1748 E. Ross La., Highlands Ranch, Colo. 80126, and Samuel C. Wu, 10205 W. Exposition Ave., Lakewood, Colo. 80226
Continuation-in-part of Ser. No. 838,283, Mar. 10, 1986, Pat. No. 4,851,817. This application Mar. 1, 1989, Ser. No. 317,426
Int. Cl.[5] G08B *21/00, 19/02*
U.S. Cl. 340—604 **18 Claims**

1. A system for detection of a selected medium in an environment comprising:
a light source means for generating a beam of light;
a light receiving and signal generating means for receiving light from said light source and for generating variable signals dependent upon the amount of light received;
optical path means made of a continuous uninterrupted length of transparent material for connecting said light source means to said light receiving and signal generating means and for providing a continuous light path therebetween for transmitting said beam of light from said light source means to said light receiving means along the optical path;
at least one sensor portion located on a peripheral outer surface of said optical path means and in contact with the environment and being constructed and arranged to cause change in intensity of light transmitted through said sensor portion dependent on the amount of selected medium in the environment adsorbed and absorbed by the sensor portion, whereby variable output signals generated by

said light receiving and signal generating means vary in accordance with the amount of selected medium in the environment adsorbed and absorbed by the sensor portion; and



signal processing and indicating means connected to said light receiving and signal generating means for output signaling and for indicating the detection of the selected medium in the environment.

5,005,006

ELECTRONIC CONTROL FOR A FLUID SYSTEM

Kenneth W. Ratcliff, 21035 Lantz, Mt. Clemens, Mich. 48043

Filed Jan. 5, 1990, Ser. No. 461,565
Int. Cl.[5] G08B *21/00*
U.S. Cl. 340—611 **9 Claims**

1. An electronic device for monitoring pressure in a system of fluid circuitry in a machine, the fluid circuitry having at least one location where fluid pressure is monitored, the electronic device comprising:

a set of at least two switches at the location, one of the switches actuated when pressure at the location is within a first range, another of the switches actuated when pressure at the location is within a second range, the set being capable of giving four responses, wherein the one switch gives a first response when not actuated and gives a second response when actuated, and wherein the other switch gives a third response when not actuated and gives a fourth response when actuated;

a first NOR gate receiving the responses from the switches, the first NOR gate outputting a fifth response when receiving both the first response from the one switch and the third response from the other switch, the first NOR gate outputting a sixth response when receiving either a second response from the one switch or the fourth response from the other switch;

a first indicator means for indicating a first status of the fluid pressure at the location, the first indicating means being actuated in response to the fifth response from the first NOR gate;

a second NOR gate, the second NOR gate receiving the third and fourth responses from the other switch and receiving the fifth and sixth responses from the first NOR gate, the second NOR gate outputting a seventh response when receiving both the third response from the other switch and the sixth response from the first NOR gate, the second NOR gate outputting an eighth response when receiving either the fourth response from the other switch or the fifth response from the first NOR gate;

a second indicator means for indicating a second status of the pressure at the location, the second indicator means actuated in response to the seventh response from the second NOR gate;

a third indicator means for indicating a third status of the fluid pressure at the location, the third indicator means actuated in response to the fourth response of the other switch;

whereby pressure at the location outside both the first range and the second range results in actuation of neither the one nor the other switch, so that the one switch sends the first response while the other switch sends the third response, so that the first indicator means is actuated to show that the pressure at the location is outside both the first range and the second range;

whereby pressure at the location within the first range and outside the second range results in actuation of the one switch but not the other switch, so that the second response is given by the one switch and the third response is given by the other switch, so that the second indicator means is actuated to show that the pressure at the location is within the first range and outside the second range; and

whereby pressure at the location within the second range results in actuation of both the one switch and the other switch, so that the one switch gives the second response and the other switch gives the fourth response, so that the third indicator means is actuated to show that pressure at the location is within the second range.

ALARM DEVICE FOR MARINE TANK

Kuo-Lianq Weng, and Kuo-Liang Weng, both of Taichung Hsien, Taiwan, assignors to Yu Li Enterprise Co. Ltd., Taiwan

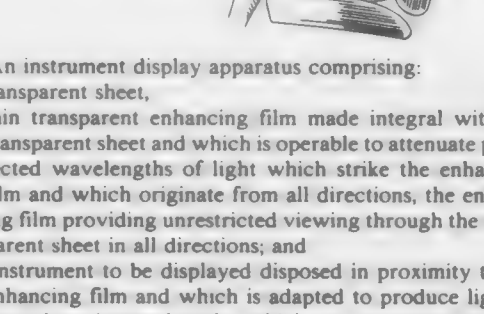
Filed May 10, 1990, Ser. No. 521,785
Int. Cl.[5] G08B *21/00*
U.S. Cl. 340—650 **1 Claim**

1. An alarm device adapted for use in a household marine tank with accessory equipment so as to indicate to an operator an electric leakage or a poor insulation condition, comprising a sensor means in serial connection to an alarm circuit controlled by a capacitor exchange type power circuit which has a receptacle for receiving plugs from the accessory equipment such as an illumination light, air pump, water temperature controller, and filter means, and said power circuit being connected to a power source; wherein the range of detection of electric leakage is from 0.1 to 1 mA, and an indication of a poor insulation condition is given at a measurement of substantially 3.3 mΩ; whenever either electric leakage occurs inc said range, or a poor insulation condition is detected, a buzzer means and an indicator light will be actuated to keep the operator alert; by disconnecting one by one the plugs of said accessory equipment to see if the light and buzzer means cease actuation, the operator can locate a trouble spot with certainty.

5,005,008

METHOD AND APPARATUS FOR PROVIDING THERMODYNAMIC PROTECTION OF A DRIVER CIRCUIT USED IN AN IN-CIRCUIT TESTER

Philip N. King, Fort Collins, Colo., assignor to Hewlett Packard Company, Palo Alto, Calif.



Continuation of Ser. No. 340,993, Apr. 20, 1989, abandoned. This application Jun. 26, 1990, Ser. No. 544,024
Int. Cl.[5] G08B *21/00*
U.S. Cl. 340—653 **7 Claims**

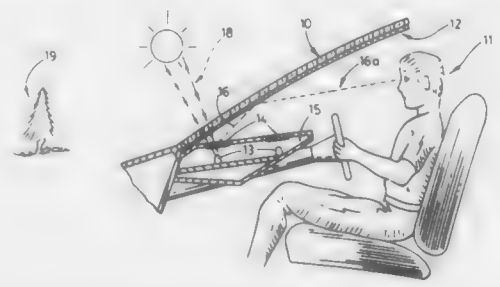
1. Apparatus for maximizing operating time while preventing damage to a transistor, or similar active device, contained in the output stage of a driver circuit in an overdrive/functional tester, comprising:

first sensing means for sensing the current in said output stage transistor, or similar active device;

second sensing means for sensing the voltage in said output stage transistor, or similar active device;

multiplication means for multiplying said sensed current with said sensed voltage and for generating a power signal representative of such multiplication;

thermodynamic model means, connected to receive said power signal, for compensating said power signal to account for the thermodynamic characteristics of said transistor, or similar active device, so that comparison of said power signal to a power reference value does not result in an indication of excessive dissipated power during heat build up in said transistor or an indication that said transistor is ready to dissipate power during heat decay; and



comparison means for comparing the compensated power signal with a power reference value and for generating an indication signal reflective of said comparison.

5,005,009

METHOD AND APPARATUS FOR MULTIPLE OBJECT VIEWING

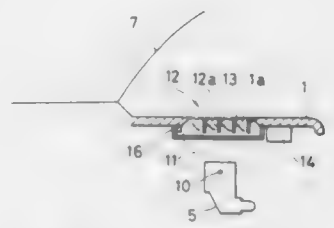
John K. Roberts, Camp Pendleton, Calif., assignor to K. W. Muth Company, Inc., Sheboygan, Wis.

Continuation-in-part of Ser. No. 156,122, Feb. 16, 1988, abandoned. This application Feb. 15, 1989, Ser. No. 310,644
Int. Cl.[5] G02B *27/16*
U.S. Cl. 340—705 **23 Claims**

1. An instrument display apparatus comprising:

a transparent sheet,

a thin transparent enhancing film made integral with the transparent sheet and which is operable to attenuate preselected wavelengths of light which strike the enhancing film and which originate from all directions, the enhancing film providing unrestricted viewing through the transparent sheet in all directions; and



an instrument to be displayed disposed in proximity to the enhancing film and which is adapted to produce light in the selected wavelengths which are attenuated by the enhancing film whereby the image of the instrument appears in the enhancing film, and wherein the enhancing film further attenuates the selected wavelengths of light which originate from locations other than the instrument whereby the contrast of the image appearing in the enhancing film is improved relative to the background ambient lighting conditions.

HEAD-UP DISPLAY FOR MOTOR VEHICLES

Takashi Misaki, Susono, and Hitoshi Aoki, Numazu, both of Japan, assignors to Yazaki Corporation, Japan

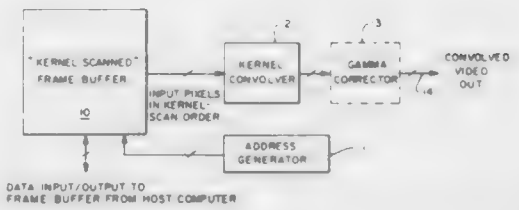
Filed Mar. 18, 1988, Ser. No. 169,695
Claims priority, application Japan, Mar. 18, 1987, 62-038509
Int. Cl.[5] G09G *3/02*
U.S. Cl. 340—705 **11 Claims**

1. A head-up display for a motor vehicle having a dashboard with a top surface which is provided with an aperture, which comprises:

a transparent member provided within said aperture in said top surface of said dashboard;

means for projecting an image of visual information through said transparent member provided in said aperture, said projecting means being enclosed in said dashboard;

reflection means for producing the image of the visual information thereon; and



means for preventing reflection of light entering from the outside of said vehicle on said transparent member, said reflection preventing means being associated with said aperture and shiftable between a first position covering said transparent member by closing said aperture and a second position uncovering said transparent member by opening said aperture.

VERTICAL FILTERING APPARATUS FOR RASTER SCANNED DISPLAY

Stephen G. Perlman, Mountain View; Jerome M. Okun, Campbell; John H. Palevich, Sunnyvale, and James A. Lundblad, Santa Clara, all of Calif., assignors to Apple Computer, Inc., Cupertino, Calif.

Filed Dec. 23, 1988, Ser. No. 290,182
Int. Cl.[5] G09G *5/10, 1/14*
U.S. Cl. 340—728 **18 Claims**

1. In a raster-scanned video display for a computer where data for the display is stored in a frame buffer, and where the data is organized in the frame buffer by scan lines with data being stored for each pixel along each scan line, an improved method for generating filtered pixel data for a first display line, comprising:

(a) storing the pixel data in a frame buffer having a first and a second bank of video RAMs with pixel data for scan lines **2, 3, 6, 7, 10, 11** . . . being stored in said first bank and

pixel data for scan lines 0, 1, 4, 5, 8, 9 . . . being stored in said second bank;

(b) reading from said buffer the pixel data for a first pixel of the n, n+1, n+2 . . . n+N scan lines before reading from said buffer the pixel data for subsequent pixels of said n, n+1, n+2 . . . n+N scan lines,

(c) convolving the pixel data for said first pixel of said n, n+1, n+2 . . . n+N scan lines to provide said filtered pixel data for said first pixel of said first display line;

(d) repeating steps (b) and (c) for each subsequent pixel on said first display line.

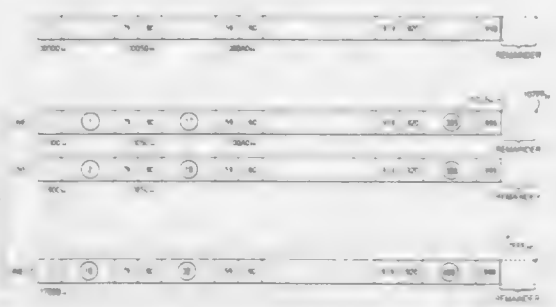
METHOD OF ARRANGING DATA ON A RAM FOR DISPLAY

Kunio Kanda, Kokubunji, Japan, assignor to Fanuc Ltd, Minamitsuru, Japan



PCT No. PCT/JP87/00522, § 371 Date Apr. 15, 1988, § 102(e) Date Apr. 15, 1988, PCT Pub. No. WO88/01420, PCT Pub. Date Feb. 25, 1988

PCT Filed Jul. 16, 1987, Ser. No. 184,486

Claims priority, application Japan, Aug. 22, 1986, 61-196900

Int. Cl.[5] G09G *1/16*

U.S. Cl. 340—750 **7 Claims**

1. A method of data arrangement in a memory for a display in which character data and graphical data are overlappingly displayed in plural rows, each of the rows includes plural lines and the memory including addresses having high-order and low-order address bits, comprising the steps of:

(a) dividing the graphic data into blocks, each of said blocks corresponding to a respective one of the rows and dividing each of said blocks into sub-blocks, each of said sub-blocks corresponding to a respective one of the lines;

(b) arranging in the memory the character data in the order of the rows;

(c) arranging in the memory said blocks in the order of the rows and arranging said sub-blocks so that the addresses associated with a respective one of said sub-blocks within a respective block have the same low-order address bits as the low-order address bits of addresses associated with a corresponding row of character data; and

(d) performing an address transition from one sub-block to another sub-block of the same block by shifting the high-order address bits.

5,005,013

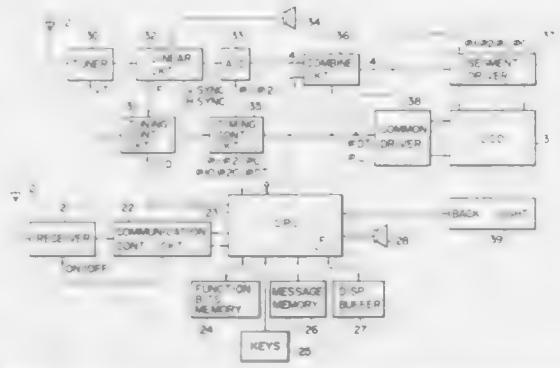
PAGER WITH A DISPLAY FUNCTION

Akihiro Tsukamoto, and Keiichi Kobayashi, both of Tokyo, Japan, assignors to Casio Computer Co., Ltd., Tokyo, Japan

Filed Jul. 14, 1988, Ser. No. 219,348

Claims priority, application Japan, Jul. 16, 1987, 62-176047; May 12, 1988, 63-115319

Int. Cl.[5] G08B *5/22*



U.S. Cl. 340—825.44 **4 Claims**

1. A pager comprising:

radio receiving means for receiving and demodulating a modulation signal including an identification number and message data;

identification number memory means for storing a self identification number;

reception control means for discriminating whether the received identification number coincides with the identification number stored in said memory means, and for, if a coincidence is detected, reading the received message data;

message memory means for storing the message data read by said reception control means;

means for designating a display color; and

color display means for displaying the message data stored in said message means as a color designated by said display color designating means;

wherein said designating means comprises means for designating said display color in accordance with the amount of time which has elapsed since the reception of the message data.

SYSTEM AND METHOD FOR OPTIMALLY TRANSMITTING ACKNOWLEDGE BACK RESPONSES

Leon Jasinski, Ft. Lauderdale, Fla., assignor to Motorola, Inc., Schaumburg, Ill.

Filed May 22, 1989, Ser. No. 354,568

Int. Cl.[4] G08B *5/22*

U.S. Cl. 340—825.44 **15 Claims**

1. A method for providing system acknowledge back responses from a plurality of remote stations to a central station, the system acknowledge back responses including a predetermined station identification number assigned to each remote station and any individual acknowledge back responses received by each remote station from a plurality of portable communication receivers operating in the system, the station identification numbers being assigned to each remote station beginning with a first remote station number and ending with a last remote station number in a predetermined sequential order, said method comprising the steps of:

generating a start signal and transmitting the same from the central station to initiate the transmission of system acknowledge back responses from the plurality of remote stations;

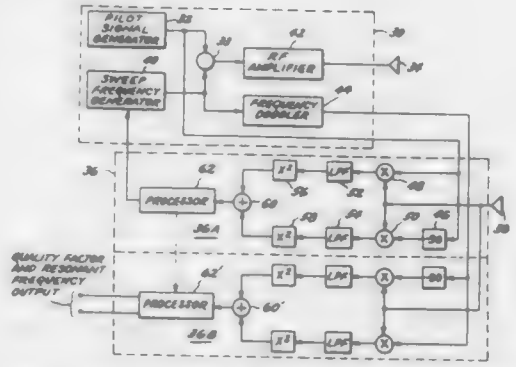
transmitting, from the first remote station, the system acknowledge back response in response to the first remote station receiving the start signal;

transmitting, from each subsequent remote station in the predetermined sequential order, the system acknowledge back response in response to the subsequent remote station receiving the predetermined station identification number of the previous remote station;

monitoring the progression of transmitted system acknowledge back responses at a selected station from the remote station in the predetermined sequential order; and

generating and transmitting from the selected station, a request to acknowledge which includes the predetermined station identification number of the previous remote station in response to subsequent remote station failing to respond in the predetermined sequential order within a predetermined time interval.

5,005,015



ICE DETECTION SYSTEM

Rudolph A. Dehn, Schenectady, and Andrew J. Macdonald, Ballston Spa, both of N.Y., assignors to General Electric Company, Schenectady, N.Y.

Filed Aug. 7, 1989, Ser. No. 390,125

Int. Cl.[5] G08B *21/00*; B64D *15/00*

U.S. Cl. 340—962 **13 Claims**

1. An ice detection system for detecting the state and thickness of water overlying a surface, comprising:

a plurality of resonant circuits spaced at predetermined locations about an electrically conductive surface, each of said circuits consisting entirely of a respective cutout in said surface and having a preselected resonant frequency which varies in response to thickness of overlying ice and liquid water;

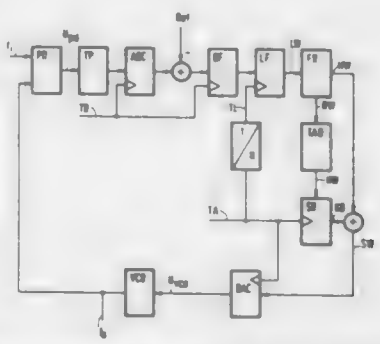
variable frequency generating means for generating a transmission signal which can be varied about the resonant frequency of each of said circuits to cause each of said circuits to generate a resonant frequency signal in response to said transmission signal;

receiver means tunable to the resonant frequency of each of said circuits, said receiver means including means for identifying the resonant frequency of each of said circuits and for determining the quality factor of each of said circuits from the resonant frequency signals produced by the respective circuits; and

processing means responsive to the identified resonant frequency and determined quality factor for each of said circuits, for determining the state and thickness of water overlying each of said circuits.

5,005,016

HYBRID PHASE-LOCKED LOOP



Konrad Schmidt, Ellingen, and Ralf Kramer, Nuremburg, both of Fed. Rep. of Germany, assignors to U.S. Philips Corporation, New York, N.Y.

Filed Mar. 27, 1990, Ser. No. 500,447

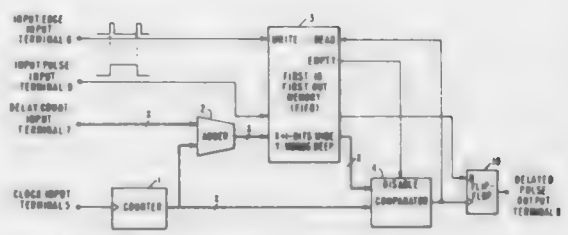
Claims priority, application Fed. Rep. of Germany, Apr. 3, 1989, 3910703

Int. Cl.[5] H03M *1/00*

U.S. Cl. 341—142 **20 Claims**

1. Phase-locked loop comprising a phase detector, an analog-to-digital converter, a digital loop filter, a digital-to-analog converter and a voltage-controlled oscillator, characterized in that a fractionizer is inserted after the digital loop filter that is operating at a first clock, which fractionizer produces a main value and a residual value and in that means are provided for deriving a correction value from the residual value and for applying the sum of the main value and a correction bit derived from the correction value is applied to the digital-to-analog converter that is operating at a second clock.

5,005,017



MULTIPLE PULSE DELAY PROCESSOR

Gary J. Sikora, Columbia, Md., assignor to Westinghouse Electric Corp., Pittsburgh, Pa.

Filed Apr. 13, 1990, Ser. No. 508,455

Int. Cl.[5] G01S *7/40*

U.S. Cl. 342—172 **3 Claims**

1. An apparatus for delaying a series of input pulses received on an input pulse input terminal and for outputting delayed pulses onto a delayed pulse output terminal, the apparatus allowing multiple input pulses to be simultaneously delayed, comprising:

counting means for outputting a binary number indicative of current time, said counting means having an input, and an output, said input being connected to a clock input terminal;

adding means for adding binary numbers, said adding means having a first input, a second input, and an output, said first input being connected to said output of said counting means, said second input being connected to a delay count input terminal, said adding means providing at its output a binary number which represents the sum of its first and second inputs;

first-in-first-out storing means for storing binary numbers,

said first-in-first-out storing means having a write input, a data word input, a data bit input, a read input, a data word output, a data bit output, and an empty output, said write input being connected to an input edge input terminal for pushing values on said data word input onto said first-in-first-out storing means upon the occurrence of each input edge of each individual input pulse of said series of input pulses, said data word input being connected to said output of said adding means, said data bit input being connected to the input pulse input terminal so that the level to which the input pulse went following each input edge is stored in the first-in-first-out storing means, said read input causing said first-in-first-out storing means to be popped such that the next oldest stored binary numbers of said first-in-first-out storing means is outputted on said data word output and said data bit output;

comparing means for outputting a delayed clock edge when two binary numbers are equal to each other, said comparing means having a first input, a second input, a disable input, and an output, said first input being connected to said output of said first-in-first-out storing means, said second input connected to said output of said counting means, said disable input being connected to said empty output of said first-in-first-out storing means, said output being connected to said read input of said first-in-first-out storing means, said comparing means outputting said delayed clock edge when said output of said counting means equals said data word output of said first-in-first-out storing means, said comparing means outputting each delayed clock edge such that the delay time from the input edge to the corresponding delayed clock edge approximately equals the amount of time required for said counting means to count the number of clock periods on said delay count input terminal when said input edge occurred; and

clocked storage means for changing the level of the signal on the delayed pulse output terminal upon the occurrence of a delayed clock edge, said clocked storage means having a data input, a clock input, and a data output, said clock input being connected to said output of said comparing means, said data input being connected to said data bit output of said first-in-first-out storing means, said data output being connected to the delayed pulse output terminal.

5,005,018

(U) MODULATOR TO PROVIDE A CONTINUOUS STEPPED FREQUENCY SIGNAL FORMAT

Glenn A. Walters, Escondido, Calif., assignor to The United States of America as represented by the Secretary of the Navy, Washington, DC

Filed Oct. 6, 1982, Ser. No. 440,392
Int. Cl.[5] G01S *13/00*; H03C *3/12*
U.S. Cl. 342—203 **2 Claims**

1. An apparatus for eliminating ringing between an input terminal and an output terminal in a stepped frequency format comprising:

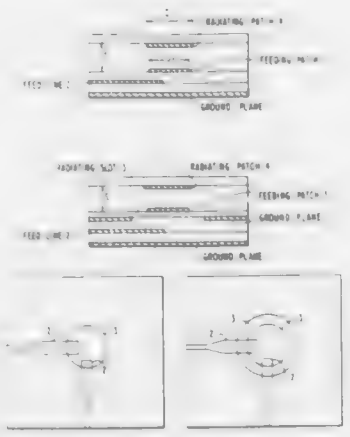
a harmonic generator coupled to the input terminal;

a first resonant circuit coupled to the input terminal to receive at least a first and a second frequency from the harmonic generator for selectively resonating at the first frequency and the second frequency, the first resonant circuit having an electric signal influenced variable reactance impedance coupled in parallel with a fixed reactance impedance;

a second resonant circuit coupled to the first resonant circuit for selectively resonating at the second frequency and the first frequency and having an output connected to the output terminal, the second resonant circuit having an electric signal influenced variable reactance impedance coupled in parallel with a fixed reactance impedance;

means for providing an electric signal source at at least two levels;

a switch coupled to the electric signal influenced variable reactance impedance of the first and second resonant circuits and the electric signal providing means for selectively switching between the two levels thereby assuring the alternate selective resonance at the first frequency simultaneously by the first and second resonant circuits and the second frequency simultaneously by the first and second resonant circuits; and



a pair of radio frequency chokes each coupling a separate resonant circuit to the electric signal providing means and switch, the electric signal providing means is a potential source and the electric signal influenced variable reactance impedance is a varactor.

5,005,019

ELECTROMAGNETICALLY COUPLED PRINTED-CIRCUIT ANTENNAS HAVING PATCHES OR SLOTS CAPACITIVELY COUPLED TO FEEDLINES

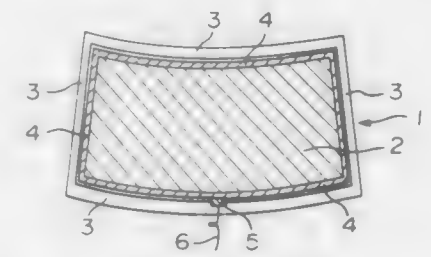
Amir I. Zaghloul, Bethesda, and Robert M. Sorbello, Potomac, both of Md., assignors to Communications Satellite Corporation, Washington, D.C.

Filed Nov. 13, 1986, Ser. No. 930,187
Int. Cl.[5] H01Q *1/00*
U.S. Cl. 343—700 MS **29 Claims**

10. A microstrip antenna, comprising:

a plurality of feedlines;

a plurality of feeding elements, each coupled in a contactless manner to at least a respective one of said plurality of feedlines, said feeding elements being impedance matched with said feedlines; and



a plurality of radiating elements, each coupled in a contactless manner to a respective one of said plurality of feeding elements, wherein said feedlines are capacitively coupled to said feeding elements and said feeding elements are capacitively coupled to said radiating elements.

5,005,020

TRANSPARENT GLASS ANTENNA FOR AN AUTOMOBILE

Masanobu Ogawa, and Shinya Shibata, both of Aikawa, Japan, assignors to Asahi Glass Company, Ltd., Tokyo, Japan

Continuation of Ser. No. 145,102, Jan. 19, 1988, abandoned. This application Jun. 25, 1990, Ser. No. 542,659
Claims priority, application Japan, Jan. 20, 1987, 62-5508[U]; May 18, 1987, 62-72860[U]
Int. Cl.[5] H01Q *1/32*
U.S. Cl. 343—713 **3 Claims**

1. A transparent antenna for an automobile, comprising:

a window glass panel;

an infrared reflecting transparent conductive film integrally formed with said window glass panel;

said transparent conductive film covering said window glass panel except for a blank region of glass having a predetermined width of at least 10 mm around the periphery of said window glass panel, the transparent conductive film having a surface resistance ranging from 4Ω/□ to 500Ω/□;

a busbar formed on said window glass panel around said transparent conductive film and connected to said transparent conductive film at substantially the entire periphery of said transparent conductive film; and

a current feeding terminal connected to said busbar;

wherein said window glass panel is a laminated glass panel formed by laminating at least two glass plates between which an interlayer film is placed, and said transparent conductive film is provided on the inner surface of one of said glass plates facing the outside of an automobile so as to be in contact with said interlayer film.

5,005,021

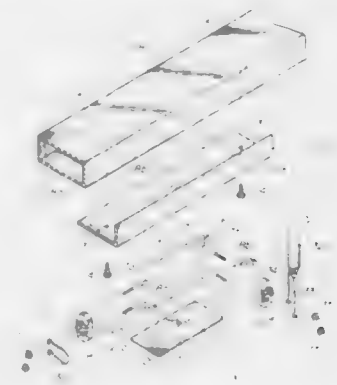
ANTENNA UNIT FOR VEHICLE

Koichiro Kato; Hiroshige Fukuhara; Hiroyuki Kamishima, and Hitoshi Tsukahara, all of Kanagawa, Japan, assignors to Nissan Motor Company, Limited, Yokohama, Japan

Filed Aug. 4, 1989, Ser. No. 389,448
Claims priority, application Japan, Aug. 8, 1988, 63-196146
Int. Cl.[5] H01Q *1/32*
U.S. Cl. 343—717 **17 Claims**

1. An antenna unit for a vehicle comprising:

an antenna element member;



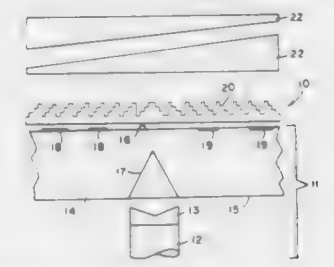
a grounding plate located on the underside of the vehicle;

a first supporting member fixed on said antenna element, said first supporting member having first and second end portions;

a second supporting member fixed on said grounding plate, said second supporting member having first and second end portions;

resilient connectors, made of insulating materials, non-conductively connecting the first and second end portions of said first supporting member to the first and second corresponding end portions of said second supporting member respectively so as to suspend said antenna element member from said grounding plate, respective first end portions of said first and second supporting members being provided as terminals for feed; and

a wire, having a predetermined length, electrically connecting respective second end portions of said first and second supporting members to adjust the impedance of the antenna unit so as to tune it to appropriate operation frequencies.



5,005,022

MICROWAVE ANTENNA

Leonard L. Blaisdell, Medway, Mass., assignor to GTE Government Systems Corporation, Waltham, Mass.

Filed Dec. 29, 1989, Ser. No. 459,004
Int. Cl.[5] H01Q *019/060, 013/000*
U.S. Cl. 343—753 **14 Claims**

1. An antenna comprising:

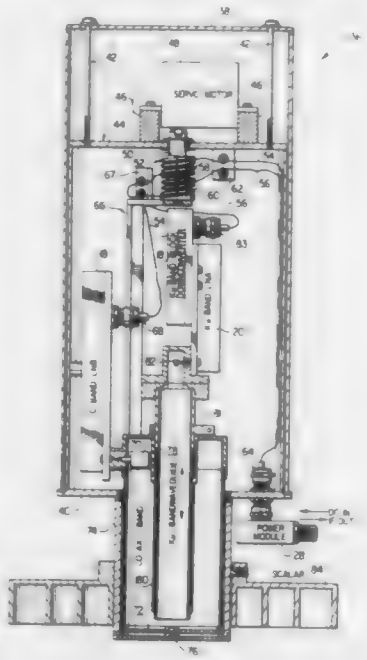
a sheet of dielectric material having a first surface and a parallel second surface;

a tapered recess in said dielectric material converging from said first surface towards said second surface and having an axis orthogonal to said second surface;

said dielectric material having a critical angle of reflection with respect to said axis;

a RF horn arranged nearer said first surface and having an axis in common with the axis of said tapered recess;

a RF lens interposed between said horn and said tapered recess; said RF horn RF lens, tapered recess, and dielectric material having RF optical properties such that all rays traced from said horn through said lens and dielectric material to said second surface have an angle with respect to said normal of said second surface greater than said critical angle and RF energy on said second surface from the center of said horn is in phase with RF energy on said second surface from the edge of said horn for launching a surface wave on said second surface; and



perturbing means for causing said surface wave on said second surface to leak in order to produce a radiating aperture with a desired illumination characteristic.

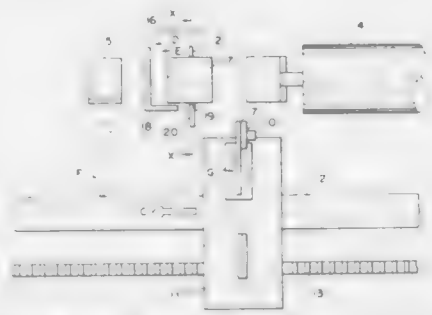
5,005,023

DUAL BAND INTEGRATED LNB FEEDHORN SYSTEM

James M. Harris, Terrell, Tex., assignor to Gardiner Communications Corporation, Garland, Tex.

Filed Dec. 1, 1988, Ser. No. 278,589
Int. Cl.[5] H01Q 19/00, 13/00; H01P 1/16, 5/12
U.S. Cl. 343—756 5 Claims

1. A multi-band integrated LNB feedhorn system comprising: a housing having a body portion and first and second ends, a first support means attached to the housing adjacent to the first end for forming a drive motor portion of the housing, a servomotor mounted on the first support means, a second support means contained in the body portion of the housing and connected to the servomotor for rotation, a plurality of power modules exteriorly attached to the housing, a plurality of low noise block means attached to the second support means for rotation therewith and electrically connected to the plurality of power modules, a cup-shaped member attached to the second end of the housing for forming with a portion of the housing a compartment for a plurality of waveguide means including a plurality of energy output coupling means electrically connected to the plurality of low noise block means, and first and second waveguide means attached to the second support means for rotation therewith, a focusing means, the first waveguide means connected to the focusing means for focusing modulated RF signals at a first band received from an antenna, a defocusing means, the second waveguide means connected to the defocusing means for defocusing modulated RF signals at a second band received from the antenna,



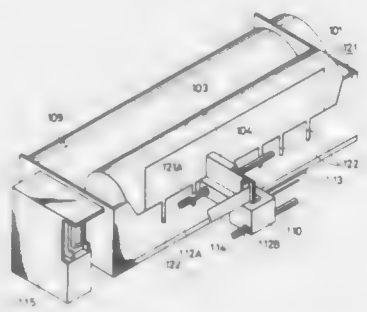
whereby with the band of the first waveguide means being focused and the band of the second waveguide means being defocused and the second support means rotated by the servomotor to align the first and second waveguide means and plurality of low noise block means with the polarization of incoming modulated RF energy, the first and second waveguide means and plurality of low noise block means combine to perform the polarizer function thereby alleviating the need for additional polarizing elements and their power loss to provide a power savings sufficient for a wider than typical half power beamwidth for increasing the aiming accuracy while compensating for the defocusing of the band of the second waveguide means without substantially affecting its gain.

5,005,024

INK JET RECORDING APPARATUS WHICH SUPPLIES REPELLENT AGENT TO LIQUID DISCHARGE PORT SURFACE AND METHOD THEREOF

Hiroto Takahashi, Atsugi; Seiichiro Karita, Yokohama, and Koichi Sato, Hiratsuka, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Continuation of Ser. No. 174,815, Mar. 29, 1988, abandoned. This application Mar. 2, 1990, Ser. No. 489,831
Claims priority, application Japan, Mar. 31, 1987, 62-076352; Mar. 14, 1988, 63-0760102; Mar. 14, 1988, 63-0760105
Int. Cl.[5] B41J 2/165, 2/05
U.S. Cl. 346—1.1 53 Claims



1. A liquid injection recording apparatus adapted to discharge recording liquid from discharge ports provided in a discharge port surface of a recording head to make flying liquid droplets to thereby accomplish recording, comprising a recording head having a discharge port surface with discharge ports provided therein and liquid-repellent process means capable of applying a liquid-repellent agent to said discharge port surface for repelling the recording liquid adhering to said discharge port surface provided at a position capable of being opposed to said discharge port surface, said liquid injection recording apparatus further comprising reciprocating means for reciprocally moving said recording head a plurality of times after said liquid-repellent agent is applied to said discharge port surface and before said recording apparatus accomplishes further recording.

5,005,025

PRINTER HAVING MEANS FOR HEATING A RECORDING SHEET AND FIXING INK THEREON

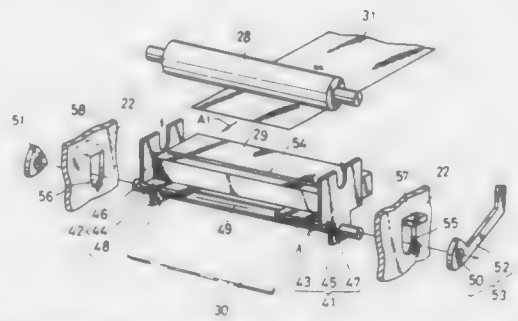
Akira Miyakawa, Tanashi, and Hiroyuki Inoue, Chiba, both of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Continuation of Ser. No. 202,568, Jun. 6, 1988, abandoned. This application Aug. 13, 1990, Ser. No. 566,311
Claims priority, application Japan, Jun. 12, 1987, 62-146376; Jul. 7, 1987, 62-167827
Int. Cl.[5] B41V 2/01
U.S. Cl. 346—25 13 Claims

1. A printer comprising:

ink jet recording means for recording on a recording sheet;

means for providing a conveyance route for conveying the recording sheet through a recording area where said recording means is opposed to the recording sheet and records on the recording sheet, said means comprising a heating member for contacting the recording sheet to heat the recording sheet; and



a press plate, disposed upstream of the recording area with respect to the conveying route, for pressing the recording sheet to said heating member, said press plate having a portion opposed to said heating member and a plurality of spaced apart slots spaced apart from each other in a direction perpendicular to a conveying direction of the recording sheet.

5,005,026

THERMAL HEAD SEPARATING MECHANISMS

Katsuyuki Sakai, Yamatokoriyama, Japan, assignor to Sharp Kabushiki Kaisha, Osaka, Japan

Filed Mar. 13, 1990, Ser. No. 493,002
Claims priority, application Japan, Mar. 17, 1989, 1-66965
Int. Cl.[5] G01D 15/10
U.S. Cl. 346—76 PH 19 Claims

1. A thermal recording apparatus for recording information onto thermosensitive recording paper, comprising:

a body;

a roller, including a shaft, rotatably connected to said body, for transporting the thermosensitive recording paper in a first direction;

a thermal head within said body, capable of moving in a second direction perpendicular to said first direction and including a plurality of heating resistance elements;

said thermosensitive recording paper being transported between said plurality of heating resistance elements and said roller during said recording;

pushing means for biasing said thermal head to push said thermosensitive recording paper into contact with said roller during said recording;

a cam, operatively connected to said thermal head, capable of angularly displacing said thermal head, said cam including a cam face;

contact members connected to said body, contacting said face at a contact point during the angular displacing of said cam and displacing said thermal head a predetermined distance from said thermosensitive recording paper and said roller, opposing the biasing force of said pushing means,

said plurality of heating resistance elements of said thermal head being positioned so as to be linearly arranged along a line including the shaft of said roller and the contact point.

5,005,027

THERMAL RECORDER

Hisaichi Oshima, Minoo, and Masami Yamashita, Takarazuka, both of Japan, assignors to Furuno Electric Co., Ltd., Hyogo, Japan

Continuation of Ser. No. 128,888, Dec. 4, 1987, abandoned. This application Mar. 30, 1990, Ser. No. 503,096
Claims priority, application Japan, Dec. 5, 1986, 62-291316
Int. Cl.[5] G01D 15/10
U.S. Cl. 346—76 PH 9 Claims

1. A thermal recorder for recording information on heat-sensitive paper comprising:

means for advancing heat-sensitive paper lengthwise through said recorder;

a linear array of heat-producing elements advanced across the paper in a direction perpendicular to the paper advancing direction;

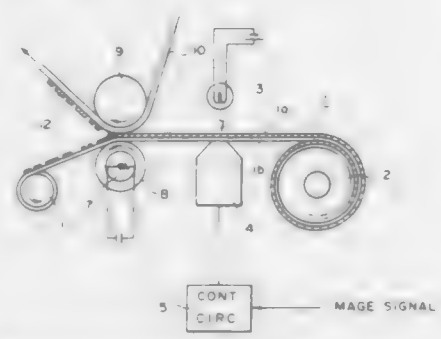
reception means for receiving information signals, each of an amplitude value, generated for a plurality of sets of time intervals, each set being a predetermined number of time intervals and each time interval being of a predetermined length;

a plurality of storing means, each for storing first signals corresponding to the amplitude values of the information signals received during said plurality of sets of time intervals;

first switching means, alternately connecting each of said plurality of storing means with said reception means, for switching said connection of said reception means to a different one of said plurality of storing means after each said set of a predetermined number of time intervals;

digital to pulse-width conversion means for converting said first signals supplied from one of said plurality of storing means, into second signals of a predetermined pulse width in accordance with a predetermined relationship between the amplitude values of the received information signals and the pulse width of the record signals;

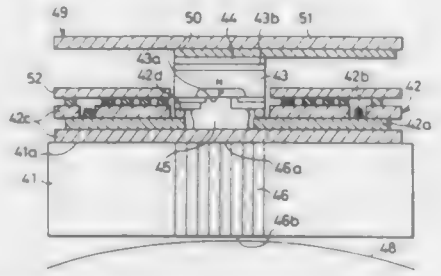
second switching means, alternately connecting each of said plurality of storing means with said digital to pulse-width conversion means, for switching said connection of said digital to pulse-width conversion means to a different one of said plurality of storing means after each said set of a predetermined number of time intervals, such that said reception means and said digital to pulse-width conversion means are continuously connected to a different of said plurality of storing means;



coupling means, connected to said digital to pulse-width conversion means, for coupling the resultant second signals of a predetermined pulse width to heat-producing elements of a terminal recording means;

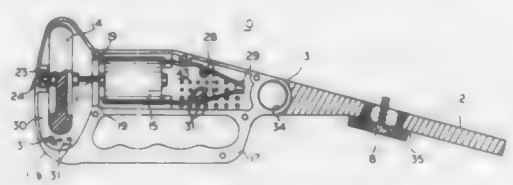
said thermal recording means recording the received information signals, each of an amplitude value, with different degrees of darkness substantially in direct proportion to the amplitude values of the received information signals in response to said pulse-widths of said second signals; and

drive means for alternately moving the array of heat-producing elements during said recording by said thermal recording means and for then moving said heat sensitive



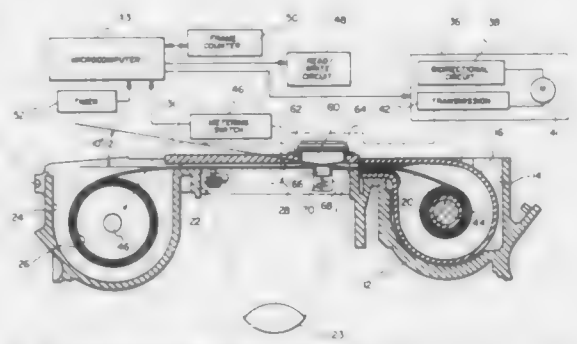
paper upon completion of said recording by said recording means.

5,005,028
IMAGE FORMING METHOD AND TRANSFER RECORDING MEDIUM THEREFOR
Yasuyuki Tamura, Yokohama, and Shuzo Kaneko, Tokyo, both of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan
Division of Ser. No. 869,689, Jun. 2, 1986. This application Sep. 8, 1988, Ser. No. 242,022
Claims priority, application Japan, Jun. 3, 1985, 60-120080; Jun. 3, 1985, 60-120081; Jun. 17, 1985, 60-131411; Jun. 20, 1985, 60-134831; Jul. 9, 1985, 60-150597; Sep. 10, 1985, 60-199926; Nov. 11, 1985, 60-250884
Int. Cl.[5] G01D *15/10*
U.S. Cl. 346—76 R 19 Claims



1. An image forming apparatus for a method wherein a transferable portion is formed in a transfer recording layer of a transfer recording medium, transported in a predetermined direction and is then transferred to a transfer-receiving medium to form an image thereon, said apparatus comprising:
transferable portion-forming means for imparting heat and light energies so that at least one of the heat and light energies corresponds to an image signal, thereby forming the transferable portion, and
transfer means for transferring the transferable portion formed in said transfer recording layer, said transfer means being disposed downstream of the transfer portion-forming means with respect to the transporting direction of the transfer recording medium.

5,005,029
TRANSMITTING RADIATION THROUGH A FLEXIBLE PRINTED CIRCUIT TO AN OPTICAL FIBER BUNDLE
Masashi Fuse, Morioka, Japan, assignor to Alps Electric Co., Ltd., Tokyo, Japan
Division of Ser. No. 228,886, Aug. 4, 1988, Pat. No. 4,929,965. This application Apr. 13, 1990, Ser. No. 509,109
Claims priority, application Japan, Sep. 2, 1987, 62-220007; Sep. 2, 1987, 62-220008; Nov. 7, 1987, 62-281343; Nov. 7, 1987, 62-281344; Nov. 7, 1987, 62-281342; Nov. 7, 1987, 62-281345
Int. Cl.[5] G01D *9/42*; G02B *6/08*; H01L *33/00*
U.S. Cl. 346—107 R 2 Claims



1. An optical writing head comprising:
a light emitting means emitting radiation in a first direction;
at least one flexible printed circuit having formed thereon at least one pattern of electrode, said pattern facing a second direction opposite to said first direction;
a fiber plate supporting said at least one flexible printed circuit;
a plurality of optical fibers buried in said fiber plate such that one end of each optical fiber is positioned to receive such radiation, said radiation arriving from said light emitting means to said end of said optical fiber through the material of said at least one flexible printed circuit.

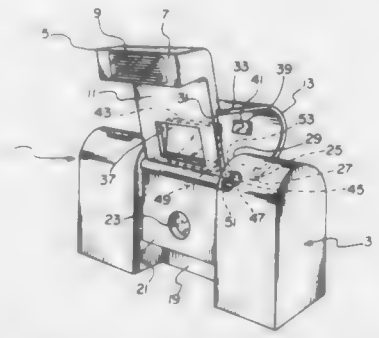
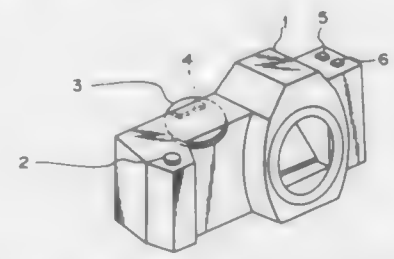
HAND HELD CAMERA STEADYING DEVICE
David L. Wells, 3881 Constitution Way, Boise, Id. 83706
Filed May 29, 1990, Ser. No. 529,322
Int. Cl.[5] G03B *17/00*
U.S. Cl. 354—82 7 Claims



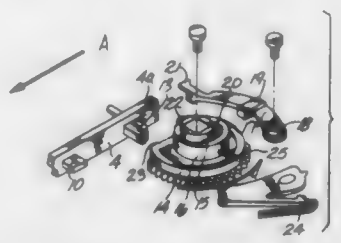
1. A camera steadying device which comprises:
a housing;
attachment means for attaching said housing to a camera; and
inertia means housed by said housing for creating a moment of inertia to resist sudden movements of an attached camera.

5,005,031
CAMERA APPARATUS FOR MAGNETICALLY RECORDING ON FILM
Richard R. Kelbe, Fishers, N.Y., assignor to Eastman Kodak Company, Rochester, N.Y.
Continuation of Ser. No. 254,914, Oct. 7, 1988, abandoned. This application Jun. 25, 1990, Ser. No. 541,434
Int. Cl.[5] G03B *17/24*
U.S. Cl. 354—106 6 Claims



1. A photographic still camera for transporting a photographic film through an exposure position to expose frames of the film, the film having a magnetic surface for magnetically recording information on the film, said camera comprising:
a camera body having an exposure opening;
a film platen supported to engage the film and hold it in a exposure plane adjacent said opening; and
a magnetic head mounted on said platen to engage one side of the film, said magnetic head being inclined transversely of the film to approximate the film inclination resulting from film curl.

5,005,032
OPTICAL FINDER FOR CAMERA WITH FLIP-UP FLASH UNIT
William L. Burnham, Leroy, N.Y., assignor to Eastman Kodak Company, Rochester, N.Y.
Filed Feb. 12, 1990, Ser. No. 479,006
Int. Cl.[5] G03B *13/06, 15/03*
U.S. Cl. 354—149.11 7 Claims

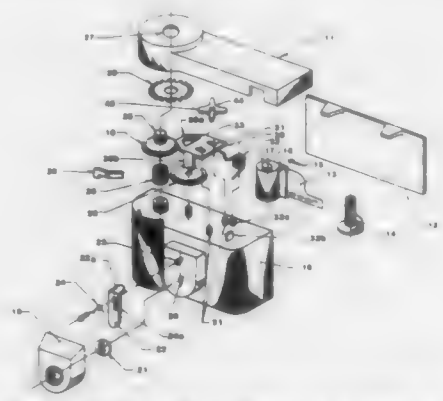


1. A photographic camera comprising (a) a camera housing and (b) a flip-up unit including a head part having a flash emission window and a supporting part for said head part connected to said camera housing to permit movement of said flash unit to a folded storage position in which the head part and said supporting part cover respective portions of the camera housing and to a non-folded operative position in which the head part and the supporting part are elevated from the camera housing with said flash emission window substantially facing a subject to be photographed, is characterized in that:
said supporting part of said flash unit has a viewfinder opening for viewing through said viewfinder opening a subject to be photographed when the flash unit is in its non-folded position;
a finder objective lens and a finder eyelens are supported for movement relative to said camera housing to individual viewing positions in which said finder lenses are optically aligned with and spaced behind said viewfiner opening of said supporting part when said flash unit is in its non-folded position, to permit a subject to be photographed to be viewed through the finder lenses in addition to through the viewfinder opening; and
motion-transmitting means connects said supporting part and said finder lenses for moving the finder lenses to their viewing positions responsive to movement of said flash unit to its non-folded position.

5,005,033
PHOTOGRAPHING DATA SETTING APPARATUS FOR CAMERA
Tetsuo Miyasaka, Machida, Japan, assignor to Olympus Optical Company, Ltd., Tokyo, Japan
Filed Jul. 27, 1989, Ser. No. 386,580
Claims priority, application Japan, Aug. 1, 1988, 63-192555
Int. Cl.[5] G03B *17/00*
U.S. Cl. 354—289.1 25 Claims

1. A photographing data setting apparatus for a camera capable of setting a plurality of types of photographing data upon rotation of a single rotary member, comprising:
a rotary operation member exposed from a plurality of portions of said camera so as to be operable at each of said plurality of exposed portions;
detection means for detecting that said rotary operation member is operated at a predetermined one of said exposed portions;
pulse signal generation means for generating a pulse signal upon rotation of said rotary operation member; and
a photographing data setting circuit for setting predetermined photographing data according to a detection output from said detection means on the basis of a pulse output from said pulse signal generation means, thereby setting and storing the plurality of types of photographing data.

5,005,034
CAMERA MECHANISM
Yet Chan, Kowloon, Hong Kong, assignor to Achiever Industries, Ltd., Mongkok, Hong Kong
Filed Apr. 11, 1990, Ser. No. 508,118
Claims priority, application United Kingdom, Apr. 14, 1989, 8908514
Int. Cl.[5] G03B *17/42*
U.S. Cl. 354—204 5 Claims

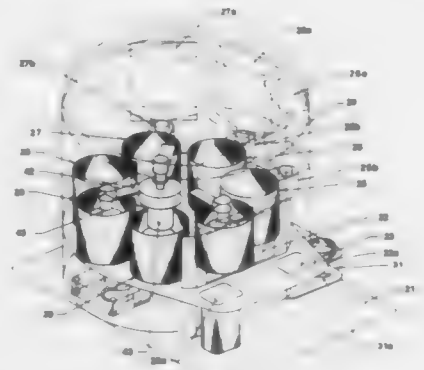


1. A camera mechanism in which a shutter plate operating member is slidably mounted for movement between a cocked position and a rest position and biassed by biassing means into said rest position, and in which actuator means is provided for effecting said sliding movement of said shutter plate operating member, said actuator means being adapted to be connected to a film wind-on device of a camera, wherein said actuator means comprises a cam mounted for rotation in said mechanism and an abutment surface on said shutter plate operating member for cooperating with said cam, so that, in use, rotation of the cam causes said shutter plate operating member to move from its rest position to its cocked position against the urging of said biassing means, said cam being provided with force-varying means whereby greater force is needed to rotate the cam over an initial part of the cocking stroke of the shutter plate operating member than is needed for a final part of said cocking stroke.

5,005,035
CAMERA OPERATING MECHANISM
Daniel M. Pagano, Henriette, N.Y., assignor to Eastman Kodak Company, Rochester, N.Y.
Filed Nov. 20, 1989, Ser. No. 439,217
Int. Cl.[5] G03B *17/42, 1/62, 1/00, 17/36*
U.S. Cl. 354—206 13 Claims

1. Operating mechanism for a camera having a shutter, actuation of which makes an exposure, comprising:
first gear wheel means mounted for axial and rotary movement, and carrying a shutter release button normally projecting outside the camera so as to be accessible to the camera user;
means biasing said first gear wheel means to urge said button to said projecting position;
a slide member carrying shutter actuating means and biased

for sliding, shutter actuating movement from a cocked position, an edge of said slide member being in contact with the periphery of said first gear wheel means when in cocked position, said slide member thereby being blocked against shutter actuating movement; and



said first gear means being movable out of contact with said slide member by depression of said shutter release button, thereby releasing said slide member for shutter actuating movement.

PROCESSING APPARATUS

William B. Wilson, Hamlin; Matthew DiPietro, Webster; Richard K. Neace, Hilton; Vincent B. Dethier, Rochester; Raymond G. Hauss, Rochester, and James R. Louk, Rochester, all of N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

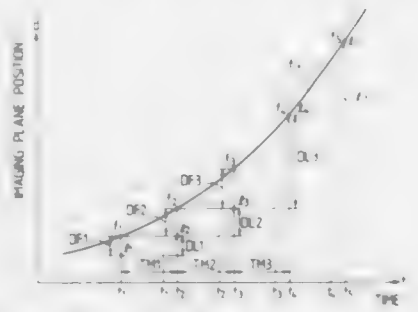
Filed Aug. 22, 1989, Ser. No. 397,147
Int. Cl.[5] G03B *3/08*
U.S. Cl. 354—322 17 Claims

1. Mechanism for effecting movement of film holder means in processing apparatus for photographic film said apparatus being of the type in which said film holder means is sequentially lowered into and raised out of a plurality of circularly arranged processing stations, comprising:

a rotatable upright column having a spiral groove and located centrally of said stations;

annular hub means slideably mounted on said column and having radially extending means for carrying said film holder means;

said hub means having pin means engaging said spiral groove to cause upward movement of said hub means along said column upon rotation of said column in a first direction and downward movement upon rotation of said column in a second direction, and



means securing said hub means against rotation with said column except when said hub means is at an upper portion of said column.

AUTO FOCUS ADJUSTING DEVICE

Akira Akashi; Terutake Kadohara, both of Yokohama; Ichiro Ohnuki, Kawasaki, and Masaki Higashihara, Yokohama, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Continuation of Ser. No. 272,475, Nov. 17, 1988, abandoned.
This application May 29, 1990, Ser. No. 528,908
Claims priority, application Japan, Nov. 20, 1987, 62-293576
Int. Cl.[5] G03B *13/36*
U.S. Cl. 354—400 5 Claims

1. Apparatus for use with an auto focus adjusting device which is provided with a focus state detecting circuit for detecting a focusing state of an imaging optical system and a driving circuit for driving the imaging optical system in conformity with a result of the detection by said detecting circuit, comprising:

(a) a calculation circuit for performing a first calculation in which imaging plane positions at a plurality of points of time in the past and at the present time are determined on the basis of a signal representing a focusing state in the past detected by said focus state detecting circuit and a signal representing a focusing state at the latest time to determine coefficients of a predetermined higher order function, and for performing a second calculation in which an imaging plane position at a time after a predetermined time has passed is determined on the basis of the higher order function;

(b) a regulation circuit for regulating the signal representing the focusing state detected by said focus detecting circuit, and for causing the operation of said calculation circuit to be performed on the basis of said regulated signal; and

(c) a control circuit for transmitting the signal representing the imaging plane position obtained by said calculation circuit to said driving circuit for driving said imaging optical system

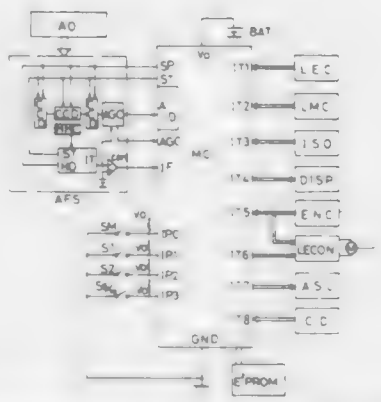
No. 918,619, Oct. 10, 1986, abandoned, which is a continuation of Ser. No. 658,694, Oct. 9, 1984, abandoned. This application Jun. 27, 1990, Ser. No. 545,123
Claims priority, application Japan, Oct. 11, 1983, 58-188341
Int. Cl.[5] G03B *5/00, 13/32*
U.S. Cl. 354—400 79 Claims

1. A driving device for varying a focal length of photographic optical means of a camera, comprising:

(A) movable optical means for varying the focal length of the photographic optical means and for focusing the photographic optical means, said movable optical means being movable between a first position and a second position and arranged for performing the variation of the focal length

and the focusing while moving between the first position and the second position;

(B) single electric driving means for driving said movable optical means; and



(C) control means for controlling said electric driving means, said control means including switch means for actuating said electric driving means so as to restore said movable optical means to a predetermined position after photography is performed.

5,005,039

AUTOFOCUSING CAMERA

Masataka Hamada; Tokuji Ishida, and Kenji Ishibashi, all of Osaka, Japan, assignors to Minolta Camera Kabushiki Kaisha, Osaka, Japan

Filed May 16, 1989, Ser. No. 352,190
Claims priority, application Japan, May 17, 1988, 63-119690
Int. Cl.[5] G03B *13/00*
U.S. Cl. 354—402 12 Claims

1. A camera having an autofocusing mechanism, comprising:

focus detecting means for repeatedly detecting a focusing state of an objective lens with respect to a photographic object and outputting a focus adjustment signal;

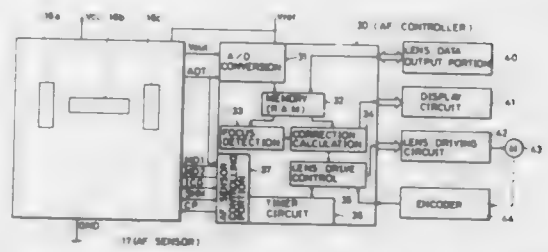
object detecting means for detecting movement of the object to be photographed in accordance with a plurality of said focus adjustment signals;

image magnification detecting means for detecting an image magnification rate;

a manually operable member;

release means for starting a shutter release operation in response to manual operation of said operable member and carrying out a subsequent photographic operation;

lens drive means capable of driving said objective lens during the shutter release operation when said object detecting means detects the movement of the photographic object; and



prohibiting means for prohibiting said lens drive means from driving said objective lens when said image magnification is greater than a predetermined rate.

5,005,040

AUTOMATIC FOCUS ADJUSTING APPARATUS OF A CAMERA

Toshio Norita; Tokuji Ishida; Masataka Hamada, and Kenji Ishibashi, all of Osaka, Japan, assignors to Minolta Camera Kabushiki Kaisha, Osaka, Japan

Continuation of Ser. No. 352,824, May 16, 1989, abandoned.
This application Feb. 14, 1990, Ser. No. 479,206
Claims priority, application Japan, May 16, 1988, 63-118682; May 16, 1988, 63-118683; Oct. 6, 1988, 63-252431; Oct. 6, 1988, 63-252432
Int. Cl.[5] G03B *13/36*; G02B *7/28*
U.S. Cl. 354—402 14 Claims

1. An automatic focus adjusting apparatus of a camera, comprising:

(a) a plurality of photoelectric converting means receiving light from an object, each of said photoelectric converting means having a plurality of light receiving portions and a plurality of charge accumulating portions for accumulating charges generated in said light receiving portions;

(b) accumulation controlling means for controlling time of charge accumulation in each said photoelectric converting means;

(c) focus detecting means for detecting an in-focus state of a photographic lens based on outputs from said photoelectric converting means to output a focus signal;

(d) calculating means for calculating an amount of driving said photographic lens based on said focus signal;

(e) selecting means for selecting one photoelectric converting means out of said plurality of photoelectric converting means, a focusing error being generated when said photographic lens is moved during said time of charge accumulation of the photoelectric converting means selected by said selecting means;

(f) correcting means for correcting the amount of driving of the photographic lens calculated based on said focusing error; and

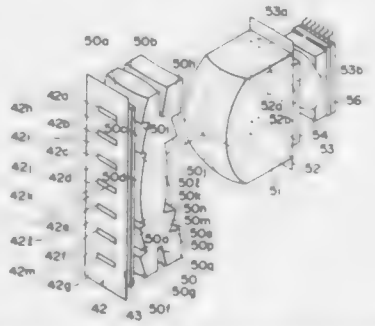
(g) driving means for driving said photographic lens based on said corrected amount of driving the photographic lens.

5,005,041

FOCUS DETECTING APPARATUS HAVING A PLURALITY OF FOCUS DETECTING AREAS

Yasuo Suda; Keiji Ohtaka; Kenji Suzuki; Akira Ishizaki, and Keisuke Aoyama, all of Yokohama, Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Nov. 3, 1988, Ser. No. 266,804
Claims priority, application Japan, Nov. 5, 1987, 62-279835; Nov. 5, 1987, 62-279836; Nov. 5, 1987, 62-279837
Int. Cl.[5] G03B *13/36*; G02B *7/34*
U.S. Cl. 354—407 10 Claims



1. An apparatus for detecting the focus adjusted state of an objective lens, comprising:

a pair of light distribution forming lenses for forming a plurality of light distribution sets whose relative positions are displaced in conformity with the focus adjusted state of the objective lens, from a light beam passed through the objective lens;

sensing means provided with a plurality of arrangements of sensors for receiving said light distribution sets, and for

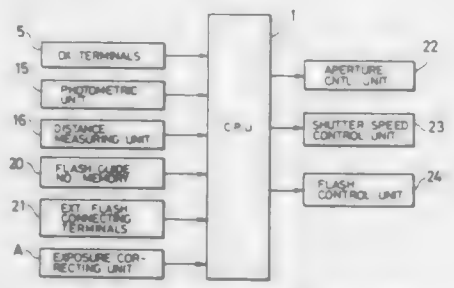
outputting a signal regarding the relative positions of said light distributions sets, said signal being indicative of the focus adjusted state of the objective lens; and

optical means for imparting the action of a field lens to a light beam incident on the arrangements of the sensors,

said optical means having a plurality of components of different shapes and being disposed on or near a predetermined imaging plane of said objective lens, light fluxes from said plurality of components being introduced to said pair of lenses.

5,005,042

ELECTRIC CONTROL CAMERA



Osamu Sato, and Isamu Hirai, both of Tokyo, Japan, assignors to Asahi Kogaku Kogyo Kabushiki Kaisha, Tokyo, Japan

Continuation of Ser. No. 174,465, Mar. 28, 1988, abandoned. This application Jan. 25, 1990, Ser. No. 471,013

Claims priority, application Japan, Mar. 26, 1987, 62-72918

Int. Cl.[5] G03B *7/00*

U.S. Cl. 354—412 **8 Claims**

1. A camera having a built-in flash comprising:

(a) film sensitivity data input means (5) for inputting sensitivity data (SV) of a film inserted into said camera;

(b) shutter means settable in accordance with shutter speed values TV;

(c) diaphragm aperture means settable in accordance with aperture values AV;

(d) photometric means (15) for determining the brightness value BV of an object to be photographed by said camera;

(e) distance setting means for setting distance values DV of the object;

(f) data processing means (1) connected to said film sensitivity data input means (5) and to said photometric means (15) for calculating an exposure value EV in accordance with said film sensitivity data value SV and with said brightness value BV;

(g) said data processing means being operable for determining whether said exposure value EV is larger than a first predetermined value, and when said exposure value EV is larger than the first predetermined value, said data processing means varies the amount of light emitted by said flash according to said exposure value EV, flash photographing is carried out with a shutter speed at a first constant value, and an aperture value is calculated according to the following expression:

$$AV = AVs + (SV - SVs) - \alpha(DV - DVs)$$

wherein AVs, SVs and DVs are initially set values for the values AV, SV, and DV, respectively, when not yet available, and wherein α is a coefficient.

AUTOMATIC MASKING DEVICE

Makoto Yahata, and Fumihiko Nishida, both of Kyoto, Japan, assignors to Dainippon Screen Mfg. Co., Ltd., Kyoto, Japan

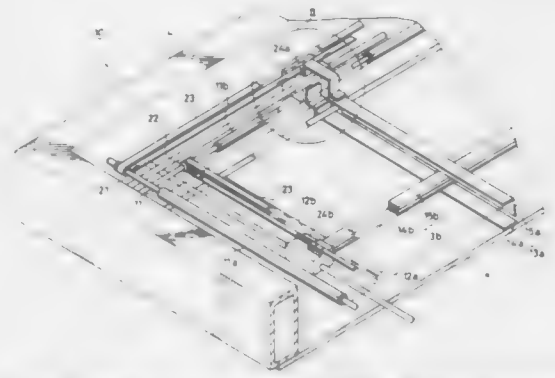
Filed Sep. 21, 1989, Ser. No. 410,201

Claims priority, application Japan, Oct. 14, 1988, 63-260295

Int. Cl.[5] G03B *27/52*

U.S. Cl. 355—40 **13 Claims**

1. A masking device for covering, when an image of an original is to be exposed on a photosensitive material, an area which is not to be exposed of said photosensitive material, comprising:



a light transmitting plate having a pair of end portions in a first direction and a pair of end portions in a second direction intersecting said first direction provided on said original;

a pair of first light intercepting means, each said first light intercepting means having one end thereof fixed near an end portion of said first direction of said plate for covering said plate from both sides in said first direction,

each one of said first light intercepting means including a first cover for covering said plate and means for determining an end portion of said first cover in the first direction,

each of said means for determining an end portion in the first direction including a first cover holding means for holding said end portion of the corresponding first cover, and means for defining an opening portion in the first direction arranged close to said plate,

a first space existing between said first cover holding means and the associated means for defining an opening portion in said first direction; and

a pair of second light intercepting means, each of said second light intercepting means having one end fixed near an end portion thereof in said direction of said plate, for covering said plate from both sides in said second direction,

each one of said second light intercepting means including a second cover for covering said plate and means for defining an end portion of said second cover in said second direction, said means for defining an end portion in the second direction including a second cover holding means for holding said end portion of said cover and means for defining an opening portion in the second direction,

at least part of said means for defining an end portion in the second direction being near said means for defining an opening portion in said first direction located in said first space.

GRAPHIC ARTS EXPOSURE DEVICE

Charles J. Leonhart, Schaumburg, Ill., assignor to nuArc Company, Inc., Niles, Ill.

Filed Jul. 5, 1990, Ser. No. 548,086
Int. Cl.[5] G03B *27/20*
U.S. Cl. 355—93 **20 Claims**

1. A graphic arts exposure device, including:

means defining a work surface at a convenient working level and having a forward edge facing a standing operator using the device;

drawer means below said working level movable between an extended position outwardly of said forward edge and a retracted position;

control panel means for controlling the operation of said device mounted with said drawer means and facing upwardly in the same field of view as said working surface; and

drawer support means below said work surface for supporting said drawer means for movement between said extended and retracted position in a manner whereby said control panel means is normally biased to move toward said extended position and is movable by rearward pressure applied to said drawer means by said operator to move toward said retracted position.

5,005,049

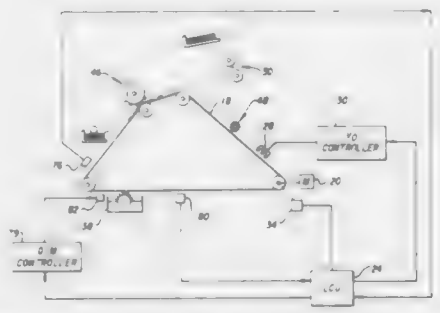
COPYING MACHINE WITH CAPACITY TO MEASURE TRANSPARENCY OF ORIGINAL

Kouji Matsushita, Osaka, Japan, assignor to Minolta Camera Kabushiki Kaisha, Osaka, Japan

Filed Aug. 17, 1989, Ser. No. 395,438
Claims priority, application Japan, Aug. 18, 1988, 63-205205
Int. Cl.[5] G03G *15/00*
U.S. Cl. 355—208 **19 Claims**

1. A copying machine irradiating light to a document from an exposure light source, guiding the reflected light from said document to a photosensitive body so as to form latent images corresponding to images of said document, supplying toner from a developing unit so as to develop said latent images, and transferring said developed images onto a copying paper, comprising:

measuring means for measuring light transmittance of said document, said measuring means using said exposure light source as its light source when the light transmittance of said document is measured; and



adjusting means for adjusting a copying condition corresponding to said light transmittance measured by said measuring means.

5,005,050

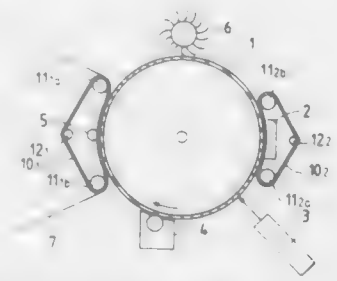
CONTROL OF TONER PARTICLE CHARGE

Lawrence J. Donivan, and Joseph F. Laukaitis, both of Rochester, N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Jun. 15, 1989, Ser. No. 366,728
Int. Cl.[4] G03G *15/08*
U.S. Cl. 355—208 **6 Claims**

1. In an electrostatographic reproduction machine having means for developing an electrostatic latent image with charged toner particles, the improvement comprising:

means for producing a control signal characteristic of the ratio of toner particle electrostatic charge to the toner particle mass; and



means responsive to said control signal for adjusting said ratio, said adjusting means including a source of ions and means for directing the ions to the toner particles.

5,005,051

ELECTROPHOTOGRAPHIC IMAGE RECORDING APPARATUS USING AMORPHOUS SILICON HYDRIDE PHOTOSENSITIVE DRUM

Shinichi Haruki; Yhuzi Furuya, and Akio Tsujita, all of Katsuta, Japan, assignors to Hitachi Koki Co., Ltd., Tokyo, Japan

Filed Mar. 26, 1990, Ser. No. 498,518

1 An electrophotographic recording apparatus for recording an image on a recording medium comprising:

a photosensitive member rotatable about its own axis and having a peripheral surface made of amorphous silicon hydride, said photosensitive member being movable in a predetermined direction and at a predetermined speed at the time of image recording;

charging means for uniformly charging said photosensitive member, said charging means comprising a corona discharger;

exposure means for exposing said uniformly charged photosensitive member to light to form a latent image thereon;

developing means for developing the latent image and providing a visible image on said photosensitive member;

transfer means for transferring the visible image onto the recording medium, said transfer means comprising a corona discharger, the recording medium being transported between said transfer means and said photosensitive member while contacting the surface of said photosensitive member; and

shielding means provided in association with at least one of said corona dischargers or shielding said corona discharger to interrupt atmospheric contact with the surface of said photosensitive member, said shielding means comprising a hermetically sealed unit for confining at least one of said charging and transfer units therein.

FREQUENCY SWEEPING EXCITATION OF HIGH FREQUENCY VIBRATORY ENERGY PRODUCING DEVICES FOR ELECTROPHOTOGRAPHIC IMAGING

Ronald E. Stokes, Fairport; William J. Nowak, Webster; Anthony A. Attardi, Rochester, and Daniel W. Costanza, Webster, all of N.Y., assignors to Xerox Corporation, Stamford, Conn.

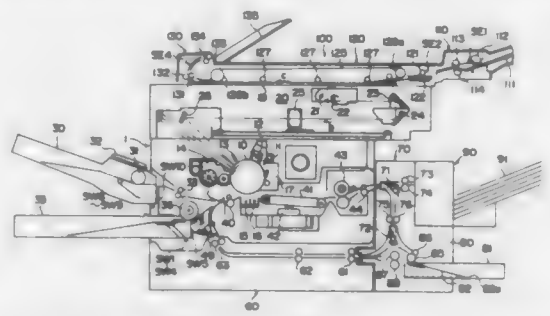
Filed Jul. 2, 1990, Ser. No. 548,645
Int. Cl.[5] G03G *15/14, 21/00;* H02N *1/04*
U.S. Cl. 355—273 14 Claims

1. In an imaging device having a non-rigid member with a charge retentive surface moving along an endless path, means for creating a latent image on the charge retentive surface, means for imagewise developing the latent image with toner, means for electrostatically transferring the developed toner image to a copy sheet, and a resonator for enhancing toner release from the charge retentive surface, producing relatively high frequency vibratory energy and having a portion thereof adapted for contact across the flexible belt member, generally transverse to the direction of movement thereof, the resonator comprising:

a horn member for applying the high frequency vibratory energy to the non-rigid member, having a platform portion, a horn portion, and a contacting portion

said horn member divided into a linear array of horn segments across said belt member, each horn segment including horn portion and contacting portion;

vibratory energy producing means coupled to said horn platform for generating the high frequency vibratory energy required to drive said horn member; and



a voltage source for driving said vibratory energy producing means through a range of frequency responses, said range of frequency responses including resonant frequencies of each horn segment.

DIGITAL-TO-ANALOG CONVERTING FIELD EFFECT DEVICE AND CIRCUITRY

John M. Golio, and Joseph Staudinger, both of Chandler, Ariz., assignors to Motorola, Inc., Schaumburg, Ill.

Filed May 1, 1989, Ser. No. 345,746
Int. Cl.[5] H01L *29/80, 29/78;* H03K *3/01*
U.S. Cl. 357—22 18 Claims

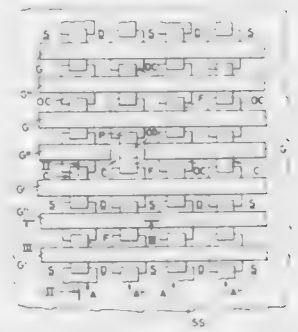
1. A field effect device suitable for providing an analog output signal having a magnitude which is representative of a digital input code having a sequence of bits, the field effect device including in combination:

an input electrode;

an output electrode;

a plurality of gate electrodes located between said input electrode and said output electrode, said gate electrodes providing different gate widths, each of said gate widths being representative of the magnitude of the analog signal to be provided at said output electrode in response to a digital input signal of a particular logic state to be applied to said gate electrode;

means for applying selected digital bits separately to each of said gate electrodes to independently control each of said gate electrodes; and



the magnitude of the current conducted between said input electrode and said output electrode thereby being adapted to be responsive to the total of the widths of the gates receiving said digital signal of said particular logic state.

HIGH CURRENT GATE TURN-OFF THYRISTOR

Dante E. Piccone, Glenmoore, Pa.; James E. McIntyre, deceased, late of Crum Lynn, Pa. (by Anna M. McIntyre, executrix), and Leroy B. Major, West Chester, Pa., assignors to General Electric Company, King of Prussia, Pa.

Filed Apr. 6, 1989, Ser. No. 334,131
Int. Cl.[5] H01L *29/74, 29/747*
U.S. Cl. 357—38 **27 Claims**

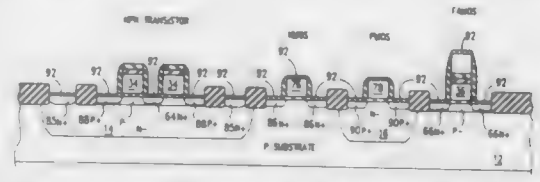
1. A gate turn-off thyristor comprising:

(a) a multi-layer semiconductor body having at least four layers, with contiguous layers being of different P and N conductivity types and with at least three back-to-back PN junctions between contiguous layers; one end layer constituting an anode layer, an opposite end layer constituting a cathode layer, and an intermediate layer contiguous with said cathode layer constituting a gate layer; said gate layer having a predetermined surface region adjacent said cathode layer but uncovered by said cathode layer and extending alongside the PN junction between said cathode layer and said gate layer;

(b) an anode electrode in ohmic contact with said anode layer,

(c) an elongated cathode electrode in ohmic contact with said cathode layer, and

(d) a gate electrode in ohmic contact with said gate layer in said predetermined surface region of said gate layer, said gate electrode extending alongside said elongated cathode electrode but spaced from said cathode electrode about the entire periphery of said cathode electrode, and in which:



(e) the PN junction between said cathode layer and said gate layer has a region located centrally of said cathode electrode that is characterized by an avalanche voltage at least 4 volts lower than characterizes the region of said latter PN junction that is closest to said gate electrode.

5,005,066

SELF-ALIGNED NPN BIPOLAR TRANSISTOR BUILT IN A DOUBLE POLYSILICON CMOS TECHNOLOGY

Kueing-Long Chen, Plano, Tex., assignor to Texas Instruments Incorporated, Dallas, Tex.

Continuation of Ser. No. 184,737, Apr. 22, 1988, abandoned, which is a division of Ser. No. 57,586, Jun. 2, 1987, Pat. No. 4,784,966. This application Dec. 28, 1989, Ser. No. 455,769
Int. Cl.[5] H01L *27/02*
U.S. Cl. 357—43 **10 Claims**

1. A semiconductor device having a floating gate avalanche metal oxide semiconductor (FAMOS) structure, an NPN bipolar transistor, an N-channel field effect transistor (NMOS) and a P-channel field effect transistor (PMOS) in a substrate, comprising:

N-type material reservoirs formed in areas of P type material in said substrate, said reservoirs of N type material corresponding to sites of the PMOS and NPN structures;

regions of P type material formed in said substrate, at least one of said regions of P type material formed to serve as a threshold voltage adjust implant of the FAMOS structure, and at least one portion of said regions of P type material formed in said N type material reservoir of said NPN transistor to serve as a base layer for the NPN transistor;

a layer of oxide for gates of the MOS transistors;

regions of a first polysilicon layer formed on regions of said substrate, at least one of said regions of the first polysilicon layer aligned over a portion of said base layer of P type material of the NPN transistor and at least one portion of said regions of the first polysilicon layer being formed to align with said threshold voltage adjust implant region at the site of the FAMOS structure;

an interlayer oxide layer formed on the regions of said first polysilicon layer;

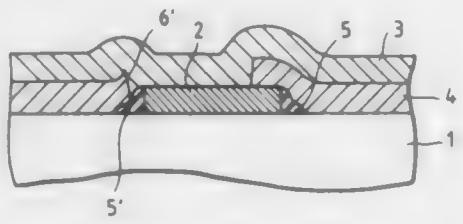
a second layer of polysilicon material formed over portions of the substrate;

the first layer of polysilicon material having an emitter hole therethrough, thereby exposing the site of the emitter of the NPN transistor, and regions of the first and second layers of polysilicon material forming the stack gate structure of the FAMOS structure, the sites of a source and drain of the FAMOS structure being adjacent said regions forming the stack gate structure;

N type material implanted into said sites of the source and drain of the FAMOS structure, and N type material implanted into said site of said emitter of said NPN transistor, the emitter being self-aligned by the first polysilicon layer;

gates for the NMOS and PMOS structures formed from portions of said second layer of polysilicon material;

N type material implanted into regions on the body to form a collector region of the NPN transistor and a source region and drain region of the NMOS structure; and



P type material implanted in a region of the base layer to form a P type doped base region(s) of the NPN transistor and a source region and drain region of the PMOS structure, the base region of the NPN transistor being self-aligned with said region of first polysilicon material aligned over said base layer, the doped base region being space apart from the emitter region, and having inner edges aligned with the region of the first polysilicon layer aligned over a portion of said base layer of P type material of the NPN transistor.

SEMICONDUCTOR INTEGRATED CIRCUIT

Yasushi Sakata, and Toshimichi Iwamori, both of Kanagawa, Japan, assignors to Fuji Xerox Co., Ltd., Tokyo, Japan

Filed Mar. 7, 1988, Ser. No. 165,039
Claims priority, application Japan, Mar. 12, 1987, 62-57779
Int. Cl.[5] H01L *29/34, 23/02, 23/12*
U.S. Cl. 357—54 **5 Claims**

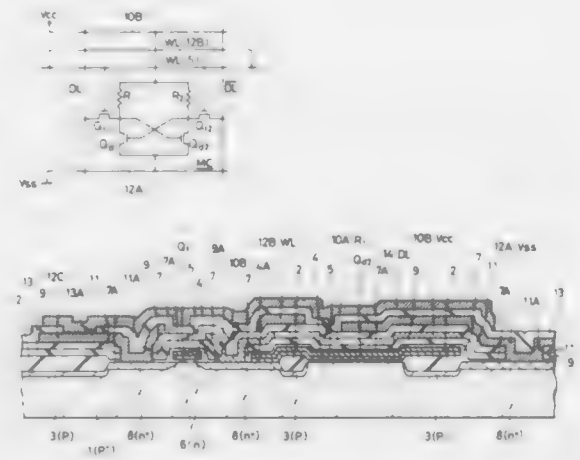
1. A semiconductor integrated circuit comprising:

a substrate;

a first electrically conductive wiring layer formed on a surface of the substrate, said first wiring layer being substantially rectangular in cross section with an upper surface having a laterally extending dimension defining the width dimension and opposite sidewalls defining the height dimension;

a first interlaid electrically insulating layer having a first etching speed overlaying at least a portion of the substrate on opposite sides of the first wiring layer, and being contiguous to both sidewalls of the first wiring layer, said first insulating layer longitudinally extending outwardly from the sidewalls of the first wiring layer in a direction substantially parallel with the width dimension of the first electrically conductive wiring layer defining a maximum width dimension contiguous to the substrate and having a maximum thickness dimension corresponding to the defined height dimension of said first wiring layer, said thickness dimension varying as a function of said width dimension;

a second interlaid electrically insulating layer having a second etching speed different than the first etching speed overlaying at least a portion of the first insulating layer on each side of the opposite sidewalls of the first wiring layer, said second insulating layer having opposing edges spaced from each other, said spaced opposing edges defining boundaries for an opening for exposing at least a portion of the upper surface of the first wiring layer through said opening; and



a second electrically conductive wiring layer overlaying said second insulating layer and filling said opening of the second insulating layer for making electrical contact with the first wiring layer, at least a portion of the first insulating layer protecting the substrate from electrical contact with the second wiring layer at times when at least one of the spaced opposing edges of the second insulating layer is spaced from the upper surface of the first wiring layer, wherein said first interlaid insulating layer includes a silicon nitride film.

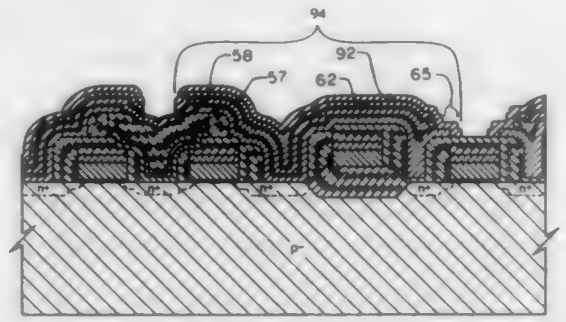
STACKED CELL DESIGN FOR 16-MEGABIT DRAM ARRAY HAVING A PAIR OF INTERCONNECTED POLY LAYERS WHICH ENFOLD A SINGLE FIELD PLATE LAYER AND CONNECT TO THE CELL'S STORAGE NODE JUNCTION

Fernando Gonzalez, Boise, Id., assignor to Micron Technology, Inc., Boise, Id.

Filed Jan. 29, 1990, Ser. No. 471,998
Int. Cl.[5] H01L *29/68, 29/78, 29/92*
U.S. Cl. 357—23.6 **4 Claims**



1. In a DRAM cell constructed on a silicon substrate, said cell having a capacitor for strong an electrical charge and a field effect access transistor through which said capacitor may be charged and discharged, said transistor having a first heavily-doped n-type region within said substrate for a storage-node junction and a second heavily-doped n-type region within said substrate for an access-node junction, said capacitor comprising:

a conductively--doped polysilicon lower storage-node plate layer having upper and lower surfaces and substantially vertical edges, the lower surface of said lower storage-node plate layer being in electrical communication with

said storage-node junction and a portion of the upper surface thereof serving as a tying region;

a first non-oxide dielectric layer superjacent said lower storage-node plate layer, said first dielectric layer being coextensive with said lower storage-node plate layer except in said tying region;

a conductively-doped polysilicon field plate layer superjacent said first dielectric layer and coextensive therewith, said field plate layer having upper and lower surfaces and a substantially vertical edge adjacent to said tying region, said vertical edge having been oxidized to form a dielectric border along its enter length, said first dielectric layer insulating the lower surface of said field plate layer from the upper surface and vertical edges of said lower storage-node plate layer;

a second non-oxide dielectric layer superjacent said field plate layer and said dielectric border, said second dielectric layer being coextensive with said field plate layer and a portion of said dielectric border extending along the entire length of said adjacent vertical edge; and

a conductively-doped polysilicon upper storage-node plate/tying layer having upper and lower surfaces, said upper storage-node plate/tying layer being coextensive with said dielectric layer and insulated from the upper surface of said field plate layer by said second dielectric layer, in addition to extending over said dielectric border, being in contact with an edge of said first dielectric layer, and making electrical contact with said tying region of said lower storage-node plate.

DEMULTIPLEXER FOR PROVIDING A COLOR TELEVISION SIGNAL HAVING AN INCREASED IMAGE FREQUENCY

Jean C. Rufray, Brigachtal, and Jean C. Guillon, Erstein, both of Fed. Rep. of Germany, assignors to Deutsche Thomson-Brandt GmbH, Hanover, Fed. Rep. of Germany

Filed Sep. 30, 1988, Ser. No. 252,051

Int. Cl.[5] H04N *9/64*

U.S. Cl. 358—21 R **7 Claims**

1. A demultiplexer for a combined color television signal composed of a plurality of first components containing luminance information and a plurality of second components containing chrominance information, the television signal initially being in a form such that the second components alternate in time with the first components, said demultiplexer comprising:

first shift register means having a plurality of register locations, a serial input connected to receive the television signal in its initial form, parallel inputs and outputs and a serial output;

second shift register means having a plurality of register locations parallel inputs and a serial output;

memory means connected to said parallel inputs and parallel outputs and having a plurality of individually addressable memory locations arranged in rows and columns; and

sequence control means including a plurality of address counters connected to said memory means so that each said counter independently addresses a selected group of memory locations, said counters including two write address counters operable for writing each component of the television signal into a respective group of memory locations from said parallel outputs of said first shift register means, and two read address counters operable for reading each first component of the television signal from said memory means to said parallel inputs of one of said shift register means and for reading each second component of the television signal from said memory means to said parallel inputs of the other one of said shift register means, whereby the first components of the television signal are supplied in succession to said serial output of said one register means and the second components of the television signal are supplied in succession to said serial output of the other one of said register means.

ADAPTIVE MULTISTANDARD VIDEO COMB FILTER

Stuart S. Perlman, Princeton, N.J., assignor to RCA Licensing Corporation, Princeton, N.J.

Filed Nov. 17, 1989, Ser. No. 437,952

Int. Cl.[5] H04N *9/78*

U.S. Cl. 358—31 **12 Claims**

1. A multimode comb filter, for comb filtering video signals of different video signal standards, comprising

a signal input terminal for receiving a video signal;

means including delay means, coupled to said signal input terminal, for selectably providing video signals representing three adjacent horizontal lines of video signal for video signals of first and second standards in first and second modes respectively;

means including combining means, responsive to said video signals representing three adjacent horizontal lines of video signal, for generating a comb filtered signal which at an instant in time comprises a combination of video signals representing two of said three horizontal lines.

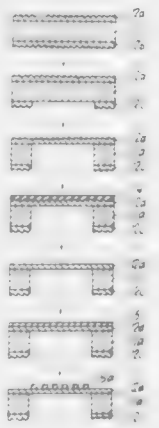
X-RAY MASK AND METHOD OF MANUFACTURING AN X-RAY MASK



Masato Kobayashi, Miyagi; Yoh-Ichi Yamaguchi, Tokyo; Minoru Sugawara, Tokyo, and Kazuhide Yamashiro, Tokyo, all of Japan, assignors to Hoya Corporation, Tokyo, Japan

Filed Jan. 30, 1990, Ser. No. 487,771

Claims priority, application Japan, Jan. 31, 1989, 1-22198; Oct. 27, 1989, 1-281132

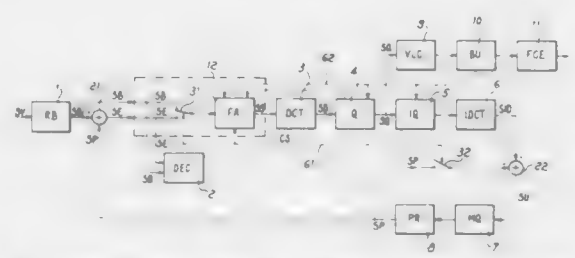
Int. Cl.[5] G21K *5/00;* **H01L** *21/306;* **B44C** *1/22;* **C23F** *1/00*

U.S. Cl. 378—35 **11 Claims**

10. An X-ray mask comprising a substrate having a principal surface, an X-ray transmission layer on said principal surface, and an X-ray absorption layer on said X-ray transmission layer, said X-ray transmission layer being subjected to a flattened process and having roughness smaller than 100 angstroms.

5,005,076

DCT VIDEO SIGNAL COMPRESSION DEVICE WITH INTRAFIELD/INTERFIELD SWITCHING AND ADJUSTABLE HIGH FREQUENCY FILTER



Mario Stroppina, Turin, and Luigi Ronchetti, Como, both of Italy, assignors to RAI Radiotelevisione Italiana S.p.A., Italy

Filed Mar. 6, 1993, Ser. No. 489,486

Claims priority, application European Pat. Off., May 12, 1989, 89830208.8

Int. Cl.[5] H04N *7/12*

U.S. Cl. 358—135 **11 Claims**

1. A digital video signal compression device comprising:

line-block converter means for converting an incoming digital video signal intrafield blocks each including a predetermined number of adjacent image elements;

a digital adder having a non-inverting input operatively connected to an output of said converter means, an inverting input and an output;

a processing chain including an input, a digital low-pass filter, a DCT transformer and a quantizer connected in cascade to each other;

a variable-length coder connected to an input to an output of said quantizer;

switching means, operatively connected to the output of said converter means, to the output of said adder and to the input of said processing chain, for selectively applying to the input of said processing chain an intrafield block from said converter means during an intrafield mode of operation and an interfield block during an interfield mode of operation;

a predictor chain operatively connected to the output of said quantizer, said predictor chain including an inverse quantizer, an inverse DCT transformer and predicting means for generating a predicted block signal and applying said signal to the inverting input of said adder to generate said interfield block;

selector means, operatively connected to said converter means, said switching means and to the output of said adder, for comparing each intrafield block with a corresponding interfield block and setting said switching means in said intrafield mode of operation if such intrafield block has less information content than said corresponding interfield block and alternatively setting said switching means in said interfield mode of operation if such intrafield block has greater information content than said corresponding interfield block; and

output buffer means operatively coupled to said variable-length coder for temporarily storing compressed video signals therefrom, said buffer means being operatively connected to said quantizer and inverse quantizer for changing quantization resolutions thereof inversely with a fill rate of said buffer means, said buffer means being operatively coupled to said filter for varying an upper cutoff frequency thereof inversely with the buffer fill rate.

5,005,077

MOTION DEPENDENT VIDEO SIGNAL PROCESSING

Raphael Samad, and Clive H. Gillard, both of Basingstoke, United Kingdom, assignors to Sony Corporation, Tokyo, Japan

Filed Apr. 20, 1990, Ser. No. 511,739

Claims priority, application United Kingdom, Apr. 27, 1989, 8909651

Int. Cl.[5] H04N *7/01*

U.S. Cl. 358—140 **10 Claims**

1. A motion compensated video standards converter for converting a video signal conforming to a first video standard to a converted video signal conforming with a second video standard, said video signal being provided as a sequence of intervals selected from fields and frames, each of said intervals being arranged in a plurality of blocks each representing a portion of an image represented by said video signal, comprising:

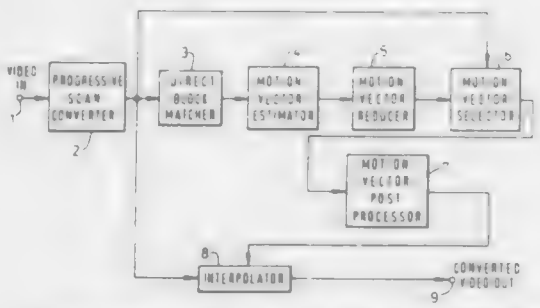
motion vector deriving means for comparing each of a plurality of blocks in a first interval of said video signal with a plurality of blocks in an adjacent interval of said video signal for deriving motion vectors representing motion of the image portion represented by respective ones of said blocks between said first interval and said adjacent interval;

motion vector assigning means to assign to respective ones in a group of blocks in said first interval adjacent to a border region thereof, motion vectors selected from motion vectors which have been derived for blocks of said first interval which are adjacent to said respective ones in said group of blocks and which are outside said border region; and

interpolator means for producing said converted video signal, said interpolator means being controlled at least in dependence on the assigned motion vectors.

5,005,078

MOTION DEPENDENT VIDEO SIGNAL PROCESSING



Clive H. Gillard, Chineham, United Kingdom, assignor to Sony Corporation, Tokyo, Japan

Filed Apr. 20, 1990, Ser. No. 513,426

Claims priority, application United Kingdom, Apr. 27, 1989, 8909645

Int. Cl.[5] H04N *7/01*

U.S. Cl. 358—140 **8 Claims**

1. A motion compensated video standards converter for converting an input video signal having a first standard format to a motion compensated video signal having a second standard format, said converter comprising:

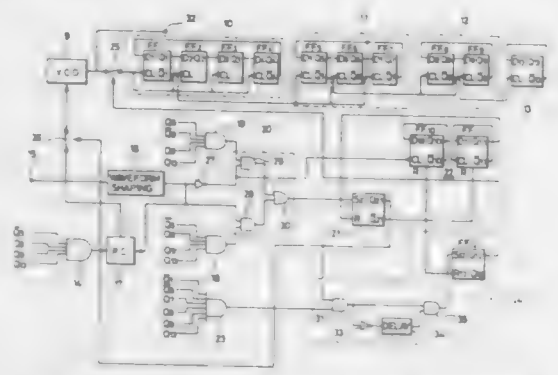
progressive scan converter means for receiving said input video signal having said first standard format and for converting fields of said input video signal to video signal progressive scan frames;

comparator means coupled to said progressive scan converter means for comparing blocks in a first progressive scan frame of said video signal with a plurality of blocks in the following progressive scan frame of said video signal, said comparator means deriving motion vectors which represent the motion of the content of the respective blocks compared between said first frame and said following frame; and

interpolator means for interpolating said scan frames from said progressive scan converter means in dependence on said motion vectors to produce said motion compensated video signal having said second standard format.

5,005,079

AUTOMATIC FREQUENCY CONTROL CIRCUIT



Hideo Satomi, Nitta, Japan, assignor to Sanyo Electric Co., Ltd., Japan

Filed Mar. 13, 1990, Ser. No. 492,759

Claims priority, application Japan, Mar. 16, 1989, 1-65528

Int. Cl.[5] H04N *5/04*

U.S. Cl. 358—158 **2 Claims**

1. An automatic frequency control circuit comprising:

voltage controlled oscillator means for providing an oscillating output signal having a frequency which changes in response to a control input;

frequency dividing means for frequency dividing the oscillating output signal of said voltage controlled oscillator means by a predetermined division ratio;

phase comparing means for comparing phases of an externally supplied input reference signal and an output signal of said frequency dividing means to generate an error output and supply the error output to said voltage controlled oscillator means as said control input such that said input reference signal and the output signal of said frequency dividing means enter a phase-locked state wherein both the input reference signal and the output signal of said frequency dividing means have a predetermined phase relation;

miss-lock detecting means for detecting the phase relation between said input reference signal and the output signal of said frequency dividing means entering a miss-lock state out of said predetermined phase relation;

frequency division interrupting means responsive to a detection signal in the miss-locked state from said miss-lock detecting means for once interrupting a frequency dividing operation of said frequency dividing means at a predetermined timing, and thereafter, restarting the frequency dividing operation in response to a subsequent input reference signal, thereby forcibly restoring the phase locked state of said input reference signal and the output signal of said frequency dividing means, said frequency division interrupting means comprising:

counter means responsive to the output of said miss-lock detecting means for counting pulses of said subsequent input reference signal by a predetermined number;

means for defining a first period starting from said predetermined timing after the detection of said miss-lock state until the end of the counting by said counter means; and

a first switch for cutting off the supply of the oscillating output signal of said voltage controlled oscillator means for said frequency dividing means during said first period, and

an output terminal for taking out an output of said voltage controlled oscillator means.

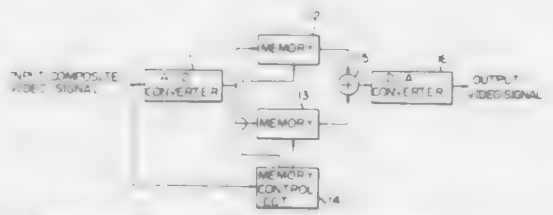
METHOD AND APPARATUS OF IMAGE PROCESSING



Masao Kanda, Tokorozawa, Japan, assignor to Pioneer Electronic Corporation, Tokyo, Japan

Filed May 13, 1988, Ser. No. 193,744

Claims priority, application Japan, May 15, 1987, 62-118236; Jun. 4, 1987, 62-140694; Jun. 5, 1987, 62-141013

Int. Cl.[5] H04N *5/14*

U.S. Cl. 358—160 **6 Claims**

1 An image processing apparatus comprising:

an analog to digital converting means for digitizing an input composite video signal representing an image into a digital composite video signal, said digital composite signal comprised of a series of fields;

a first memory means for storing said digital composite video signal;

a second memory means for storing said digital composite video signal;

memory control means for controlling writing and reading timings of said first and second memory means such that one field of said digital composite video signal obtained for every four fields of said digital composite video signal is sequentially written in said first memory means and a stored content of said first memory means is sequentially read out in the order of storing said digital composite signal, and one field which is identical to any one field of a field group stored in said first memory means is sequentially written in said second memory means at intervals longer than intervals of the field stored in said first memory means, and a stored content of said second memory means is read out sequentially in the order of storing said digital composite signal;

adding means for adding together the contents of said first and second memory means; and

a digital to analog converting means for outputting an analog composite video signal corresponding to the combined contents of said first and second memory means.

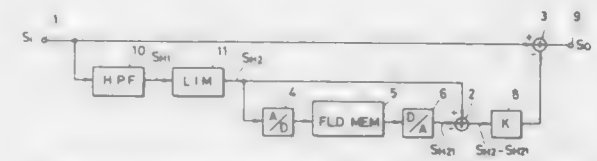
METHOD AND APPARATUS FOR REDUCING NOISE IN A VIDEO SIGNAL

Mitsuyasu Asano, Tokyo, Japan, assignor to Sony Corporation, Tokyo, Japan



PCT No. PCT/JP88/00286, § 371 Date Jan. 10, 1989, § 102(e) Date Jan. 10, 1989, PCT Pub. No. WO88/07307, PCT Pub. Date Sep. 22, 1988

PCT Filed Mar. 18, 1988, Ser. No. 294,663

Claims priority, application Japan, Mar. 20, 1987, 62-67403

Int. Cl.[5] H04N *5/213*

U.S. Cl. 358—167 **11 Claims**

1. A method of reducing noise in a video signal, comprising:

passing said video signal through a high pass filter to create a high frequency signal;

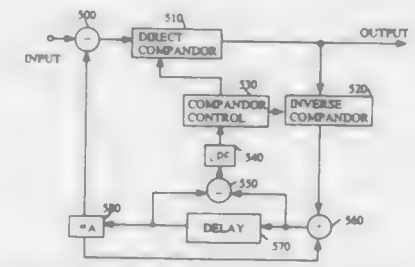
passing said high frequency signal through a limiter to produce a first signal;

delaying said first signal to produce a second signal;

subtracting said second signal from said first signal to produce a difference signal;

subtracting said difference signal from said video signal such that any noise in said video signal is reduced.

5,005,082



VIDEO SIGNAL COMPANDER ADAPTIVELY RESPONSIVE TO PREDICTIONS OF THE VIDEO SIGNAL PROCESSED

Joel W. Zdepski, Lebanon, and Joshua L. Koslov, East Windsor, both of N.J., assignors to General Electric Company, Princeton, N.J.

Filed Oct. 3, 1989, Ser. No. 416,695

Int. Cl.[5] H04N *5/52, 7/12*

U.S. Cl. 358—174 **20 Claims**

1. An adaptive compansion system for processing a video signal comprising:

means for applying an adaptively companded signal representing a video signal;

an adaptive compandor having an output terminal and a control terminal, and having a plurality of compansion transfer characteristics selectably responsive to a control signal applied to said control terminal, said adaptive compandor being responsive to said adaptively companded signal for performing a compansion function to produce a noncompanded signal representing said video signal;

means coupled to the output terminal of said adaptive compandor for providing an output video signal;

means responsive to said output video signal for generating a signal indicative of an attribute of said video signal;

means responsive to said signal indicative of an attribute of said video signal for generating said control signal.

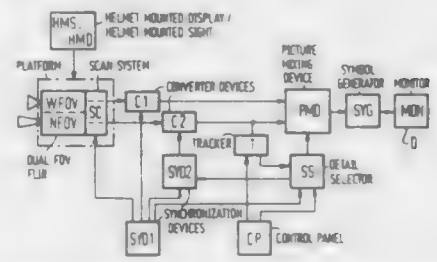
FLIR SYSTEM WITH TWO OPTICAL CHANNELS FOR OBSERVING A WIDE AND A NARROW FIELD OF VIEW



Ludger Grage, Eichenau, and Paul Dato, Emmering, both of Fed. Rep. of Germany, assignors to Siemens Aktiengesellschaft, Berlin and Munich, Fed. Rep. of Germany

Filed May 19, 1989, Ser. No. 354,208

Claims priority, application Fed. Rep. of Germany, May 19, 1988, 3817159

Int. Cl.[5] H04N *5/268, 7/18*

U.S. Cl. 358—181 **19 Claims**

1. A method for observing a scene, comprising the steps of:

directing an image pick-up side of an infrared imaging system having two optical channels with different fields of view at a scene to be observed to obtain a picture signal of the scene to be observed having a wide field of view and having a narrow field of view;

converting said picture signals of said two optical channels into two television video signals through two converter devices;

synchronizing said two television video signals to one another with a first synchronization device;

supplying said two television video signals to a picture mixing device;

selecting only a detail of said television video signal of said narrow field of view by a detail selector;

mixing said detail with said television video signal of said wide field of view in said picture mixing device to form a mixed video signal; and

portraying said mixed video signal on a single image portrayal device in such fashion that an overview of the scene to be observed from the wide field of view channel appears simultaneously with a mixed-in picture detail of said narrow field of view channel in a portrayed picture.

5,005,084

REMOTE CONTROL TELEVISION SYSTEM USING SUPPLEMENTARY UNIT FOR SIMPLIFIED PERSONALIZED CONTROL

Kenneth R. Skinner, Jefferson City, Tenn., assignor to North American Philips Corporation, New York, N.Y.

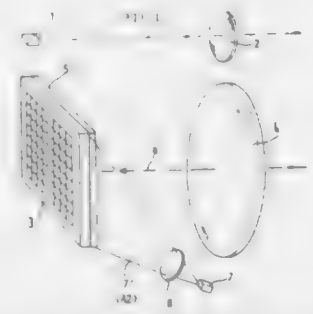
Filed Dec. 19, 1989, Ser. No. 452,983
Int. Cl.[5] H04N 5/44; H03J 9/06
U.S. Cl. 358—194.1 20 Claims

1. A television system comprising:

(a) a first remote control transmitter device having a plurality of first keyboard keys and a first infrared transmitter which are coupled such that the pressing of respective of said plurality of first keyboard keys causes said first infrared transmitter to transmit respective of a plurality of desired first signals;

(b) an auxiliary remote control transmitter device having a plurality of second keyboard keys, said plurality of second keyboard keys being substantially smaller in number than said plurality of first keyboard keys, and a second infrared transmitter, said plurality of second keyboard keys and said second transmitter being coupled such that the pressing of respective of said plurality of second keyboard keys causes said second infrared transmitter to transmit respective of a plurality of desired second signals, at least one of said desired second signals being uniquely distinguishable from all of said desired first signals; and

(c) a television having an infrared receiver means for receiving said desired first and desired second signals; parameter control means for effecting control over an audio or video parameter of said television; a microprocessor coupled to the infrared receiver means for determining the meaning of said desired first and desired second signals, and coupled to the parameter control means for controlling the parameter control means in response to the received desired signals; and a programmable memory means for storing values for a plurality of personal preference parameter rings, including a value for at least said audio or video parameter, at least one of said plurality of personal preference parameter rings being associated with said uniquely distinguishable desired second signal of said auxiliary remote device, said programmable memory means being coupled to said microprocessor,



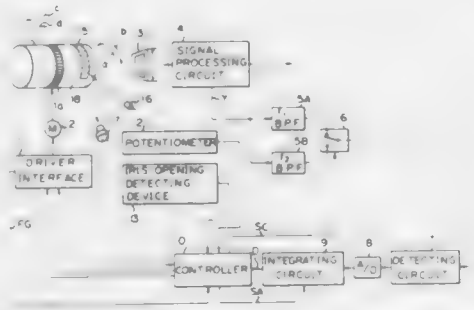
wherein said programmable memory means is programmable when said television is in a programmable mode, and said programmable memory means is programmed with said values for said plurality of personal preference parameter rings by the pressing of a desired sequence of said first remote control transmitter device first keyboard keys.

5,005,085

CONTROLLABLE SEMICONDUCTOR IMAGE SENSOR AND ARRANGEMENT WITH SUCH A SENSOR

Hans Spies, Pfaffenhofen; Alfons Woehrl, Schrobenhausen, and Martin Spies, Pfaffenhofen, all of Fed. Rep. of Germany, assignors to Messerschmitt-Boelkow-Blohm GmbH, Munich, Fed. Rep. of Germany

Filed Nov. 22, 1989, Ser. No. 440,601
Claims priority, application Fed. Rep. of Germany, Nov. 23, 1988, 3839512
Int. Cl.[5] H04N 5/335, 3/14, 5/30
U.S. Cl. 358—213.11 10 Claims



1 A controllable semiconductor image sensor, comprising a sensor semiconductor device, CCD-read-out means as part of said sensor semiconductor device for reading-out sensed image information, avalanche diode means arranged in said sensor semiconductor device for amplifying by an avalanche a photon current produced in response to exposure of said sensor semiconductor device to light from an image scene, means for generating a space charge in a space charge region of said sensor semiconductor device and for causing a charge carrier transport toward said CCD-read-out means to provide image information at said CCD-read-out means in response to said image scene light, and control light source means for directing control light impulses onto said space charge region for optically controlling said sensor semiconductor device.

5,005,086

FOCUS CONTROL APPARATUS HAVING TWO FOCUSING SPEEDS

Koji Iwamoto, Tokyo; Kenichi Hamada, and Katsuaki Hirota, both of Kanagawa, all of Japan, assignors to Sony Corporation, Tokyo, Japan

Filed Mar. 2, 1989, Ser. No. 318,138
Claims priority, application Japan, Mar. 4, 1988, 63-051294; Mar. 4, 1988, 63-051293; Aug. 29, 1988, 63-214360
Int. Cl.[5] H04N 3/26
U.S. Cl. 358—227 5 Claims

1. Focus control apparatus for a video camera in which a component of a video signal is maximized to perform focus control, comprising:

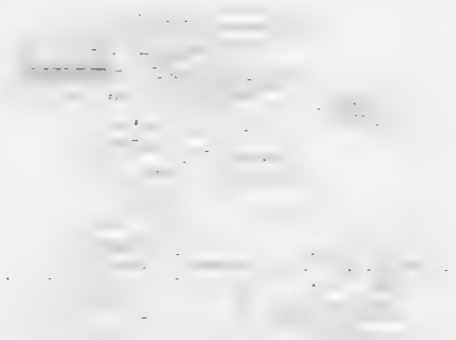
means for extracting a signal having a predetermined frequency component from a video signal;

means for moving a position of a lens in quest of an in-focus position at which said lens is correctly focused;

means for sampling the signal of predetermined frequency component extracted from the video signal at at least continuous, successive first, second, and third lens positions,

means for determining a first gradient indicative of a change in value of the signal of predetermined frequency component for a change in lens position between said first and second lens positions from the signal of the predetermined frequency component sampled at the first lens position and the signal of predetermined frequency component sampled at the second lens position;

means for determining a second gradient indicative of a change in value of the signal predetermined frequency component for a change in lens position between said second and third lens positions from the signal of the predetermined frequency component sampled at the second lens position and the signal of predetermined frequency component sampled at the third lens position; and



control means responsive to a relationship between said first and second gradients for effecting relatively rapid movement of said lens when said lens is relatively distant from said in-focus position and relatively slow movement of said lens when said lens is relatively close to said in-focus position.

5,005,087

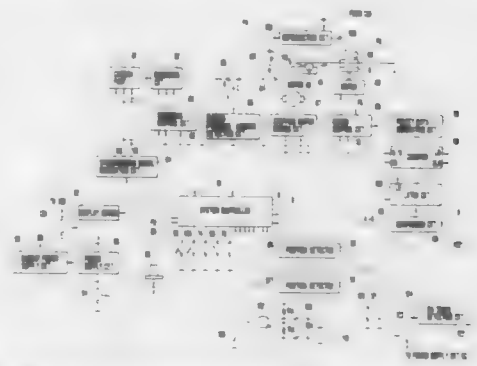
SIGNAL PROCESSING DEVICE FOR AUTOMATIC-FOCUSING VIDEO SIGNAL IN ELECTRONICALLY CONTROLLED PHOTOGRAPHIC CAMERA

Noboru Suzuki; Shigeo Toji, and Yukio Uenaka, all of Tokyo, Japan, assignors to Asahi Kogaku Kabushiki Kaisha, Tokyo, Japan

Continuation of Ser. No. 173,449, Mar. 25, 1988. This application Aug. 22, 1989, Ser. No. 396,632
Claims priority, application Japan, Mar. 26, 1987, 62-45016[U]; Mar. 26, 1987, 62-72916
The portion of the term of this patent subsequent to Oct. 24, 2006, has been disclaimed.
Int. Cl.[5] H04N 5/232; G03B 3/00, 13/18
U.S. Cl. 358—227 15 Claims

1. A signal processor for an automatic-focusing video signal in an electronically controlled camera, comprising:

a photosensor having an electric charge accumulating part for accumulating an electric charge signal which corresponds to an object brightness, said photosensor being adapted to sequentially transmit said electric charge signal accumulated in said electric charge accumulating part; and



an automatic gain control circuit for automatically controlling the gain of said automatic-focusing video signal produced from said photosensor when said object contrast is low, in such a manner that a low-contrast corresponding level difference, which is the difference between a high-luminance corresponding level and a low-luminance corresponding level of an automatic-focusing video signal arising from a low-contrast object, approaches a high-contrast corresponding level difference, which is the difference between a high-luminance corresponding level and a low-luminance corresponding level of an automatic-focusing video signal arising from a high-contrast object

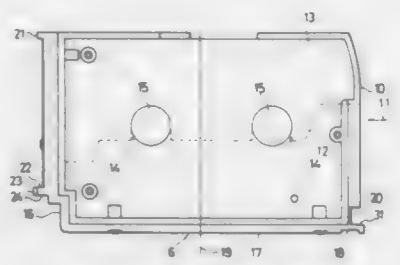
AUTOMATIC CASSETTE TAPE CHANGER



Takashi Kikuchi, and Shigeo Aoyagi, both of Iwaki, Japan, assignors to Alpine Electronics Inc., Tokyo, Japan

Division of Ser. No. 465,714, Jan. 16, 1990, which is a division of Ser. No. 207,671, Jun. 16, 1988, Pat. No. 4,918,542, which is a division of Ser. No. 807,368, Dec. 10, 1985, Pat. No. 4,777,547. This application Oct. 1, 1990, Ser. No. 591,348

Claims priority, application Japan, Dec. 10, 1984, 59-186121[U]; Dec. 10, 1984, 59-186122[U]; Dec. 10, 1984, 59-186123[U]; Dec. 10, 1984, 59-186124[U]; Dec. 10, 1984, 59-196125[U]

Int. Cl.[5] G11B *15/68*

U.S. Cl. 360—92 **4 Claims**

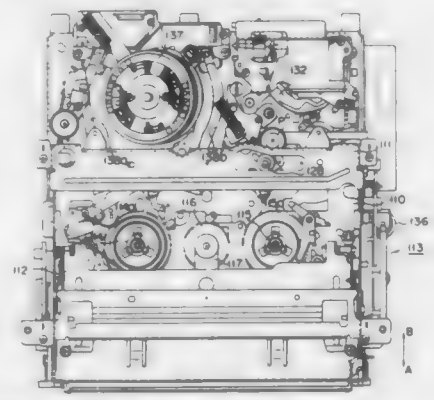
1. An automatic cassette tape changer having:

a tape container having side plates for containing a plurality of cassette tapes, said tape container having a first hole passing through each of its side plates, said first hole being located at a position corresponding to a rotatable hub of a cassette tape disposed in said tape container, said tape container having a plurality of partition walls forming tape cassette receiving portions within said tape container, said partition walls being provided with a plurality of cut portions therein corresponding to said position of said rotatable hub of said cassette tape; and

a hub locking member passing through said first hole in said side plates, said cut portions, and a plurality of cassette tape hubs in line with said first hole and said cut portions for restraining rotational movement of said hubs.

5,005,091

CASSETTE LOADING APPARATUS WITH SINGLE SWITCH CONTROL



Hisanaga Tsujimoto, Tokyo, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Dec. 27, 1989, Ser. No. 457,562

Claims priority, application Japan, Dec. 28, 1988, 63-333616

Int. Cl.[5] G11B *5/008*

U.S. Cl. 360—96.5 **7 Claims**

1. A cassette loading apparatus comprising:

a cassette holder which houses a cassette to be loaded and is arranged to be movable in a substantially horizontal state;

loading means including a guide member for guiding said cassette holder so as to load the cassette in a first direction from a loading start position to a loading end position and to unload the cassette in a second direction opposite to the first direction from an unloading start position to an unloading end position, and a driving member for driving said guide member in the first and second directions;

transmitting means for transmitting a driving force from a driving source to said driving member;

switch means including a pair of contacts which are switched to ON and OFF states as to selectively supply power to said driving source, and first and second actuators for switching said pair of contacts to ON and OFF states, said second actuator being engaged with said guide member at the loading end position assumed by said guide member so as to switch said pair of contacts to an OFF state; and

a switching member including first and second engaging portions which can be freely engaged with said driving member and said first actuator of said switch means, engagement of said first engaging portion with said driving member being released at the loading start position assumed by said guiding member so as to cause said second engaging portion to be engaged with said first actuator of said switch means, thereby switching said pair of contacts to an ON state, and said first engaging portion being engaged with said driving member at the unloading end position assumed by said guide member so as to cause said second engaging portion to be disengaged from said first actuator, thereby switching said pair of contacts to an OFF state.

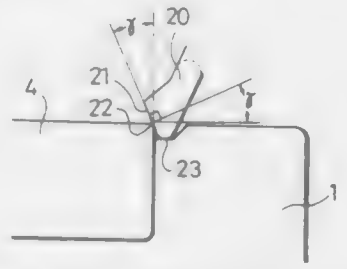
SHUTTER OPENING DEVICE



Osamu Shigenai, Furukawa, and Keiichi Sato, Shiogama, both of Japan, assignors to Alps Electric Co., Ltd., Tokyo, Japan

Filed Dec. 26, 1989, Ser. No. 456,921

Claims priority, application Japan, Apr. 7, 1989, 1-40478[U]

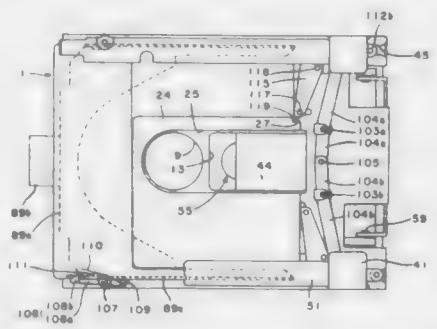
Int. Cl.[5] G11B *17/02*

U.S. Cl. 360—99.06 **2 Claims**

1. In a shutter opening device including a lever member rotatably supported at a deepest portion of a cartridge holder of a disc driving device with respect to an inserting direction of a disc cartridge and means for normally elastically biasing said lever member in an ejecting direction of said disc cartridge, said disc cartridge having a case formed with a head insertion opening and a shutter so mounted as to ride over one end of said case for normally closing said head insertion opening, said lever member being adapted to contact an end surface of said shutter upon insertion of said disc cartridge and open said shutter in a direction perpendicular to the inserting direction of said disc cartridge according to an inserting force of said disc cartridge; the improvement wherein said lever member has a contact end portion for contacting said shutter, said contact end portion being formed with an inclined surface having an angle of inclination from a plane perpendicular to a sliding direction of said shutter and further formed with a front end adapted to first contact said case of said disc cartridge, said inclined surface being adapted to contact a corner of said shutter, said angle of inclination of said inclined surface being set such that a force to be applied to said shutter by said lever member in a disengaging direction of said shutter upon contacting of said inclined surface with said corner is in a predetermined range not generating disengagement of said shutter.

5,005,093

RECORDING AND/OR REPRODUCING APPARATUS WITH CARTRIDGE LOCK MECHANISM



Yoshihisa Inoue, Saitama, and Yasunori Arai, Tokyo, both of Japan, assignors to Nakamichi Corporation, Tokyo, Japan

Continuation of Ser. No. 265,212, Oct. 31, 1988, Pat. No. 4,899,238. This application Dec. 13, 1989, Ser. No. 450,246

Claims priority, application Japan, Oct. 31, 1987, 62-276778

Int. Cl.[5] G11B *5/012*

U.S. Cl. 360—99.06 **9 Claims**

1. A recording and/or reproducing apparatus for performing recording and/or reproducing operation with respect to a disc contained in a disc cartridge, comprising:

a main chassis;

a holder secured to said main chassis for accommodating the disc cartridge;

shutter actuating means for opening a laterally slidable shutter of the disc cartridge along with insertion thereof into said holder in a direction substantially perpendicular to the sliding direction of said shutter;

a base for mounting thereon a head for transducing signals from a recording medium in opposition to one side of the disc and a spindle motor for rotating the disc, said base being displaceable between a first position retracted away from said holder and a second position close to said holder to make operative said head and said spindle with respect to the disc contained in the full-loaded disc cartridge in said holder;

cartridge lock means for locking the disc cartridge in a full-loaded position, including a lock lever engageable with a corresponding engaging portion of the disc cartridge and first spring means for biasing said lock lever and said corresponding engaging portion is released;

detect means for detecting that the disc cartridge has reached the full-loaded position in said holder; and

control means operated in response to detection by said detect means to actuate said cartridge lock means against said first spring means to lock the disc cartridge in the full-loaded position and then to shift said base to said second position.

5,005,094

MODE CHANGEOVER MECHANISM WITH FLAT CAM SURFACE FOR A TAPE PLAYER

Norimasa Komatsu, and Asashi Miyazaki, both of Kakuda, Japan, assignors to Alps Electric Co., Ltd., Tokyo, Japan

Filed Oct. 19, 1989, Ser. No. 424,359

Claims priority, application Japan, Dec. 12, 1988, 63-161741[U]; Feb. 10, 1989, 1-15065

Int. Cl.[5] G11B *5/008, 5/54*

U.S. Cl. 360—105 **5 Claims**

1. A mode changeover mechanism for a tape player for recording signals on a magnetic tape and reproducing signals recorded on the magnetic tape, comprising:

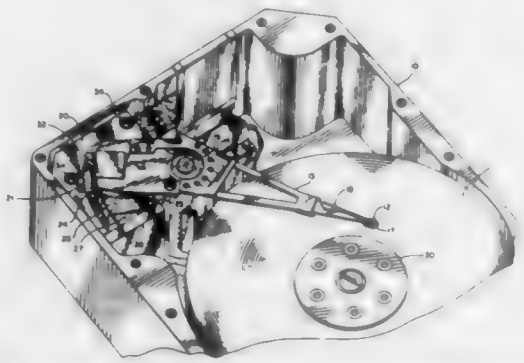
a base plate, a magnetic head mounted on said base plate, said base plate disposed to move toward the magnetic tape to bring the magnetic head into contact with the magnetic tape and away from the magnetic tape to separate the magnetic head from the magnetic tape, said base plate moving in a direction of movement which is substantially along a straight line;

a spring biasing said base plate away from the magnetic tape to separate the magnetic head from the magnetic tape;

a changeover cam for moving said base plate toward the magnetic tape against the resilience of the spring; and

a motor for driving the changeover cam for rotation;

characterized in that the changeover cam has a flat cam surface, and when said flat cam surface is in contact with said base plate, said base plate is in a position such that the magnetic head is in contact with the magnetic tape, and



while said base plate is in said position, said flat cam surface is disposed perpendicular to and intersecting a center line passing through the center of rotation of the change-over cam, said center line extending in a direction parallel to said direction of movement of said base plate.

5,005,095

ACTUATOR FOR LINEARIZING TORQUE IN A DISK DRIVE SYSTEM

J. Arthur Wagner, San Jose, Calif., assignor to Maxtor Corporation, San Jose, Calif.

Filed May 2, 1990, Ser. No. 518,078
Int. Cl.[5] G11B *5/55*
U.S. Cl. 360—106 **12 Claims**

1. In a magnetic recording system which includes a magnetic disk for storing data in a pattern of remnant magnetization, a rotary moving coil actuator for selectively positioning a transducer across said disk to access data stored thereon, said actuator comprising:

a frame having a pair of radial slots;

a body pivotable about an axis;

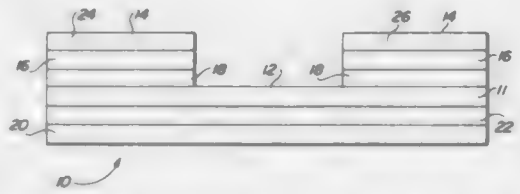
a pair of magnets mounted to said frame along said slots;

a coil securely attached to said body, said coil passing through said radial slots and adjoining said magnets, said coil moving across said slots in an arcuate path from a first position to a second position, thereby pivoting said body, during a data stroke; and

at least one notch formed in said frame at a point midway along said arcuate path, said coil and notch each having first and second edges such that when said coil is in said first position, said first edge of said notch coincides with said first edge of said coil, and when said coil is in said second position, said second edge of said notch coincides with said second edge of said coil, said notch reducing the magnetic flux density at said point, thereby linearizing the torque of said actuator across said data stroke.

5,005,096

MAGNETORESISTIVE READ TRANSDUCER HAVING HARD MAGNETIC SHUNT BIAS



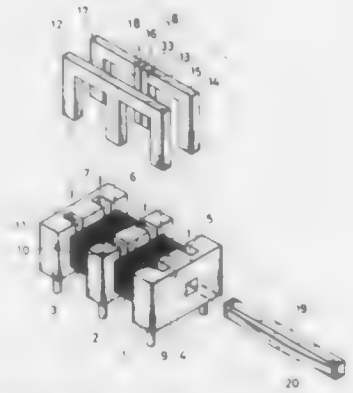
Mohamad T. Krounbi, San Jose; Otto Voegeli, Morgan Hill; and Po-Kang Wang, San Jose, all of Calif., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Dec. 21, 1988, Ser. No. 287,970
Int. Cl.[5] G11B *5/127*
U.S. Cl. 360—113 **15 Claims**

1. A magnetoresistive read transducer comprising:

a thin film of magnetoresistive conductive layer formed of magnetic material, said magnetoresistive conductive layer having passive end regions separated by a central active region; and

means for producing a longitudinal magnetostatic bias in the passive end regions of said magnetoresistive layer, said means for producing a longitudinal bias comprising separate thin films of hard magnetic material parallel to, but spaced from, said magnetoresistive layer, said separate thin films of hard magnetic material existing substantially in each of the passive end region only, and said separate thin films of hard magnetic material being magnetized in a chosen direction along said transducer whereby said longitudinal bias maintains said active regions of said magnetoresistive layer in a single domain state in said chosen direction along said transducer.



5,005,097

MAGNETIC HEAD WITH A COIL AND CORE SUPPORTING BOBBIN

Seigou Matsuoka, Arao, Japan, assignor to Matsushita Electric Industrial Co., Ltd., Kadoma, Japan

Filed Jan. 4, 1989, Ser. No. 293,776
Int. Cl.[5] G11B *5/265, 5/17*
U.S. Cl. 360—121 **2 Claims**

1. A magnetic head comprising:

at least one coil,

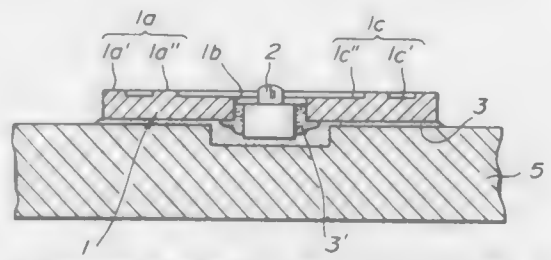
a front core having a media-touching portion and at least one protrusion;

a back core;

a dummy core disposed parallel to said front core; and

a bobbin for holding thereon said at least one coil for generating magnetic flux,

said bobbin having at least two apertures through which said dummy core and said protrusion of said front core are respectively disposed to effect an integral assembly of said front core, said dummy core and said bobbin,



said back core extending in said bobbin and through said at least one coil and being in contact with said at least one protrusion of said front core to produce therewith at least one magnetic path for said magnetic flux.

5,005,098

DISK DRIVE WITH STABILIZER BLOCK FOR INSURING STABLE CONTACT BETWEEN A READ/WRITE HEAD AND A FLEXIBLE RECORDING MEDIUM

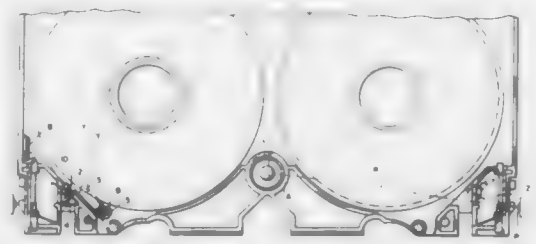
Tokio Kanada, Tokyo, Japan, assignor to Sony Corporation, Tokyo, Japan

Filed Jun. 12, 1989, Ser. No. 364,121
Claims priority, application Japan, Jun. 15, 1988, 63-147101
Int. Cl.[5] G11B *5/60, 21/21*
U.S. Cl. 360—130.34 **30 Claims**

1. A stabilizer block structure for a contact-type disk drive unit, in which information to be recorded and/or reproduced is transferred between a flexible storage medium disk and a reading and/or writing head being held in contact with each other, said stabilizer block structure comprising:

a stabilizer block body defining a head receptacle opening for securing said reading and/or writing head therein;

a contact surface incorporated with said stabilized block body and oriented on one side of said stabilizer block body, for defining a contact area for establishing contact with said flexible storage medium disk, the surface area of said contact area being less than a surface area of said one side of said stabilizer block body; and



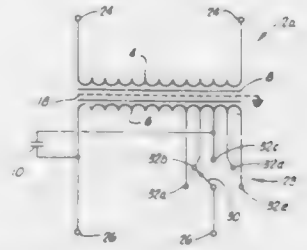
at least one void formed on said one side of said stabilizer block body, said void being substantially surrounded by said contact area and said void surrounding said reading and/or writing head for defining a vacuum chamber in cooperation with said flexible storage medium disk for generating a Bernoulli drawing force for drawing said flexible storage medium disk to establish steady head-to-disk contact while said flexible storage medium disk is rotatingly driven.

5,005,099

METHOD AND APPARATUS FOR THE PREVENTION OF FAST-FORWARDING OF A VIDEO CASSETTE TAPE

James D. Perryman, 1449 Richland Rd. #9, Auburn, Ala. 36830, and John M. Green, 125 Eufaula St., Gulf Breeze, Fla. 32561

Filed Dec. 18, 1989, Ser. No. 451,562
Int. Cl.[5] G11B *23/02, 15/48*
U.S. Cl. 360—132 **4 Claims**



1. In a video cassette recorder having a motor for driving the supply reel and take-up reel for moving a video tape in a video tape cassette at a first play/record speed and a second fast forward/rewind speed, and standard photoelectric circuitry for sensing the clear leader and trailer in a video tape cassette to stop said recorder when the beginning or end of said tape is reached, a method for preventing the fast-forwarding of said video tape cassette in said video cassette recorder comprised of sensing said second speed of said tape in said cassette, and activating said standard photoelectric circuitry of said video cassette recorder for sensing the end of said tape to cause said video cassette recorder to stop.

5,005,100

TRANSIENT-FILTERED TRANSFORMER

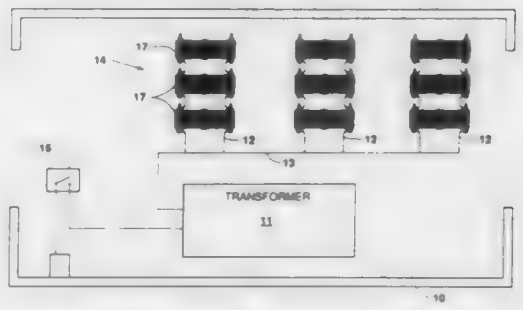
Donald W. Owen, Yukon, Okla., assignor to Southwest Electric Company, Oklahoma City, Okla.

Filed Aug. 2, 1989, Ser. No. 389,312
Int. Cl.[5] H02H *7/04*
U.S. Cl. 361—35 **15 Claims**

1. A transient-filtered transformer, comprising:

an electrically conductive primary winding;

an electrically conductive secondary winding inductive by coupled to said primary winding for providing an output voltage, said secondary winding having leakage reactance; and



capacitance connected directly across less than the full length of said secondary winding wherein said capacitance is rated for less than the full output of said secondary winding, said capacitance combining only with said leakage reactance so that an inductive-capacitive filter is formed for reducing high frequency voltage transients magnetically induced in said secondary winding.

5,005,101

METHOD AND APPARATUS FOR NEGATIVE CHARGE EFFECT AND SEPARATION OF UNDESIRABLE GASES

James C. Gallagher, and Michael K. Gallagher, both of 105 Villa Ann, San Antonio, Tex. 78213

Filed Jan. 31, 1989, Ser. No. 304,275
Int. Cl.[5] H01J *3/04*
U.S. Cl. 361—231 **3 Claims**

1. An electrical discharge generator apparatus comprising:

at least two electrode units each having an electrically conductive plate such as stainless steel covered by a dielectric material bonded to the conductive plate, said electrode units being disc like in a spaced relationship, and said electrode units having an assembly notch, a tubular electrically conductive spacer and insulating washer, with the electrode units and spacer and insulating washer having an assembly rod capable of passing through the aligned spacers, washer, and electrode units, the rods being

threaded are fitted with nuts tightened to compress in a good physical and electrical contact, all being mounted and connected to a transformer which is then connected to a switch controlling the power to the transformer primary winding, wherein the improvement comprises the combination that includes:

a. the apparatus includes a plurality of electrode units each having an electrically conductive plate having a surface covered by a dielectric material wherein:

said dielectric material shall have a minimum dielectric strength of 10 kilovolts per millimeter;

said dielectric material shall have a minimum dielectric constant of 9.7 kilohertz;

said dielectric material shall have a minimum thermal conductivity not less than 0.05 at 20 degrees centigrade;

said dielectric material shall have a maximum use temperature under no load conditions of at least 1,300 degrees centigrade;

b. the apparatus include said electrically conductive plate covered by said dielectric material bonded together by a flexible water, heat, and corrosion resistant silicone adhesive;

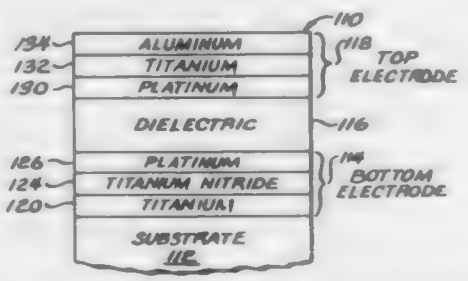
c. said electrode units being spaced at least 0.330 centimeters apart;

d. said electrically conductive spacer being made of the same dielectric material used for the electrically conductive plate surface;

e. said washer being made from the same material used for said electrically conductive plate;

f. said transformer for supplying electrical power between said electrode units being sufficient to generate a glow type of discharge between said plates, said transformer having a minimum power rating of at least 7,000 volts at 30 milliamps when supplied with 110 volts at 60 hertz, and said transformer being midpoint grounded.

5,005,102



MULTILAYER ELECTRODES FOR INTEGRATED CIRCUIT CAPACITORS

William L. Larson, Colorado Springs, Colo., assignor to Ramtron Corporation, Colorado Springs, Colo.

Filed Jun. 20, 1989, Ser. No. 368,668

Int. Cl.[5] H01G *1/01;* **H01L** *3/00, 27/02*

U.S. Cl. 361—313 **8 Claims**

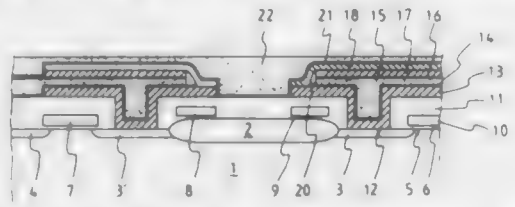
3. A capacitor for an integrated circuit comprising:

first and second electrodes;

a dielectric located between said electrodes;

one of said electrodes comprising a plate layer adjacent to said dielectric and a further layer, wherein said further layer comprises a layer of titanium and a layer of titanium nitride.

5,005,103



METHOD OF MANUFACTURING FOLDED CAPACITORS IN SEMICONDUCTOR AND FOLDED CAPACITORS FABRICATED THEREBY

Oh-Hyun Kwon; Taek-Yong Jang; Jung-Hyun Shin, and Won-Taek Choi, all of Seoul, Rep. of Korea, assignors to Samsung Electronics Co., Ltd., Suweon, Rep. of Korea

Filed Jun. 5, 1990, Ser. No. 533,494

Int. Cl.[5] H01G *4/06, 4/20*

U.S. Cl. 361—313 **14 Claims**

10. A folded capacitor for a DRAM cell having a MOS transistor and a capacitor, comprising:

a first capacitor including a first storage electrode, a first insulating layer and a first plate electrode, the first capacitor, the first storage electrode being extended from the upper part of a gate of a field oxide to the upper part of a gate of a channel region through a region for contact, the first insulating layer being interposed between the first storage electrode and the first plate electrode;

a second capacitor including the first plate electrode, a second insulating layer and a pad poly layer, the second capacitor being formed on the first capacitor, the second insulating layer being interposed between the first plate electrode and the pad poly layer; and

a third capacitor including a second storage electrode, a third insulating layer and second plate electrode, the third capacitor being formed on the second capacitor, the third insulating layer being interposed between the second storage electrode and the second plate electrode.

5,005,104

CLIP-CONNECTED TERMINAL CONDUCTOR ASSEMBLY

Kurt A. Grunert, Beaver, Pa.; Delfin Pabon, Carolina, Puerto Rico; and Ronald A. Cheski, Stowe Township, Pa., assignors to Westinghouse Electric Corp., Pittsburgh, Pa.

Filed Aug. 16, 1990, Ser. No. 568,375

Int. Cl.[5] H02B *1/20*

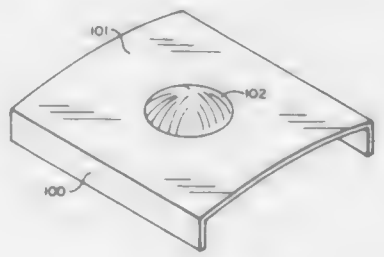
U.S. Cl. 361—355 **1 Claim**

1. A terminal assembly for connecting an electric cable to a bus conductor having a flat and square end portion with a central recess therein comprising:

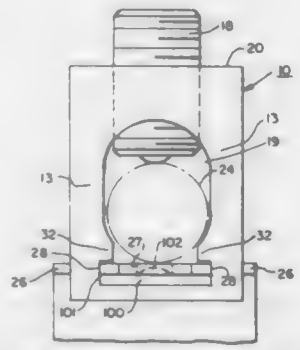
a collar having an inner wall defining, between a head and a base portion thereof, a substantially central opening for accommodating therethrough the cable and the conductor end portion side-by-side in overlapping relation;

said central opening having a first section adjoining said head portion for receiving the cable and a second section adjoining said base portion for receiving the conductor end portion;

said second section forming an open channel communicating with said first section and of rectangular cross section matching the cross section of the conductor end portion; said open channel being defined by opposite lateral walls and by the inner surface of said, collar base portion joining said lateral walls, whereby the conductor end portion is lodged into said open channel for slip-fitting therein;



said collar head portion having a transversal threaded aperture with a locking screw extending therethrough for applying a perpendicular tightening force on the cable; and



clip means being provided including a resiliently curved metallic member symmetrically defined by parallel generatrices extending between opposite side edges from a front

end to a back end of the member; said opposite edges being distant by substantially the distance between said lateral walls so that said member side edges are guided by said lateral walls of said collar open channel;

a boss being provided centrally on said member, projecting on the convex side thereof and matching the end portion recess;

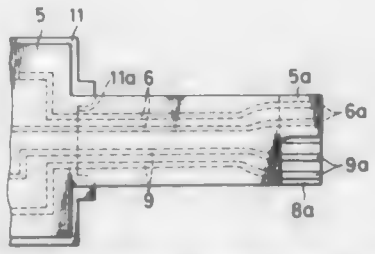
said member extending from front end to back end sufficiently, when lodged inside said second section, to ride

upon said collar base inner surface, and said member having ledges along said front and back edges for gripping the respective front and back sides of said collar base portion;

said member being placed within said open channel (a) upon said collar base inner surface for clipping thereupon and (b) below the conductor end portion for boss and recess mating under resilient cooperative pressure by said locking screw and said member.

5,005,105

STRESS-RELIEVING FLEXIBLE CIRCUIT BOARD HOLDER PLATE



Norio Onodera, Furukawa, Japan, assignor to Alps Electric Co., Ltd., Tokyo, Japan

Filed Feb. 16, 1989, Ser. No. 311,928

Claims priority, application Japan, May 13, 1988, 63-63212[U]

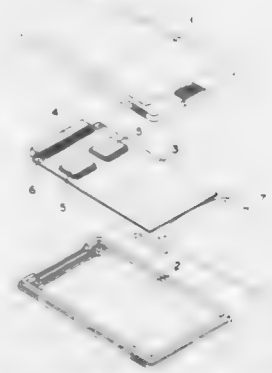
Int. Cl.[5] H05K *1/00*

U.S. Cl. 361—398 **5 Claims**

1. A flexible print circuit board comprising a wired flexible insulation film held on a holder plate, a distributor section having a portion projecting from said insulation film, said distributor section including a cluster of conductive patterns arranged on said insulation film, wherein said holder plate is provided with a recessed portion under said distributor section, said recessed portion having a width greater than that of said cluster of conductive patterns.

5,005,106

MULTIFUNCTIONAL CARD HAVING AN ELECTROMAGNETIC WAVE PROTECTION



Yutaro Kiku, Yokohama, Japan, assignor to E. I. Du Pont de Nemours and Company, Wilmington, Del.

Filed Dec. 7, 1989, Ser. No. 447,394

Claims priority, application Japan, Dec. 8, 1988, 63-159956[U]

Int. Cl.[5] H05K *9/00*

U.S. Cl. 361—424 **1 Claim**

1. A multifunctional IC card comprising

a circuit substrate having mounted thereon at least one integrated circuit device and including a ground means,

a connector means disposed along at least one edge of said circuit substrate for electrically connecting the substrate to an external apparatus,

a housing of two separate sections formed of insulating material which are fit together to enclose the circuit substrate, and

a thin, film-like shielding member having two layers, an inner insulating layer and an outer conductive layer, said shielding member being disposed between the circuit substrate and the housing and surrounding said substrate, said inner insulating layer facing the substrate and said outer conductive layer facing the housing, said conductive layer being electrically connected to said ground means.

PURSE LIGHT ASSEMBLY
Chuck Teal, P.O. Box 1134, Walkertown, N.C. 27051
Filed Apr. 19, 1990, Ser. No. 511,234
Int. Cl.[5] A45C *15/06*
U.S. Cl. 362—156 **1 Claim**

1. A light assembly for use in a purse comprising:
(A) a case, said case having a front surface, a rear surface, a top surface, a bottom surface, and two side surfaces;
(B) a hook-and-loop fastener on said case rear surface mounting said case to an inner surface of a purse;
(C) a light element mounted on said case front surface;
(D) a hood element mounted on said case front surface above said light element, said hood element being shaped to direct light emitted from said light element downwardly toward said case bottom surface;
(E) a power source in said case;
(F) a manual on/off switch mounted on said case front surface adjacent to said light element;
(G) a horn element mounted on said case front surface adjacent to said manual on/off switch;
(H) a first circuit means connecting said light element to said power source, said first circuit means including a reverse switch that is biased into a circuit closing closed condition and is opened by overcoming said bias, said reverse switch being connected to said power source and to said light element, said reverse switch connecting said light element and said horn element to said power source when said reverse switch is closed and disconnecting said light element and said horn element from said power source when said reverse switch is held open;
(I) a second circuit means connecting said horn to said reverse switch and to said power source, said second circuit means including
(1) a timer mechanism connected to said horn,
(2) said manual on/off switch connecting said timer mechanism and to said reverse switch,
(3) said timer mechanism connecting said horn to said reverse switch after a preset delay period after said reverse switch is closed, said manual on/off switch being connected between said timer mechanism and said horn to disconnect said horn from said power source when manually operated into an off condition whereby said manual on/off switch serves as a manual override to prevent said horn from being activated even after said preset time has elapsed if said manual on/off switch is in an off condition;
(4) said timer mechanism, said manual on/off switch and said horn all being connected in series with each other and said series connected timer mechanism, said manual on/off switch and said horn being connected in parallel with said light element with respect to said reverse switch so that said light element will be activated even if said manual on/off switch is in an off condition to disconnect said timer mechanism from said power source;
(J) a pedestal mounted at one end thereof on said case top surface and extending upwardly therefrom and having a second end located spaced from said case top surface; and
(K) a housing mounted on said pedestal second end, said reverse switch being located in said housing to be contacted by a mouth element of a purse to hold said reverse switch open when the purse is closed and to permit said reverse switch to close when the purse is opened

REGULATED D.C.-D.C. POWER CONVERTER HAVING MULTIPLE D.C. OUTPUTS
Shigemi Kuriyama, Nagoya City, Japan, assignor to Mitsubishi Jukogyo Kabushiki Kaisha, Tokyo, Japan
Filed Jan. 16, 1990, Ser. No. 465,812
Claims priority, application Japan, Jan. 26, 1989, 1-16965
Int. Cl.[5] H02M *3/335*
U.S. Cl. 363—21 **6 Claims**

1. A regulated D.C.-D.C. power converter having multiple D.C. outputs, comprising:
switching means for converting a D.C. input to a high-frequency power;
power conversion means for converting said high-frequency power into a plurality of D.C. output powers at a plurality of output terminals;
feedback means for monitoring the D.C. voltage at one of said plurality of output terminals and providing a feedback signal to said switching means when the monitored D.C voltage deviates from a predetermined value to alter the operation of said switching means so as eliminate said deviation; and
hysteresis means for varying the value of said monitored D.C. voltage in accordance with the amount of load current drawn by a load connected to said one output terminal so as to cause a hysteresis change in the output D.C. voltage at said one output terminal in accordance with a change in said load current.

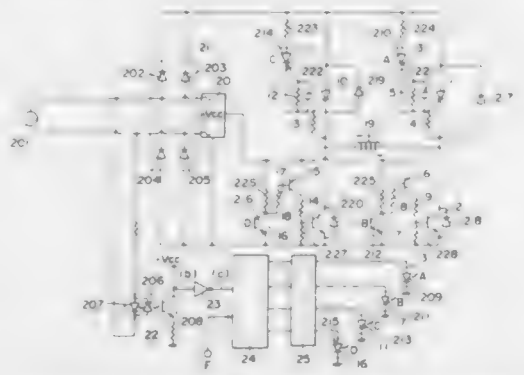
HYBRID CIRCUIT MODULE HAIVNG BRIDGE CIRCUIT AND RECTIFYING CIRCUIT DISPOSED ON A SAME SUBSTRATE



Nobuo Ohtuka, Oizumi, and Kouichi Matsumoto, Kumagaya, both of Japan, assignors to Sanyo Electric Co., Ltd., Osaka, Japan

Division of Ser. No. 271,302, Nov. 15, 1988, Pat. No. 4,918,590. This application Nov. 9, 1989, Ser. No. 433,773

Claims priority, application Japan, Nov. 16, 1987, 62-288779; Nov. 16, 1987, 62-288800

Int. Cl.[5] **H02M** *5/45, 5/458*

U.S. Cl. 363—37 **1 Claim**

1. A conversion apparatus having a bridge circuit using fast switching transistors for PWM and slow switching thyristors for a fundamental frequency and supplying to a load an output AC power having a frequency which is different from a frequency of an input AC power supplied thereto, said inverter comprising:

a rectifying circuit for rectifying a full wave of the input AC power and for providing a rectified output of pulsating power,

transistors for ON/OFF switching, said transistors each having a collector terminal, an emitter terminal and a base terminal for switching ON/OFF an electric current from said collector terminal to said emitter terminal,

thyristors having an ON/OFF switching speed slower than a switching speed of said transistors, said thyristors each having an anode terminal, a cathode terminal, and a gate terminal for switching ON/OFF an electric current from said anode terminal to said cathode terminal,

a plurality of bridge circuit arms each comprising one of said transistors and one of said thyristors, said collector terminal of said one of said transistors being connected to said cathode terminal of said one of said thyristors, said emitter terminal of said one of said transistors being connected to a negative side of said rectified output from said rectifying circuit, said anode terminal of said one of said thyristors being connected to a positive side of said rectified output from said rectifying circuit,

said plurality of bridge circuit arms being connected in parallel to each other to from the bridge circuit,

controlling means for supplying an electric signal to said gate terminal of said thyristors and for supplying an electric signal to said base terminal of said transistors so as to supply the AC output power to said load in accordance with a desired frequency, wherein said transistors repeatedly switch between ON and OFF states while said thyristors are in an ON state, and,

a zero cross signal generator for generating a zero cross signal at each half cycle of the input AC power supplied thereto,

said controlling means further comprising means for dividing a pulsating power during a period of time between said zero cross signal and a subsequent zero cross signal into plural power portions in accordance with the period of time, and means for changing a polarity of each of said plural power portions to said load in accordance with the desired frequency.

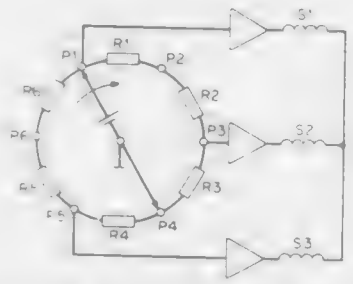
CIRCUITRY FOR GENERATING PHASE-SHIFTED SINUSOIDAL VOLTAGES



Güunter Gleim, Villingen-Schwenningen, Fed. Rep. of Germany, assignor to Deutsche Thomson-Brandt GmbH, VS-Villingen, Fed. Rep. of Germany

Filed Apr. 28, 1989, Ser. No. 345,020

Claims priority, application Fed. Rep. of Germany, Apr. 29, 1988, 3814562

Int. Cl.[5] **H02M** *7/42;* **H03B** *27/00*

U.S. Cl. 363—43 **6 Claims**

1. An arrangement for generating phase-shifted sinusoidal voltages, comprising: a plurality of resistors connected in series in a closed circular network for providing said sinusoidal voltages; connecting junctions between resistors, each pair of connecting junctions having the same resistors therebetween; a source of direct-current voltage with poles; means for cyclically advancing a direct-current voltage from said source through said network so that two parallel branches of said network with the same number of resistors are connected between said poles of said voltage source, said resistors having all the same resistance values; motor windings connected between said connecting junctions; said voltage source being cyclically connected in sequence to said connecting junctions so that phase-shifted sinusoidal voltage functions appear at said connecting junctions for operating a motor.

FORCED-COMMUTATED CURRENT-SOURCE CONVERTER AND AC MOTOR DRIVE USING THE SAME

Colin D. Schauder, Murrysville, Pa., assignor to Westinghouse Electric Corp., Pittsburgh, Pa.

Filed Jul. 28, 1989, Ser. No. 386,067

Int. Cl.[5] **H02M** *5/257*

U.S. Cl. 363—159 **11 Claims**

1. An AC/AC converter, connected between AC input lines and AC output lines, said input lines being connected to a power supply and said output lines being connected to a load,

and including a plurality of bilateral switches connected in groups, each group being associated in common with one of the respective AC output lines and the bilateral switches in each group being associated with the AC input lines, respectively, each bilateral switch when turned ON connecting one AC line associated therewith to one AC output line common with the group, comprising:

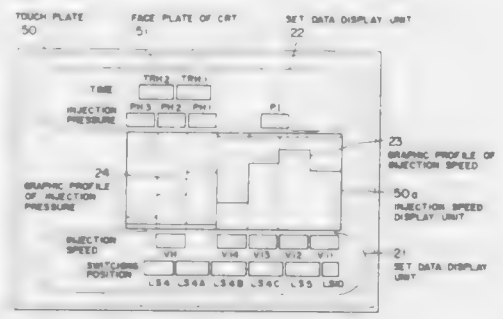
first means for successively selecting in sequence said groups by pairs, each pair of group for a predetermined duration to establish a single current path through the load, said current being for said duration in one direction through one selected group of said pair and in the opposite direction through the other selected group of said pair, said sequence and duration determining the frequency of alternation of said current in the load;

second means for successively gating for conduction in relation to the AC input line voltages said bilateral switches of a selected pair of groups for establishing a voltage between the output lines of said selected pair of groups;

means being associated with said gating means for adjusting the phase of gating relative to the voltage of said input lines for controlling said establishing voltage and for establishing therewith a desired magnitude of current on said output lines;

whereby a current source of controlled magnitude and frequency is applied to said output AC load lines.

5,005,116



APPARATUS FOR DISPLAYING A PROFILE AND CORRESPONDING DATA OF OPERATING CONDITIONS

Shigeru Fujita; Hideo Tanaka, and Susumu Harada, all of Numazu, Japan, assignors to Toshiba Kikai Kabushiki Kaisha, Tokyo, Japan

Filed Nov. 4, 1988, Ser. No. 267,254

Int. Cl.[5] **G06F** *15/46*

U.S. Cl. 364—188 **4 Claims**

1. An input display apparatus including:

a display member adapted to display a plurality of set items,

a transparent panel including key elements and being superposed on said display member,

a profile controlled graphic profile display picture displaying a profile and corresponding data representing an operating condition during one operation step of an injection molding machine in multi-stages in accordance with an operation position of a screw, and

means for changing a level of said profile display picture in accordance with a magnitude of a changed corresponding data value when an operating condition of said injection molding machine is changed, wherein an input key frame is displayed in a superposed relation on said displayed picture only when a set item is selected and operated for inputting a set value, said input key frame comprising a ten key and an input data display unit.

THREE-DIMENSIONAL COMPUTER GRAPHICS APPARATUS WITH TWO-PORT MEMORY FOR STORING DEPTH INFORMATION

Nobuyuki Ikumi, Tokyo, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Sep. 29, 1988, Ser. No. 251,164

Int. Cl.[5] **G06F** *3/153, 15/70;* **G09G** *1/16*

U.S. Cl. 364—200 **1 Claim**

1. A three-dimensional computer graphics apparatus in which depth information, brightness information, and memory addresses of a plurality of coordinate points on a screen of the apparatus are calculated by an integrated circuit, wherein the depth information and the brightness information are stored in respective depth information display and brightness information display buffers in accordance with the memory addresses, said integrated circuit comprising:

depth information storing means for storing the calculated depth information of the coordinate points;

register means for storing depth information for a first of said plurality of coordinate points;

selecting means for selecting the depth information in said register for said first of said plurality of coordinate points and for selecting the calculated depth information in said storing means serially for all but the first of said plurality of coordinate points;

delay means for delaying transfer of the calculated depth information of said plurality of coordinate points for a predetermined period of time;

comparing means, connected to said selecting means and to said delay means, for comparing the calculated depth information selected by said selecting means with the depth information delayed by said delay means, and for activating a write-in control signal on the basis of the comparison; and

said depth information display buffer including a two-port memory means for storing the depth information in accordance with the write-in control signal, said two-port memory means including a random port through which the calculated depth information stored in the depth information storing means is entered, and including a serial port through which the calculated depth information is supplied to said delay means.

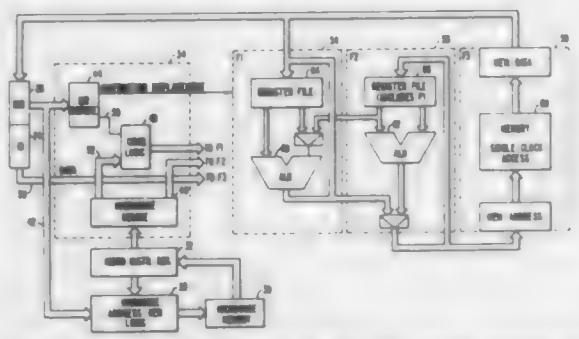
METHOD AND APPARATUS FOR MODIFYING MICRO-INSTRUCTIONS USING A MACRO-INSTRUCTION PIPELINE

Daniel E. Lenoski, Mountain View, Calif., assignor to Tandem Computers Incorporated, Cupertino, Calif.

Filed Apr. 10, 1987, Ser. No. 36,726

Int. Cl.[5] **G06F** *9/26, 9/302, 9/305, 9/38*



U.S. Cl. 364—200 **1 Claim**

1. An apparatus for executing instructions in a controller having at least first and second function units which each include an arithmetic logic unit, comprising:

a macro-instruction register;

a next macro-instruction register coupled to said macro-instruction register;

first logic means, coupled to one of said instruction registers, for generating control signals to concurrently execute, during a single clock cycle, first and second operations in said first and second function units, respectively, said first operation being used to carry out a first macro-instruction in said first macro-instruction register and said second operation being performed to carry out a next macro-instruction, and for using the result of said second operation during the execution of said next macro-instruction if said next macro-instruction has a number of operations less than a predetermined number and otherwise re-executing said second operation;

second logic means for decoding said next macro-instruction to determine whether less than said predetermined number of operations are required;

wherein one of said first and second operations is a memory access operation and said first logic means includes

a first logic stage for providing access to a memory,

a second logic stage having a first arithmetic logic unit for performing arithmetic operations on data provided from at least one of said first and next macro-instructions and said memory, and

a third logic stage having a second arithmetic logic unit for performing arithmetic operations on data provided from at least one of said first and next macro-instructions and said memory, at least two of said first, second and third logic stages being concurrently operated for a portion of said first and next macro-instructions.

USER INTERACTIVE CONTROL OF COMPUTER PROGRAMS AND CORRESPONDING VERSIONS OF INPUT/OUTPUT DATA FLOW

James E. Rumbaugh, Schenectady, N.Y., and Kenneth J. Daniel, North Ridgeville, Ohio, assignors to General Electric Company, Schenectady, N.Y.

Continuation of Ser. No. 20,846, Mar. 2, 1987, abandoned. This application Aug. 29, 1989, Ser. No. 401,461

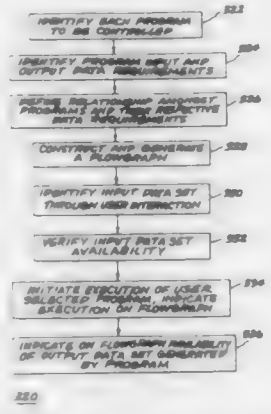
Int. Cl.[5] **G06F** *15/00, 3/14*

U.S. Cl. 364—200 **22 Claims**

1. A method of for tracking program execution and versions on a digital computer during a computeraided engineering design operation, said computer including means for interacting with a human user and memory means for storing programs and data, said method comprising the steps of:

a) identifying on the digital computer each program to be controlled;

b) identifying for each said program input and output data set requirements;



c) defining a relationship amongst said programs and their respective input and output data set requirements;

d) identifying an input data folder and an output data folder for respectively representing said input and output data set requirements for each said program;

e) identifying through user interaction each said user selected input data set;

f) verifying the presence of each said user selected input data set in each said input data folder of each said user selected program;

g) issuing computer commands effective to execute each said user selected program on each said user selected input data set, each said user selected program generating an output data set upon completing execution;

h) placing each said output data set generated by each said user selected program into said output data folder thereof; and

i) automatically identifying for each said output data set a respective input data set which was utilized to generate said output data set, thereby tracking design versions resulting from said computeraided engineering design operation.

COMPENSATING TIME DELAY IN FILTERING SIGNALS OF MULTI-DIMENSIONAL RECONVIGURABLE ARRAY PROCESSORS

Peter A. Ruetz, Redwood City, Calif., assignor to LSI Logic Corporation, Milpitas, Calif.

Filed Jul. 29, 1988, Ser. No. 226,026

Int. Cl.[5] **G06F** *3/05, 13/29, 13/372, 15/16*

U.S. Cl. 364—200 **10 Claims**

1. A reconfigurable signal processing module comprising:

a first module input port (X.1) for receiving a first digital signal stream ($A.1 = a_{1,1}\ a_{1,2} \ldots a_{1,n1}$) having sequential data components ($a_{1,1}\ a_{1,2} \ldots a_{1,n1}$) representing a first number $n.1 > 1$ of sample values;

a second module input port (X.2) for receiving a second digital signal stream ($A.2 = a_{2,1}\ a_{2,2} \ldots a_{2,n2}$) having sequential data components ($a_{2,1}\ a_{2,2} \ldots a_{2,n2}$) representing a second number $n.2 > 1$ of sample values;

a first chain of register means ($P_{1,1}\ P_{1,2} \ldots P_{1,n1}$), having a first end coupled to the first module input port (X.1), for receiving and storing the data components ($a_{1,1}\ a_{1,2} \cdot a_{1,n1}$) of the first digital signal stream (A.1) and for outputting predesignated stored ones of said data components ($a_{1,1}\ a_{1,2} \ldots a_{1,n1}$) in parallel onto a corresponding number of first-chain tap lines;

first multiplexer means, having first and second selectable multiplexer input ports and a first multiplexer output port, for outputting signals appearing on a selected one of the first and second multiplexer input ports, the first multiplexer input port being coupled to a preselected one or more of the first-chain tap lines and the second multiplexer input port being coupled to the second module input port (X.2);

a second chain of register means ($P_{2,1}\ P_{2,2} \ldots P_{2,n2}$), having a first end coupled to the first multiplexer output port, for receiving and storing, during a first mode of the first multiplexer means, each of the data components ($a_{2,1}\ a_{2,2} \ldots a_{2,n2}$) of the second digital signal stream (A.2) and for outputting predesignated ones of said data components ($a_{2,1}\ a_{2,2} \ldots a_{2,n2}$) in parallel onto a corresponding number of second-chain tap lines, the second chain of register means being further for receiving and storing, during a second mode of the first multiplexer means, a plurality of first-chain-stored data components transmitted from the preselected one or more first-chain tap lines and for outputting predesignated ones of said first-chain-stored data components in parallel onto a corresponding number of second-chain tap lines, the first mode of the first multiplexer means being one in which the first multiplexer input port is coupled to the first multiplexer output port, the second mode of the first multiplexer means being one in which the second multiplexer input port is coupled to the first multiplexer output port; and

function generating means, having function input lines coupled to predetermined ones of the first-chain and second-chain tap lines, for receiving as input parameter signals of a predetermined signal processing function, preselected ones of the shifted data components ($a_{1,1}, a_{1,2}, \ldots, a_{1,n1}$ and $a_{2,1}, a_{2,2}, \ldots a_{2,n2}$) and for outputting on a function output bus of the function generating means, a digital function signal which is produced according to said signal processing function.

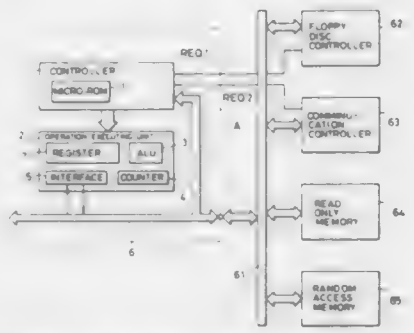
INTEGRATED CPU AND DMA WITH SHARED EXECUTING UNIT



Kunihiko Nakada, Kodaira, and Yasushi Akao, Kokubunji, both of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Continuation of Ser. No. 836,421, Mar. 5, 1986, abandoned. This application Mar. 20, 1989, Ser. No. 326,472

Claims priority, application Japan, Mar. 25, 1985, 60-58350

Int. Cl.[5] **G06F** *9/22, 15/78, 12/00*

U.S. Cl. 364—200 **29 Claims**

1. A monolithic integrated single device data processor controller, comprising:

a CPU;

A DMA controller;

memory means for storing in a plurality of addressable memory locations, a plurality of CPU and DMA instructions for individually, respectively, controlling the operation of the CPU and the DMA controller;

holding means for simultaneously holding DMA and CPU instruction addresses of selected ones of said memory locations;

a single operation execution unit for executing at different times both said CPU and DMA instructions stored in said selected ones of said memory locations;

means for addressing said memory means in a variable sequence with said CPU and DMA instruction addresses held by said holding means for transferring said CPU and DMA instructions from said selected ones of said memory locations addressed by said CPU and DMA instruction addresses to said operation execution unit;

means for transferring said DMA instruction address from said holding means to said means for addressing while simultaneously maintaining said CPU instruction address held within said holding means independently of the order of arrival of said DMA instruction address and said CPU instruction address in said means for holding; and

means for transferring said CPU instruction address from said holding means to said means for addressing while simultaneously maintaining said DMA instruction address held within said holding means independently of the time of arrival of said DMA and CPU instruction addresses in said holding means.

ARRANGEMENT WITH COOPERATING MANAGEMENT SERVER NODE AND NETWORK SERVICE NODE

David Griffin, Maynard; Jonathan Campbell, Acton; Michael Reilly, Sterling, and Richard Rosenbaum, Pepperell, all of Mass., assignors to Digital Equipment Corporation, Maynard, Mass.

Filed Sep. 8, 1987, Ser. No. 94,169

Int. Cl.[5] **G06F** *9/44, 13/38*

U.S. Cl. 364—200 **11 Claims**

1. A network including a client node and a plurality of server nodes interconnected by a communications link, at least one of said server nodes comprising a management server node and at least another one of said server nodes comprising a network service node for performing a network service with respect to said client node,

A. said management server node including:

i. a network service initiator arranged to transmit a network service initiation message for initiating a network service with respect to said client node;

ii. a network status maintainer arranged to receive a status message from said communications link and to maintain the status of said network service in response thereto; and

iii. a management server controller connected to said network service initiator and said network status maintainer and arranged to control the network service initiator to initiate said network service in response to the received status messages;

B. said network service node including:

i. a network service operator arranged to perform said network service with respect to said client node;

ii. a network service enabler connected to said communications link and said network service operator and arranged to receive the network service initiation message from said communications link and to enable said network service operator to operate in response to the receipt of said network service initiation message; and

iii. a status message generator connected to said communications link and to said network service operator and arranged to generate said status message identifying the status of an operation performed by said network service operator and to transmit said status message over said communications link.

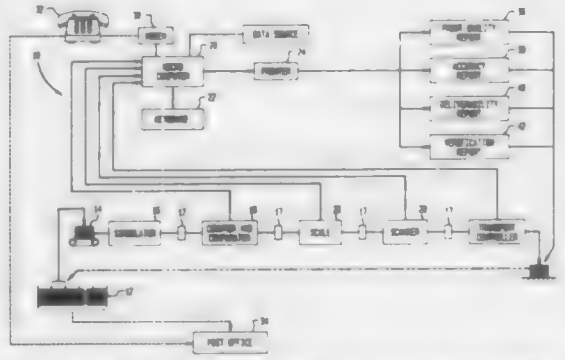
METHOD AND APPARATUS FOR CATEGORIZING AND CERTIFYING MAIL

Richard A. Connell, South Salem; Raymond Keating, Purdys, both of N.Y.; Ronald P. Sansone, Weston, and Karl H. Schumacher, Westport, both of Conn., assignors to Pitney Bowes Inc., Stamford, Conn.

Filed Aug. 23, 1988, Ser. No. 234,977

Int. Cl.[5] G06F *15/21*

U.S. Cl. 364—401 **34 Claims**



9. Apparatus for certifying and categorizing a batch of mail, comprising:

means for obtaining a random statistical sample of mail pieces from a batch of mail pieces,

means for storing post office regulations with regard to acceptable mail sizes, weight and address readability,

means for individually transporting the sample mail pieces,

means for identifying each sample mail piece,

means for scanning the sample mail pieces to determine the size and readability of the address line on each sample mail piece,

means for comparing the obtained weight, size and readability of the sample mail pieces with the stored regulations, and

means for determining the number of sample mail pieces that do not conform with the stored regulations.

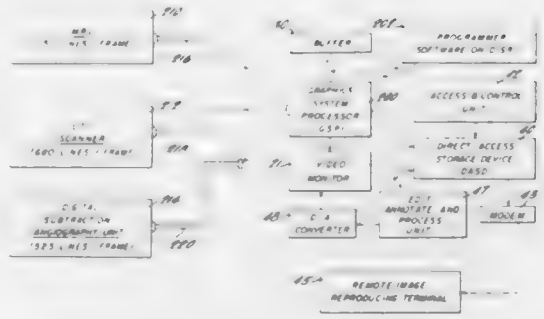
SYSTEM AND METHOD FOR REMOTE PRESENTATION OF DIAGNOSTIC IMAGE INFORMATION



Marvin E. Haskin, Philadelphia, Pa., assignor to Prevail, Inc., West Chester, Pa.

Continuation of Ser. No. 84,333, Aug. 11, 1987, Pat. No. 4,764,870, and a continuation-in-part of Ser. No. 36,264, Apr. 9, 1987, abandoned. This application May 31, 1988, Ser. No. 200,543

The portion of the term of this patent subsequent to May 24, 2005, has been disclaimed.

Int. Cl.[5] G06F *15/42*

U.S. Cl. 364—413.13 **3 Claims**

1. In a system for providing viewing of diagnostic images of an object at a location remote from the object, comprising:

irradiating means for applying diagnostic radiation fields to said object at a diagnostic site;

radiation sensing means positioned adjacent said site and responsive to changes in said fields produced by said object for producing first object-related analog video signals embodying diagnostic information ■ to said object, in a first format;

signal-supplying means provided with said analog video signals of said first format;

diagnostic-image forming means ■jacent said site, supplied with said analog video signals of said first format by said signal-supplying means, said diagnostic image-forming means being responsive thereto to form a visually-perceptible visual image of said object suitable for diagnostic review; and

a remote display terminal adapted to receive analog video signals in a standard television format differing from said first format and to produce therefrom a corresponding image;

the improvement comprising:

signal pick-off means at said site for directly capturing said first analog video signals of said first format from said signal supply means prior to its application to said diagnostic image-forming means, and for converting them to said standard television format; and

transmitter means for transmitting said converted signals to said remote display terminal for display of said image thereon.

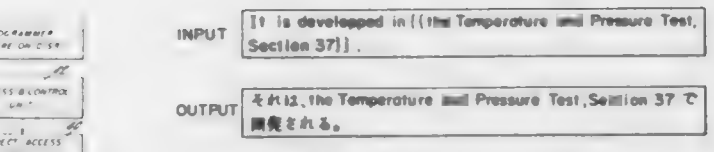
SYSTEM INCLUDING MEANS TO TRANSLATE ONLY SELECTED PORTIONS OF AN INPUT SENTENCE AND MEANS TO TRANSLATE SELECTED PORTIONS ACCORDING TO DISTINCT RULES



Shuzo Kugimiya; Yoji Fukumochi; Ichiko Nakamura, all of Nara; Tokuyuki Hirai, Yamatokoriyama, and Hitoshi Suzuki, Nara, all of Japan, assignors to Sharp Kabushiki Kaisha, Osaka, Japan

Filed Oct. 25, 1988, Ser. No. 262,313

Claims priority, application Japan, Oct. 26, 1987, 62-271287; Oct. 28, 1987, 62-272638

Int. Cl.[5] G06F *15/38*

U.S. Cl. 364—419 **2 Claims**

1. A machine translation apparatus for inputting source language of words or sentences to be translated to a target language comprising:

a morpheme analyzer having a dictionary for analyzing a source sentence into morphemes and for obtaining part of speech and other information using said dictionary;

a syntax analyzer having grammatical rules for analyzing the structure of the morphemes identified by said morpheme analyzer using said dictionary and grammatical rules;

a converter for converting the structure obtained by said syntax analyzer to a structure of the target language;

a translated sentence generator for generating a translated sentence according to the structure of the target language obtained by said converter;

marker entry means for entering a no-conversion start marker and a no-conversion end marker in said input sentence;

marker identification means for identifying whether or not data read is either one of said no-conversion start marker and said no-conversion end marker;

morpheme skip means for skipping, when said marker identification means identifies the data read to be a no-conversion start marker, the dictionary referencing for all morphemes between the no-conversion start and end markers;

morpheme storing means for storing said morphemes between said no-conversion start and end markers, and adding data identifying said morphemes as a noun compound during dictionary look-up processing of said morpheme analyzer;

generation skip means for skipping translation generation for all morphemes between the no-conversion start and end markers, when said marker identification means identifies the read data to be a no-conversion start marker;

translation generation storing means for storing said morphemes in the same form as they appear in the source language during a translation generation processing in said translated sentence generator; and

means for setting a flag as the noun compound in a buffer.

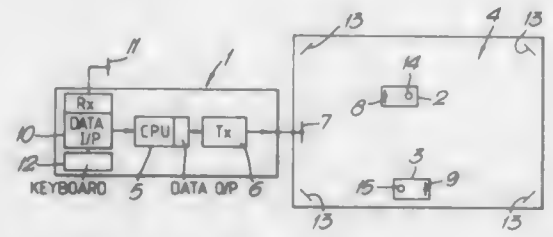
AUTOMATED VEHICLE CONTROL



Michael P. Robins, Rugby, and Malcolm T. Roberts, Oadby, both of England, assignors to The General Electric Company, p.l.c., England

Filed May 2, 1989, Ser. No. 346,129

Claims priority, application United Kingdom, May 13, 1988, 8811442

Int. Cl.[5] **G06F** *15/50*

U.S. Cl. 364—424.02 **5 Claims**

1. A method of operating a vehicle guidance and control system including

(a) a vehicle having motive power and steering, a navigation system, and means for transmitting a directional laser beam which is scanned in a predetermined sense;

(b) a plurality of reflectors spaced apart from one another, each reflector incorporating an optical code which identifies that reflector, and each reflector being operative to reflect light from said laser beam when said beam impinges thereon; and

(c) means for utilizing said light reflected back to the vehicle by at least two said reflectors for controlling the movement and heading of the vehicle,

said method comprising the steps of:

(i) notionally dividing an area in which the vehicle is to freely operate into a plurality of equal subareas of predetermined dimension, each sub-area being provided with a plurality of said reflectors;

(ii) positioning the vehicle at an initial location from which its laser beam can scan a plurality of initialization reflectors, each incorporating a unique optical code, the initialization reflectors being located at positions selected for initialization of said navigation system;

(iii) feeding to said navigation system data defining the positions of said initialization reflectors; and

(iv) causing the navigation system to determine the position of the vehicle with respect to said initialization reflectors,

whereby, during subsequent movement of the vehicle around the area, the navigation system is operative, by measurement of distances and directions traveled by the vehicle from said initial location, to determine in which sub-area the vehicle is located at any instant.

DIAGNOSIS SYSTEM FOR A MOTOR VEHICLE

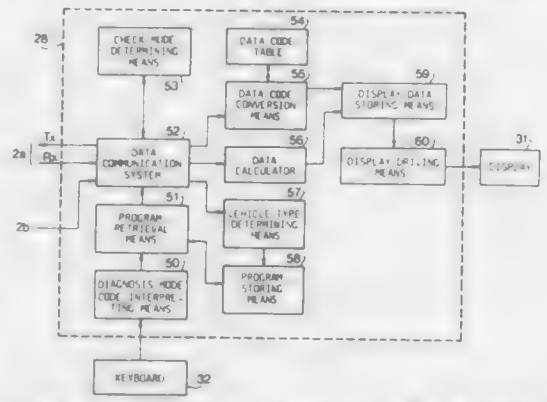
Kunihiro Abe, Higashi-Murayama; Masanori Sakamoto, Nishitama, and Tomoya Kobayashi, Fuchi, all of Japan, assignors to Fuji Jukogyo Kabushiki Kaisha, Tokyo, Japan

Filed Feb. 21, 1989, Ser. No. 314,647

Claims priority, application Japan, Feb. 29, 1988, 63-046331

Int. Cl.[5] **G01M** *15/00;* **F02D** *41/26;* **F02P** *17/00*

U.S. Cl. 364—424.03 **3 Claims**



1. A diagnosis system for diagnosing an electronic control system for a vehicle, the electronic control system comprising sensing means for detecting operation conditions of the vehicle, and a first control unit responsive to the operation conditions for providing control signals for controlling the vehicle, the diagnosis system comprising a diagnosis device with a keyboard for inputting a code, a second control unit responsive to the code for diagnosing the electronic control system, display means for displaying diagnosis data diagnosed by the second control unit, and connecting means electrically connecting the diagnosis device to the electronic control system,

said first control unit comprising a programmed control system comprising self-diagnosis means for checking trouble in the electronic control system and for storing the trouble as trouble data and designation means for designating one of a plurality of test modes for the trouble data to said self-diagnosis means;

said second control unit comprising a programmed control system comprising:

interpreting means for interpreting the code inputted from the keyboard as a first specific code for checking the trouble data and for producing a first signal;

communication means for applying a first command signal

to the self-diagnosis means in response to the first signal for feeding the trouble data from the self-diagnosis means under a test mode designated by the designation means;

means for processing the trouble data fed from the self-diagnosis means by the communication means to display the trouble data on the display means;

said interpreting means for interpreting the code inputted from the keyboard as a second specific code for changing the test mode and for producing a second signal;

said communication means being responsive to the second signal for applying a second command signal to the designation means; and

said designation means being responsive to the second command signal for changing the test mode of the self-diagnosis means.

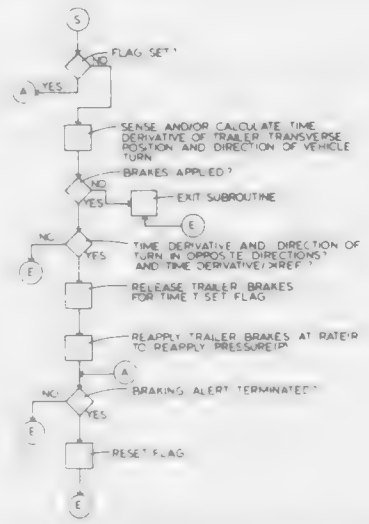
TRAILER SWING CONTROL

Michael T. Breen, Garden City, and Jeffrey H. Skorupski, Brighton, both of Mich., assignors to Eaton Corporation, Cleveland, Ohio

Filed Dec. 20, 1989, Ser. No. 454,095

Int. Cl.[5] **G06F** *7/70, 15/48;* **B06T** *13/00, 8/74*



U.S. Cl. 364—426.01 **12 Claims**

1. A trailer anti-swing brake control method for articulated vehicles (**10**) of the type comprising a tractor (**12**) and a trailer (**14**) connected at an articulating connection (**34/176**) defining a pivot axis (**176**) about which the trailer is pivotable relative to the tractor, a tractor brake system, a trailer brake system, a driver operated brake effort demand device (**76/78**) for providing a demand input signal indicative of the magnitude of operators demand for vehicle braking, trailer brake control means (**174**) responsive in at least one operating mode for causing the trailer brake system to be applied with an operating force generally proportional to the magnitude of said demand input signal, said control method characterized by:

sensing (**260**) and/or calculating a value indicative of trailer transverse movement and of a time derivative thereof and providing at least one input signal indicative thereof;

receiving and processing said input signals (**70**) according to predetermined logic rules to detect the existence of conditions indicative of at least one of incipient and initial trailer brake induced trailer swing events and generating command output signals in response to detection of the existence of said conditions; and

responding (**174**) by said control means to said command output signals by causing the trailer brake system brakes to be applied with a substantially reduced force (**210–212**) regardless of the magnitude of said demand input signal

for a period of time (T) and then causing said trailer brake system brakes to be reapplied (**214–216**) at a selected rate (R) to a selected maximum reapplication force (P), said selected maximum reapplication force having a magnitude considerably smaller than the maximum trailer brake system brake application force (**208–210**), said selected maximum reapplication force (P) being a function of, and varying inversely with, the magnitude of the absolute value of said time derivative.

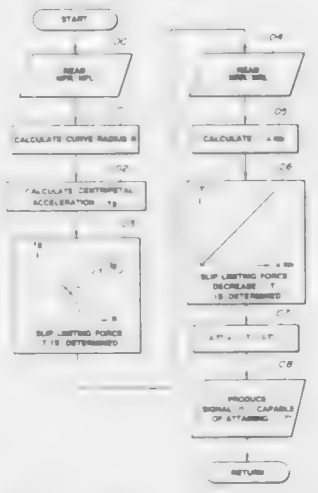
SLIP CONTROL DEVICE FOR DIFFERENTIAL



Takashi Imaseki, and Yuji Kobari, both of Zushi, Japan, assignors to Nissan Motor Co., Ltd., Yokahama, Japan

Filed Sep. 21, 1988, Ser. No. 247,466

Claims priority, application Japan, Sep. 29, 1987, 62-245685

Int. Cl.[5] **B60T** *8/32*

U.S. Cl. 364—426.02 **3 Claims**

1. A method of controlling a slip of a differential for a wheeled vehicle, the differential being of the type incorporating a clutch variable in engagement for producing a slip limiting force for limiting a differential action even during cornering of the vehicle, the method comprising:

detecting a driving wheel slip during cornering of the vehicle;

reducing a force urging the clutch for engagement and thereby reducing the slip limiting force in proportion to an increase of the driving wheel slip, wherein said detecting comprises the steps of:

detecting rotation speeds of a set of front dirigible wheels;

calculating a curve radius of the cornering vehicle by using the rotation speeds of the front dirigible wheels;

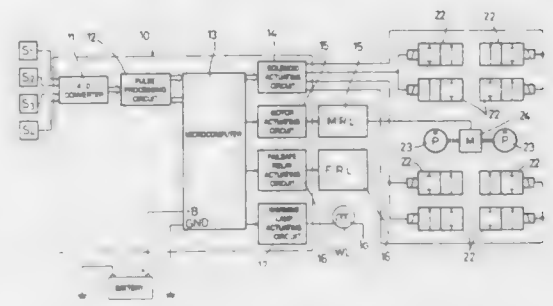
calculating a centripetal acceleration of the cornering vehicle by using the rotation speeds of the front dirigible wheels;

determining a basic slip limiting force based on the curve radius and the centripetal acceleration of the cornering vehicle and on a predetermined map;

detecting rotation speeds of a set of rear driving wheels; and

calculating the driving wheel slip by using an average front wheel speed and an average rear wheel speed.

5,005,132



ANTILOCK BRAKE CONTROL DEVICE

Masato Yoshino, Itami, Japan, assignor to Sumitomo Electric Industries, Ltd., Osaka, Japan

Filed Nov. 20, 1989, Ser. No. 438,006

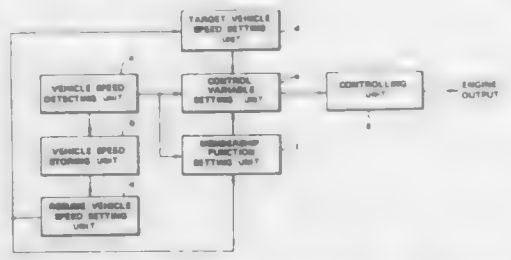
Int. Cl.[5] **B60T** *8/58*

U.S. Cl. 364—426.02 **4 Claims**

1. An antilock brake control device for use in a full-time four-wheel drive motor vehicle, comprising: wheel rotation sensors for detecting the wheel rotations of the wheels of the vehicle; an electronic control circuit for calculating the wheel speeds, the estimated vehicle speed and the decelerations and the slip rates of the wheels from the wheel rotation signals detected and for producing fluid pressure control signals on the basis of the results of said calculation, and a fluid pressure control unit for controlling the braking forces on the wheels independently of one another in response to said fluid pressure control signals, said electronic control circuit having means for calculating the coefficient of friction μ between the wheels and the road surface based on the calculated vehicle deceleration and the sum of slip rates SR of both rear wheels based on a predetermined formula using the speeds of both rear wheels and a reference vehicle speed as the parameters to control all the wheels independently of one another if said coefficient of friction μ is higher than a first predetermined value μ_0 and said sum of slip rates SR is smaller than a second predetermined value THR and to control the front wheels independently of each other and control the rear wheels based on the wheel rotation signal supplied from the wheel rotation sensor for one of the rear wheels rotating at a lower speed than the other, if said sum of slip rates SR is larger than said second predetermined value THR.

5,005,133

SYSTEM AND METHOD FOR AUTOMATICALLY CONTROLLING A VEHICLE SPEED TO A DESIRED CRUISING SPEED



Hiroshi Takahashi, Tokyo, Japan, assignor to Nissan Motor Company, Limited, Yokohama, Japan

Filed Jan. 12, 1988, Ser. No. 143,092

Claims priority, application Japan, Jan. 12, 1987, 62-3299; Jan. 14, 1987, 62-5000

Int. Cl.[5] **B60K** *31/00*

U.S. Cl. 364—426.04 **34 Claims**

2. A system for automatically controlling a vehicle speed to a target cruising speed, having an automatic cruising speed control mode comprising:

(a) first means for detecting vehicle speed;

(b) second means for setting said target cruising speed on the basis of a vehicle driver'intention;

(c) third means for controlling an engine output using a controlled variable so that said vehicle speed detected by said first means coincides with said target cruising speed;

(d) fourth means for deriving a gear range operation state of a vehicular transmission connected to the engine;

(e) fifth means for selecting and setting a membership function from among a plurality of different membership functions in fuzzy estimation on the basis of said derived gear range operation state; and

(f) sixth means for carrying out said fuzzy estimation using membership function set by said fifth means to set said controlled variable of said third means, with said target cruising speed set by said second means and said vehicle speed detected by said first means as input information thereof.

5,005,134

NUMERICAL CONTROL APPARATUS WITH SIMULTANEOUS FUNCTION EXECUTION

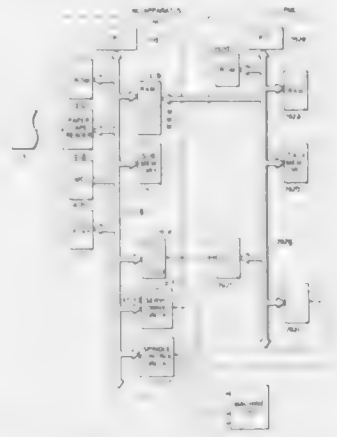
Yoshihiro Nakashima, Machida, and Yasunori Kinoshita, Kunitachi, both of Japan, assignors to Fanuc Ltd., Minamitsuru, Japan

PCT No. PCT/JP88/00409, § 371 Date Nov. 9, 1988, § 102(e) Date Nov. 9, 1988, PCT Pub. No. WO88/08559, PCT Pub. Date Nov. 3, 1988

PCT Filed Apr. 26, 1988, Ser. No. 274,149

Claims priority, application Japan, Apr. 30, 1987, 62-107257

Int. Cl.[5] **G05B** *19/403*



U.S. Cl. 364—474.01 **4 Claims**

1. A numerical control apparatus for sequentially controlling an NC machine tool in accordance with a stored-program method by using a sequence program and a program that has been read in, comprising:

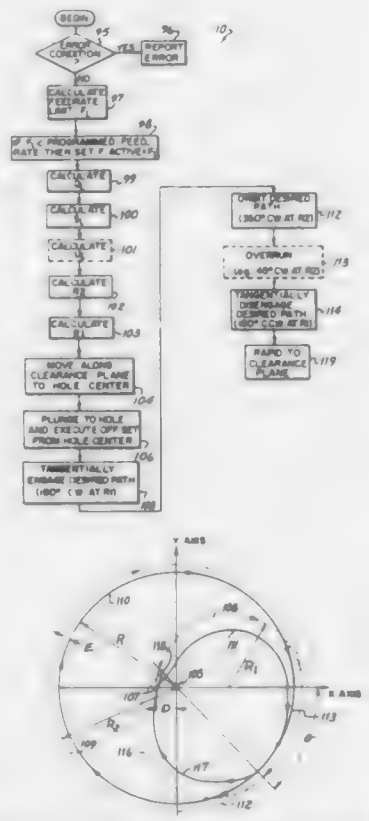
memory means for simultaneously storing a plurality of auxiliary function codes which command the NC machine tool to perform specific auxiliary functions, from the program that has been read in;

execution means for simultaneously executing function instructions identifying auxiliary function numbers corresponding to each of the auxiliary function codes stored in said memory means to carry out the auxiliary functions; and

updating means for updating all of the auxiliary function codes of said memory means in response to completion of

the auxiliary functions, which correspond to each of the auxiliary function codes, in the NC machine tool.

5,005,135



DYNAMIC CORRECTION OF SERVO FOLLOWING ERRORS IN A COMPUTER-NUMERICALLY CONTROLLED SYSTEM AND FIXED CYCLE UTILIZING SAME

Alfred H. Morser; Walter M. Gildemeister, both of Cincinnati, and David M. Farmer, Loveland, all of Ohio, assignors to Cincinnati Milacron, Inc., Cincinnati, Ohio

Filed Mar. 22, 1989, Ser. No. 327,324

Int. Cl.[5] **G05B** *19/24*

U.S. Cl. 364—474.35 **57 Claims**

1. A method of correcting path radius errors in a computer numerically controlled system of the type adapted to receive

program instructions defining a desired path of relative movement to be effected between a workpiece and a tool by motion of machine members along at least two orthogonal linear axes at a feedrate, (F) under control of a servo which receives position commands based on said instructions, said servo having at least one of, a position loop gain, (K_v) and a velocity loop integral time, (T_i), said path including a curved portion to be executed by effecting coordinated linear movement along said axes, said method comprising the steps of:

(a) receiving an instruction defining a desired radius, (R) of said curved portion;

(b) generating corrected radius data, (R2) to compensate for servo following errors appearing as path radius errors along said curved portion of said path such that the difference between the desired radius, (R) and said corrected radius data, (R2) compensates for at least a portion of the path radius error that would otherwise be induced in the movement by the servo, and

(c) generating the position commands in response to said corrected radius data whereby the actual relative movement between the workpiece and the tool more closely follows said curved portion of said desired path.

5,005,136

SILICON-COMPILER METHOD AND ARRANGEMENT

Cornelis H. Van Berkel, Heeze; Ronald W. J. J. Saeijs, Eindhoven, and Cornelis Niessen, Geldrop, all of Netherlands, assignors to U. S. Philips Corporation, New York, N.Y.

Filed Feb. 16, 1988, Ser. No. 156,392

Int. Cl.[5] **G06F** *15/60*

U.S. Cl. 364—490 **13 Claims**

1. A silicon-compiler method for executing a silicon-compiler program comprising the following sequence of steps:

a. a source-analyzer step having a sequence of substeps for:

a1. receiving a source text expressing an algorithm in a first imperative concurrent computer language having concepts including an explicit parallelism construct, an explicit sequentialism construct and an explicit communication construct, said communication construct stipulating a communication action that is represented as a time interval and is either active or passive for execution on the active or passive side of a program channel, respectively;

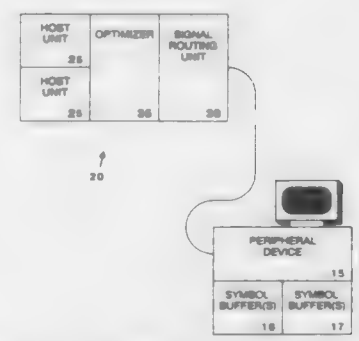
a2. converting said received source text under execution of lexical analysis, syntactic analysis and semantic analyis into a structure-tree (as an abstract) representation of the source text and defined according to said concepts;

b. an abstract-circuit synthesizer step for converting said structure-tree representation into an abstract-circuit representation that is a network of basic components interconnected by abstract channels, each such basic component representing an elementary program execution and each abstract channel representing an associated program channel featuring in exacty two elementary programs interconnected thereby;

c. converting said abstract-circuit representation into a concrete-circuit representation as constrained by timing-organization requirements, circuitry-type requirements and technologic-realization requirements, while one-to-one translating each abstract channel into a wire set of the concrete circuit, and each basic component of the abstract circuit into an elementary electronic circuit, linked by at least one wire set to another electronic circuit;

d. converting said concrete-circuit representation into a very large-scale integrated-circuit lay-out while implementing at least one low-level task of providing an elementary circuit element not specified by said concrete-circuit representation but mandated by an electrical property of an in-layout passive part.

5,005,137



METHOD FOR OPTIMIZING DATA STREAMS CONTAINING TWO-BYTE CHARACTERS

Theodore R. Ernst, Sugar Land, Tex., assignor to BMC Software, Inc., Sugar Land, Tex.

Filed Jan. 9, 1989, Ser. No. 294,159

Int. Cl.[5] **G06F** *3/14, 13/00*

U.S. Cl. 364—514 **12 Claims**

5. A method of processing a data stream, containing an instruction sequence identifying a sequence of at least one character as a double byte character set (DBCS) character sequence, in a system for optimizing a formatted data stream generated at a host unit for processing at a peripheral unit to modify information contents of an addressable buffer of said peripheral unit, said method comprising the steps of:

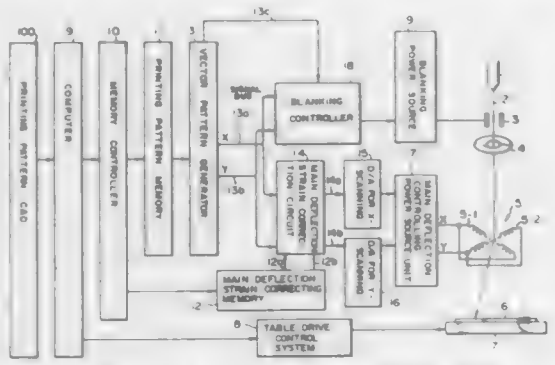
(a) receiving the data stream from the host unit;

(b) generating an updated-state map of the peripheral unit buffer, said map reflecting the information contents of said buffer that are expected to exist after processing of the data stream at the peripheral unit;

(c) said updated-state map including at least one extension plane;

(d) setting a DBCS-character flag in a said extension plane for each character in said DBCS character sequence;

(e) altering the value of an odd-numbered flag in a said extension plane for each character in said DBCS character sequence; and



(f) performing a map comparison optimization method, utilizing the updated-state map as an operand, to generate a substitute data stream.

5,005,138

ELECTRON BEAM DIRECT PRINTING APPARATUS

Hiroaki Tobuse; Hidenobu Murakami, and Masashi Kamio, all of Amagasaki, Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Apr. 20, 1990, Ser. No. 511,788
Claims priority, application Japan, Apr. 20, 1989, 1-102212
Int. Cl.[5] G01N *21/00*
U.S. Cl. 364—519 **14 Claims**

1. An electron beam direct printing apparatus comprising:

direct printing pattern information generating means for setting an electron beam printing pattern on a circuit printing base and outputting said printing pattern as direct printing pattern information;

deflection scanning data generating means for generating data necessary for main deflection scanning by an electron beam on said circuit printing beam in a direction of the X-axis and in a direction of the Y-axis which is carried out on a basis of said printing pattern information;

electron beam deflection scanning means for executing deflection scanning by said electron beam on said circuit printing base on a basis of said data outputted from said deflection scanning data generating means;

blanking means provided in a route of radiation of said electron beam for cutting off said electron beam when a control signal is received;

a bit map memory for storing a dot graphic which represents the image of said printing pattern irradiated with said electron beam at the time of said deflection scanning by said electron beam on said circuit printing base by dots which correspond to the points which are to be irradiated with said electron beam; and

radiation control means including reading means for receiving said data for deflection scanning by said electron beam from said deflection scanning data generating means and reading the dot information at the position in the bit map memory which corresponds to the point which is to be irradiated with said electron beam in accordance with said data, writing means for judging whether or not the read information includes a dot and writing a dot at the position in said memory if there is no dot, and blanking control means for permitting radiation if there is no dot, while supplying a control signal to a blanking means so as to cut off said beam and prevent the irradiation of said base if there is a dot.

5,005,139

PIECE-WISE PRINT IMAGE ENHANCEMENT FOR DOT MATRIX PRINTERS

Charles C. Tung, Boise, Id., assignor to Hewlett-Packard Company, Palo Alto, Calif.

Continuation of Ser. No. 112,814, Aug. 16, 1988, Pat. No. 4,847,641. This application Jun. 30, 1989, Ser. No. 374,494
Int. Cl.[5] G06K *15/00*
U.S. Cl. 364—519 **2 Claims**

1. A method for enhancing a displayed image derived from scanned input data which comprises the steps of;

a. storing bits of digital data representative respectively of a plurality of lines having known characteristic curvatures such as smooth edge curves, sharp tips and notches;

b. reading incoming digital data which may or may not be representative of said known characteristic curvatures;

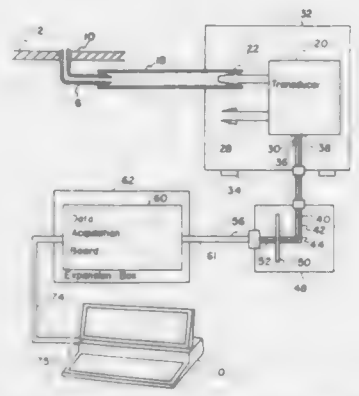
c. comparing read digital data with said stored digital data;

d. generating an error correction signal only where there is a correlation between said read data and said stored data;

e. reading an image boundary to establish an initial pattern of cells to be printed;

f. responsive to said error signal generation, converting only digital information which is representative of said known characteristic curvatures to said image boundary,

g. controlling the orientation and ink proportionality of each cell by generating subcells; and



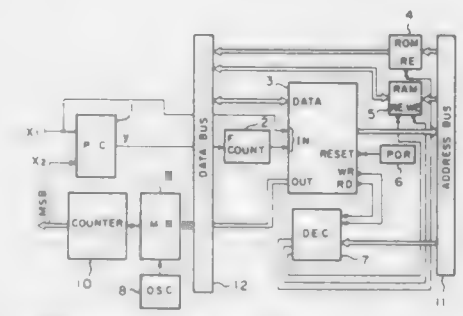
h. rearranging said subcells in a pattern to more closely follow the shape or contour of said image boundary.

5,005,140

METHOD AND APPARATUS FOR MONITORING HYDRODYNAMIC THERAPY AND EXERCISE

Rod Havriluk, Tallahassee, Fla., assignor to Swimming Technology Research, Inc., Tallahassee, Fla.

Filed Jan. 23, 1990, Ser. No. 468,618
Int. Cl.[5] A61H *1/02;* **G06F** *15/00*
U.S. Cl. 364—550 **4 Claims**



1. A system for monitoring and measuring underwater physical therapy, comprising: an aquatic exercise assembly having a first surface and a second surface; a first remote having a first surface and a second surface; a first remote pressure port defined by said first surface; a second remote pressure port defined by said second surface, said second surface being substantially opposite said first surface; a pressure/electrical signal transducer; a pressure conduit connecting each of said first and second remote pressure ports to said pressure transducer, said pressure transducer for sensing the pressure at each of said first and second pressure port via a corresponding said pressure conduit and forming a differential signal representative of the difference between pressure at said first remote pressure port and said second remote pressure port; calibration means for receiving electrical signals from said transducer means and for outputting a zero pressure signal representing a background pressure level; data acquisition means for receiving said differential signal and said zero pressure signal and for outputting a digital signal representative of said differential signal, compared to said zero calibration signal thereby allowing movement of the aquatic exercise assembly to be monitored for monitoring hydrodynamic therapy and exercise.

5,005,141

PHASE-LOCKED LOOP CIRCUIT

Kazunori Sanada, and Jyoji Kawai, both of Hyogo, Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Apr. 7, 1989, Ser. No. 334,471
Claims priority, application Japan, Apr. 25, 1988, 63-102012
Int. Cl.[5] G06F *15/20;* **H03K** *5/13*
U.S. Cl. 364—550 **12 Claims**

1. A phase-locked loop circuit, comprising:

phase comparator means for detecting a phase difference between an input signal and a feedback signal and for outputting the resultant phase difference data twice per each cycle of said input signal;

calculator means for executing a phase control calculation based on the output of said phase comparator means; and

a variable-frequency oscillator circuit for producing an output signal of a frequency conforming to the result of calculation of said calculator means.

5,005,142

SMART SENSOR SYSTEM FOR DIAGNOSTIC MONITORING

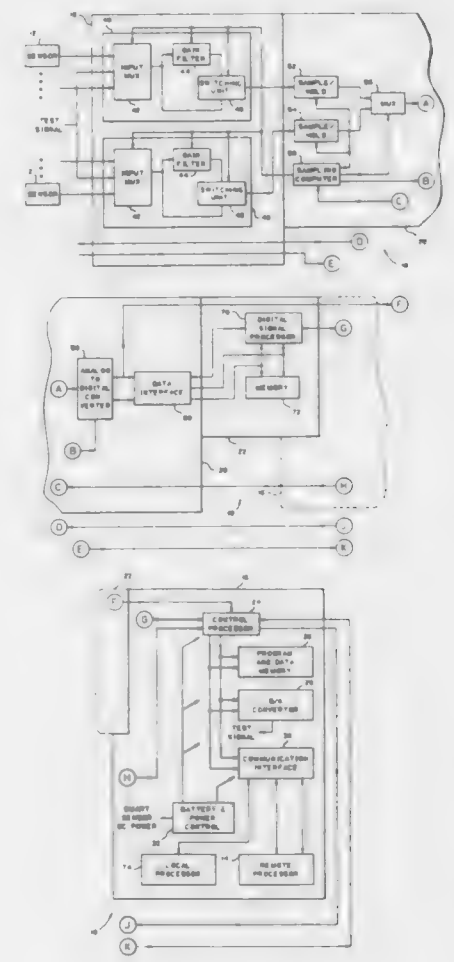
John B. Lipchak, Forest Hills; Tod A. Oblak, Belle Vernon; Fred H. Bednar, Millvale; William Ciaramitaro, Murrysville; Francis R. Hughes, Verona; John R. Smith, Monroeville, and Gregory A. Gisoni, Murrysville, all of Pa., assignors to Westinghouse Electric Corp., Pittsburgh, Pa.

Continuation of Ser. No. 10,504, Jan. 30, 1987, abandoned. This application Jul. 24, 1989, Ser. No. 386,008
Int. Cl.[5] G21C *17/00;* **G05B** *15/02*
U.S. Cl. 364—550 **18 Claims**

1. A smart sensor system, comprising:

one or more sensors for a monitored component;

a remote processor for processing and analyzing sensor signals from said one or more sensors;



a communication link connected to said remote processor; and

a component monitor connected to said communication link, located physically in association with the monitored component and located physically remotely with respect to said remote processor, said monitor including at least

conditioning and multiplexing means for conditioning and selecting one of the sensor signals, wherein said conditioning and multiplexing means includes at least one sensor preprocessing module, each sensor preprocessing module including at least

a channel selection latch for storing a channel selection signal;

an input multiplexer, operatively connected to said channel selection latch, for receiving the sensor signals from said one or more sensors and for selecting one of the sensor signals as a selected sensor signal based on the channel selection signal;

a gain control latch for storing a gain control value;

a programmable gain control amplifier, operatively connected to said input multiplexer and said gain control latch, for amplifying the selected sensor signal based on the gain control value and for outputting an amplified signal;

a frequency selection latch for storing a frequency selection value;

a switching unit, operatively connected to said fre-

quency selection latch and said programmable gain control amplifier, for receiving the amplified signal and outputting a differential signal;

clock signal generating means for outputting a clock signal in dependence upon the frequency selection value; and

a programmable filter, operatively connected to said switching unit, for lowpass filtering the differential signal based on the clock signal and for outputting a preprocessed sensor signal;

conversion means for converting the sensor signals into digital samples;

signal analysis means for processing and analyzing the digital samples; and

control means for designating selection, conditioning and acquisition of sensor signals, designating a type of analysis performed on the digital samples, performing sensor signal analysis to determine and indicate pending sensor, component and component monitor failure and communicating the results of the analysis to said remote processor over said communications link.

5,005,143

INTERACTIVE STATISTICAL SYSTEM AND METHOD FOR PREDICTING EXPERT DECISIONS

Martin D. Altschuler, Wallingford, and Richard Whittington, Media, both of Pa., assignors to University of Pennsylvania, Philadelphia, Pa.

Continuation of Ser. No. 65,304, Jun. 19, 1987, Pat. No. 4,872,122. This application Sep. 25, 1989, Ser. No. 411,911

The portion of the term of this patent subsequent to Oct. 3, 2006, has been disclaimed.

Int. Cl.[5] G06F *15/42, 9/00*

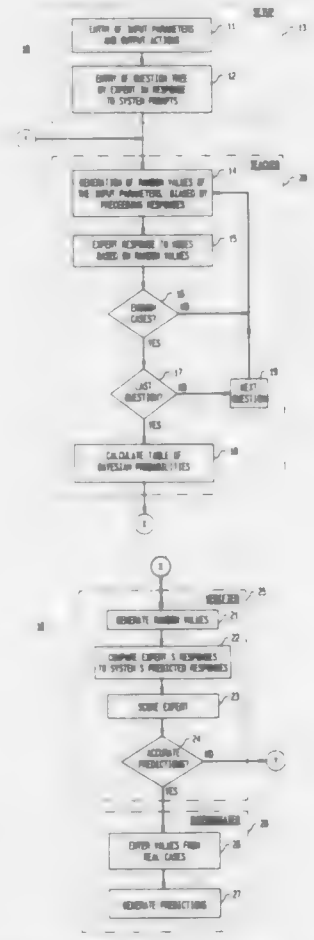
U.S. Cl. 364—554 **2 Claims**

1. A method for comparing the analyses of a plurality of experts in a particular field, comprising the steps of:

(a) establishing a set of output actions for combinatory situations, said combinatory situations defined by a plurality of input parameters having input values which define a particular case situation;

(b) for each expert,

(1) establishing a decision making structure having a plurality of linked nodes extending from a first node and ending in a terminal node with each node defining a question;



(2) entering the input values of the input parameters defining a case situation to be analyzed;

(3) determining which input values of the particular case situation are significant input values from node to node and predicting which response the expert would make for a question posed at the first node based on the significant input values and then predicting additional responses for questions posed at each subsequent node, said subsequent nodes forming a path based on the prior predicted responses through the decision making structure;

(4) repeating step (3) through the linked nodes until a predicted response is an output action at a terminal node of the decision-making structure; and

(5) determining the probability that the expert would have selected the output action predicted in step (4).

(c) comparing the determinations of which input values are significant input values from step (b) (3) and the output action arrived at in step (b) (4) of an expert's decision making structure with that of another expert's decision

making structure to determine which input values are most significant in arriving at an output action.

5,005,144

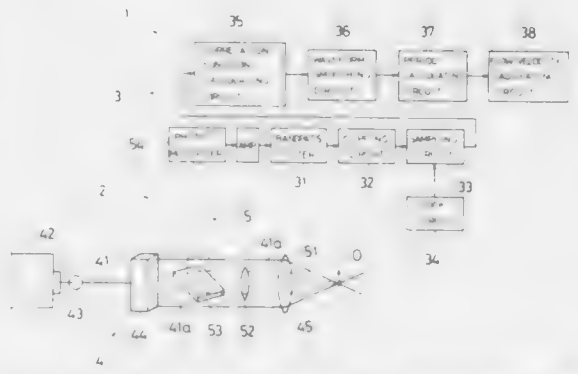
SIGNAL PROCESSING SYSTEM FOR FLOW VELOCITY IN LASER DOPPLER VELOCIMETER

Tsuyoshi Nakajima, 3-19 Mefuyamate, Takarazuka-shi, Hyogo-ken, and Yuji Ikeda, Maison de Cascade Rokko 205, 111-1 Miyasaka, Suishashindenaza, Nada-ku, Kobe-shi, Hyogo-ken, both of Japan

Filed Jul. 10, 1989, Ser. No. 378,098

Int. Cl.[5] G01P *3/36*

U.S. Cl. 364—565 **17 Claims**



1. A flow velocity measurement processor for a laser Doppler velocimeter, comprising:

clipping means for receiving a Doppler burst signal obtained from a photomultiplier of a laser Doppler velocimeter and digitizing the Doppler burst signal by clipping it at a fixed level to output a pulse signal;

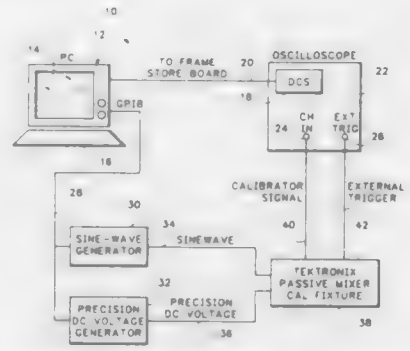
sampling means for receiving the pulse signal from the clipping means and sampling the pulse signal with a pre-set clock signal to output a digitized pulse signal;

digital correlation function calculating means for receiving the digitized pulse signal from the sampling means and calculating a correlation function of the digitized pulse signal to output a correlation signal;

period calculating means for receiving the correlation signal from the digital correlation function calculating means and detecting a crossing point at which the correlation signal crosses over a pre-set threshold level and calculating the period of the correlation signal based on the crossing point to provide a frequency of the correlation signal; and

flow velocity calculating means for calculating the flow velocity of a measuring object based on the frequency from the period calculating means.

5,005,145



METHOD AND APPARATUS FOR CALIBRATING A SCAN CONVERTOR

Timothy L. Falk, and Geoffrey B. Rhoads, both of Vancouver, Wash., assignors to Tektronix, Inc., Beaverton, Oreg.

Filed Jun. 19, 1989, Ser. No. 367,997

Int. Cl.[5] G01R *35/00, 13/00*

U.S. Cl. 364—571.02 **16 Claims**

1. In a calibration system for a scan convertor having a scanning target with a horizontal axis related to time and a vertical axis related to voltage wherein a voltage map is generated for the vertical axis and a timing map is generated for the horizontal axis, an improved method of generating the timing map for the horizontal axis comprising the steps of:

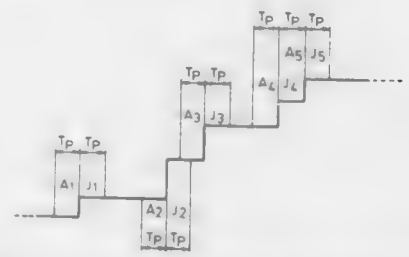
scanning the target with a calibration periodic waveform having a known frequency;

estimating an ideal waveform for the calibration waveform;

calculating the phase differences between the ideal waveform and the calibration waveform; and

generating timing values for the timing map as a function of the calculated phase differences between the ideal waveform and the calibration waveform.

5,005,146



SIGNAL PROCESSING METHOD FOR NUCLEAR SPECTROMETERS

Tamás Lakatos; József Molnár, and Endre Madarász, all of Debrecen, Hungary, assignors to Magyar Tudományos Akadémia Atommag Kutató Intézete, Budapest, Hungary

Continuation-in-part of Ser. No. 39,250, Apr. 16, 1987, abandoned. This application Dec. 20, 1988, Ser. No. 289,398

Int. Cl.[5] G06G *7/12;* **G01J** *1/00*

U.S. Cl. 364—573 **8 Claims**

1. A signal processing method for nuclear spectrometers and the like adapted to analyze a series of randomly-occurring electrical data signals of random length and having randomly varying amplitudes, impressed upon electrical noise-bearing background, comprising: selecting a processing time interval for the signal, said processing time interval embracing the onset time of said signal; setting a base-line filtering time interval immediately preceding said signal onset and a signal filtering time interval immediately following said signal onset, the total duration of said intervals being equal to said processing time; continuously measuring the instantaneous voltage value in said base-line and signal filtering intervals and subtracting the base-line filtering interval voltage value from the corresponding signal filtering (internal) interval voltage to create a series of difference values, wherein said corresponding instantaneous base-line filtering interval voltage and signal filtering interval voltage values are symmetric in time offset from said onset of said signal; and summing said difference values according to a selected weighting function whereby a portion of said signal filtering interval may be used as portion of the base-line filtering interval for a following signal.

5,005,147

METHOD AND APPARATUS FOR SENSOR FUSION

Kumar Krishen, Seabrook, Tex.; Scott W. Shaw, Saratoga, Calif., and Rui J. P. deFigueiredo, Houston, Tex., assignors to The United States of America as represented by the Administrator, the National Aeronautics and Space Administration, Washington, D.C.

Filed Dec. 30, 1988, Ser. No. 292,130

Int. Cl.[5] G06F *15/20*

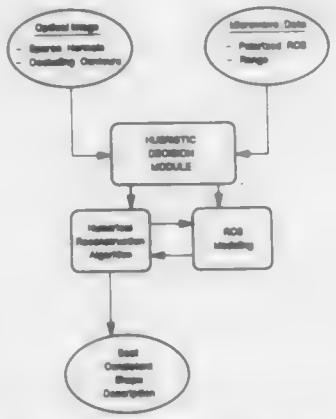
U.S. Cl. 364—578 **20 Claims**

1. A method for determining the shape of a remote surface by sensor fusion using incomplete data from a plurality of sensors, comprising the steps of

(a) obtaining from a first sensor a first electronic signal representative of the surface,

(b) constructing a first electronic model of the surface using the first electronic signal,

(c) using first electronic model as a guide, constructing for a second sensor a predicted electronic signal also representative of the surface,



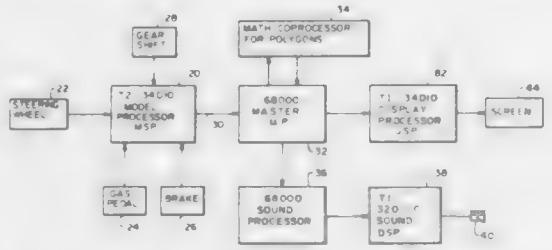
(d) obtaining from the second sensor an actual electronic signal representative of the surface,

(e) minimizing the difference between the predicted electronic signal and the actual electronic signal,

(f) constructing an additional electronic model of the surface using the result of step (e) as a guide,

(g) using the additional electronic model of the surface in constructing an additional predicted electronic signal for the second sensor,

(h) obtaining from the second sensor an additional actual electronic signal representative of the surface,
(i) minimizing the difference between the additional predicted electronic signal and the additional actual electronic signal,
(j) repeating steps (f) through (i) until the difference between



the final predicted electronic signal and the actual electronic signal is below a predetermined threshold level whereby, the shape of the remote surface, represented by the final predicted electronic signal, is determined more accurately than can be done with either the first or second sensor alone, and
(k) displaying the shape of the remote surface.

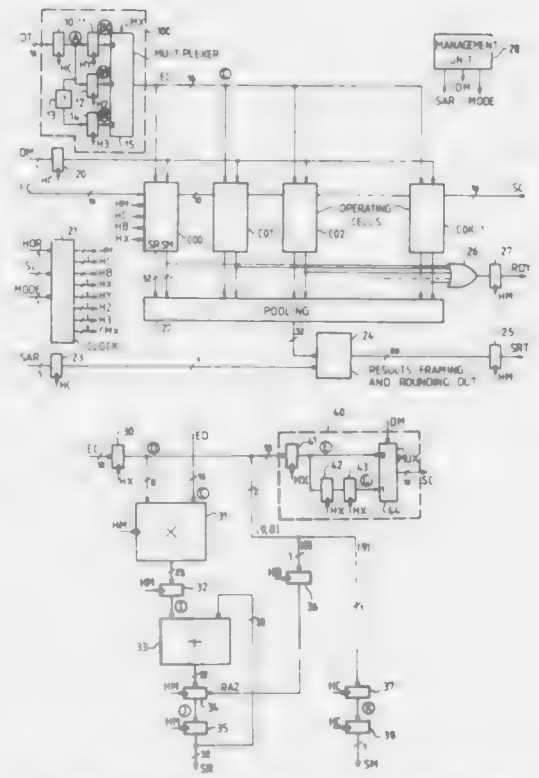
DRIVING SIMULATOR WITH MOVING PAINTED DASHBOARD

Max L. Behensky, Hayward; Rick L. Moncrief, Santa Clara; Jed Margolin, San Jose, and Stephanie J. Mott, Sunnyvale, all of Calif., assignors to Atari Games Corporation, Milpitas, Calif.

Filed Jan. 12, 1989, Ser. No. 296,553
Int. Cl.[5] G09B *9/04*
U.S. Cl. 364—578 **16 Claims**

13. A method of displaying a control panel of a vehicle on a video display and shifting the displayed position of said control panel to simulate perspective change to the operator of said vehicle comprising the steps of:
reading control inputs from said operator indicating desired movements of said simulated vehicle and calculating therefrom data indicating the position at which to display said control panel taking into account the forces acting on the operator's head and the compliance of the operator's body resisting movement of the operator's head; and
using said data to control the output of video data defining the appearance of said control panel such that said control panel appears in the proper place on said display to simulate the perspective which would be seen by said operator.



15. An apparatus for displaying a shifting control panel of a simulated vehicle on a video display comprising:
means for reading inputs from an operator indicating disired movements of said simulated vehicle and calculating therefrom data indicating the position at which to display said control panel taking into account the forces acting on the operator's head and the compliance of the operator's body resisting movement of the operator's head; and
means for using said data to control the output of video data defining the appearance of said control panel such that said control panel appears in the proper place on said display to simulate the perspective which would be seen by said operator.

DIGITAL COMPUTATION INTEGRATED CIRCUIT FOR CONVOLUTION TYPE COMPUTATIONS

Philippe Elleaume, Antony, and Michel Prevost, Le Plessis Robinson, both of France, assignors to Thomson CSF, Paris, France

Filed Dec. 7, 1988, Ser. No. 280,882
Claims priority, application France, Dec. 8, 1987, 87 17051
Int. Cl.[5] G06F *15/336*
U.S. Cl. 364—728.01 **6 Claims**

1. A digital computation integrated circuit for convolution type computations of the form

$$\sum_i C_i X_j$$

with $j=i+k$, j and k being integers and i being a natural integer, where C_i represents complex coefficients having a real and an imaginary part and X_j represents either complex or real input data, respectively corresponding to a complex data operating mode of said integrated circuit, wherein said input data have a real and an imaginary part, and to a real data operating mode of said integrated circuit, wherein said input data have only a real part, said circuit comprising:
a plurality of operating cells connected to each other in a sequence and which simultaneously receive the input data, a propagation bus for sending in succession the real and imaginary parts of each coefficient C_i to a first of said operating cells in said sequence, each of said cells including:
(a) a multiplier having an output connected to an adder accumulator comprising an adder and an accumulator register connected to form a loop, whereby each operating cell performs computations corresponding to a different value of k,
(b) a second register, inserted in the loop of said adder accumulator, after said accumulator register, to provide for alternative processing, at a clock rate, of real and imaginary portions of the computation, said second register providing output results of said each cell for computations corresponding to said value of k, and
(c) means for transferring, on said propagation bus, real and imaginary parts of coefficients received thereon by that cell, to a next cell in said sequence; whereby in each cell, the real and imaginary parts received on said propagation bus are, firstly, applied to an input of the multiplier of that cell and, secondly, retransmitted, by the transferring means of that cell, with a suitable delay, to the next cell, said coefficients thus being propagated from one cell to the next; and
logic means for receiving clock signals and said input data and for ensuring time distribution and repetition of said real and imaginary parts of said input data on a data bus towards said operating cells whereby said each cell is enabled to successively and alternatively provide real and imaginary partial products of the computation.

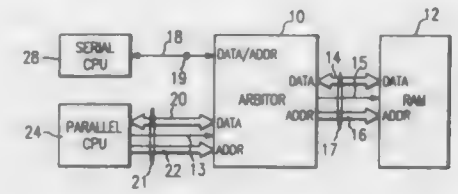
DIGITAL SIGNAL PROCESSORS

Peter R. Dent, Bedford, and Rajpal S. Bharya, Brickhill, both of United Kingdom, assignors to Texas Instruments Incorporated, Dallas, Tex.

Filed Apr. 12, 1989, Ser. No. 336,956
Claims priority, application United Kingdom, Apr. 12, 1988, 8808569
Int. Cl.[5] G06F *7/38*
U.S. Cl. 364—736 **13 Claims**

1. A digital signal processor incorporated in an integrated circuit and including first and second sources of binary numbers, a parallel binary multiplier having a first input port with a first plurality of conductors for receiving in parallel a first plurality of bits defining a first number, a second input port with a second plurality of conductors for receiving in parallel a second plurality of bits defining a second number, and an output port with a third plurality of conductors for transmitting in parallel a third plurality of bits representing the product of the first and second numbers, the first plurality being substantially larger than the second plurality, a first data selector connected from the first and second sources to the first input port of the multiplier, a second data selector connected from the first and second sources to the second input port of the multiplier, and means for controlling the operation of the first



and second data selectom according to the number of bits in the binary numbers from the first and second sources.

5,005,151

INTERLEAVED ARBITRATION SCHEME FOR INTERFACING PARALLEL AND SERIAL PORTS TO A PARALLEL SYSTEM PORT

Hal Kurkowski, Dallas, Tex., assignor to Dallas Semiconductor Corporation, Dallas, Tex.

Filed May 13, 1988, Ser. No. 194,025
Int. Cl.[5] G06F *13/00*
U.S. Cl. 364—900 **41 Claims**

1. An arbiter for selectively interfacing a serial input port and a parallel input port with a parallel system port for transfer of information therebetween, comprising:
a serial communication link connected to the serial port for transmitting and receiving serial information;
a parallel communication link connected to the parallel input port for transmitting and receiving parallel information;
converting means for receiving parallel information from the parallel system port and converting it to serial infor-

mation for transmission to the serial communication link and for receiving serial information from the serial communication link and converting it to parallel information for transmission to the parallel system port;

serial port access means for transferring parallel data between the parallel system port and said converter means during a predetermined access window;

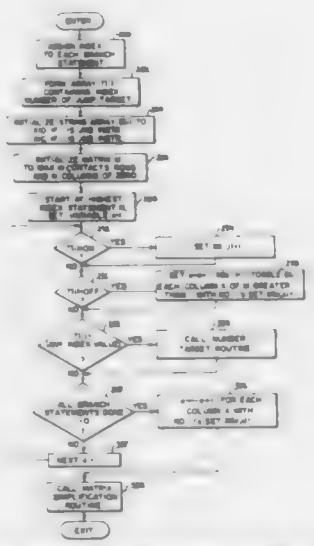
storage means for determining and storing the duration of time before the occurrence of said access window;

means for accessing the predetermined duration of time stored in said storage means for output to the parallel port in response to signals received from the parallel port;

parallel port access means for inhibiting access by the parallel port during said access window; and

means for transferring parallel information between the parallel input port and the parallel system port outside of said access window.

5,005,152



INDUSTRIAL CONTROLLER WITH DECOMPILABLE USER PROGRAM

Neil W. Knutsen, Milwaukee, Wis., assignor to Allen-Bradley Company, Milwaukee, Wis.

Filed Apr. 5, 1989, Ser. No. 333,196

Int. Cl.[5] G06F *9/44, 3/153*

U.S. Cl. 364—900 **3 Claims**

1. A method of decompiling a series jump format machine code implementation of a ladder logic program comprised of a series of jump statements, each examining a contact status and jumping to a target, and including a COIL ON and a COIL OFF routine, into a ladder logic diagram comprised of interconnected numbered succeeding contacts arranged in rungs, each contact with a head and tail terminal, and an output coil, comprising the steps of:

a) assigning an index number to each jump statement according to its order in the machine code;

b) determining the target for each jump statement;

c) creating an interconnection matrix of elements having columns corresponding to the number of jump statements and hence to the number of contacts in the ladder logic diagram and rows corresponding to the number of points of interconnection between contacts;

d) placing head marker elements and tail marker elements in the matrix by analyzing each jump statement and its target so that each column will have only one head marker element and one tail marker element representing the head and tail terminal of a contact whose sequential number corresponds to the column number and so that the row of the head marker element and the row of the tail marker element define interconnections between the terminals of that contact and the terminals of contacts associated with other columns; and

e) displaying a ladder logic diagram by:

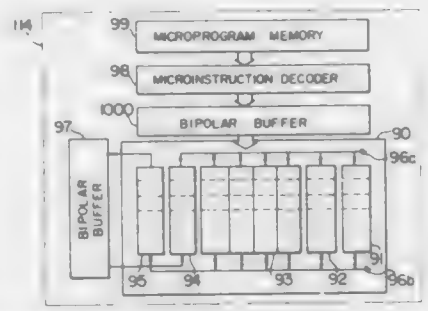
i) displaying a contact having a head and tail terminal for each column the contact having a head and tail terminal;

ii) connecting the head terminal of each contact to the head terminals of all other contacts having head marker elements in the row of the head marker element of that contact and to the tail terminals of all other contacts having a tail marker element in the row of the head marker element of that contact; and

iii) connecting the tail terminal of each contact to the head terminals of all other contacts having a head marker element in the row of the tail marker element of that contact and to the tail terminals of all other contacts having a tail marker element in the row of the tail marker element of that contact.

5,005,153

DATA PROCESSOR INTEGRATED ON A SEMICONDUCTOR SUBSTRATE



Hideo Maejima, and Ikuro Masuda, both of Hitachi, Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Division of Ser. No. 13,204, Feb. 6, 1987, abandoned, which is a continuation of Ser. No. 535,054, Sep. 23, 1983, abandoned. This application Feb. 12, 1988, Ser. No. 155,484

Claims priority, application Japan, Sep. 29, 1982, 57-168502; Oct. 27, 1982, 57-187569

Int. Cl.[5] G06F *13/00*

U.S. Cl. 364—900 **20 Claims**

6. A data processor integrated on a semiconductor substrate comprising:

an instruction decoder comprising a plurality of MOSFETs, for decoding instructions; and

a processing circuit being controlled by the decoded instructions, and comprising a plurality of elements including an arithmetic logic unit, a shifter, an operation register, an input register and an output register, each connected to an internal bus to provide a path for the transfer of data and each comprises of a plurality of MOSFETs,

wherein the connection of the at least one of said elements to said internal bus includes a bipolar buffer to reduce signal transmission delay along said data transfer path.

HIGH SPEED PROGRAMMABLE READ ON MEMORY DEVICE FORMED BY BIPOLAR TRANSISTORS

Hajime Masuda, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

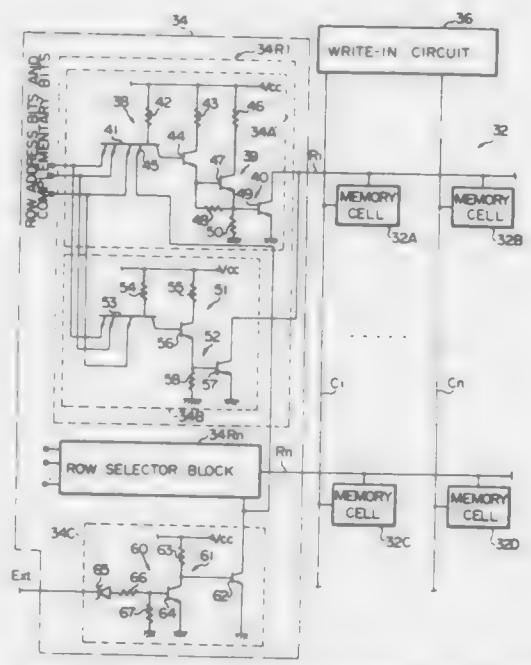
Filed Jul. 19, 1989, Ser. No. 321,902

Claims priority, application Japan, Jul. 19, 1988, 63-181025

Int. Cl.[5] G11C *11/34*

U.S. Cl. 365—96 **16 Claims**

1. A programmable read only memory device having a read out mode of operation and a write-in mode of operation, comprising:



(a) a plurality of memory cells arranged in rows and columns and having respective elements each capable of being permanently changed in resistance with a large amount of a write-in current, each of said memory cells being operative to store a data bit of either logic "1" or "0" level depending upon the resistance of the element of the memory cell;

(b) a plurality of row lines respectively coupled to the rows of said memory cells;

(c) a plurality of column lines respectively coupled to the columns of said memory cells;

(d) column selector means coupled to said column lines and responsive to a column address signal for supplying one or a plurality of said column lines with said write-in current in said write-in mode of operation and with a small amount of a read out current with respect to said write-in current in said read out mode of operation;

(e) a row selector circuit having a plurality of row selector blocks respectively associated with said row lines, and responsive to a row address signal for selectively activating one of the row selector blocks, thereby providing a

current path from one of said row lines to a first constant voltage source; and

(f) an output circuit coupled to the aforesaid one or a plurality of said column lines in said read out mode of operation to change the voltage level or levels on the column line or lines for producing an output signal or signals representative of the data bit or bits stored in one or a plurality of the memory cells, in which each of said row selector blocks comprises a first discharging unit having a large current driving capability and activated in said write-in mode of operation for providing most of said current path, and a second discharging unit having a small current driving capability with respect to said first discharging unit and activated for providing the remaining part of said current path in said write-in mode of operation and for providing the current path in said read out mode of operation, and in which said programmable read only memory device further comprises a control unit responsive to an external signal and operative to establish most of said current path in said write-in mode of operation and to block most of said current path in said read out mode of operation.

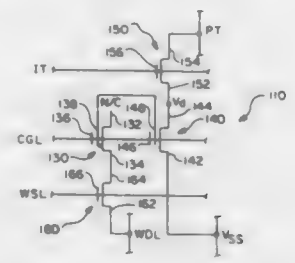
OPTIMIZED ELECTRICALLY ERASABLE PLA CELL FOR MINIMUM READ DISTURB



Nader A. Radjy, San Francisco, and Michael S. Briner, San Jose, both of Calif., assignors to Advanced Micro Devices, Inc., Sunnyvale, Calif.

Filed Jun. 15, 1988, Ser. No. 207,323

The portion of the term of this patent subsequent to Jun. 19, 2007, has been disclaimed.

Int. Cl.[5] G11C *16/04*

U.S. Cl. 365—185 **9 Claims**

1. Apparatus comprising:

an array of floating gate tunnel devices including a first floating gate tunnel device (**130**), said first floating gate tunnel device having first (**134**) and second (**136**) terminals and having a floating gate (**138**) in tunnelling communication with said first terminal in response to a field generated between said floating gate and said first terminal;

a floating gate read transistor having first (**142**) and second (**146**) terminals and having a floating gate (**148**), said second terminal of said read transistor being common with said second terminal of said first tunnel device and said floating gate of said read transistor being common with said floating gate of said first tunnel device;

circuitry responsive during a sense mode to the charge level on a selected subset of said tunnel devices in said array; and

means, operative during said sense mode regardless of whether said first floating gate tunnel device is in said selected subset, for applying a first predetermined non-zero voltage to said second terminal of said read transistor relative to said first terminal of said read transistor and a second predetermined non-zero voltage to said first terminal of said tunnel device relative to said first terminal of said read transistor.

SEMICONDUCTOR DEVICE HAVING OUTPUT BUFFER CIRCUIT CONTROLLED BY OUTPUT CONTROL SIGNAL

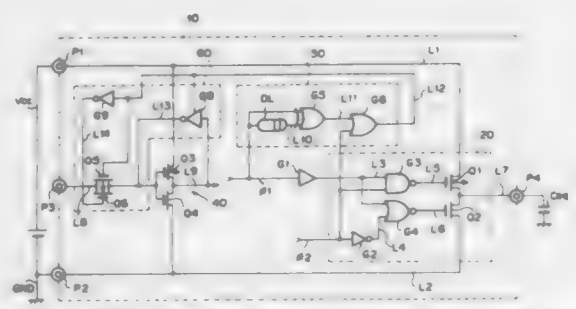
Yasuhiro Takai, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed Dec. 27, 1989, Ser. No. 457,631

Claims priority, application Japan, Dec. 27, 1988, 63-331724

Int. Cl.[5] G11C *11/34*

U.S. Cl. 365—189.05 **11 Claims**



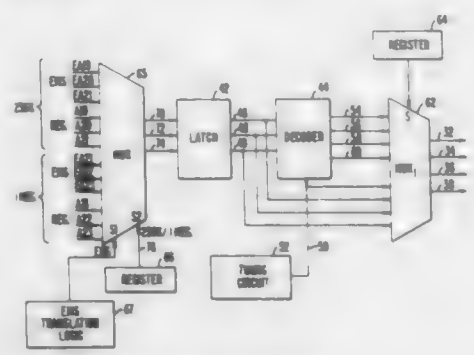
1. A semiconductor device having a data output buffer circuit controlled by an output control signal, comprising:

an output detecting circuit for detecting the level changes in the data signal inputted to said data output buffer circuit;

a signal input circuit, an output level of which is determined on the basis of the detection of the level changes in the data signal by said output detecting circuit; and

a holding circuit for holding said output level of said signal input circuit,

whereby possible output noises attendant on the data outputting operation of said data output buffer circuit are prevented from affecting the operation of said signal input circuit.



5,005,157

APPARATUS FOR SELECTIVELY PROVIDING RAS SIGNALS OR RAS TIMING AND CODED RAS ADDRESS SIGNALS

Robert W. Catlin, Santa Clara, Calif., assignor to Chips & Technologies, Inc., San Jose, Calif.

Filed Nov. 13, 1989, Ser. No. 436,143
Int. Cl.[5] G11C *7/00, 11/408*
U.S. Cl. 365—193 **7 Claims**

1. A memory control unit comprising:

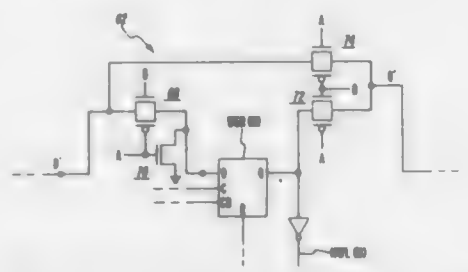
N row address strobe (RAS) outputs;

means for selectively providing an address externally provided to said memory control unit or a translated expanded memory space (EMS) address, said means for selectively providing addresses including a multiplexer;

said multiplexer including two additional inputs of different address bits of said EMS address and external address for a different size of memory bank;

means for decoding said addresses to select, for predetermined addresses, one of N decode outputs;

means for providing a timing signal to control the duration of a signal on said selected decode output, and



multiplexing means, coupled to said means for providing addresses, said means for decoding and said means for providing a timing signal, for selectively coupling to said RAS outputs said addresses and said timing signal or said decode outputs.

REDUNDANCY FOR SERIAL MEMORY

David C. McClure, and Mark A. Lysinger, both of Carrollton, Tex., assignors to SGS-Thomson Microelectronics, Inc., Carrollton, Tex.

Filed Jan. 12, 1990, Ser. No. 464,219
Int. Cl.[5] G11C *8/04;* **G06F** *11/20*
U.S. Cl. 365—200 **10 Claims**

1. A fault tolerant serial memory comprising, in combination:

a serial array of primary memory blocks including a first memory block, one or more intermediate memory blocks and a last memory block, each memory block having data storage cells;

a redundant memory block of data storage cells;

a block selection circuit having data input and data output nodes coupled to each primary and redundant memory block, respectively, for writing and reading data into and out of said primary and redundant memory blocks, said block selection circuits interconnecting said primary memory blocks for enabling write and read operations from the first memory block sequentially to the last memory block in the serial array, and interconnecting the redundant memory block to the last primary memory block for enabling write and read operations from the first primary memory block of the serial array sequentially to the redundant memory block;

a multiplexer circuit having a data input node and a data output node coupled to the data input and data output nodes of the block selection circuit for each intermediate memory block, for the last memory block and for said redundant memory block, respectively, each multiplexer circuit being operable in a first stable state in which block selection data is input to and output from each block selection circuit respectively, and each multiplexer circuit being operable in a second stable state in which the block selection circuit to which it is coupled is bypassed and block selection data is conducted from the multiplexer circuit data input node through a bypass path to the multiplexer circuit data output node, respectively.

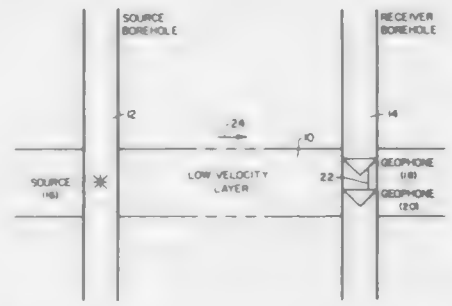
CONTINUITY LOGGING USING DIFFERENCED SIGNAL DETECTION

Christine E. Krohn, Houston, Tex., assignor to Exxon Production Research Company, Houston, Tex.

Filed Nov. 1, 1989, Ser. No. 430,513
Int. Cl.[5] G01V *1/40*
U.S. Cl. 367—57 **19 Claims**

13. Method of continuity logging guided waves in the lithographic region located between two boreholes, comprising



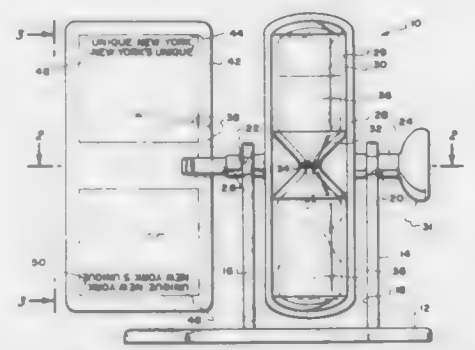
(a) first seismic sourcing at a first depth location in a first borehole,

(b) first receiving the direct impulses from said first depth location in a second borehole at a seismic receiver and developing a first signal value,

(c) second seismic sourcing at said first depth location in said first borehole in substantially the same manner as said first seismic sourcing,

(d) second receiving the direct impulses from said second sourcing at a depth location in said second borehole a predetermined short vertical distance from the location of said first receiving at said seismic receiver and developing a second signal value,

(e) developing a differenced signal by subtracting one of said first and second signals from the other, and



(f) at subsequent discrete depth locations in said respective first and second boreholes, repeating steps (a) through (e), wherein an appreciable differenced signal at a specific depth indicates the presence of guided waves in a continuous low-velocity lithographic layer at such specific depth.

5,005,160

GAME TIMING APPARATUS

Robert A. DeMars, 7210 Jordan Ave., Canoga Park, Calif. 91303

Filed Apr. 5, 1990, Ser. No. 505,165
Int. Cl.[5] G04F *1/04*
U.S. Cl. 368—95 **6 Claims**

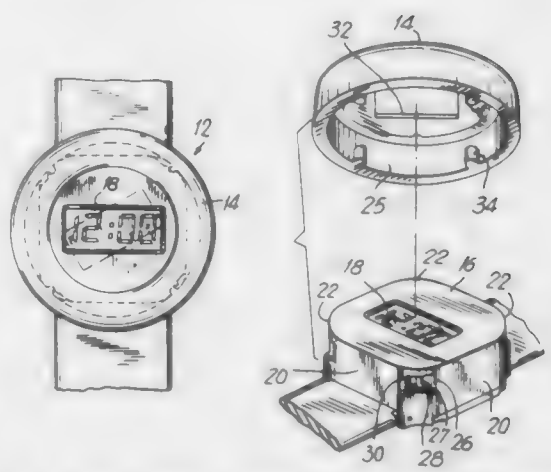
1. A game timing apparatus comprising:

a base, said base adapted to be placed on a planar supportive surface;

a mounting frame mounted on said base, said mounting frame including a pair of stanchions extending from said base and located in a substantially parallel spaced apart relationship defining a gap therebetween;

an hourglass mounted on said stanchions of said mounting frame, said hourglass being pivotably on said stanchions, said hourglass having a transparent bulb defining a pair of chambers separated by a necked down waist, said bulb having a longitudinal center axis, during sufficient pivotable movement of said bulb said longitudinal center axis will be perpendicular to said base, a quantity of sand located within said chamber, said sand being movable between said chambers during pivoting of said hourglass;

a support frame, said bulb being fixedly mounted on said support frame, said support frame being located within said gap, said support frame including a pair of stub shafts mounted directly adjacent said waist, said stub shafts being in axial alignment, one said stub shaft connecting with one said stanchion and the other said stub shaft connecting with the remaining said stanchion; and



card mounting means mounted on one of said stub shafts, said card mounting means adapted to removably support a planar card upon which is located indicia, whereby as said hourglass is pivoted so is said card and said card mounting means.

OPTICAL HEAD DEVICES FOR USE IN DISC PLAYERS

Koji Mitsumori, and Hidehiro Kume, both of Tokyo, Japan, assignors to Sony Corporation, Tokyo, Japan

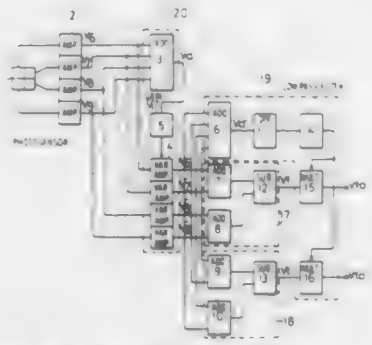
Filed Apr. 14, 1989, Ser. No. 338,184
Claims priority, application Japan, Apr. 25, 1988, 63-101964
Int. Cl.[5] G11B *7/00*
U.S. Cl. 369—44.12 **13 Claims**

1. An optical head device in a disc player comprising:

a movable optical assembly which has a finite magnification objective lens, a first mirror and a second mirror, and a light beam generating and detecting unit having a semiconductor substrate including photodetecting means and

light beam generating means formed thereon, said finite-magnification objective lens, said first and second mirrors, and said light beam generating and detecting unit being supported in said movable optical assembly by a common supporting member, and

a driving mechanism for moving said movable optical assembly in both a first direction along an optical axis of said finite-magnification objective lens and a second direction substantially perpendicular to said first direction;



wherein, in said movable optical assembly, a light beam generated by said light beam generating means is reflected by said first mirror and changed in direction, reflected further by said second mirror and changed again in direction, and focused by said finite-magnification objective lens at a point on the optical axis of said finite-magnification objective lens, and wherein a light beam coming from outside of said movable optical assembly is received by said finite-magnification objective lens to pass therethrough to said second mirror, is reflected by said second mirror and changed in direction, and guided to said photodetecting means in said light beam generating and detecting unit.

5,005,163

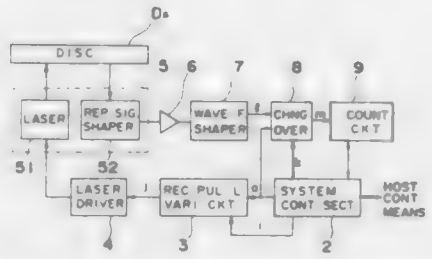
LEVEL SHIFT CIRCUIT OF OPTICAL DISC APPARATUS

Makoto Yamamoto, and Akio Terada, both of Kodaira, Japan, assignors to Nakamichi Corp., Tokyo, Japan

Continuation of Ser. No. 302,125, Jan. 26, 1989, abandoned, which is a continuation of Ser. No. 39,260, Apr. 17, 1987, abandoned. This application May 16, 1990, Ser. No. 523,199
Claims priority, application Japan, Apr. 18, 1986, 61-57421
Int. Cl.[5] G11B *7/095*
U.S. Cl. 369—44.36 **3 Claims**

1. An optical disc apparatus, comprising:

a servo circuit including an automatic gain control device having a predetermined range of permissible input signal levels, and



a shifting circuit for shifting the level of signals inputted to said servo circuit, said shifting circuit comprising: photodetecting and converting means for detecting optical signals reflected from the optical disc and for converting the detected optical signals into electrical signals, a plurality of variable gain amplifiers receiving said electrical signals from said photodetecting and converting means aid variable gain amplifiers outputting signals for detecting at least one of a focussing or tracking error and forming a corresponding error signal, respectively, means for determining a level of a quantity of light reflected from the optical disc according to said electrical signals, and gain set means for selecting one of a plurality of gains of said variable gain amplifiers depending on the level determined so that the outputs of said variable gain amplifiers are within the predetermined range of permissible input signal levels of said automatic gain control device.

RECORDING AND REPRODUCING APPARATUS

Noriaki Sakamoto, Kyoto; Shigemi Maeda, Yamatokortyama; Toshihiro Yamanaka, Ikoma; Toshihisa Deguchi, Nara; Nobuyuki Horie, Yamatokoriyama; Takeshi Yamaguchi, and Kunio Kojima, both of Nara, all of Japan, assignors to Sharp Kabushiki Kaisha, Osaka, Japan

Filed Apr. 27, 1988, Ser. No. 186,580
Claims priority, application Japan, Apr. 28, 1987, 62-105616; Apr. 28, 1987, 62-107102; Apr. 28, 1987, 62-107104; May 13, 1987, 62-117574
Int. Cl.[5] G11B *7/00*
U.S. Cl. 369—48 **17 Claims**

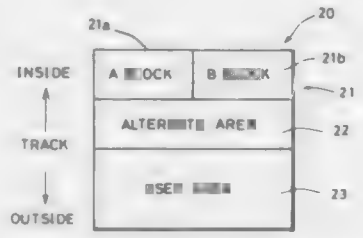
1. A recording and reproducing apparatus comprising:

system control means for developing a binary-coded original recording signal;

recording condition control means for controlling recording conditions during the recording of said binary-coded original recording signal on a recording medium;

signal recording means for recording said original recording signal onto said recording medium in response to said recording conditions set by said recording condition control means;

reproducing signal output means for outputting a binary-coded reproducing signal by detecting said original recording signal as recorded on the recording medium by said signal recording means; and



recording condition setting means for obtaining said recording conditions and developing a reproducing signal approximately equal to said original recording signal through a comparison between said binary-coded reproducing signal outputted from said reproducing signal output means and said original recording signal.

5,005,165

METHOD FOR MANAGING INFORMATION ON A STORAGE MEDIA WITHOUT LOSING INFORMATION DUE TO EFFECTS

Toshihiro Yamanaka; Shigemi Maeda, and Nobuyuki Horie, all of Nara, Japan, assignors to Sharp Kabushiki Kaisha, Osaka, Japan

Filed Dec. 14, 1988, Ser. No. 284,328
Claims priority, application Japan, Dec. 15, 1987, 62-316862
Int. Cl.[5] G11B *7/00*
U.S. Cl. 369—58 **7 Claims**

1. A method for managing defect information comprising the steps of:

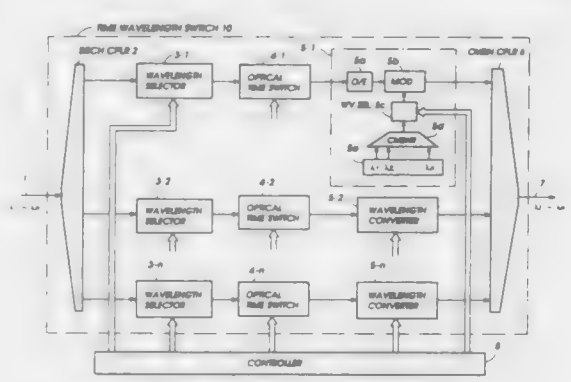
(a) providing a first and second defect information storage area in a storage medium;

(b) determining if a defect is present in the storage medium;

(c) storing location data of the determined defect in a work area;

(d) determining which defect information storage area has a greater number of registrations stored therein, a registration representing a location data of a single defect in the storage medium;

(e) transferring, for storing purposes, registrations from the defect information storage area having the greater number of registrations to the defect information storage area having a lesser number of registrations; and



(f) transferring, for storing purposes, the location data of determined defect from the work area to the defect information storage area receiving the registrations in said step (e), the location data becoming a new registration.

MULTICAST PACKET SWITCHING METHOD

Edward Arthurs, Summit; Matthew S. Goodman, Belle Meade; Chong K. Kim, Livingston, and Tony T. Lee, Bridgewater, all of N.J., assignors to Bell Communications Research, Inc., Livingston, N.J.

Division of Ser. No. 306,528, Feb. 3, 1989, Pat. No. 4,896,934. This application Oct. 11, 1989, Ser. No. 420,010
Int. Cl.[5] H04J *14/08*
U.S. Cl. 370—4 **9 Claims**

1. A method for routing packets in optical form from a plurality of input ports of a switch to a plurality of output ports of said switch, said method comprising:

during a first control phase of a packet transmission cycle, writing information into a control token at particular input ports so as to reserve particular output ports,

passing said control token among input ports to resolve contentions among said particular input ports wanting to reserve the same said particular output ports and between output ports to tune said particular output ports for receiving packets from said particular input ports,

transmitting said token from said particular input ports to said particular output ports on a distinct network independent of the optical packets being routed,

during a second control phase of a packet transmission cycle, reading said control token at said particular output ports and tuning said particular output ports in response to said token to enable them to selectively receive packets from said particular input ports, and

during a transmission phase which follows said first and said second control phases of a packet transmission cycle, optically transmitting said packets via an optical branching network from said particular input ports to all output ports including said particular output ports.

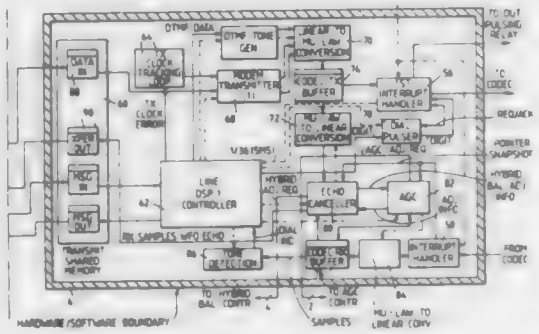
MULTIRATE WIRE LINE MODEM APPARATUS

Peter Cummiskey, Clark, N.J.; Marvin Epstein, Monsey, N.Y.; Paul A. Gilmour, Bloomfield, and Richard Kim, Nutley, both of N.J., assignors to ITT Corporation, New York, N.Y.

Filed May 2, 1988, Ser. No. 189,497
Int. Cl.[5] H04B *1/56;* **H04J** *15/00;* **H04L** *5/111*
U.S. Cl. 370—24 **40 Claims**



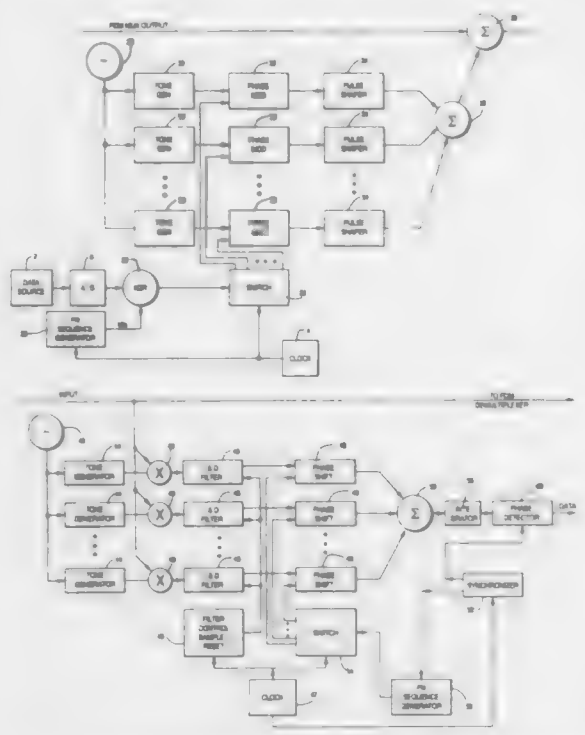
1. Modulator/demodulator apparatus comprising:

first digital signal processor means operable in a full duplex mode for providing digital samples to be transmitted to a coder decoder and receiving transmitted digital samples therefrom, said first digital signal processor means being responsive to received samples for initiating echo cancellation in said received samples;

second digital signal processor means operable to demodulate samples received from said first digital signal processor and outputting demodulated message information therefrom; and

input/output processor means for initiating operations of said first and second digital signal processor means, said input/output processor means receiving input information

to be transmitted and supplying said information to said first digital processor means and receiving demodulated message information from said second digital signal processor means and outputting said demodulated message information to at least one user device, said input/output



processor means also receiving transmitted digital samples to be demodulated from said first digital signal processor means and supplying said transmitted samples to be demodulated to said second digital signal means, said input-/output processor means being operable in a full duplex mode of operation.

FREQUENCY DIVISION MULTIPLEX GUARDBAND COMMUNICATION SYSTEM FOR SENDING INFORMATION OVER THE GUARDBANDS

Joseph B. Brooder, East Berlin, Pa., and William H. Gossard, Grasonville, Md., assignors to Westinghouse Electric Corp., Pittsburgh, Pa.

Filed Nov. 16, 1989, Ser. No. 437,153
Int. Cl.[5] H04J *1/14, 1/20*
U.S. Cl. 370—76 **4 Claims**

1. A frequency division multiplex (FDM) guardband communication system for using guardbands for sending additional signals between the information bands of the frequency division multiplex system, comprising:

generator means for generating pn chips;

data means for providing data to the system;

converting means, operatively connected to said data means, for converting the signal to digital form, if required;

combining means, operatively connected to said converting means and said generator means, for combining a predetermined number of pn chips with a number of data bits and obtaining signal chips;

switching means, operatively connected to said combining means, for assigning the signal chips to individual guardbands;

modulation means, operatively connected to said combining means, for combining digital data to be added to the frequency division multiplex system with the pn chips;

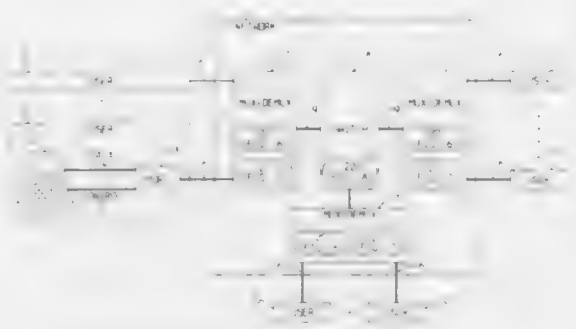
means, operatively connected to said modulation means, for summing the pn modulated digital signals to a FDM output for transmission through a communication medium;

shifting means for translating each guardband to DC;

filter means, operatively connected to said shifting means, for isolating individual chips and outputting a signal;

sampling means, operatively connected to said filter means, for sampling and phase alignment of the output signals from said filter means;

summing means, operatively connected to said sampling means, for summing outputs from said sampling means; and



detector means, operatively connected to said summing means, for recovering the signal added to the frequency division multiplex system.

MULTI-RATE MULTIPLEXING ARRANGEMENT EFFICIENTLY UTILIZING MULTIPLEXED CHANNEL BANDWIDTH

Donald R. Nelson, Boulder, Colo., assignor to AT&T Bell Laboratories, Murray Hill, N.J.

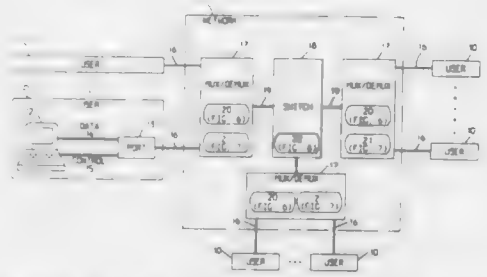
Filed Jan. 9, 1990, Ser. No. 462,361
Int. Cl.[5] H04J *3/22*
U.S. Cl. 370—84 **34 Claims**

1. A subrate multiplexer comprising:

means for receiving a plurality of first signal streams each at a subrate of a predetermined transmission rate;

means cooperative with the receiving means for subrate-multiplexing the plurality of received first signal streams into a second signal stream such that the second signal stream comprises a plurality of adjacent frames each having an identical sequence of time slots of equal duration with different ones of the time slots of a frame assigned to carry signals from different ones of the first signal streams and with sequentially identical time slots of a plurality of the adjacent frames assigned to a same one first signal stream;

means cooperative with the receiving means and the subrate-multiplexing means for assigning to at least one first signal stream a plurality of time slots in each frame, at least some of the time slots of the assigned plurality being separated from others of the time slots of the assigned plurality by at least one time slot assigned to a different first signal stream and at least some of the time slots of the assigned plurality being non-periodically distributed with respect to others of the time slots of the assigned plurality within the sequence of the time slots of a frame; and



means cooperative with the subrate-multiplexing means for transmitting the second signal stream at the predetermined transmission rate.

5,005,171

TELECOMMUNICATION TRANSMISSION FORMAT SUITED FOR NETWORK-INDEPENDENT TIMING ENVIRONMENTS

David R. Modisette, Jr., Broomfield, and Donald R. Nelson, Boulder, both of Colo., assignors to AT&T Bell Laboratories, Murray Hill, N.J.

Filed Jan. 9, 1990, Ser. No. 462,374
Int. Cl.[5] H04J *3/12*
U.S. Cl. 370—110.1 **20 Claims**

1. An arrangement for transmitting control signals and data signals as a sequence of delineated units of signals, with at least the data signals having a present data transmission rate that fluctuates about a nominal rate, comprising:

means for assigning to the control and data signals a fixed transmission rate greater than the nominal rate; and

means for transmitting a stream of delineated units carrying the data signals at the present data transmission rate, and transmitting delineated units carrying the control signals interspersed among the delineated units carrying the data signals at a present control transmission rate that fluctuates and is equal to the fixed transmission rate less the present data transmission rate to maintain transmission of a continuous sequence of adjacent delineated units carrying the data and control signals at the fixed transmission rate;

whereby the present control transmission rate varies inversely with the present data transmission rate.

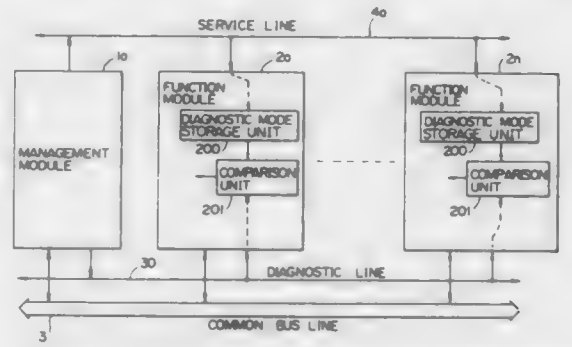
DIAGNOSTIC SYSTEM IN A DATA PROCESSING SYSTEM

Masakazu Kawamoto, Komae, Japan, assignor to Fujitsu Limited, Kawasaki, Japan

Filed Mar. 15, 1989, Ser. No. 323,941
Claims priority, application Japan, Mar. 18, 1988, 63-064941
Int. Cl.[5] G06F *11/00*
U.S. Cl. 371—18 **7 Claims**



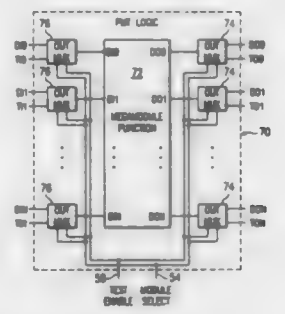
1. A diagnostic system in a data processing system constituted by a management module and a plurality of function modules, each having an address, a normal mode, and a diagnostic mode, and each being connected to said management module through a common bus line, said diagnostic system comprising:

service line means, operatively connected to the management module and said plurality of function modules, for issuing a diagnostic mode command;

diagnostic line means, operatively connected to said management module and said plurality of function modules, for providing a signal indicating a transfer of diagnostic data on the common bus line;

diagnostic mode storage means provided in each of the function modules, and operatively connected to said service line means for setting the diagnostic mode; and

comparison means, provided in each of the function modules, and operatively connected to said diagnostic mode storage means and to said diagnostic line means, for comparing a content of said diagnostic mode storage means with the signal indicating the transfer of diagnostic data, by comparing an address on the common bus line with an address of a corresponding function module, a resultant data of the comparison being used as a condition for a module selection for the diagnosis so that a transfer of diagnostic data in said diagnostic mode is separated from the transfer of the data in said normal mode.



5,005,173

PARALLEL MODULE TESTING

Robert C. Martin, Dallas, Tex., assignor to Texas Instruments Incorporated, Dallas, Tex.

Filed Dec. 7, 1988, Ser. No. 281,308
Int. Cl.[5] G06F *11/00*
U.S. Cl. 371—22.6 **29 Claims**

25. An integrated circuit, comprising:

a first module of operation circuits, said first module having a plurality of first data terminals;

a plurality of first multiplexers, each of said first multiplexers having a first external data terminal and a first test terminal, each of said first multiplexers coupling a respective one of said first data terminals to said first external data terminal during normal operation and to said first test terminal during testing of said first module to permit test patterns of a testing program corresponding to said first module to be input into said first module;

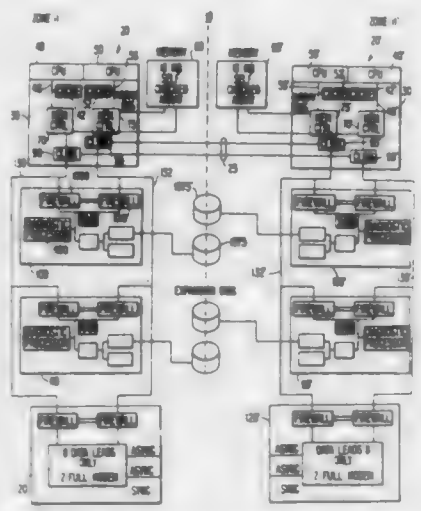
a second module of operation circuits, said second module having a plurality of second data terminals;

a plurality of second multiplexers, each of said second multiplexers having a second external data terminal and a second test terminal, each of said second multiplexers coupling a respective one of said second data terminals to said second external data terminal during normal operation and to said second test terminal during testing of said

second module to permit test patterns of a testing program corresponding to said second module to be input into said second module; and

a bus for coupling to a source of test patterns, said bus having a plurality of conductors, each of said first test terminals and said second test terminals coupled to one of said plurality of conductors.

5,005,174



DUAL ZONE, FAULT TOLERANT COMPUTER SYSTEM WITH ERROR CHECKING IN I/O WRITES

William F. Bruckert, Northboro, Mass., and Thomas D. Bissett, Derry, N.H., assignors to Digital Equipment Corporation, Maynard, Mass.

Continuation of Ser. No. 93,572, Sep. 4, 1987, abandoned. This application Feb. 26, 1990, Ser. No. 489,751

Int. Cl.[5] G06F *11/16*

U.S. Cl. 371—68.3 **18 Claims**

1. A fault tolerant computer system designed to be coupled to at least one I/O device comprising:

a first processing system including

a first data processor for executing a series of data processing instructions involving the passage of data into and out of said first data processor, and

a first data output terminal for outputting a portion of the data passing out of said first data processor to said at least one I/O device;

a second processing system, substantially identical to said first processing system and operating independently of said first processing system, said second processing system including

a second data processor for executing said series of data processing instructions in the same sequence as said first data processor, said second data processor's execution of said instructions involving the passage of data into and out of said second data processor, and

a second data output terminal for outputting a portion of the data passing out of said second data processor to said at least one I/O device;

synchronizing means, coupled to said first and second data processors, for maintaining the execution of said series of data processing instructions by said first and second processing systems in synchronism; and

fault detection means, coupled to said first and second processing systems at said first and second output terminals, respectively, for receiving from said first and second processing systems only the portion of the data output from said first data output terminal of said first processing system to said at least one I/O device and the portion of the data output from said second data output terminal of said second processing system to said at least one I/O device, said fault detection means including means for identifying the presence of an error in said fault tolerant computer system when the portion of said data output from said first processing system at said first output terminal is different from the portion of the data output from said second processing system at said second output terminal.

ERBIUM-DOPED FIBER AMPLIFIER

Emmanuel Desurvire; Clinton R. Giles, both of Middletown; Jay R. Simpson, Fanwood, and John L. Zyskind, Shrewsbury, all of N.J., assignors to AT&T Bell Laboratories, Murray Hill, N.J.

Filed Nov. 27, 1989, Ser. No. 441,495

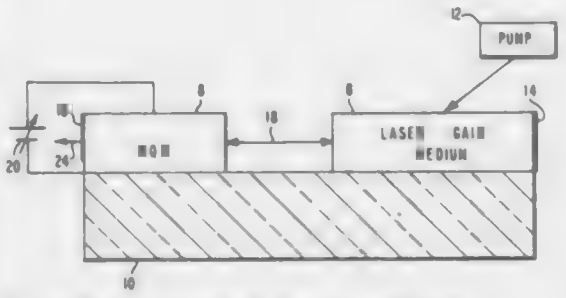
Int. Cl.[5] G02B *6/00*; H01S *3/00*

U.S. Cl. 372—6 **15 Claims**

1. An optical amplifier comprising a single mode optical fiber having a core surrounded by a cladding, said core being doped with rare earth ions having a distribution profile, and

means for generating a pump signal at a pump wavelength, said pump wavelength capable of coupling the ground state of the rare earth ions to an excited state which is an upper pump level of a three level lasing system having the ground state as the lower level of the lasing transition, said generating means being optically coupled to said optical fiber, the transmission mode of the optical fiber at the pump wavelength having a radius which is greater than the radius of the distribution profile of the rare earth ions in the core.

5,005,176



METHOD AND APPARATUS FOR Q-SWITCHING A LASER

Juan F. Lam, and Thomas C. Hasenberg, both of Agoura Hills, Calif., assignors to Hughes Aircraft Company, Los Angeles, Calif.

Filed Apr. 4, 1990, Ser. No. 504,758

Int. Cl.[5] H01S *3/11*

U.S. Cl. 372—10 **17 Claims**

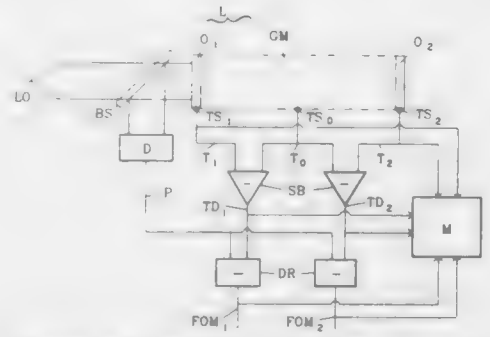
1. An optical amplification method, comprising:

storing photon energy in a Type II staggered alignment multiple quantum well (MQW) structure by optically exciting the MQW structure with electromagnetic radiation,

applying an electric field across the MQW structure of sufficient magnitude to induce a release of optical energy from the structure, and

applying electromagnetic radiation at a wavelength substantially matched with that of the MQW energy release as an input to the MQW structure during at least a portion of said energy release, such that said energy release is amplified with respect to said input.

5,005,177



LASER OPTICS QUALITY MONITORING

Paul H. Beckwith, Ottawa, Canada, assignor to Lumonics Inc., Kanata, Canada

Filed Sep. 27, 1989, Ser. No. 413,096

Int. Cl.[5] H01S *3/04*

U.S. Cl. 372—34 **12 Claims**

1. A method of monitoring optical quality of optical means of a gas laser having a pair of optical means, the method comprising:

measuring a temperature of at least one of a pair of optical means of a gas laser;

measuring a surrounding temperature of an enclosure for the laser; and

subtracting said surrounding temperature from the measured temperature of said optical means to obtain a corresponding temperature differential thereby enabling monitoring of said optical means.

5,005,178

LASER DIODE MODULE

Johannes T. M. Kluitmans, and Hindrik Tjassens, both of Eindhoven, Netherlands, assignors to U.S. Philips Corp., New York, N.Y.

Continuation of Ser. No. 425,375, Oct. 17, 1989, abandoned, which is a continuation of Ser. No. 297,796, Jan. 17, 1989, abandoned. This application May 11, 1990, Ser. No. 523,308

Claims priority, application Netherlands, Jan. 22, 1988, 8800140

Int. Cl.[5] H01S *3/045*

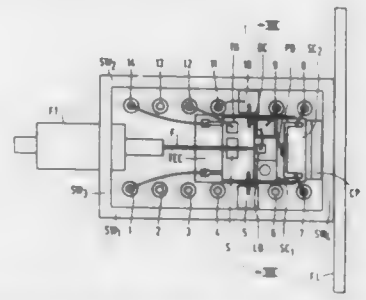
U.S. Cl. 372—36 **19 Claims**

1. A laser diode module comprising:

a rectangular box-like metal casing with a bottom, two long and two short sidewalls, a tubular passage for a glass fibre being provided in one of the short sidewalls, and no less than eight guide pins being passed through the bottom in a standardized DIL order, no less than one of the guide pins being inserted in the bottom by means of electrically conducting material and the remaining guide pins being inserted in the bottom by means of feedthrough insulators;

a thermoelectric cooler having two thermal contact pads, one contact pad being thermoconductively coupled to the bottom of the metal casing;

a plate-formed metal base carrier which is thermoconductively connected to the other thermal contact pad of the thermoelectric cooler, this base carrier accommodating:



a first sub-carrier with a laser diode attached,

a second sub-carrier with a photodiode attached,

a support for arranging the glass fibre such that its end is facing the front facet of the laser diode, and

a thermistor thermally coupled with the base carrier; and

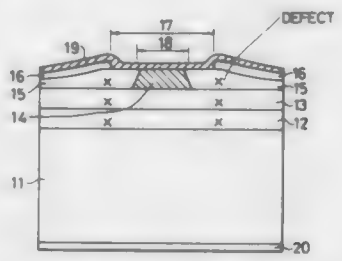
connecting lines for electrically connecting the laser diode,

the photodiode, the thermistor, the thermoelectric cooler and the metal base carrier to the respective guide pins;

wherein no less than one of the guide pins, electroconductively connected to the bottom, has a portion located inside the casing which portion has the form of a rod which over its entire length is electroconductively connected to the associated long sidewall of the casing, an electroconductive coupling being provided between the head face of the rod and the base carrier.

5,005,179

SEMICONDUCTOR DEVICE



Toru Fukushima; Tsunehisa Takabayashi, and Mikio Ogai, all of Yokohama, Japan, assignors to The Furukawa Electric Company, Ltd., Tokyo, Japan

Filed Jun. 8, 1989, Ser. No. 364,366

Claims priority, application Japan, Jun. 8, 1988, 63-140632; Feb. 15, 1989, 1-35784

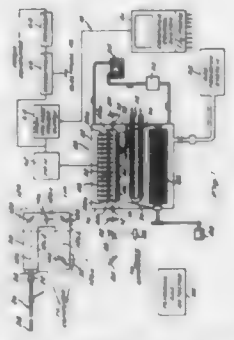
Int. Cl.[5] H01S *3/19*

U.S. Cl. 372—46 **13 Claims**

1. A semiconductor device comprising:

an active layer formed on a semiconductor substrate;

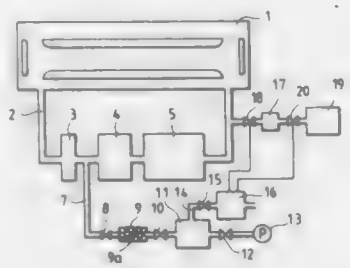
an electrode;



a first semiconductor layer in contact with the electrode;

a first current blocking layer formed on the first semiconductor layer and having a current confinement window;

wherein the contact resistance between the current blocking layer and the electrode is higher than the contact resistance between the electrode and the first semiconductor layer; and



a second current blocking layer formed on said first blocking layer and provided with a dielectric insulation material having a window portion with an area larger than that of the current confinement window.

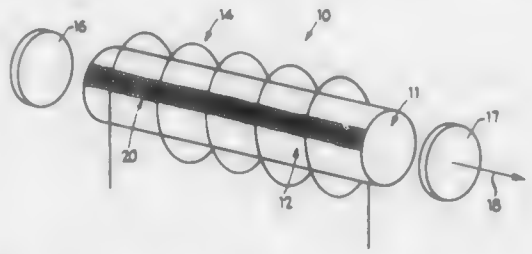
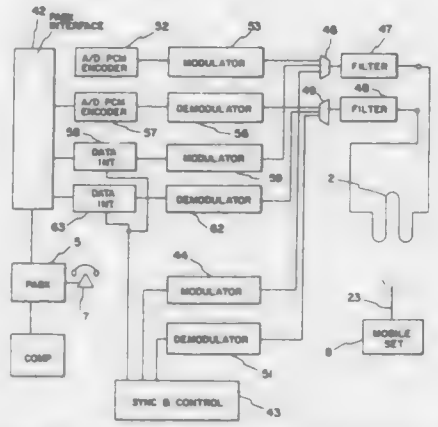
LASER CATHETER SYSTEM
William Edelman, Seal Beach; Dennis Constantinou, Corona Del Mar; Miles Stefanovski, Santa Ana; Yuh L. Jan, El Toro; Theodore S. Fahlen, San Jose; Ronald L. Hansen, San Jose, and Kenneth J. Kramasz, San Jose, all of Calif., assignors to Schneider (USA) Inc., Minneapolis, Minn.
Filed Sep. 1, 1989, Ser. No. 402,135
Int. Cl.[5] H01S *3/22*
U.S. Cl. 372—57 15 Claims



1. An apparatus for producing and transmitting energetic optical signals, comprising:
an excimer laser for producing ultraviolet light, said laser comprising:
(a) a first elongated laser electrode having a plurality of segments, there being associated with each of said segments an individual inductive element through which each said segment is connected to a common bus;
(b) a second elongated laser electrode spaced apart from said first laser electrode, said second electrode positioned substantially parallel to said first laser electrode and substantially coextensive therewith, the space between said first and second laser electrodes forming a laser discharge gap;
(c) a preionizer positioned adjacent to one of said first and second laser electrodes throughout the effective length of said one laser electrode, said preionizer comprising a conductive element within ar insulting tube, said insulating tube proximate said one laser electrode and said conductor element in electrical connection with the other of said laser electrodes;
(d) a housing for said first and second laser electrodes, said housing defining a cavity suitable for confining a gaseous laser medium, said housing cavity allowing exchange of said gaseous laser medium between said cavity and said laser discharge gap;
(e) a pulse forming network for producing electrical pulses for application to said laser electrodes to generate an electrical discharge in said gaseous laser medium in said laser discharge gap;
(f) a gas circulator for circulating said laser medium within said housing cavity; and
(g) a trap through which said gaseous laser medium may be passed, said trap removing impurities from said gaseous medium; an optical fiber having an input end and an output end, said input end receiving optical signals from said laser and guiding them through said fiber to said output end, said fiber further comprising a substantially rod shaped core material surrounded by a substantially tube shaped cladding material, said cladding material having an optical index of refraction which is less than or equal to the index of refraction of said core material at an interface between the core and the cladding, the index of refraction of the cladding material decreasing as the radial distance from said interface increases; and
a control system for monitoring and controlling the operation of said laser.

5,005,181
METHOD FOR CONTROLLING GAS IN HALOGEN GAS LASER AND DEVICE THEREFOR
Takeo Yoshioka, and Tadao Minagawa, both of Hyogo, Japan, assignors to Mitsubishi Denki K.K., Tokyo, Japan
Filed Sep. 20, 1989, Ser. No. 409,916
Claims priority, application Japan, Oct. 20, 1988, 265470
Int. Cl.[5] H01S *3/22*
U.S. Cl. 372—59 22 Claims



1. A gas control device for a halogen gas excimer laser using a laser gas comprising a halogen gas as the active medium, comprising:
means for pumping said laser and causing said laser to oscillate;
means for circulating said laser gas through said laser, said circulating means communicating with said laser pumping means;
means for controlling a flow of said laser gas circulating in said laser gas circulating means;
means for storing new halogen gas, said new halogen gas storing means being controllably connected to said circulating means;
means connected to said circulating means for converting said halogen gas into a low-boiling-point gas; and
means for detecting a density of said low-boiling-point gas, said detecting means being connected to said converting means, aid density detecting means outputting a control signal to said new halogen gas storing means when said density is lower than a predetermined value for controllably supplying the new halogen gas to said circulating means whereby the level of halogen gas in said laser device is mainmined above a predetermined level.

5,005,182
LASER PUMPING APPARATUS
Myron C. Muckerheide, Port Washington, Wis., assignor to Seton Health Care Foundation, Milwaukee, Wis.
Filed Oct. 11, 1989, Ser. No. 419,757
Int. Cl.[5] H01S *3/093*
U.S. Cl. 372—72 9 Claims

1. An improved laser pumping apparatus comprising:
laser element having an active outer surface;
pumping energy source; and
a plurality of generally spherical beads disposed in juxtaposition with at least part of said active outer surface and between said pumping energy source and said active outer surface whereby said plurality of generally spherical beads serve to increase the overall energy absorbing surface area of the active outer surface, refocus the energy from the pumping source in a random fashion adjacent the active outer surface, and lengthen the dwell time to increase the pumping efficiency of the apparatus.

METHOD AND APPARATUS FOR WAVEFORM EQUALIZATION
Tetsuya Amano, Hachioji; Seiichi Mita, Kanagawa; Morishi Izumita, Inagi; Nobukazu Doi, Hachioji; Mamoru Kaneko, Hokkaido; Hiroto Yamauchi, Katsuta, and Susumu Kasai, Sagamihara, all of Japan, assignors to Hitachi, Ltd.; Hitachi Denshi Kabushiki Kaisha, both of Tokyo and Hitachi Video Engineering, Inc., Kanagawa, all of, Japan
Filed Sep. 6, 1988, Ser. No. 240,196
Claims priority, application Japan, Sep. 8, 1987, 62-223026
Int. Cl.[5] H03H *7/30, 7/40*
U.S. Cl. 375—14 4 Claims

1. A waveform equalization method for a digital modulated signal having an inverted polarity within a bit period lasting a time width of T or an inverted polarity on a boundary between bit periods, comprising the steps of:
inputting an isolated impulse response waveform of a digital modulated signal; and
compensating said isolated impulse response waveform by permitting intersymbol interference at ±T/2 with respect to the center axis of time of the waveform and eliminating

intersymbol interference at ±nT/2 which respect to the center axis of time of the waveform.

5,005,185
PARALLEL MODE ADAPTIVE TRANSVERSAL EQUALIZER FOR HIGH-SPEED DIGITAL COMMUNICATIONS SYSTEM
Shoichi Mizogachi, and Hideki Matsuura, both of Tokyo, Japan, assignors to NEC Corporation, Tokyo, Japan
Filed Jan. 19, 1990, Ser. No. 467,580
Claims priority, application Japan, Jan. 19, 1989, 1-10270
Int. Cl.[5] H04L *27/01*
U.S. Cl. 375—15 3 Claims

1. An adaptive transversal equalizer for a demodulator, wherein the demodulator derives a P-channel (in-phase channel) baseband signal and a Q-channel (quadrature-channel) baseband signal from a received digitally modulated signal and recovers a clock signal synchronized with symbols contained in the baseband signals, and includes P-channel and Q-channel analog-to-digital (A/D) converters for converting said P-channel and Q-channel baseband signals, respectively, into P-channel and Q-channel digital data streams, comprising:
a frequency divider for dividing the frequency of said clock signal by N to produce a sequence of lower-frequency clock pulses, where N is an integer equal to or greater than two;
(N−1) P-channel delay means for delaying said P-channel digital data stream by one symbol interval to produce (N−1) successively delayed P-channel data streams, and (N−1) Q-channel delay means for delaying said Q-channel digital data stream by one symbol interval to produce (N−1) successively delayed Q-channel data streams;

N P-channel transversal filters and N Q-channel transversal filters, each of said transversal filters comprising a tapped-delay line, latch means having inputs respectively connected to successive taps of the tapped-delay line and clocked by the output of said frequency divider for holding symbols for a duration of N-symbol intervals, first variable tap-weight multipliers coupled respectively to the outputs of said latch means, a first adder for summing the outputs of said first tap-weight multipliers to produce a first equalized output, second variable tap-weight multipliers coupled respectively to said latch means, and a second adder for summing the outputs of said second tap-weight multipliers to produce a second equalized output, the tapped-delay line of one of the transversal filters of each of said channels being connected to the output of the A/D converter of the same channel, and the tapped-delay lines of the other transversal filters of each of said channels being connected respectively to the output of said delay means of the same channel;

N P-channel adders associated respectively with the N transversal filters of each of said channels, and N Q-channel adders associated respectively with the N transversal filters of each of said channels, each of said adders summing the first equalized output of the associated transversal filter of one of said channels with the second equalized output of the associated transversal filter of the other channel;

a P-channel multiplexer for multiplexing the outputs of said P-channel adders, and a Q-channel multiplexer for multiplexing the output of said Q-channel adders; and

N pairs of P-channel correlators associated respectively with said P-channel transversal filters and further associated with said P-channel multiplexer, and N pairs of Q-channel second correlators associated respectively with said Q-channel transversal filters and further associated with said Q-channel multiplexer, one of the correlators of each of said N pairs detecting a correlation between data and error components of an output signal from the associated multiplexer for controlling the first variable tap-weight multipliers of the associated transversal filter, and the other of the correlators of each of said N pairs detecting a correlation between a data component of the output signal from the associated one of said multiplexers and an error component of an output signal from the other of said multiplexers for controlling the second variable tap-weight multipliers of the associated transversal filter.

Int. Cl.[5] H04L *27/06*

U.S. Cl. 375—94 **11 Claims**

1. A slave receiver for detecting commands in the form of digital signals modulated on a cyclic carrier, the receiver comprising:

(a) an input for said carrier;

(b) capacitive means;

(c) first charging means coupling the input to said capacitive means for causing cycles of the carrier to charge the capacitive means beyond a predetermined level of charge when the carrier cycles exist above a given frequency and for at least a first given time;

(d) second charging means for applying charge to the capacitive means in the opposite direction so that, when the predetermined level of charge has been exceeded and there is a subsequent gap in the carrier cycles of a second given time, the charge falls below said predetermined level, and when carrier cycles are subsequently restored said predetermined level of charge is reached after a time directly related to the length of such gap;

(e) switching means coupled to the capacitive means to produce a binary signal corresponding to the existence of said predetermined level of charge;

(f) means for defining time windows; and

(g) means coupled to the switching means for processing said binary signal within said time windows to determine therefrom digital values dependent upon states of the binary signal within said windows.

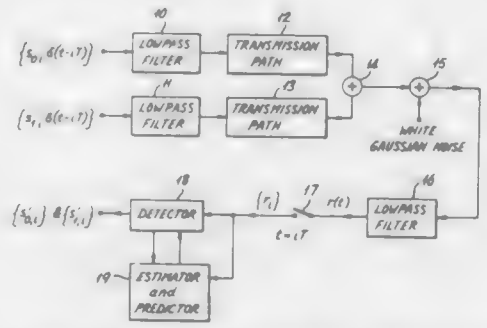
CHANNEL ESTIMATION AND DETECTION FOR DIGITAL COMMUNICATION SYSTEMS



Adrian P. Clark, Loughborough, England, assignor to National Research Development Corporation, London, England

Division of Ser. No. 38,351, Apr. 14, 1987, Pat. No. 4,862,483. This application Jun. 29, 1989, Ser. No. 373,211

Claims priority, application United Kingdom, Apr. 21, 1986, 8609711

Int. Cl.[5] H04L *27/00*

U.S. Cl. 375—94 **1 Claim**

1. A method of detection of signals at a receiver following transmission of symbols from at least one transmitter comprising the steps carried out for each of a succession of sample instants, of:

receiving a digital sample representative of at least one of said symbols from a communication channel between the transmitter and the receiver,

forming a plurality of different predictions of the effect of the channel on said symbols, each prediction being derived from the digital sample at that instant, and

using the predictions to carry out near-maximum likelihood detection of said digital sample received in one of said sample instants.

DETECTION OF DIGITAL SIGNALS RECEIVED FROM MULTIPATH CHANNELS

Charles M. Hackett, Jr., 38 Farragut, Irvine, Calif. 92720

Filed Jan. 23, 1989, Ser. No. 300,785

Int. Cl.[5] H04L *1/00*

U.S. Cl. 375—101 **9 Claims**

1. For any positive integers N, M, and K with N=K+2M, a method for detection or demodulation of a phase-and-amplitude-shift-keyed signal having a block format wherein each block has N symbols and is comprised of a known fixed pattern of M symbols preceding and following K symbols of data, where said signal is transmitted through a channel that may have multiple propagation paths and may add interfering noise, said method comprising the steps of:

a. obtaining from a received waveform complex samples of its complex-envelope at a rate which is an integer multiple of its symbol rate;

b. establishing block synchronization and symbol synchronization for said complex samples;

c. down-sampling to the symbol rate, and buffer-storing the N complex samples of the block to be detected and the first M complex samples of the next subsequent block;

d. computing the M-point fast Fourier transform (FFT) of the first M complex samples of said block to be detected, and computing the M-point FFT of the first M complex samples of said next subsequent block, where an M-point FFT is an efficient algorithm for evaluating an M-point discrete Fourier transform;

e. computing a weighted average of the two FFT's computed in step d;

f. computing the quotient of said average formed in step e divided component-by-component by the precomputed M-point FFT of said known fixed pattern;

g. obtaining a complex vector that is an estimate of the multipath-structure of the channel by computing the M-point inverse fast Fourier transform (IFFT) of said quotient formed in step f, and subjecting the components of said IFFT to a threshold;

h. computing the N-point FFT of said estimate of the multipath-structure of the channel obtained in step g padded with K+M zeros;

i. scaling up the small components of said N-point FFT computed in step h and replacing any zero by a non-zero number;

j. computing the N-point FFT of said block to be detected;

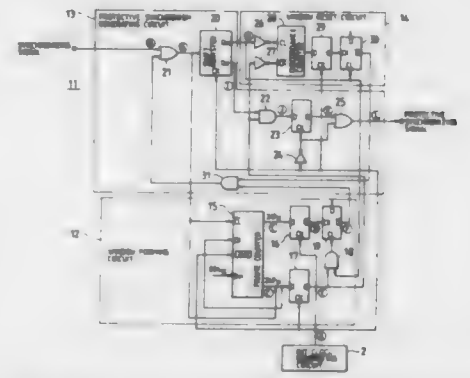
k. dividing component-by-component said N-point FFT formed in step j by the result of step i;

l. forming analog estimates of said data symbols and pattern symbols by computing the IFFT of the result of step k;

m. detection of said analog estimates of said data symbols formed in step l by an operation appropriate for detection of a signal of the same modulation transmitted over a noisy channel having but a single propagation path.

5,005,190

WINDOW SYSTEM SYNCHRONIZING PROTECTIVE CIRCUIT



Satoshi Itoi, Osaka, Japan, assignor to NEC Home Electronics Ltd., Osaka, Japan

Filed Nov. 30, 1988, Ser. No. 278,029

Claims priority, application Japan, Nov. 30, 1987, 62-302843

Int. Cl.[5] H04L *7/08*

U.S. Cl. 375—108 **17 Claims**

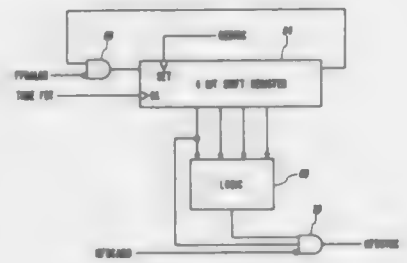
1. A window system synchronizing protective circuit comprising:

a bit clock for producing bit clock pulses;

window dorming circuit means for forming a variable-duration window having a predetermined position and a maximum duration corresponding to a predetermined number of said bit clock pulses, said window forming circuit

means generating a window signal representing said window;

protective synchronizing circuit means for detecting a synchronizing signal within said window and generating a protective synchronizing signal in accordance with said window signal, said duration of said window being terminated upon the detection of the synchronizing signal; and



window reset circuit means, responsive to said window forming circuit means and said protective synchronizing circuit means, for changing the position of said window when the synchronizing signal has not been detected in said window over a predetermined period.

5,005,191

SYSTEM FOR SYNCHRONIZING DATA FRAME GROUPS IN A SERIAL BIT STREAM

James T. O'Connor, Dallas, and David A. Courtright, Carrollton, both of Tex., assignors to SGS-Thomson Microelectronics, Inc., Carrollton, Tex.

Filed Jun. 30, 1989, Ser. No. 374,278
Int. Cl.[5] H04J 3/06
U.S. Cl. 375—116 **8 Claims**

1. A system for determining multiframe alignment in a serial bit stream by a receiver, each multiframe having a plurality of frames, each frame having a plurality of bits including a frame bit, comprising:

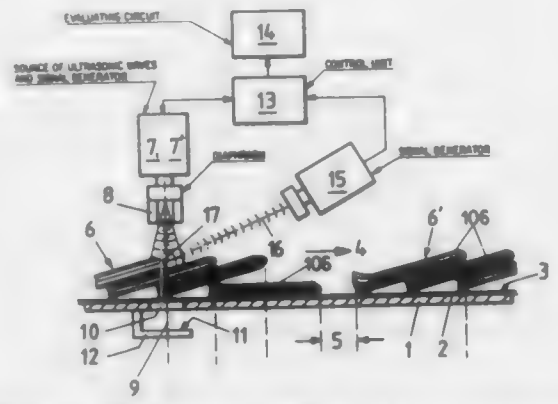
first logic means for identifying frame alignment, wherein a frame alignment signal is generated when frame bits for a plurality of consecutive frames are available at known positions;

second logic means for generating a candidate signal when the available frame bits match a valid alignment pattern, wherein a candidate signal can be generated only simultaneously with the frame alignment signal;

a shift register having bits initially set to a first logic state, wherein said shift register is clocked by the frame alignment signal;

third logic means for shifting the first logic state into said shift register when said second logic means generate the candidate signal, and for shifting a second logic state into said shift register otherwise; and

an alignment signal generator for generating a multiframe alignment signal when exactly one selected bit of said shift register is in said first logic state when the candidate signal and the frame alignment signals are generated.



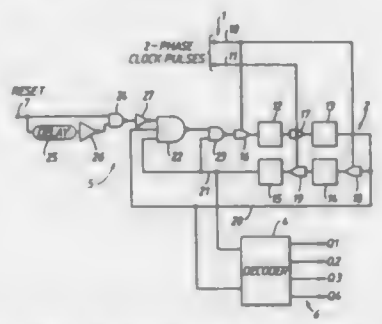
5,005,192

METHOD OF AND APPARATUS FOR COUNTING FLAT OBJECTS IN A STREAM OF PARTIALLY OVERLAPPING OBJECTS

Hanspeter Duss, Baden, Switzerland, assignor to GRAPHA-Holding AG, Hergiswil, Switzerland

Filed Sep. 14, 1989, Ser. No. 407,058
Claims priority, application Switzerland, Sep. 30, 1988, 3654/88
Int. Cl.[5] G06M 7/10
U.S. Cl. 377—8 **16 Claims**

1. A method of monitoring flat objects of a stream of successive partially overlapping objects, particularly printed sheets, brochures, signatures, newspapers and sections of newspapers, comprising the steps of conveying the stream along a predetermined path; generating a series of ultrasonic waves; directing the ultrasonic waves of said series against successive objects of said stream in a predetermined portion of said path to thus produce ultrasonic echoes having characteristics indicative of the respective objects, including transmitting ultrasonic waves



from a first location at a first distance from said portion of said path; detecting said echoes at a second location at a second distance from said portion of said path; ascertaining the length of intervals of transmission of waves at said first location to arrival of the respective echoes at said second location; comparing the intervals for each of said waves; and utilizing the results of said comparing step to count the number of those objects which are conveyed along said portion of said path.

5,005,193

CLOCK PULSE GENERATING CIRCUITS

Richard D. Simpson, Houston, Tex., assignor to Texas Instruments Incorporated, Dallas, Tex.

Filed Jun. 29, 1989, Ser. No. 374,194
Int. Cl.[5] H03K 5/19, 21/12
U.S. Cl. 377—33 **12 Claims**

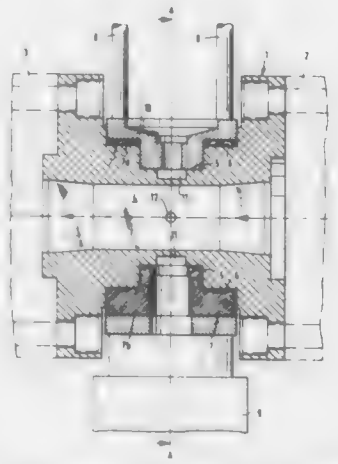
1. A clock pulse generating circuit comprising:

an input for a clock drive signal;

a multi-state circuit responsive to the clock drive signal to produce a cyclically repeated sequence of different output combinations of bits, each combination including a plurality of bits;

decoding means responsive to the output combinations of the multi-state circuit to produce a plurality of clock pulse outputs corresponding respectively to the different output combinations of the multi-state circuit;

reset control circuit means interconnected between said multi-state circuit and said decoding means and responsive to a reset signal and to a particular state of the multi-state circuit corresponding to a predetermined output combination of bits from said multi-state circuit to provide a control signal to said multi-state circuit blocking the response of the multi-state circuit to the clock drive signal for a period of time; and



the multi-state circuit continuing to follow the cyclically repeated sequence of different output combinations of bits until the predetermined output combination of bits corresponding to the particular state of the multi-state circuit is reached, the multi-state circuit in response to the control signal from said reset control circuit means being held in the particular state to which the predetermined output combination of bits corresponds until the control signal from said reset control circuit means is terminated.

5,005,194

METHOD AND APPARATUS FOR DETECTING IN CONFORMITY WITH PROCESS TIME MIXING RATIOS IN PLASTICS AND RUBBER COMPOUNDING

Hans-Gerhard Fritz, Uhingen, and Rudi Löffel, Karlsruhe, both of Fed. Rep. of Germany, assignors to Hoechst Aktiengesellschaft, Fed. Rep. of Germany

Filed Feb. 27, 1990, Ser. No. 485,430
Claims priority, application Fed. Rep. of Germany, Feb. 28, 1989, 3906203
Int. Cl.[5] G01N 23/06
U.S. Cl. 378—53 **2 Claims**

1. A method of detecting in conformity with process time mixing ratios in plastics and rubber compounding, wherein one uses an apparatus comprising a barrel section (1) with an axial channel (4) of rectangular cross section, with sliding surfaces (5) and (6) for a carriage, which can move on both sides of the barrel section (1) transversely to the axis of the barrel section (1) and bears on the one hand holders (8) for a radiation source selected from a group consisting of a gamma source, an X-ray source, and a bremsstrahlungs source, and on the other hand a scintillation detector system (9), the narrow sides of the channel (4) facing the sliding surfaces (5) and (6) and the wall thickness of the barrel section (1) being reduced in the region of the axis joining radiation source and detector system, to transirradiate the polymer melt flowing through the channel (4) with the measuring beam emanating from the radiation source and to determine from the reduction in the radiation intensity the proportion by volume k_F in accordance with the formula

$$k_F = \frac{1}{[\rho_F \cdot \mu_F - \rho_P \cdot \mu_P]} \cdot \left[\frac{1}{L} \cdot \ln\left(\frac{I_{St}}{I_{St,G}}\right) - \rho_P \cdot \mu_P\right]$$

in which

k_F = percentage proportion by volume of the filler, reinforcing material, pigment or blend component,

I_{St} = measured radiation intensity on the empty channel (4),

$I_{St,G}$ = measured radiation intensity on the channel (4) filled with melt,

μ_P = mass attenuation coefficient of the polymer,

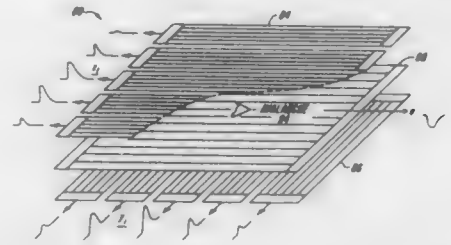
μ_F = mass attenuation coefficient of the filler, reinforcing material, pigment or blend component

L = transirradiated material length,

ρ_F = density of the filler, reinforcing material, pigment or blend component and

ρ_P = density of the polymer at the melt temperature T and the pressure p and to calculate from this the percentage proportion by weight of b of the filler, reinforcing material, pigment or blend component in accordance with the equations

$$k_P = 1 - k_F, \; a = \frac{k_P \cdot P}{[k_P(\rho_F - \rho_P) - \rho_F]} \text{ and } b = 1 - a.$$



wherein k_P stands for the percentage proportion by volume of the polymer and a stands for the percentage proportion by weight of the polymer.

5,005,195

DIGITAL READOUT SYSTEM FOR RADIOGRAPHIC IMAGING

Richard C. Lanza, Brookline, and Joseph R. Votano, Tewksbury, both of Mass., assignors to Expert Image Systems, Inc., Somerville, Mass.

Filed Mar. 10, 1989, Ser. No. 321,766
Int. Cl.[5] G01N 23/04; G01T 1/185
U.S. Cl. 378—62 **16 Claims**

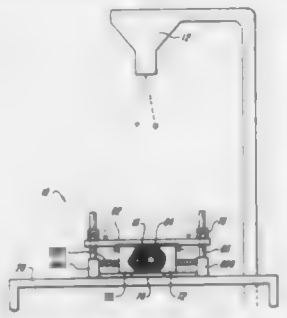
1. A readout system for transferring data from a radiation detector, the readout system comprising:

a plurality of event gating means each electrically connected to one of a plurality of detector lines for receiving signals simultaneously generated on said detector lines at a plurality of locations within a radiation detector in response to a radiation event, said event gating means operating to process the signals from a plurality of detector lines in parallel to produce a set of signals representative of the detector lines that have sensed said radiation event; and

means for estimating the locus of the radiation event from said signals by delineating said signals along at least one axis, determining the highest and lowest detector lines along said axis on which a signal has been generated, and selecting a median line as the locus of the radiation event.

5,005,196

LIMB POSITIONING AND CALIBRATION APPARATUS FOR RADIOGRAPHIC IMAGING



Richard C. Lanza, Brookline, and Joseph R. Votano, Tewksbury, both of Mass., assignors to Expert Image Systems, Inc., Somerville, Mass.

Filed Mar. 10, 1989, Ser. No. 321,990
Int. Cl.[5] G01D 18/00
U.S. Cl. 378—207 **10 Claims**

4. A method of calibrating a radiographic imaging system, the method comprising:

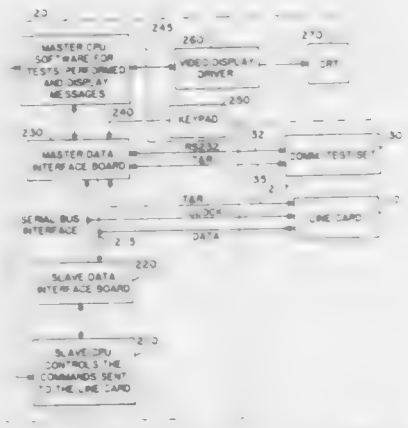
disposing at least two side blocks of materials having differ-

ent radiation absorption characteristics in stationary positions adjacent to a limb and between a photon radiation source and a detector of a radiographic imaging system said side blocks permitting concurrent measurement of differences in the intensity of photon radiation transmitted

through the two materials without affecting the acquisition of an image by the detector; and

comparing the intensity of photon radiation transmitted through said blocks to establish a comparative measurement value for said imaging system.

5,005,197



METHOD AND APPARATUS AS FOR TESTING A TELEPHONE LINE INTERFACE CARD

Gerald J. Parsons; Brian D. Greenwald, both of Chester Springs; John J. McGrath, Kennett Square, and Stephen W. Andrasko, Drexel Hill, all of Pa., assignors to Communications Test Design, Inc., West Chester, Pa.

Filed Nov. 30, 1989, Ser. No. 444,106

Int. Cl.[5] H04M *3/26*

U.S. Cl. 379—21 **14 Claims**

1. Apparatus suitable for testing a line interface card (LIC) for communication system applications, said LIC including a single data terminal for alternately transmitting data from said LIC and receiving data at said LIC, said apparatus comprising:

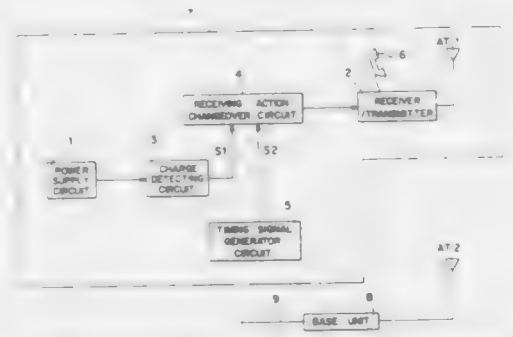
a bidirectional data bus including a single conductor for coupling to the single data terminal of said LIC;

first processing means, coupled to the single conductor of said bidirectional data bus, for receiving and analyzing data which is produced by the LIC; and

second processing means, physically distinct from said first processing means and coupled to the single conductor of said bidirectional data bus, for transmitting data to the LIC.

5,005,198

CORDLESS TELEPHONE APPARATUS



Manabu Toda, Hiroshima, Japan, assignor to Sharp Kabushiki Kaisha, Osaka, Japan

Filed Jul. 11, 1989, Ser. No. 377,960

Claims priority, application Japan, Jul. 11, 1988, 63-173360

Int. Cl.[5] H04M *11/00*

U.S. Cl. 379—58 **11 Claims**

1. A cordless telephone apparatus including a base unit and a portable unit for transferring information between the base and portable unit by radio communications, the portable unit being powered by a rechargeable secondary battery and further including an internal receiver operating in an intermittent receiving action, the portable unit comprising:

detecting means for detecting when the secondary battery is being charged; and

switching means for switching the receiving action of the receiver to a continuous receiving action of continual power supply from an external power source, from the intermittent receiving action, when the secondary battery is being charged, as detected by the detecting means.

TELEPHONE INTERFACE CIRCUIT

Christian Dupillier, Brignoud, France, assignor to Dolphin Integration, Meylan, France

Filed Nov. 15, 1989, Ser. No. 436,588

Int. Cl.[5] H04M *1/00*

U.S. Cl. 379—375 **18 Claims**

1. A line powered telephone interface circuit, comprising:

input means for receiving an input from a telephone line (L1, L2) and providing an output to at least one telephone plug (1, 2) connectable with a telephone set jack, said interface circuit connected to various terminals;

ring detector means (10) for detecting a ring signal on said telephone line;

answering means (32) for establishing an off-hook connection on said telephone line in response to a ring signal being detected for a determined time duration by said ring detector means; and

control means including timing, selecting and steering means for selectively connecting said telephone line to a selected terminal in response to a command signal received on said telephone line (12) wherein each plug includes

connection means for directly connecting to the telephone line,

inhibiting means for inhibiting the ringing of the corresponding telephone set, and

connection means for connecting a sound transducer (21, 22) with said third means, said sound transducer operable by a low voltage signal.

PUBLIC KEY/SIGNATURE CRYPTOSYSTEM WITH ENHANCED DIGITAL SIGNATURE CERTIFICATION

Addison M. Fischer, 60 14th Ave. S., Naples, Fla. 33942

Continuation-in-part of Ser. No. 155,467, Feb. 12, 1988, Pat. No. 4,868,877. This application Mar. 7, 1989, Ser. No. 319,780

Int. Cl.[5] H04K *1/00*

U.S. Cl. 380—30 **58 Claims**

1. In a communication system having a plurality of terminal devices coupled to a channel over which users may exchange messages, at least some of said user's having a public key and an associated private key, a method for controlling authority in a hierarchical manner among a group of users, comprising the steps of:

specifying at least first and second digital authority defining data structures, said data structures having digital values which can be associated with at least one user's private key,

said step of specifying including the step of

digitally specifying a set of authorities from a sufficient plurality of authorities so that a first user may digitally delegate authorities to second and third users so that the authorities delegated to the second user are different than those delegated to the third user, providing that the first user's digital authority defining data structure allows for such delegation; and

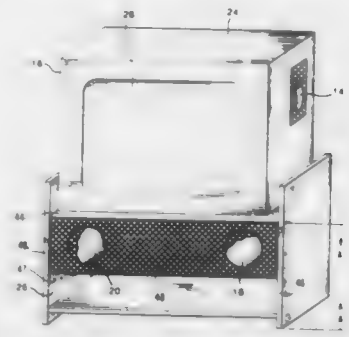
digitally signing by the first user the second digital data structure so that signatures performed by the second user's private key associated with the second data structure will be recognized upon an electronic analysis of the digital signature as having been granted said authority by the first user in accordance with the first user's authority-defining data structure.

5,005,201

APPARATUS AND METHOD THEREOF FOR IMPROVEMENT OF STEREOPHONIC SOUND

Mark F. Rumreich, and Robert P. Parker, both of Indianapolis, Ind., assignors to RCA Licensing Corporation, Princeton, N.J.

Filed Feb. 14, 1989, Ser. No. 310,102



Int. Cl.[5] H04R *5/02*

U.S. Cl. 381—24 **4 Claims**

1. Apparatus for improving stereophonic sound from a source comprising:

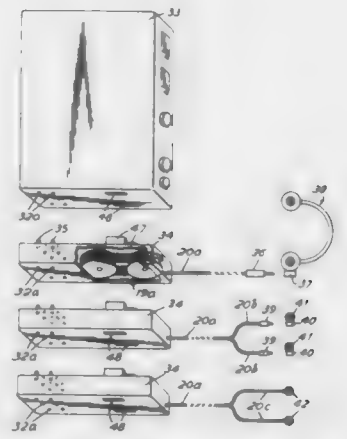
a source of stereophonic sound having a cabinet and two internal loudspeakers disposed in a first spaced apart relationship within the cabinet and driven by stereophonic signal channels internal of the cabinet, said internal loudspeakers providing stereophonic sound external of the cabinet,

means for coupling the stereophonic signals to at least two other loudspeakers disposed eternal of the source, and

means for coupling a mixture of the stereophonic channels to said two internal loudspeakers at reduced power with respect to the external loudspeakers, said mixture of stereophonic channels comprising difference signals of said stereophonic channels.

5,005,202

HIGH FIDELITY STEREOPHONIC REPRODUCTION SYSTEM



Andreas Pavel, 20, Via Gustavo Modena, Milan, Italy

Continuation of Ser. No. 105,168, Oct. 7, 1987, abandoned, which is a continuation-in-part of Ser. No. 539,232, Oct. 5, 1983, which is a division of Ser. No. 265,124, May 19, 1981, Pat. No. 4,412,106, which is a continuation of Ser. No. 47,967, Jun. 12, 1979, abandoned, which is a continuation-in-part of Ser. No. 889,664, Mar. 24, 1978, abandoned. This application Jul. 19, 1989, Ser. No. 382,048

Claims priority, application Italy, Mar. 24, 1977, 21625 A/77; Fed. Rep. of Germany, Jul. 22, 1987, 3724208

Int. Cl.[5] H04R *5/02*

U.S. Cl. 381—25 **23 Claims**

1. A personal stereo sound system device, to be carried and used on the person of at least one individual listener, comprising the combination of:

(i) a program source playback device, including control means for program selection, arranged to produce simultaneous mutually different stereo program output signals,

(ii) stereo signal amplifier means, including output volume adjusting means, impedance match to and arranged to receive said stereo output signals from said source device,

(iii) light weight paired stereo headphone or earphone means, which is the only sound reproduction means, phys-

ically remote from said source device, impedance and sensitivity matched to and arranged to receive separately, one for each phone, the output signals of said amplifier means,

(iv) multi-conductor lead means for electrically connecting said amplifiers means to said phone means,

(v) lead-reeling means capable of receiving and of dispensing a desired length of said lead means to permit the phone means to be used at a variable distance from said amplifier means,

(vi) power source means comprising a battery electrically connected to said amplifier means and to said source device, and

(vii) wherein said control means, said source device, said amplifier means, said volume adjusting means and said power source means are housed in a single portable unit, and wherein said lead reeling means are housed in a reel pack, adapted for mechanical and electrical connection to and disconnection from another like pack and mechanically and electrically connectable to and disconnectable from said portable unit.

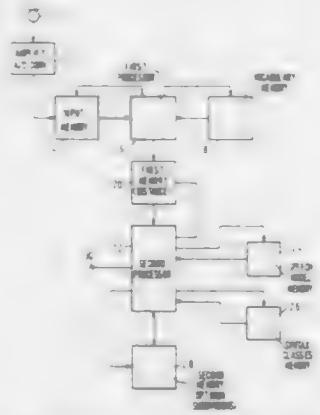
METHOD OF RECOGNIZING CONTINUOUSLY SPOKEN WORDS



Hermann Ney, Hamburg, Fed. Rep. of Germany, assignor to U.S. Philips Corporation, New York, N.Y.

Filed Mar. 30, 1988, Ser. No. 175,085

Claims priority, application Fed. Rep. of Germany, Apr. 3, 1987, 3711348

Int. Cl.[5] **G10L** *5/00*

U.S. Cl. 381—43 **4 Claims**

1. A method of recognizing a speech signal which is derived from coherently spoken words and includes a temporal sequence of speech values, each of which indicates a section of the speech signal, comprising: comparing the speech values with given stored comparison values, of which each time a group of comparison values represents a word of a given vocabulary; summing the comparison results over different sequences of combinations of comparison values and speech values to a distance sum per sequence, at each new speech value for each word calculating and storing in a first memory a distance sum of such sequences which for each word begin at different earlier speech values as a starting point, traverse the whole word as far as the instantaneous speech value and, related to the respective starting point, produce a minimum distance sum; then, for each of these starting points, according to an assignment contained in a first stored list of the words of the vocabulary to per word at least one syntactical class, for each class storing the smallest distance sum of all words assigned to this class together with an indication about the assignment of the word yielding this smallest distance sum in a second memory; subsequently, according to a second stored list, checking whether and into which two further syntactical classes each class can be subdivided and each time that a subdivisibility is ascertained again for each starting point as far as the earliest speech signal, adding each distance sum stored for the one of the two further classes for the respective starting point and a number of intermediate points lying successively at points adjacent to each other between the starting point and the instantaneous speech value, and each distance sum stored for the other of the two further classes for each intermediate point and the instantaneous speech value, and comparing each sum with the distance sum of the subdivided class and, in case it is larger than the smallest of the added distance sums, storing said sum instead thereof together with an indication about the subdivision at the particular intermediate point which has yielded the smallest sum; and after processing the last speech value from the class indicating a whole sentence through the subdivision into further classes indicated therein at the storage site for the first speech value as starting point and through the subdivision indicated at the respective further classes, determining a sequence of words and supplying same as recognized spoken words.

5,005,204

DIGITAL SOUND SYNTHESIZER AND METHOD

Michael A. Deaett, N. Kingstown, R.I., assignor to Raytheon Company, Lexington, Mass.

Continuation-in-part of Ser. No. 756,220, Jul. 18, 1985, abandoned. This application Mar. 30, 1989, Ser. No. 332,414

Int. Cl.[4] **G10L** *5/00*

U.S. Cl. 381—51 **10 Claims**

1. A method for providing a synthesized transient signal which is a replica of an original mechanically produced transient signal comprising the steps of:

sampling said original signal to provide sampled signals at a sample rate;

grouping consecutive sampled signals into blocks;

determining the autocorrelation coefficients for the sampled signals in each block;

determining the covariance matrix coefficients of each successive block of said sampled signal from the autocorrelation coefficients of each corresponding block;

applying a pseudo-random digital noise signal which changes at the sample rate to the input of a recursive filter;

applying the coefficients derived from the covariance matrix as multiplying factors to the respective multipliers of said recursive filter for a time equal to that of a block of said sampled signal;

changing the covariance matrix derived coefficients successively applied to said recursive filter to the values corresponding to the time of each said successive block of sampled signal; and

obtaining the output of said recursive filter to provide a synthesized transient signal which reproduces the sound of said original transient signal.

HANDWRITING RECOGNITION EMPLOYING PAIRWISE DISCRIMINANT MEASURES

Hamed A. Ellozy, Bedford Hills; Henry H. Jeanty, Patterson, and Charles C. Tappert, Ossining, all of N.Y., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Jan. 12, 1990, Ser. No. 463,770

Int. Cl.[5] **G06K** *9/00*

U.S. Cl. 382—3 **18 Claims**

1. In a handwriting recognition system, a method for discriminating a first handwritten character from a second handwritten character, comprising the steps of:

selecting one or more discriminants that satisfy a predetermined threshold relating to a number of occurrences (N) of original characters in a training set and to a predetermined threshold relating to a percent accuracy (P) in correctly differentiating between training characters;

assigning a weight to each selected discriminant, the weight being equal to a product (P*G) of a goodness value (G) associated with the discriminant and (P); and

summing the weights to discriminate between the first and the second characters.

5,005,206

METHOD OF AND ARRANGEMENT FOR IMAGE DATA COMPRESSION BY MEANS OF A NEURAL NETWORK

Martine Naillon, Sceaux, and Jean-Bernard Theeten, Ozoir, both of France, assignors to U.S. Philips Corporation, New York, N.Y.

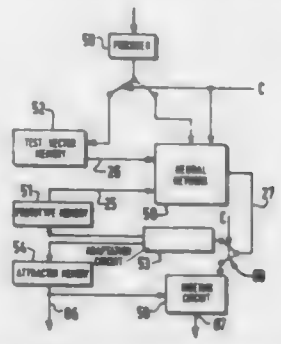
Filed Nov. 20, 1989, Ser. No. 439,725

Claims priority, application France, Nov. 25, 1988, 88 15427

Int. Cl.[5] **G06K** *9/46*

U.S. Cl. 382—56 **10 Claims**

1. A method used in an arrangement for image data compression by vector quantization in accordance with a precoding in blocks constituted by a plurality of picture elements, thereafter comparing by means of a neural network precoded blocks with reference words stored in the form of a code book in the neural network so as to transmit to a receiver selected indices corresponding to the index of the reference words nearest to the precoded blocks, characterized in that it includes a stage of generating an adaptive code book by means of the neural network, the stage comprising the following steps:



A—feeding the neural network with prototypes which prescribe the states of stable neurons in the neural network which determines its synaptic coefficients associated with each prototype during the learning phases,

B—resolving by means of the neural network with the aid of test vectors supplied by the pictures by effecting in accordance with consecutive dynamic relaxation phases performed by feeding back the input to the output of the neural network, after which the states of the neurons are stabilized in configuration denoted attractors around which the test vectors are grouped in clouds,

C—comparing each test vector with its corresponding attractor, with determination of the distance by which they are separated from each other and determination of the rate of frequentation of each attractor by the test vector,

D—determining the rough mean of all the distances:

and when this rough mean exceeds a predetermined value, selecting attractors whose rate of frequentation exceeds a predetermined rate, thereafter determining the centre

of gravity of the total cloud existing around each selected attractor to generate an optimum attractor when this attractor is the better and preserve the old attractor in the opposite case so as to form a group of new attractors which are then used again as new prototypes to restart the method of step A,

and when this rough mean is less than the predetermined value, to utilize all the final attractors, to form the reference words of the adaptive code book which are stored in a synaptic coefficients store of the neural network, said reference words being transmitted to the receiver to update its local code book,

the method also including a coding stage utilizing the said reference words to encode the rough image and thereafter to select the indices to be transmitted.

Int. Cl.[5] **H02P** *5/165*

U.S. Cl. 388—816 **16 Claims**

1. A device for controlling the speed of a d.c. motor comprising: means for deriving a low frequency periodic signal

(S_M) induced by rotation of the motor, a circuit for processing said periodic signal, said processing circuit including a shaping circuit connected in cascade with an integrator circuit which supplies a motor-speed signal (S_V) comprising a direct voltage proportional to the motor-speed, a comparator circuit which compares said direct voltage (S_v) with a reference voltage (S_{ref}), said comparator circuit having an output terminal at which a control voltage (V_o) is produced, and a "negative-resistance" circuit coupled to the output terminal of the comparator circuit and to the motor such that the negative-resistance circuit at least partly compensates for the internal resistance of the motor, said control voltage being applied to an input terminal of said negative-resistance circuit so as to control the motor supply voltage to a value which is a substantially linear combination of the motor current and the control voltage.

5,005,209

PROCESS AND APPARATUS FOR THE TRANSMISSION OF SELECTIVE ADDRESSES AND/OR EMERGENCY MESSAGES IN SHORTWAVE RADIO NETWORKS

Roland Kung, Wolfhausen, and Hanspeter Widmer, Zurich, both of Switzerland, assignors to Zellweger Telecommunications AG, Hombrechtikon, Switzerland

Filed Jun. 30, 1988, Ser. No. 213,601
Int. Cl.[5] H04Q *7/00*
U.S. Cl. 455—32 **23 Claims**

1. Method for the transmission of selective addresses and/or emergency messages in short-wave radio networks having several stations which each include a transmitter and/or a receiver, comprising the steps of:

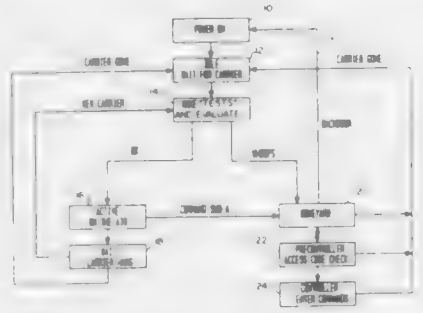
operating the stations in a channel-in-band scanning mode;

transmitting a calling signal consisting of a synchronization signal and an address signal, using as the address signal a modified FSK signal which forms a diversity pair by subdivision into two identical m-ary frequency-time-shift-keying (FTSK) signals; and,

numerically processing a received signal in a frequency-time plane by carrying out a frequency adaption and a transformation of each received FTSK pulse and FTSK slot in a frequency space by a fast Fourier transformation (FFT).

5,005,210

METHOD AND APPARATUS FOR CHARACTERIZING A RADIO TRANSMITTER



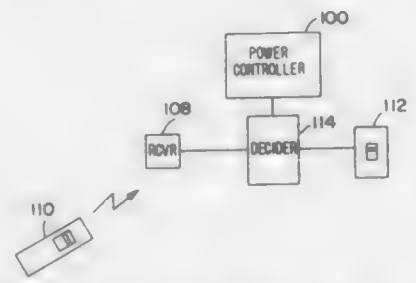
Philip J. Ferrell, Seattle, Wash., assignor to The Boeing Company, Seattle, Wash.

Filed Dec. 30, 1987, Ser. No. 139,862
Int. Cl.[5] H04B *17/00*
U.S. Cl. 455—115 **20 Claims**

1. Apparatus for determining transient characteristics of a radio transmitter that transmits a transient signal, comprising:

means for receiving the transient signal transmitted by the transmitter;

means for measuring the signal phase of the transient signal with respect to a predetermined frequency; and



means for analyzing the signal phase of the transient signal to determine transient characteristics of the radio transmitter.

5,005,211

WIRELESS POWER CONTROL SYSTEM WITH AUXILIARY LOCAL CONTROL

Stephen J. Yuhasz, Zionsville, Pa., assignor to Lutron Electronics Co., Inc., Coopersburg, Pa.

Continuation of Ser. No. 79,845, Jul. 30, 1987, abandoned. This application Sep. 25, 1989, Ser. No. 412,572
Int. Cl.[5] H04B *10/10*
U.S. Cl. 455—603 **6 Claims**

1. A wireless power control system with auxiliary local control comprising, in combination,

(a) transmitter means to transmit a radiant first control signal,

(b) receiver means to receive and store said first control signal,

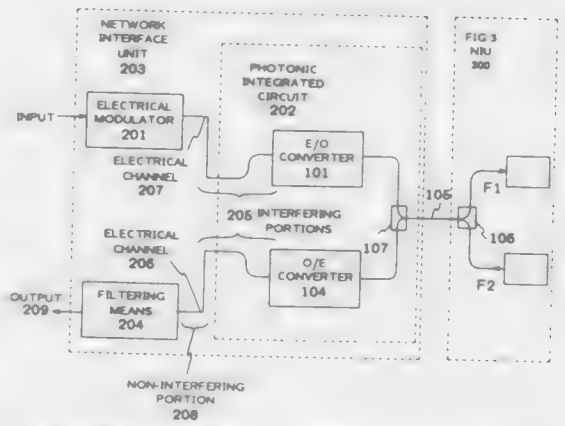
(c) auxiliary local control means to provide a second control signal,

(d) decider means to select one of said first or second control signals and to provide said selected signal to power control means to control the power supplied from a source to a load over a substantially continuous range of values, wherein said transmitter means has actuator means manually movable through a continuous range of positions to produce said first control signal.

5,005,212

INTERFERENCE SUPPRESSION IN OPTICAL COMMUNICATION SYSTEMS

Thomas H. Wood, Holmdel, N.J., assignor to AT&T Bell Laboratories, Murray Hill, N.J.



Filed Dec. 12, 1989, Ser. No. 449,039
Int. Cl.[5] G02F *1/00, 2/00;* **H01S** *3/00*
U.S. Cl. 455—606 **15 Claims**

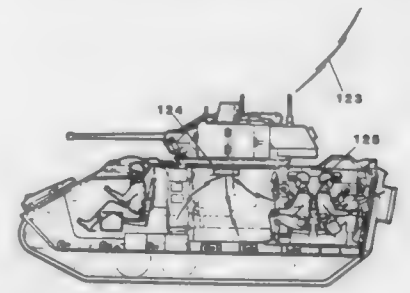
1. A network interface unit (NIU) for interfacing an electrical device to an optical network, said NIU comprising:

first and second electrical transmission lines (**206**,**207**), arranged to effectuate substantial electromagnetic coupling therebetween;

electro-optical converting means (**101**) connected to said first electrical transmission line for receiving a first electrical signal and converting the first electrical signal into a first optical signal for transmission to the optical network;

optical-electro converting means (**104**) for (a) receiving a second optical signal from the optical network, (b) converting said second optical signal into a second electrical

signal, and (c) transmitting said second electrical signal via the second electrical transmission line; and



means connected to said second electrical transmission line for increasing a ratio of energy in the second electrical signal to energy electromagnetically coupled from said first electrical transmission line to said second electrical transmission line.

5,005,213

HEAD MOUNTED VIDEO DISPLAY AND REMOTE CAMERA SYSTEM

Charles M. Hanson, Richardson; Vaughn J. Koester, Dallas, and Robert D. Fallstrom, Richardson, all of Tex., assignors to Varo, Inc., Garland, Tex.

Division of Ser. No. 382,243, Jul. 19, 1989, which is a division of Ser. No. 168,137, Mar. 14, 1988, which is a division of Ser. No. 883,994, Jul. 10, 1986, Pat. No. 4,786,966. This application Apr. 11, 1990, Ser. No. 507,978
Int. Cl.[5] H04B *10/22;* **H04N** *5/33, 7/18, 7/22*
U.S. Cl. 455—617 **9 Claims**

1. A video system for use with a vehicle, comprising:

a transmitter mounted within said vehicle for omnidirectionally transmitting a video signal of an image through free space within the vehicle; and

a video receiver and display mountable to a person's head for receiving and displaying the image irrespective of the person's location within the vehicle.

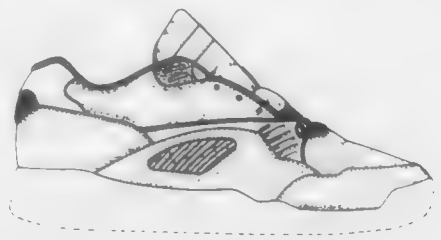
315,824



SHOE UPPER

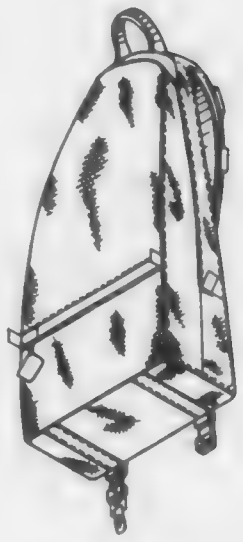
Peter Backus, Portland, and Craig Feller, Tigard, both of Oreg., assignors to Avia Group International, Inc., Portland, Oreg.

Filed Mar. 28, 1990, Ser. No. 500,272

Term of patent 14 years

U.S. Cl. D2—314

315,825



BACKPACK

Anthony Hutton, Bedford, England; Phillip A. Straughan, Mount Vernon, N.Y.; Tiffany A. Norwood, Ft. Washington, Md., and Oliver Pfeffer, Ithaca, N.N.Y., assignors to ToPAQ, Inc., Ithaca, N.Y.

Filed Dec. 4, 1989, Ser. No. 445,475

Term of patent 14 years

U.S. Cl. D3—32

315,826

ACCESSORY CONTAINER FOR A GOLF BAG

Enrico Fumia, Turin, Italy, assignor to Pininfarina Extra S.r.l., Turin, Italy

Filed Dec. 15, 1987, Ser. No. 133,454

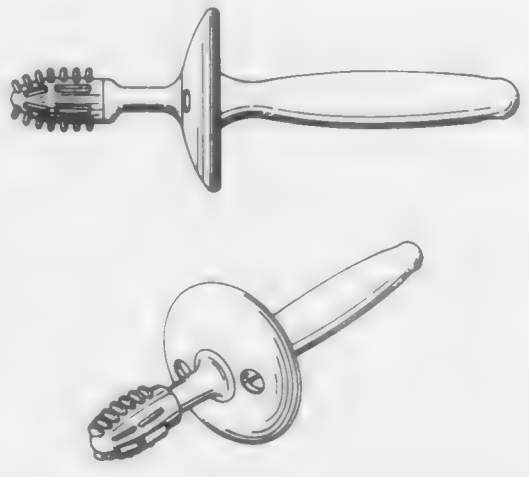
Claims priority, application Italy, Jun. 15, 1987, 53424/87[U]

Term of patent 14 years

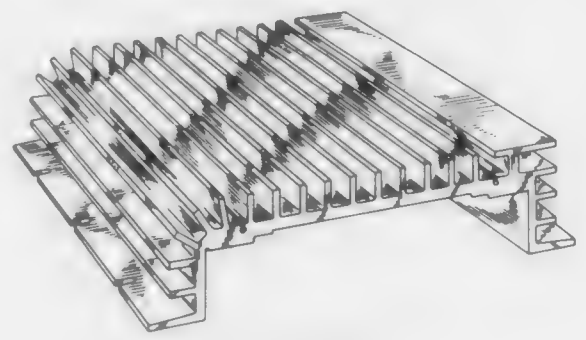
U.S. Cl. D3—37

315,827
SOFT LUGGAGE CASE
William L. King, Denver, Colo., assignor to Samsonite Corporation, Denver, Colo.
Filed Sep. 25, 1987, Ser. No. 101,331
Term of patent 14 years
U.S. Cl. D3—71

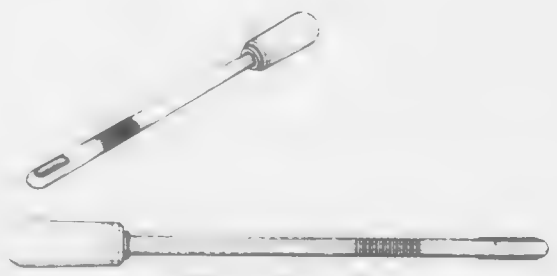
315,828
ELEMENT OF A SHOE UPPER
Larry M. Clark, Simi Valley, and Janell E. Magdaleno, Rosemead, both of Calif., assignors to L.A. Gear, Inc., Los Angeles, Calif.
Division of Ser. No. 295,561, Jan. 10, 1989, abandoned. This application Feb. 27, 1989, Ser. No. 315,778
Term of patent 14 years
U.S. Cl. D2—314



315,829
WATER PURIFYING CANTEEN
Melvin R. Covington, 3711 N. 75th St., Scottsdale, Ariz. 85251
Filed Mar. 12, 1987, Ser. No. 24,809
Term of patent 14 years
U.S. Cl. D3—30.1

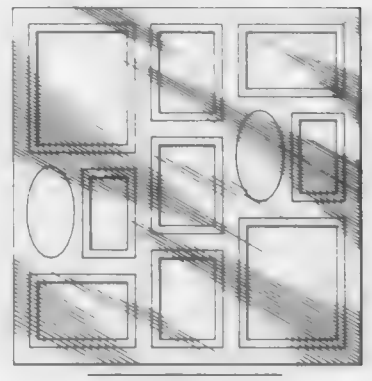


315,830
LIGHTED HANDBAG
Ellen Roberts, 541 Walnut St., Apt. B7, Elizabeth, N.J. 07201
Filed Feb. 19, 1988, Ser. No. 157,521
Term of patent 14 years
U.S. Cl. D3—52

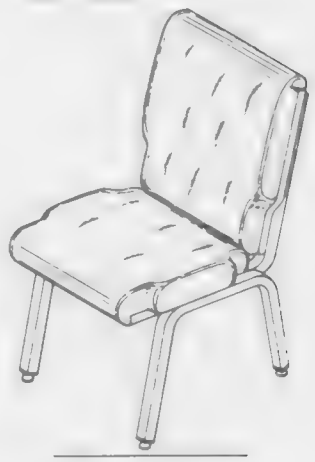


315,831
TOOTHBRUSH
Yusuke Kawano, Tokyo, Japan, assignor to Pigeon Co., Ltd., Tokyo, Japan
Filed Dec. 6, 1988, Ser. No. 280,728
Claims priority, application Japan, Jun. 6, 1988, 63-22113
Term of patent 14 years
U.S. Cl. D4—104

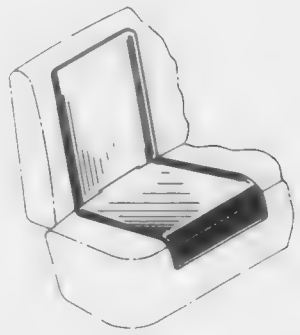
315,832
HEAT SINK
George A. Rocheleau; Michael C. Graves, both of Mesa, and John France, Phoenix, all of Ariz., assignors to Rockford Corporation, Tempe, Ariz.
Filed Oct. 24, 1988, Ser. No. 261,280
Term of patent 14 years
U.S. Cl. D13—179



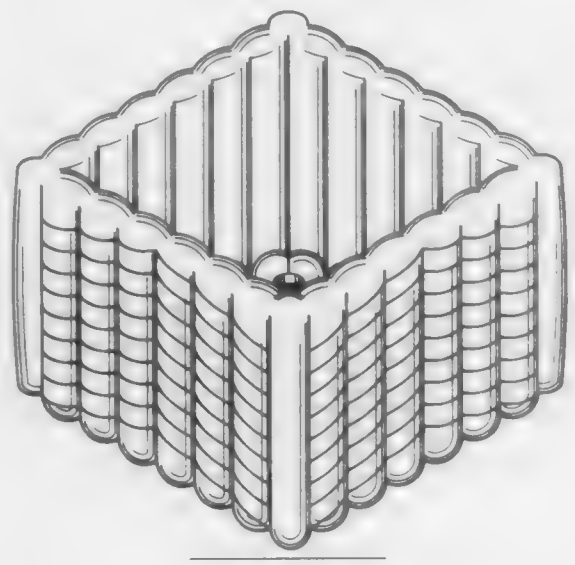
315,833
TOILET BOWL BRUSH HANDLE
William E. Brazis, Medina, Ohio, assignor to Rubbermaid Incorporated, Wooster, Ohio
Filed Jan. 13, 1989, Ser. No. 297,261
Term of patent 14 years
U.S. Cl. D4—138



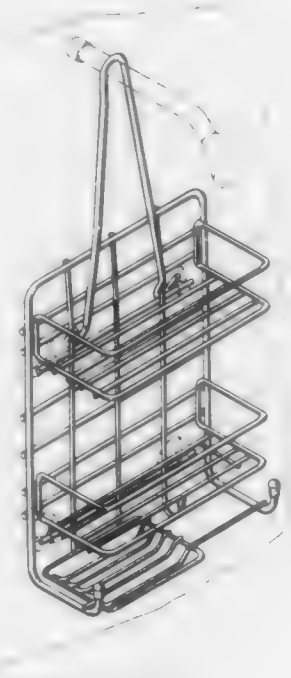
315,834
SCARF
Bruno Gentilli, Come, Italy, assignor to S. T. Dupont, Paris, France
Filed Aug. 17, 1987, Ser. No. 86,654
Claims priority, application France, Mar. 2, 1987, 871172
Term of patent 14 years
U.S. Cl. D5—16



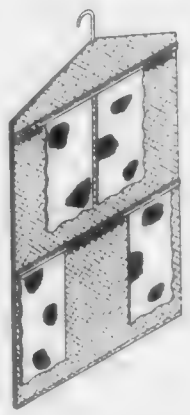
315,835
MAGNETIZED FRAME FOR HOLDING PLURAL PHOTOGRAPHS
Cindy K. Dahlquist, R.R. 3, Box 126, Oakland, Nebr. 68045
Filed Mar. 2, 1988, Ser. No. 162,861
Term of patent 14 years
U.S. Cl. D6—302



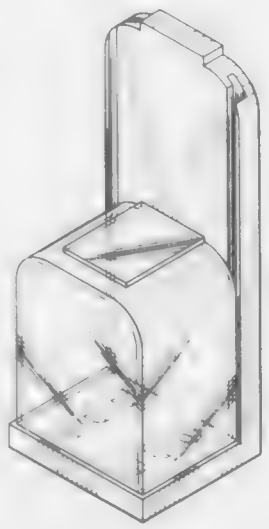
315,836
CHAIR
Kenneth L. Kaiser, 311 S. Denton St., Gainesville, Tex. 76240
Filed Feb. 29, 1988, Ser. No. 161,659
Term of patent 14 years
U.S. Cl. D6—334



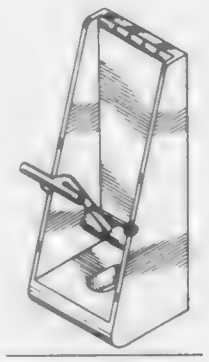
315,837
PROTECTIVE PAD FOR A CAR SEAT
Daniel J. Bernon, 2099 Miramar Blvd., S. Euclid, Ohio 44121
Filed Feb. 8, 1988, Ser. No. 153,023
Term of patent 14 years
U.S. Cl. D6—368



315,838
INFLATABLE CRIB
Robert R. Penrod, 47 McNeil Cir., Marlborough, Mass. 01752
Filed Feb. 8, 1988, Ser. No. 153,793
Term of patent 14 years
U.S. Cl. D6—391

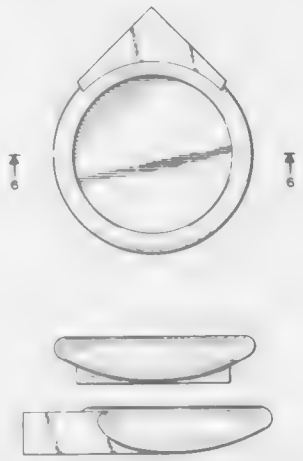


315,840
SHOWER CADDY
William W. Emery, Berkeley Heights, N.J., assignor to Better Sleep Manufacturing Co., Berkeley Heights, N.J.
Filed Sep. 14, 1989, Ser. No. 407,022
Term of patent 14 years
U.S. Cl. D6—525

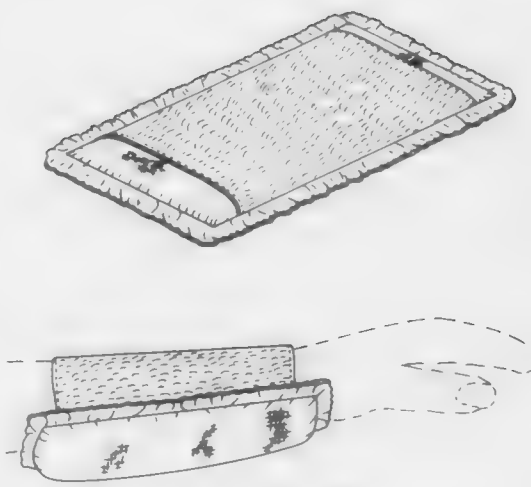


315,839
JEWELRY, TRINKET AND ACCESSORY ORGANIZER
Ellen Martorella, 11643 Sunshine Pond Rd., Tampa, Fla. 33635
Filed Aug. 6, 1990, Ser. No. 562,950
Term of patent 14 years
U.S. Cl. D6—513

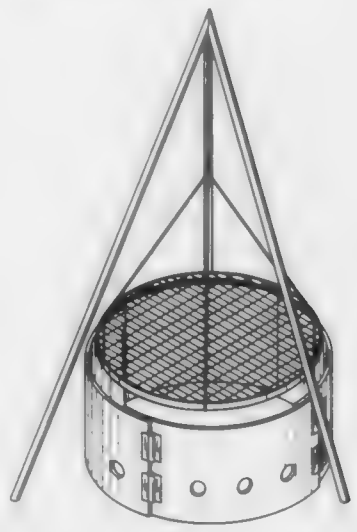
315,841
COMBINED TOOTHBRUSH HOLDER AND PROTECTOR
Larry G. Roope, 413 Clyde St. N.E., and Earl W. Bobbitt, 1728 20th St. N.E., both of Roanoke, Va. 24012
Filed Nov. 18, 1988, Ser. No. 272,573
Term of patent 14 years
U.S. Cl. D6—528



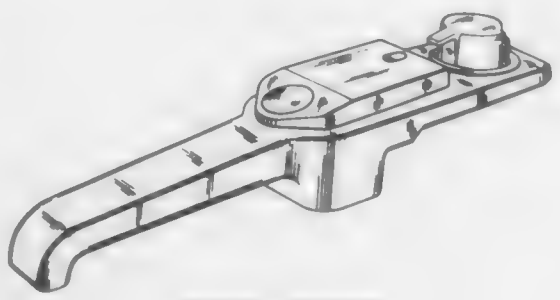
315,842
TOOTHPASTE DISPENSER
Larry E. Tallman, P.O. Box 42, North Hyde Park, Vt. 05665
Filed Mar. 27, 1989, Ser. No. 329,089
Term of patent 14 years
U.S. Cl. D6—541



315,843
POUCH CONTAINING LIQUID SOAP OR THE LIKE FOR USE WITH A DISPENSER UNIT
Peter Thomsen, 100 N. Hill Dr. No. 28, Brisbane, Calif. 94005
Continuation-in-part of Ser. No. 807,293, Dec. 10, 1985. This application May 25, 1989, Ser. No. 356,405
Term of patent 14 years
U.S. Cl. D6—542



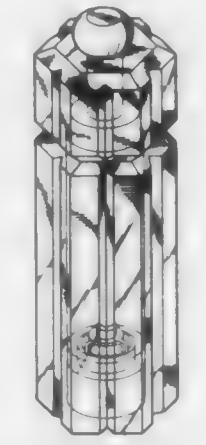
315,844
WALL-MOUNTED SHELF OR THE LIKE
Axel Enthoven, Wijnegem, Belgium, assignor to American Standard Inc., New York, N.Y.
Filed Oct. 19, 1987, Ser. No. 111,521
Term of patent 14 years
U.S. Cl. D6—574



315,845
NURSING PILLOW
Linda S. Lafley, 12006 Blair Meadow, Stafford, Tex. 77477
Filed Jan. 5, 1989, Ser. No. 293,904
Term of patent 14 years
U.S. Cl. D6—601

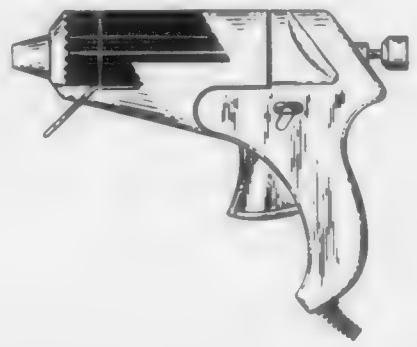
315,846
COMBINED HOT PIT AND GRILL
Garold E. Hatzenbeller, 1520 Madison Ave., So. Milwaukee, Wis. 53172
Filed May 18, 1988, Ser. No. 195,176
Term of patent 14 years
U.S. Cl. D7—335

315,847
HANDLE FOR A PRESSURE COOKER
Christian Sebillotte, Selongey, France, assignor to SEB, Selongey, France
Continuation of Ser. No. 817,574, Jan. 10, 1986, abandoned. This application Oct. 7, 1988, Ser. No. 256,076
Claims priority, application France, Jul. 17, 1985, 853420
Term of patent 14 years
U.S. Cl. D7—393



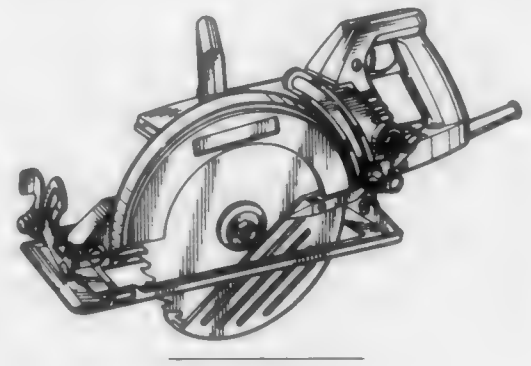
315,848
INSULATIVE COVER FOR PAPER BEVERAGE CUPS
Arthur G. Guzman, 14527 E. Los Angeles St., Baldwin Park, Calif. 91706
Filed Jan. 10, 1989, Ser. No. 295,469
Term of patent 14 years
U.S. Cl. D7—608

315,849
TRAY FOR HOLDING PEPPERONI SLICES
Donald A. Brunner, 2073 Kratz Station Rd., Harleysville, Pa. 19438
Filed Jun. 24, 1988, Ser. No. 190,231
Term of patent 14 years
U.S. Cl. D7—672

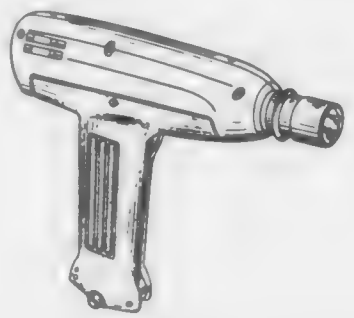


315,850
PEPPER MILL
J. T. Wu, No. 25, Hsin Ye Road, Tainan, Taiwan
Filed Oct. 24, 1988, Ser. No. 261,181
Term of patent 14 years
U.S. Cl. D7—679

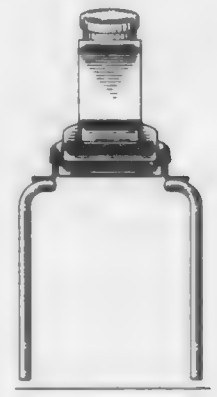
315,851
MILL
J. T. Wu, No. 25, Hsin Ye Road, Tainan, Taiwan
Filed Oct. 24, 1988, Ser. No. 261,478
Term of patent 14 years
U.S. Cl. D7—679



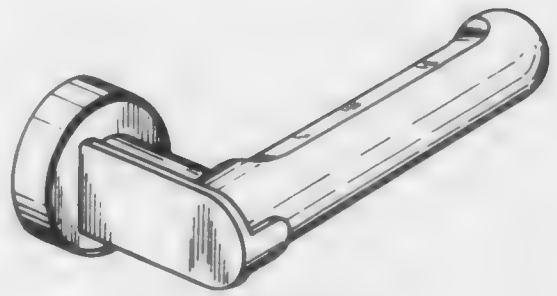
315,852
HOT MELT DISPENSER
Oktavio K. Nüsse, and Wolf-Dieter Krause, both of Münster, Fed. Rep. of Germany, assignors to Bostik, Inc., Middletown, Mass.
Filed Sep. 25, 1987, Ser. No. 101,334
Term of patent 14 years
U.S. Cl. D8—30



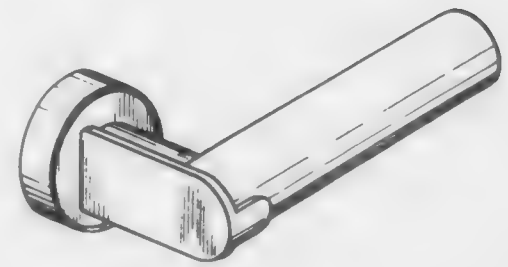
315,853
HANDLE FOR A SOLDERING IRON
Thaddeus Zaborowski, and Alan MacLeod, both of Cambridge, Mass., assignors to The Schawbel Corporation, Cambridge, Mass.
Division of Ser. No. 228,960, Jul. 25, 1988. This application Dec. 6, 1988, Ser. No. 280,532
Term of patent 14 years
U.S. Cl. D8—30



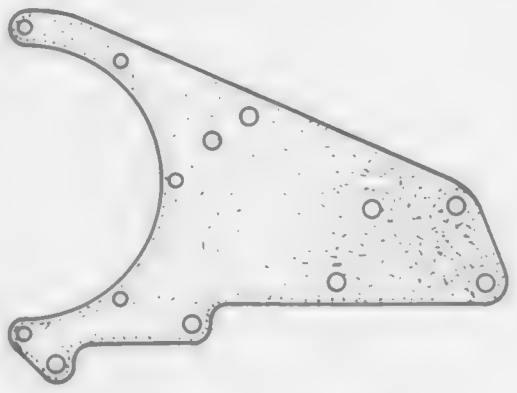
315,854
ELECTRIC SAW
Hideki Kawakami, Hiroshima, and Kiyoshi Hoshino, Tokyo, both of Japan, assignors to Ryobi Ltd., Hiroshima, Japan
Filed Oct. 1, 1987, Ser. No. 103,568
Claims priority, application Japan, Apr. 2, 1987, 62-12900
Term of patent 14 years
U.S. Cl. D8—66



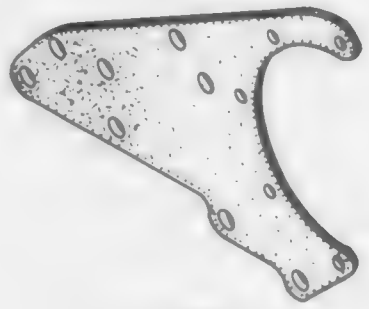
315,855
PORTABLE ELECTRIC WRENCH
Fusao Fushiya, and Shigeki Yamauchi, both of Anjo, Japan, assignors to Makita Electric Works, Ltd., Japan
Filed May 12, 1988, Ser. No. 192,899
Claims priority, application Japan, Nov. 12, 1987, 62-46350
Term of patent 14 years
U.S. Cl. D8—68



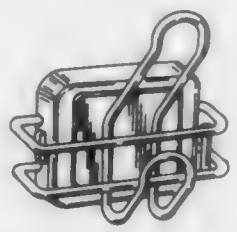
315,856
HOOP CUTTER
Seiji Tokukatsu, 25-8 Nishiarai 5 chome, Adachi-ku, Tokyo, Japan
Filed May 9, 1988, Ser. No. 192,597
Claims priority, application Japan, Nov. 16, 1987, 62-46869
Term of patent 14 years
U.S. Cl. D8—98



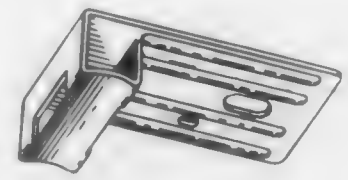
315,857
DOOR HANDLE
Gianfranco Frattini, Via S. Agnese, 14, 20123 Milan, Italy
Filed Aug. 17, 1988, Ser. No. 233,342
Claims priority, application Italy, Mar. 29, 1988, 20973/88[U]
Term of patent 14 years
U.S. Cl. D8—308

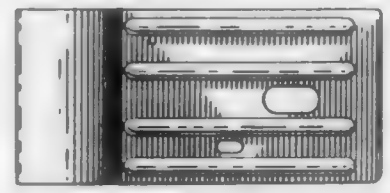


315,858
DOOR HANDLE
Gianfranco Frattini, Via S. Agnese, 14, 20123 Milan, Italy
Filed Aug. 17, 1988, Ser. No. 233,344
Claims priority, application Italy, Mar. 4, 1988, 2079/88[U]
The portion of the term of this patent subsequent to Apr. 2, 2005, has been disclaimed.
Term of patent 14 years
U.S. Cl. D8—308

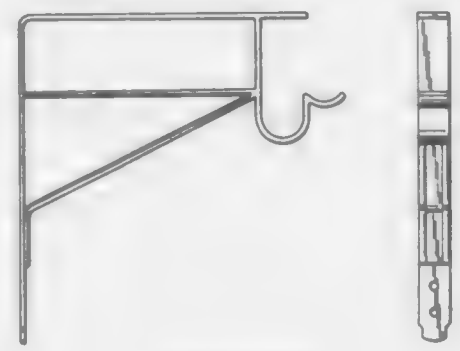


315,859
BRACKET
Francis G. Carroll, 40 Main St., Apt. 2C, Butler, N.J. 07405
Filed Sep. 28, 1988, Ser. No. 250,426
Term of patent 14 years
U.S. Cl. D8—357

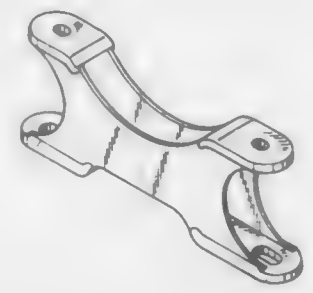


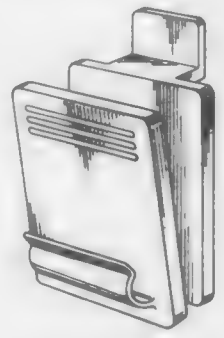


315,860
DOUBLE HOOK
Michael S. Joos, 911 W. Webster St., Chicago, Ill. 60614; Stanley P. Gresens, 2129 W. LeMoyne St., Chicago, Ill. 60622, and Richard Fraker, 1751 Mansards Blvd., Griffith, Ind. 46319
Filed Dec. 31, 1987, Ser. No. 139,941
Term of patent 14 years
U.S. Cl. D8—367

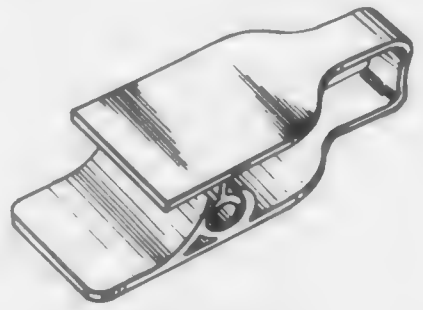


315,861
SUPPORT STRAP BRACKET
Isaac Sachs, 1240 Ridgewood Drive, Chomedey, Laval, Quebec, Canada H7W 1L3
Filed Dec. 23, 1987, Ser. No. 137,005
Term of patent 14 years
U.S. Cl. D8—371



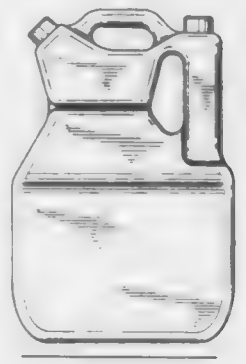


315,862
CLOSET POLE HANGER
Lewis Specker, Jr., 10 Via Cheparro, Greenbrae, Calif. 94904
Filed Dec. 14, 1988, Ser. No. 284,866
Term of patent 14 years
U.S. Cl. D8—380

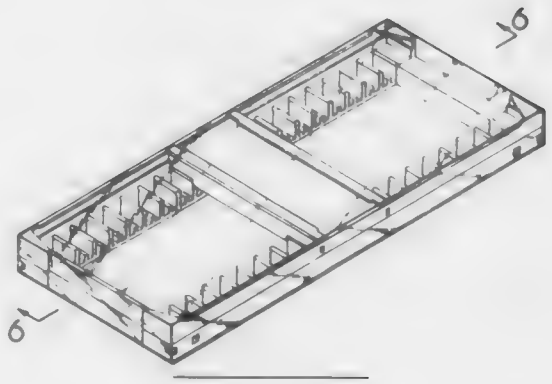


315,863
PIPE HOLDER
Lee Shui-Mu, No. 160, Sec. 1, Tai Yuan Rd., Taichung, Taiwan
Filed Jul. 6, 1990, Ser. No. 548,774
Term of patent 14 years
U.S. Cl. D8—380

315,864
CLIP HOOK FOR PERFORATE SUPPORTS
Donald Embree, Copley, and Stanley A. Mathey, Orrville, both of Ohio, assignors to Rubbermaid Incorporated, Wooster, Ohio
Filed Jul. 1, 1988, Ser. No. 214,634
Term of patent 14 years
U.S. Cl. D8—395

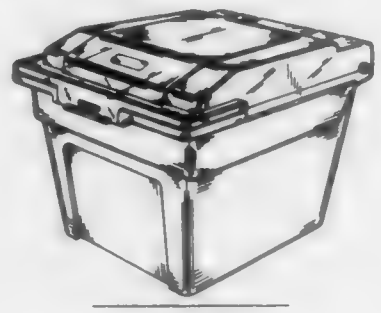


315,865
BOAT COVER CLIP
Brahm Fischer, Atlanta, Ga., assignor to Pawly Industries Corporation, Atlanta, Ga.
Filed Jul. 28, 1989, Ser. No. 387,100
Term of patent 14 years
U.S. Cl. D8—395

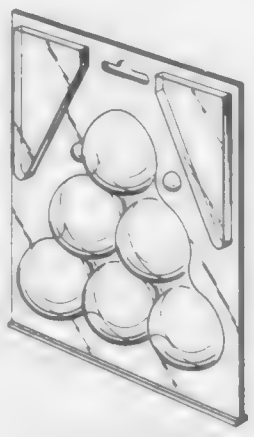


315,866
CONTAINER FOR CONFECTIONERY PRODUCTS
Pietro Ferrero, Genese, Belgium, assignor to Ferrero Ardennes S.A., Arlon, Belgium
Filed Sep. 23, 1988, Ser. No. 249,163
Claims priority, application Italy, Mar. 24, 1988, 53009/88[U]
Term of patent 14 years
U.S. Cl. D9—318

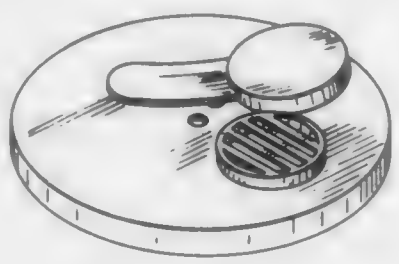
315,867
DUAL COMPARTMENT BOTTLE
Borge Hestehave, Alta Loma, and Kjeld Hestehave, Upland, both of Calif., assignors to Bomatic, Inc., Ontario, Calif.
Filed Jul. 7, 1987, Ser. No. 70,528
Term of patent 14 years
U.S. Cl. D9—341



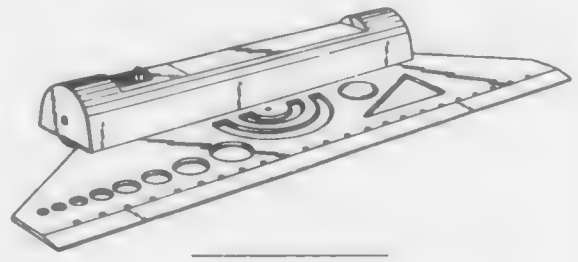
315,868
COMBINATION DISPLAY PACKAGE AND FLIP FILE HOLDER FOR COMPACT DISC BOXES
Paul J. Gelardi; Anthony L. Gelardi, both of Cape Porpoise, Me.; Alan B. Lowry, Canton, Mass.; Craig S. Lovecky, Old Orchard Beach, Me., and Richard H. Farr, Woburn, Mass., assignors to Shape Inc., Biddeford, Me.
Filed Apr. 8, 1988, Ser. No. 179,134
Term of patent 14 years
U.S. Cl. D9—341



315,869
CONTAINER BODY FOR LIQUIDS OR THE LIKE
Wayne N. Collette, Merrimack, N.H., assignor to Continental PET Technologies, Inc., Norwalk, Conn.
Filed Jan. 11, 1989, Ser. No. 295,849
Term of patent 14 years
U.S. Cl. D9—392

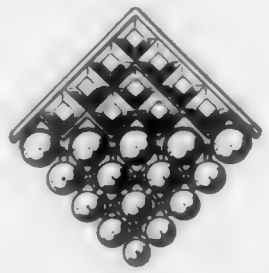


315,870
STORAGE BOX WITH HINGED LID
Thomas E. Perdue, Jr., 414 Spruce La., Crystal Lake, Ill. 60014, and Jeffrey D. Branasky, 233 S. Kensington, La Grange, Ill. 60525
Filed Jul. 18, 1988, Ser. No. 221,561
Term of patent 14 years
U.S. Cl. D9—420

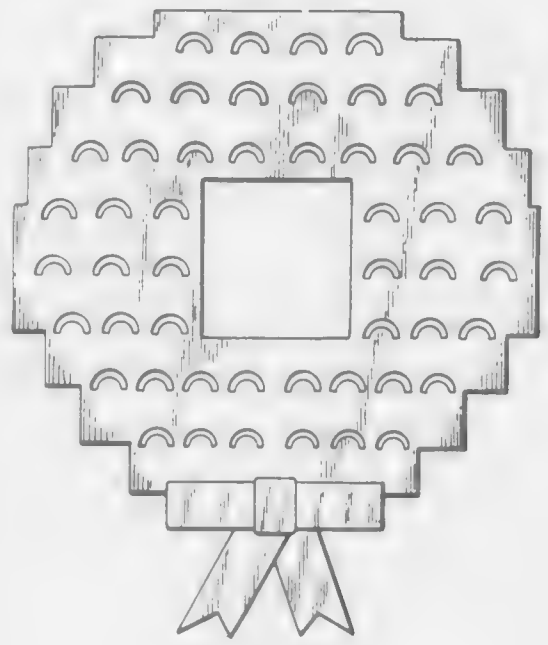


315,871
PACKAGE
David Whitebread, Harpenden, England, assignor to M.Y. Sports & Games Ltd., England
Filed Feb. 23, 1989, Ser. No. 314,600
Claims priority, application United Kingdom, Aug. 26, 1988, 1,083,264
Term of patent 14 years
U.S. Cl. D9—415

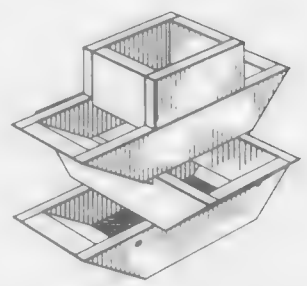
315,872
CLOSURE FOR A BEVERAGE CAN
Cynthia C. Bixler, Chillicothe, Ohio, assignor to CinTom, Inc., Carmel, Ind.
Filed Nov. 14, 1988, Ser. No. 270,118
Term of patent 14 years
U.S. Cl. D9—446



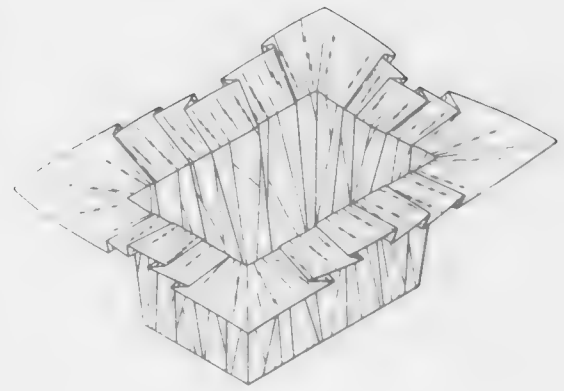
315,873
ROLLING RULER
Adam T. Laws, Balmain East, Australia, assignor to James Gregory McLaughlin, Queensland, Australia
Filed Nov. 18, 1988, Ser. No. 273,431
Claims priority, application Australia, May 20, 1988, 1629/88
Term of patent 14 years
U.S. Cl. D10—62



315,874
COMBINED FLASHING LIGHTS & TRAFFIC CONE
Jack A. DeCaro, 1109 N. Jackson, Tacoma, Wash. 98406
Filed May 13, 1988, Ser. No. 193,648
Term of patent 14 years
U.S. Cl. D10—114



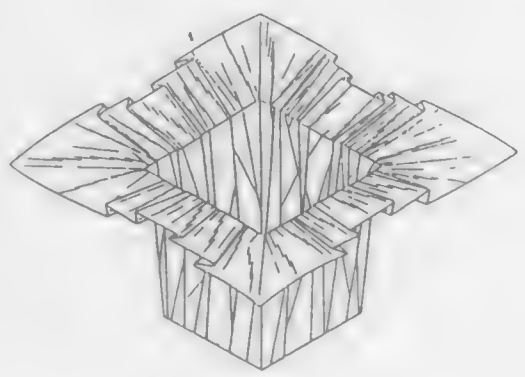
315,875
BROOCH
Paolo Bulgari, Rome, Italy, assignor to Partecipazione Bulgari S.p.A., Rome, Italy
Filed Jul. 13, 1988, Ser. No. 218,043
Claims priority, application Int'l Pat. Institute, Jan. 14, 1988, DM/010065
Term of patent 14 years
U.S. Cl. D11—43

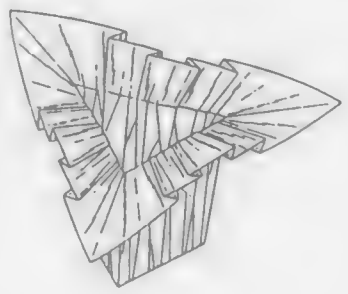


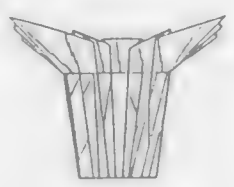
315,876
HOLDER FOR GREETING CARDS
Frank J. Vernon, 16 Powell Rd., Emerson, N.J. 07630
Filed Jan. 4, 1988, Ser. No. 140,417
Term of patent 14 years
U.S. Cl. D11—120

315,877
MULTI-TIER PLANTER UNIT
Kelley M. Hedges, 825 N. Buchanan, Escondido, Calif. 92027
Filed Jan. 19, 1988, Ser. No. 145,243
Term of patent 14 years
U.S. Cl. D11—143

315,878
FLOWER POT COVER
Donald E. Weder; Erwin H. Weder, both of Highland, Ill.; Wanda M. Weder, Highland, Calif : Franklin J. Craig, Valley Park, Mo.; Wilma M. Donnelly, Highland, Ill.; Phyllis J. Bolk, Highland, Ill.; John W. Bergstrand, Highland, Ill., and Robert C. Abrams, Edwardsville, Ill., assignors to Highland Supply Corporation, Highland, Ill.
Continuation-in-part of Ser. No. 613,053. May 22, 1984, Pat. No. D. 293,224. This application Oct. 13, 1987, Ser. No. 107,802
The portion of the term of this patent subsequent to Apr. 2, 2005, has been disclaimed.
Term of patent 14 years
U.S. Cl. D11—164

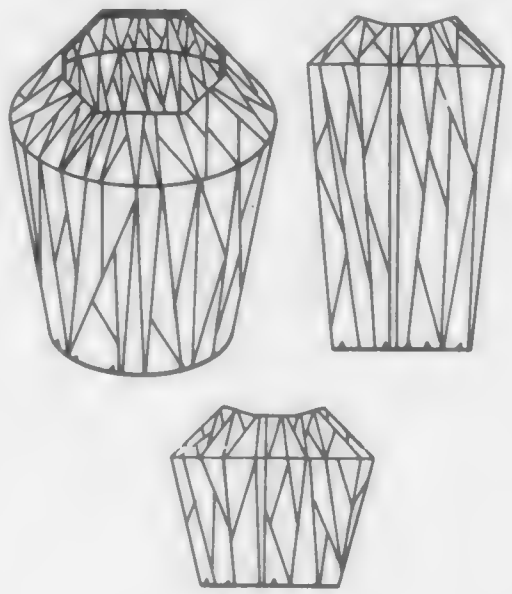


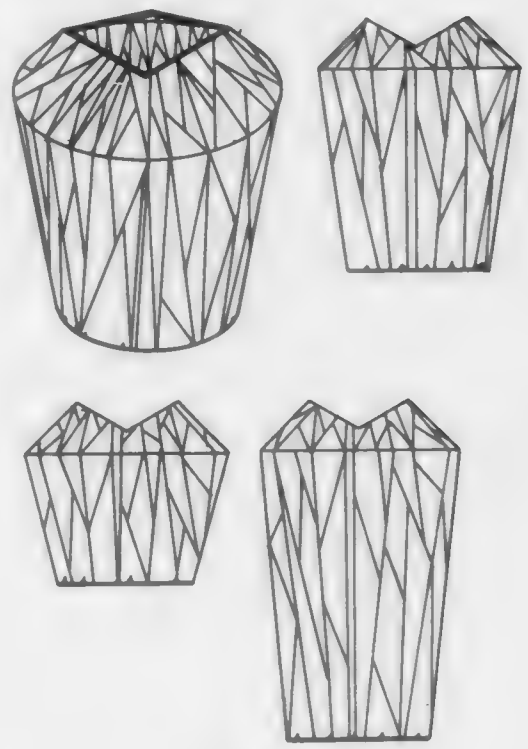


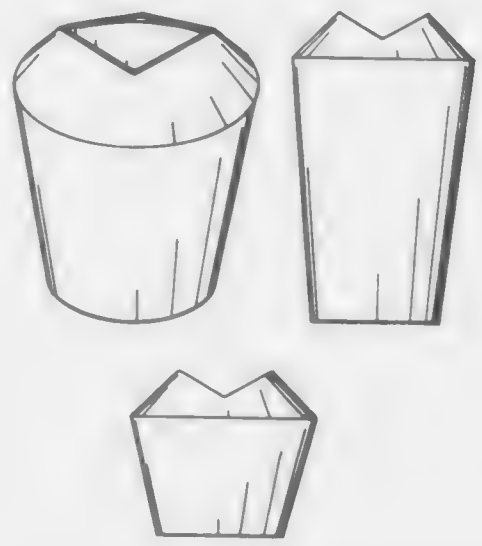


315,879
FLOWER POT COVER
Donald E. Weder; Erwin H. Weder, both of Highland, Ill.; Wanda M. Weder, Highland, Calif.; Franklin J. Craig, Valey Park, Mo.; Wilma M. Donnelly, Highland; Phyllis J. Bolk, Highland; John W. Bergstrand, Highland, and Robert C. Abrams, Edwardsville, all of Ill., assignors to Highland Supply Corporation, Highland, Ill.
Continuation-in-part of Ser. No. 613,053, May 22, 1984, Pat. No. D. 293,224. This application Oct. 13, 1987, Ser. No. 108,320
The portion of the term of this patent subsequent to Apr. 2, 2005, has been disclaimed.
Term of patent 14 years
U.S. Cl. D11—164

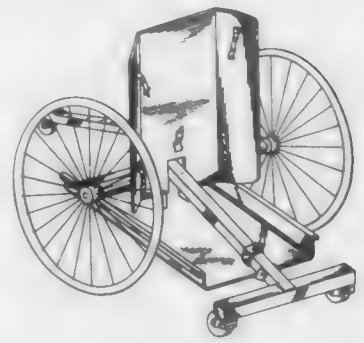
315,880
FLOWER POT COVER
Donald E. Weder; Erwin H. Weder, both of Highland, Ill.; Wanda M. Weder, Highland, Calif.; Franklin J. Craig, Valley Park, Mo.; Wilma M. Donnelly, Highland, Ill.; Phyllis J. Bolk, Highland, Ill.; John W. Bergstrand, Highland, Ill., and Robert C. Abrams, Edwardsville, Ill., assignors to Highland Supply Corporation, Highland, Ill.
Continuation-in-part of Ser. No. 613,053, May 22, 1984, Pat. No. Des. 293,224. This application Oct. 13, 1987, Ser. No. 108,309
The portion of the term of this patent subsequent to Apr. 2, 2005, has been disclaimed.
Term of patent 14 years
U.S. Cl. D11—164



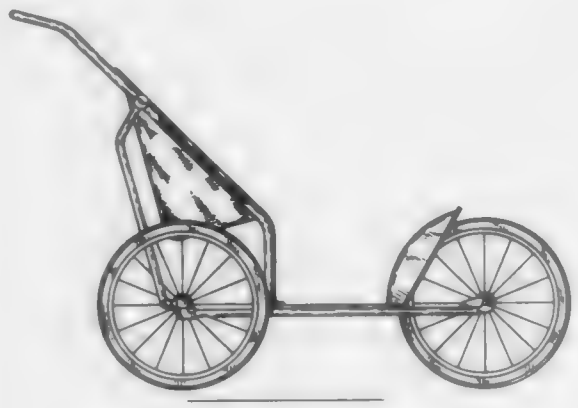




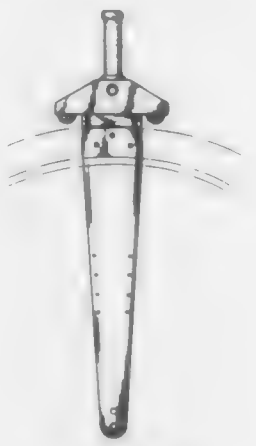
315,881
FLOWER POT COVER
Donald E. Weder, Highland, Ill., assignor to Highland Supply Corporation, Highland, Ill.
Filed Mar. 9, 1989, Ser. No. 321,459
The portion of the term of this patent subsequent to Apr. 2, 2005, has been disclaimed.
Term of patent 14 years
U.S. Cl. D11—164



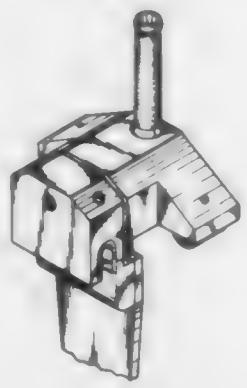
315,883
FLOWER POT COVER
Donald E. Weder, Highland, Ill., assignor to Highland Supply Corporation, Highland, Ill.
Filed Mar. 9, 1989, Ser. No. 321,467
The portion of the term of this patent subsequent to Apr. 2, 2005, has been disclaimed.
Term of patent 14 years
U.S. Cl. D11—164



315,882
FLOWER POT COVER
Donald E. Weder, Highland, Ill., assignor to Highland Supply Corporation, Highland, Ill.
Filed Mar. 9, 1989, Ser. No. 321,466
The portion of the term of this patent subsequent to Apr. 2, 2005, has been disclaimed.
Term of patent 14 years
U.S. Cl. D11—164

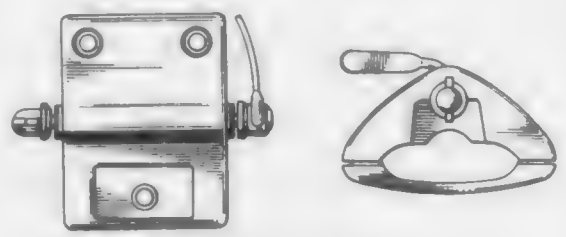


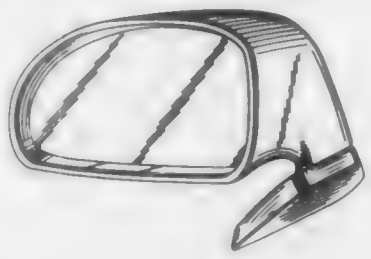
315,884
VERTICAL SUPPORTER FOR CHILD OR THE LIKE
Mac L'Dean Baker, Bakersfield, Calif., assignor to Mobility Options Research Foundation, Bakersfield, Calif.
Filed Sep. 14, 1987, Ser. No. 96,835
Term of patent 14 years
U.S. Cl. D12—128



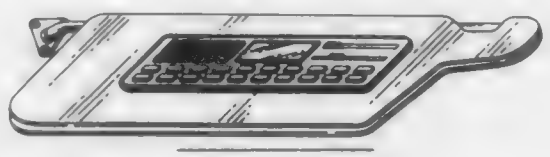
315,885
INFANT STROLLER
Richard H. Jacobs, Roseville, Minn., assignor to Tri Industries, Inc., Hopkins, Minn.
Filed Nov. 27, 1989, Ser. No. 441,933
Term of patent 14 years
U.S. Cl. D12—129

315,886
WHEELCHAIR PROPULSION UNIT
Herbert E. Wood, 1397 Tamarack St., Springfield, Oreg. 97477
Filed Sep. 30, 1988, Ser. No. 252,871
Term of patent 14 years
U.S. Cl. D12—133

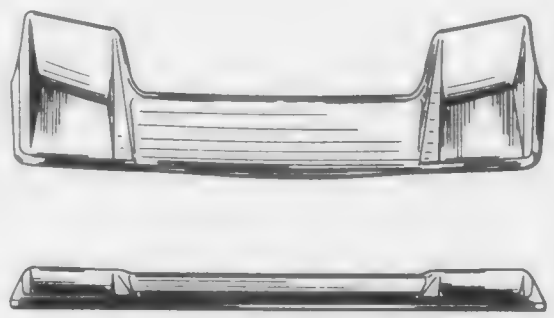




315,887
VEHICLE TIRE
Hisashi Shintomi, Osaka, Japan, assignor to The Ohtsu Tire & Rubber Co., Ltd., Osaka, Japan
Filed Mar. 15, 1988, Ser. No. 170,974
Claims priority, application Japan, Sep. 16, 1987, 62-37906
Term of patent 14 years
U.S. Cl. D12—136

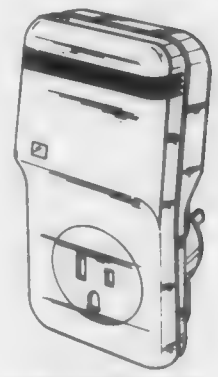


315,888
BICYCLE HOLDER FOR ATTACHMENT TO A VEHICLE ROOF RACK
Michael Dixon, Ardross, Australia, assignor to Samrein Pty Ltd., Double Bay, Australia
Filed Sep. 12, 1988, Ser. No. 243,491
Term of patent 14 years
U.S. Cl. D12—157



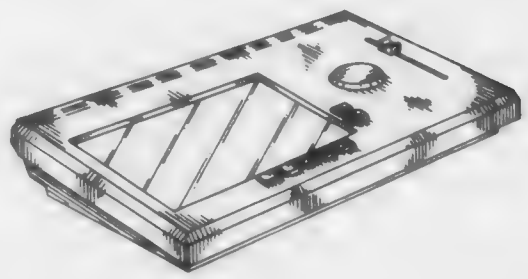
315,889
SIDE VIEW MIRROR
Hermann Burst, Rutesheim, and Heinz-Arno Kruschhausen, Leonberg, both of Fed. Rep. of Germany, assignors to Dr. Ing. h.c.F. Porsch AG, Fed. Rep. of Germany
Filed Feb. 10, 1988, Ser. No. 154,616
Claims priority, application Fed. Rep. of Germany, Aug. 11, 1987, MR 6302
Term of patent 14 years
U.S. Cl. D12—187

315,890
COMBINED VEHICLE SUN VISOR AND CELLULAR TELEPHONE UNIT
Joe Lewo, P.O. Box N8913, Nassau, The Bahamas
Filed Apr. 29, 1988, Ser. No. 187,999
Term of patent 14 years
U.S. Cl. D12—191

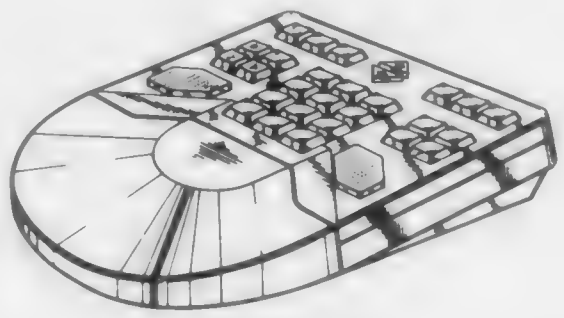


315,891
EXTERIOR VEHICLE VISOR OR SIMILAR ARTICLE
Paul Down, Elkhart, Ind., assignor to Kemberly, Inc., Elkhart, Ind.
Filed Jan. 30, 1989, Ser. No. 304,016
Term of patent 14 years
U.S. Cl. D12—191

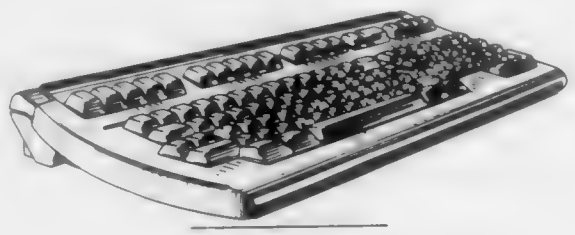
315,892
YACHT
R. M. Tollefson, Edmonds; Dane A. Armstrong, Longview; David A. LeMonds; Douglas J. Wakefield, both of Kelso; Walter F. Altmann, Longview, and Marcel L. LaFond, Kelso, all of Wash., assignors to Tollycraft Yachts Corp., Seattle, Wash.
Filed Nov. 30, 1989, Ser. No. 444,604
Term of patent 14 years
U.S. Cl. D12—315



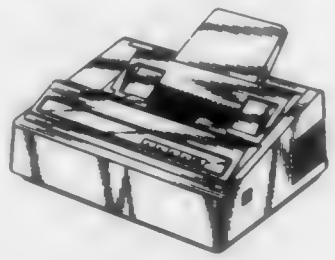
315,893
HEAVY DUTY, REMOTELY CONTROLLED TIMER SWITCH
Willis Cheng, Taipei, Taiwan, assignor to Woods Far East, Inc., Taiwan
Filed Jul. 11, 1988, Ser. No. 216,976
Term of patent 14 years
U.S. Cl. D13—165



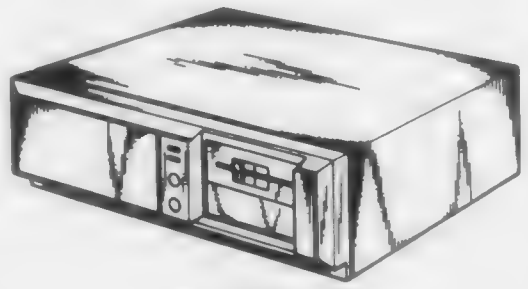
315,894
UNDERWATER SWITCH
Gabriel M. Giannini, 51555 Madison, Indio, Calif. 92201
Division of Ser. No. 132,056, Dec. 9, 1987, abandoned. This application May 8, 1990, Ser. No. 520,611
Term of patent 14 years
U.S. Cl. D13—171



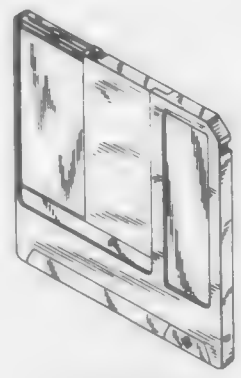
315,895
CONSOLE FOR DATA INPUT/OUTPUT TABLET
Stephen H. Paine, and Carl Schofield, both of London, Great Britain, assignors to Syco Systems Ltd., London, United Kingdom
Filed Jan. 25, 1988, Ser. No. 148,271
Claims priority, application Bulgaria, Jul. 23, 1987, 1043645; United Kingdom, Jul. 23, 1987, 1043646; Jul. 23, 1987, 1043647; Jul. 23, 1987, 1043648
Term of patent 14 years
U.S. Cl. D14—100



315,896
KEYPAD
Michael Brown, Kanata, Canada, assignor to Northern Telecom Limited, Montreal, Canada
Filed Apr. 20, 1989, Ser. No. 341,104
Term of patent 14 years
U.S. Cl. D14—100

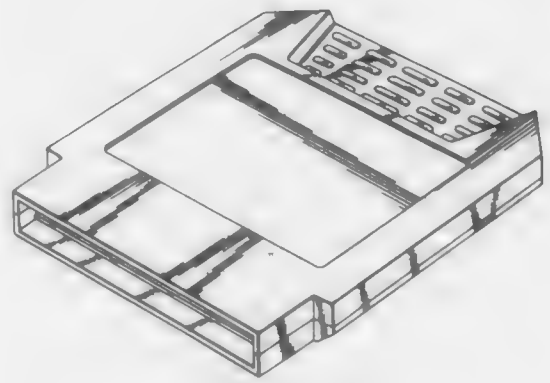


315,897
KEYBOARD
Robert T. Faranda, Acton, Mass., and Steven D. Kim, New York, N.Y., assignors to Digital Equipment Corporation, Maynard, Mass.
Filed May 26, 1989, Ser. No. 358,602
Term of patent 14 years
U.S. Cl. D14—100

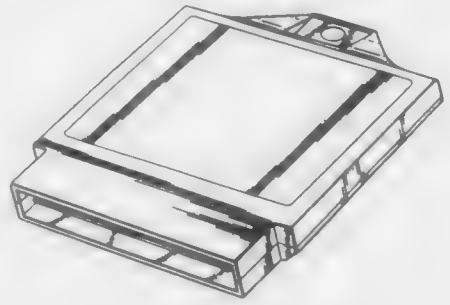


315,898
PAGE SCANNER
Yoshikazu Hokura, Kanagawa; Hironosuke Koda, and Munerori Fujimoto, both of Tokyo, all of Japan, assignors to Matsushita Graphic Communication Systems, Inc., Tokyo, Japan
Filed May 5, 1989, Ser. No. 347,955
Claims priority, application Japan, Nov. 9, 1988, 63-43880
Term of patent 14 years
U.S. Cl. D14—107

315,899
FLOPPY DISK DRIVE UNIT
Yong H. Kim, Kyungki, Rep. of Korea, assignor to Gold Star Co., Ltd., Seoul, Rep. of Korea
Filed Sep. 5, 1989, Ser. No. 402,919
Claims priority, application Rep. of Korea, Mar. 22, 1989, 3489/1989[U]
Term of patent 14 years
U.S. Cl. D14—109

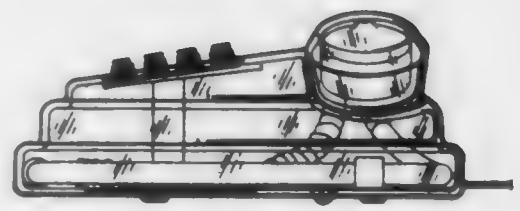


315,900
OPTICAL DISC CARTRIDGE
Hirokimi Iwata, Ina, Japan, assignor to Sony Corporation, Tokyo, Japan
Filed Apr. 14, 1989, Ser. No. 337,548
Claims priority, application Japan, Nov. 9, 1988, 63-43946
Term of patent 14 years
U.S. Cl. D14—114

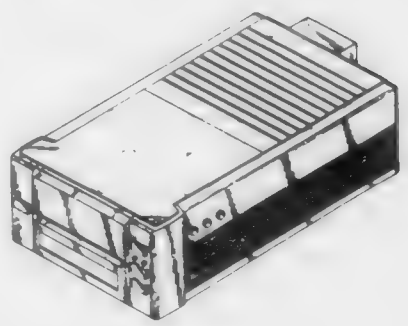


315,901
PORTABLE LASER SCANNER
Carl H. Knowles, Moorestown, N.J., assignor to Metrologic Instruments, Inc., Bellmawr, N.J.
Filed Jan. 30, 1989, Ser. No. 304,310
Term of patent 14 years
U.S. Cl. D14—116

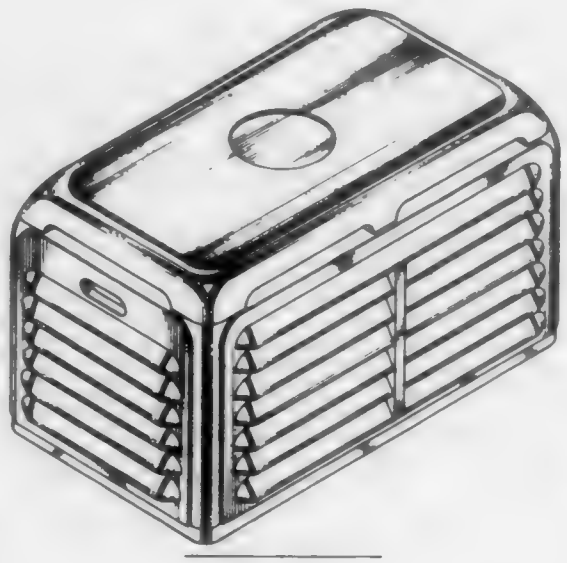
315,902
GAME CARTRIDGE
Yoshiaki Nakauma, Chigasaki, Japan, assignor to Namco, Ltd., Tokyo, Japan
Filed Dec. 15, 1988, Ser. No. 284,481
Term of patent 14 years
U.S. Cl. D14—121

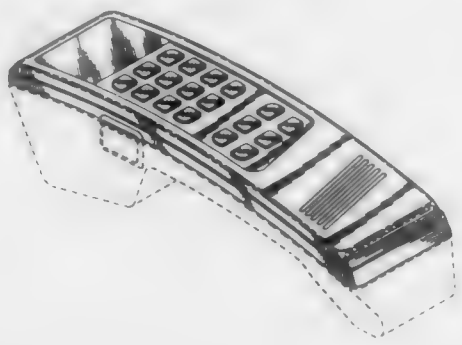


315,903
GAME CARTRIDGE
Yoshiaki Nakauma, Chigasaki, Japan, assignor to Namco, Ltd., Tokyo, Japan
Filed Dec. 15, 1988, Ser. No. 284,482
Term of patent 14 years
U.S. Cl. D14—121

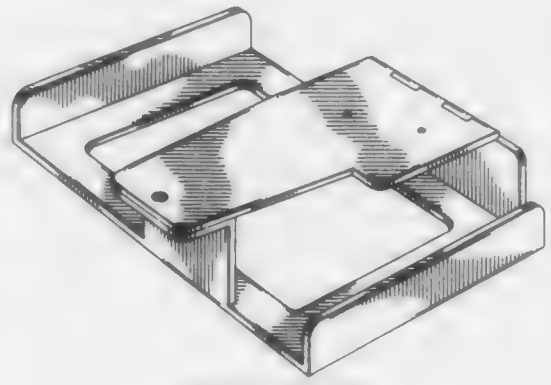


315,904
TELEPHONE SET WITH TRANSPARENT OUTER SURFACE AND NEON-LIGHT TUBE SURROUNDING THE BASE
Thomas Cheng, No. 6, Alley 49, Lane 149, Sec. 3, Nan Kang Rd., Taipei, Taiwan
Filed Sep. 5, 1989, Ser. No. 402,265
Term of patent 14 years
U.S. Cl. D14—150



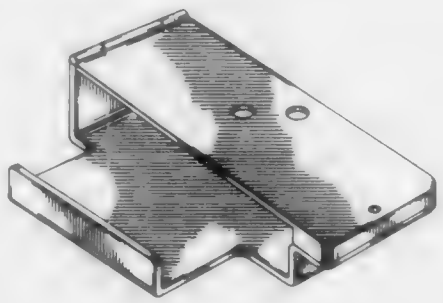


315,905
DIGITAL AUDIO DISC PLAYER
Masafumi Ito, Tokyo; Shigeru Hasegawa, Kodaira; Haruki Takita, and Minoru Sabe, both of Hachioji, all of Japan, assignors to Teac Corporation, Musashino, Japan
Filed Feb. 10, 1988, Ser. No. 154,625
Claims priority, application Japan, Aug. 24, 1987, 62-34371
The portion of the term of this patent subsequent to Mar. 26, 2005, has been disclaimed.
Term of patent 14 years
U.S. Cl. D14—156

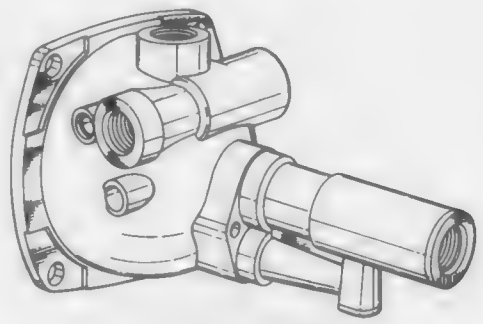


315,906
ALL-WEATHER COVERING FOR CABLE TELEVISION EQUIPMENT
William H. Channell, 122 Oak Tree Dr., Glendora, Calif. 91740
Filed Mar. 31, 1988, Ser. No. 175,725
The portion of the term of this patent subsequent to Oct. 11, 2005, has been disclaimed.
Term of patent 14 years
U.S. Cl. D14—239

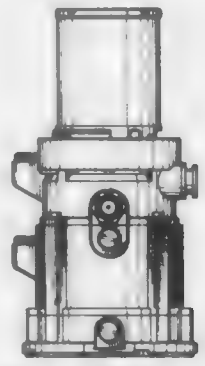
315,907
DIAL TOP-HOUSING FOR TELEPHONE HANDSET OR SIMILAR ARTICLE
Allen Wong, Streamwood; Leonid Soren, Lincolnwood, and Phillip E. Lindeman, Roselle, all of Ill., assignors to Motorola Inc., Schaumburg, Ill.
Filed Nov. 17, 1989, Ser. No. 438,914
Term of patent 14 years
U.S. Cl. D14—247



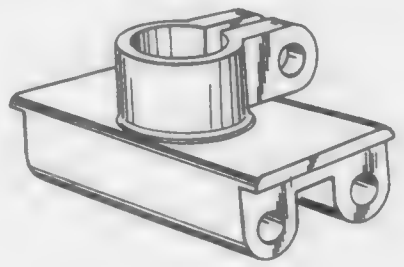
315,908
TELEPHONE DIALING-KEY COVER
Raymond F. Ward, 5225 E. Thomas Rd., Apt. 216, Phoenix, Ariz. 85018
Filed Jul. 31, 1989, Ser. No. 386,964
Term of patent 14 years
U.S. Cl. D14—250



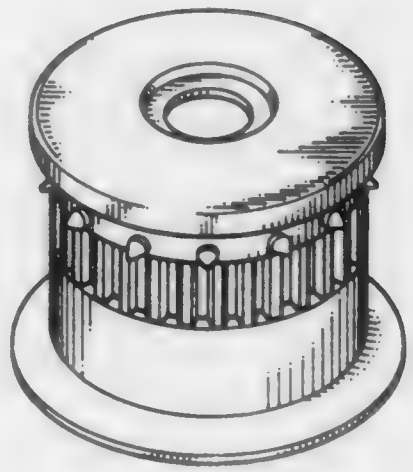
315,909
TELEPHONE DIALING-KEY COVER
Raymond F. Ward, 5225 E. Thomas Rd., Apt 216, Phoenix, Ariz. 85018
Filed Jul. 31, 1989, Ser. No. 386,965
Term of patent 14 years
U.S. Cl. D14—250



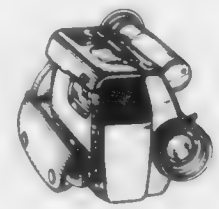
315,910
TELEPHONE DIALING-KEY COVER
Raymond F. Ward, 5225 E. Thomas Rd., Apt 216, Phoenix, Ariz. 85018
Filed Jul. 31, 1989, Ser. No. 386,966
Term of patent 14 years
U.S. Cl. D14—250



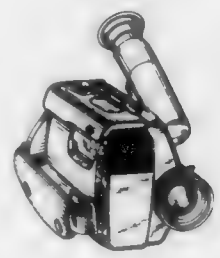
315,911
PUMP HOUSING
Jack F. Campbell, Guelph, Canada, assignor to GSW Inc., Fergus, Canada
Filed Mar. 4, 1988, Ser. No. 163,885
Term of patent 14 years
U.S. Cl. D15—7



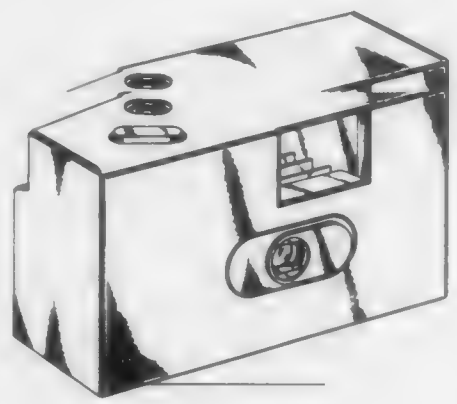
315,912
VACUUM PUMP
Mitsuhiro Nishida; Kozaburo Fujii, both of Fukuoka; Nobuyuki Kondoh, and Yoshinori Abe, both of Kamakura, all of Japan, assignors to Mitsubishi Denki K.K., Tokyo, Japan
Filed Mar. 14, 1989, Ser. No. 338,061
Claims priority, application Japan, Sep. 21, 1988, 63-37135
Term of patent 14 years
U.S. Cl. D15—7



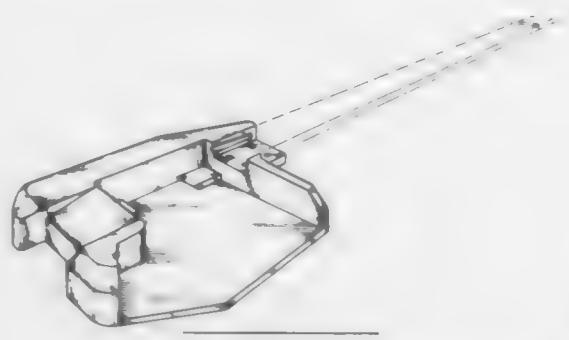
315,913
KNIFE HOLDER FOR TURF AERATION MACHINE
David J. Livingstone, Sylvania Waters, Australia, assignor to Greencare PTY. Limited, Taren Point, Australia
Filed Jun. 11, 1987, Ser. No. 60,435
Claims priority, application Australia, Dec. 17, 1986, 7962/86
Term of patent 14 years
U.S. Cl. D15—28

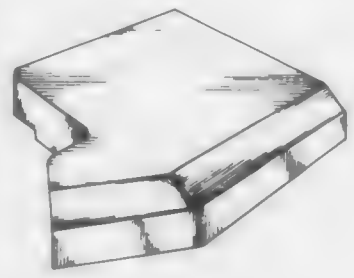


315,914
YARN FEEDER
Jen F. Chen, P.O. Box 1-79, Taipei, Taiwan 10602
Filed May 13, 1988, Ser. No. 193,640
Term of patent 14 years
U.S. Cl. D15—72

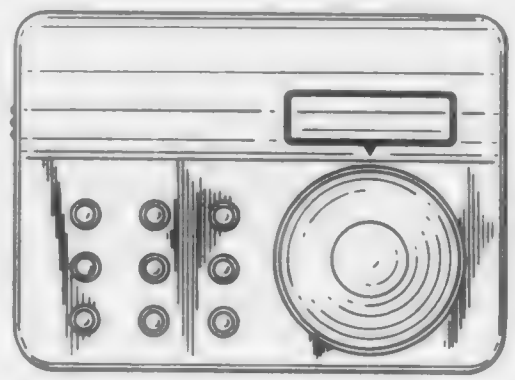


315,915
VIDEO CAMERA COMBINED WITH VIDEO TAPE RECORDER
Yuji Morimiya, Funabashi, Japan, assignor to Sony Corporation, Tokyo, Japan
Filed Jul. 26, 1989, Ser. No. 385,298
Claims priority, application Japan, Apr. 26, 1989, 1-1555[illegible]
Term of patent 14 years
U.S. Cl. D16—202

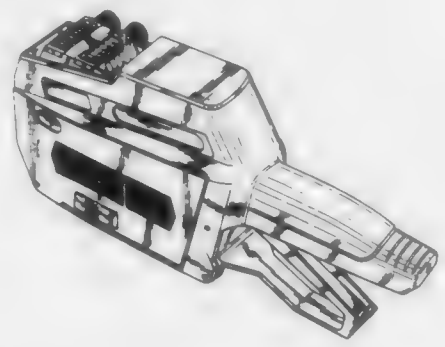




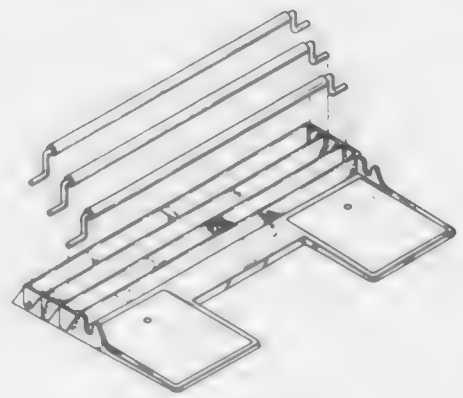
315,916
STILL CAMERA
Bruce A. Leonard, Honeoye Falls, and Deborah N. Pelcher, Rochester, both of N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.
Filed Jan. 6, 1988, Ser. No. 141,345
Term of patent 14 years
U.S. Cl. D16—218



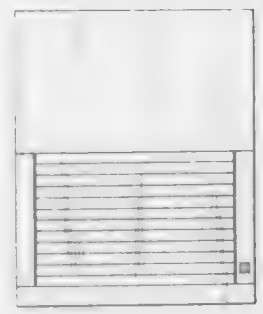
315,917
GUITAR BODY
E. Todd Ellison, 3203 Tareco Dr., Los Angeles, Calif. [illegible]
Filed Feb. 1, 1988, Ser. No. 150,718
Term of patent 14 years
U.S. Cl. D17—[illegible]



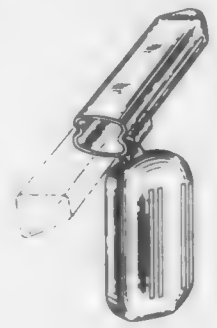
315,918
REMOVABLE CARTRIDGE FOR GUITAR BODY
E. Todd Ellison, 3203 Tareco Dr., Los Angeles, Calif. 90068
Filed Feb. 1, 1988, Ser. No. 150,723
Term of patent 14 years
U.S. Cl. D17—20



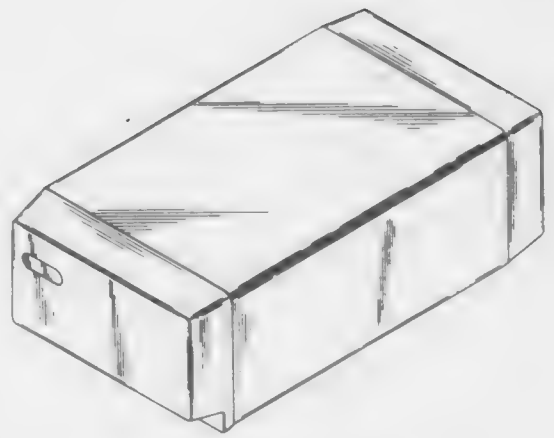
315,919
ELECTRONIC TAPE WRITER
Akira Miyamoto; Tokushige Ohmiya; Genichiro Otani; Setsuo Kawai; Kenji Watanabe; Goro Iijima; Takeshi Matsubara, and Takanobu Kameda, all of Tokyo, Japan, assignors to King Jim Co., Ltd., Japan
Filed Sep. 19, 1988, Ser. No. 246,304
Claims priority, application Japan, Apr. 20, 1988, 63-16032
Term of patent 14 years
U.S. Cl. D18—13



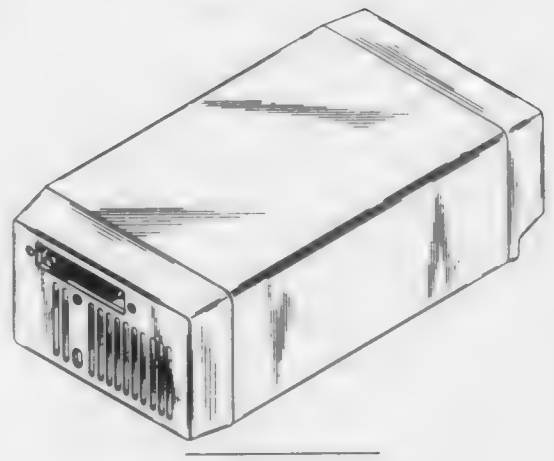
315,920
MANUALLY OPERATED LABELLING GUN
Klaus-Dieter Hermann, Ritterweg 17, D-6932 Hirschhorn, Fed. Rep. of Germany
Filed Sep. 9, 1987, Ser. No. 94,532
Claims priority, application Fed. Rep. of Germany, Mar. 25, 1987, 430
Term of patent 14 years
U.S. Cl. D18—19



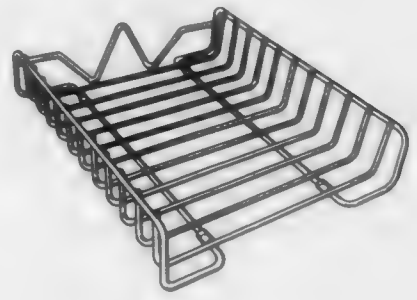
315,921
MULTI-FORM FEEDER FOR PRINTER
H. Charles Hassel, Los Angeles, and Donald Westland, Venice, both of Calif., assignors to MicroComputer Accessories, Inc., Los Angeles, Calif.
Filed Oct. 14, 1987, Ser. No. 108,041
Term of patent 14 years
U.S. Cl. D18—22



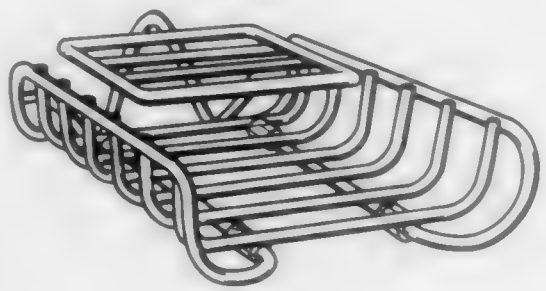
315,922
PAPER SHEET
John M. Giordano, Virginia Beach, Va., assignor to Hunt Holdings, Inc., Wilmington, Del.
Division of Ser. No. 110,956, Oct. 21, 1987. This application May 31, 1990, Ser. No. 532,503
Term of patent 14 years
U.S. Cl. D19—1



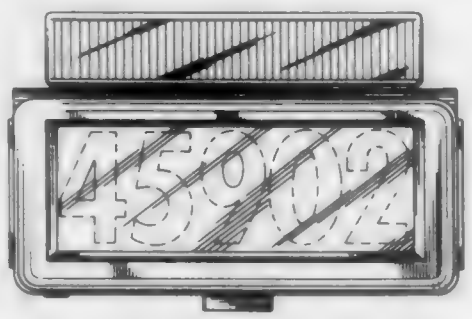
315,923
HAND TOOL HOLDER
Ivar Frischer, Kungsgatan 41, Goteborg, Sweden 411 15
Filed Aug. 20, 1987, Ser. No. 87,445
Claims priority, application Sweden, Feb. 23, 1987, 870388
Term of patent 14 years
U.S. Cl. D19—55



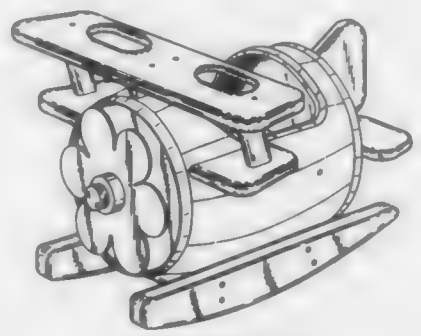
315,924
PORTABLE FILE
James J. Best, Austin, and Margaret C. Sweeney, Georgetown, both of Tex., assignors to International Business Machines Corporation, Armonk, N.Y.
Filed May 27, 1988, Ser. No. 199,550
Term of patent 14 years
U.S. Cl. D19—75



315,925
LETTER TRAY
Beverly C. Rich, Ruxton, Md., assignor to Fellowes Mfg Co, Itasca, Ill.
Filed Mar. 24, 1988, Ser. No. 171,293
Term of patent 14 years
U.S. Cl. D19—92

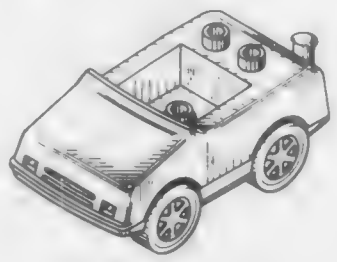


315,926
HOLDER FOR A NOTE PAD OR SIMILAR ARTICLE
Beverly C. Rich, Ruxton, Md., assignor to Fellowes Mfg. Co., Itasca, Ill.
Filed Mar. 24, 1988, Ser. No. 172,348
Term of patent 14 years
U.S. Cl. D19—92

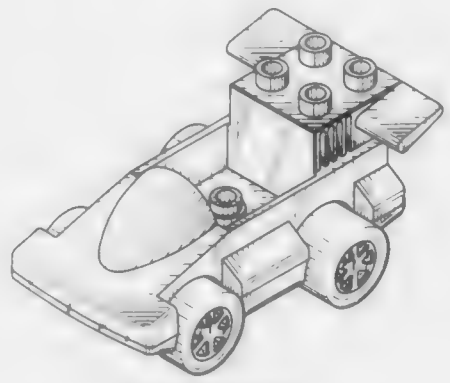


315,927
MULTIPLE UNIT VENDING MACHINE
Eldin H. Irwin, 225 Rue de Paresse, Tavares, Fla. 32778
Filed Feb. 2, 1987, Ser. No. 9,928
The portion of the term of this patent subsequent to Apr. 9, 2005, has been disclaimed.
Term of patent 14 years
U.S. Cl. D20—4

315,928
SOLAR POWERED ILLUMINATED YARD MARKER
Robert A. Flieder, 521 Long La., Huntingdon Valley, Pa. 19006
Filed Nov. 28, 1988, Ser. No. 276,563
Term of patent 14 years
U.S. Cl. D20—17

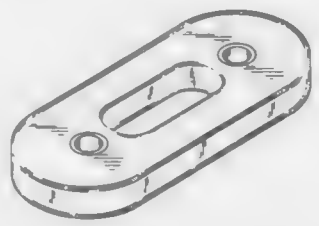


315,929
BI-PLANE ROCKING TOY
Thomas J. Bush, 123 Cherry Brook Rd., Canton Center, Conn. 06020
Filed Dec. 16, 1988, Ser. No. 285,232
Term of patent 14 years
U.S. Cl. D21—68

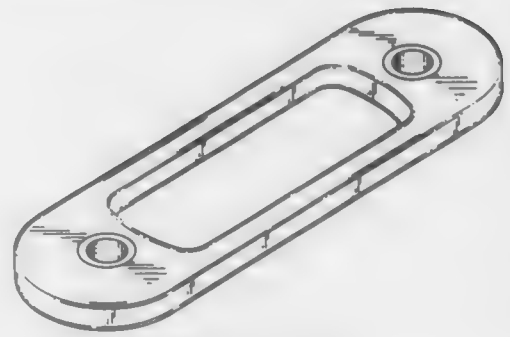


315,930
TOY SWING
Harry S. Thomson, Richmond; David M. Raffo, Gildern Sutton, and John A. Pape, Hitchin, all of England, assignors to Hestair Kiddicraft Limited, Bristol, England
Filed May 19, 1989, Ser. No. 354,678
Term of patent 14 years
U.S. Cl. D21—123

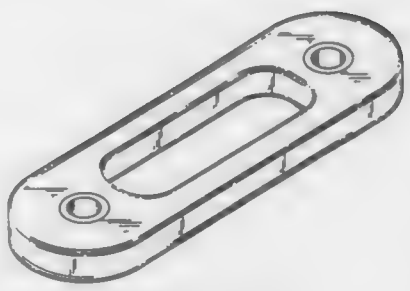
315,931
TOY CAR
Ib H. Berggren, Vedbaek, Denmark, assignor to Interlego AG, Baar, Switzerland
Filed Nov. 29, 1989, Ser. No. 443,231
Term of patent 14 years
U.S. Cl. D21—128



315,932
TOY CAR
Ib H. Berggren, Vedbaek, Denmark, assignor to Interlego AG, Baar, Switzerland
Filed Nov. 29, 1989, Ser. No. 443,233
Term of patent 14 years
U.S. Cl. D21—128

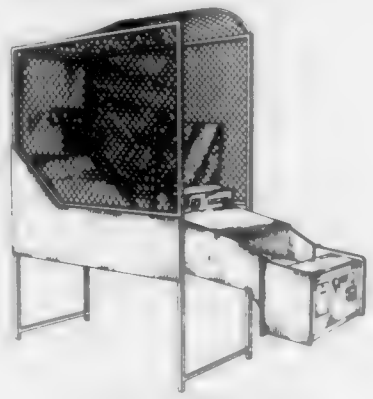


315,933
HULA DOLL
Rak M. Sung, 225 Kaiulani Ave., #505, Honolulu, Hi. 96815
Filed Apr. 14, 1989, Ser. No. 338,139
Term of patent 14 years
U.S. Cl. D21—180

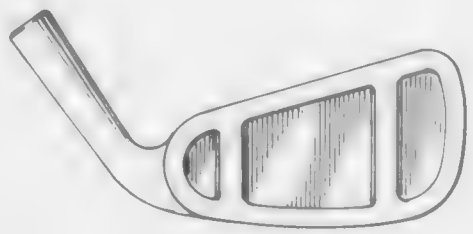


315,934
RESISTANCE STRAP FOR AN EXERCISE MACHINE
Jerry L. Wilson, 16170 SW. Jenne Lake Ct., Beaverton, Oreg. 97006; Jon Schneider, Washington County, and Frederick E. Collins, Lane County, both of Oreg., assignors to Jerry L. Wilson, Hillsboro, Oreg.
Filed Sep. 12, 1988, Ser. No. 243,649
Term of patent 14 years
U.S. Cl. D21—191

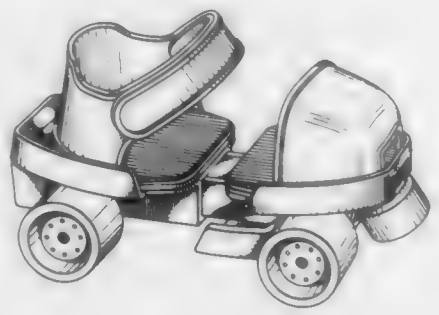
315,935
RESISTANCE STRAP FORAN EXERCISE MACHINE
Jerry L. Wilson, 16170 SW. Jenne Lake Ct., Beaverton, Oreg. 97006; Jon Schneider, Hillsboro, and Frederick E. Collins, Cresswell, both of Oreg., assignors to Jerry L. Wilson, Hillsboro, Oreg.
Filed Sep. 12, 1988, Ser. No. 243,650
Term of patent 14 years
U.S. Cl. D21—191



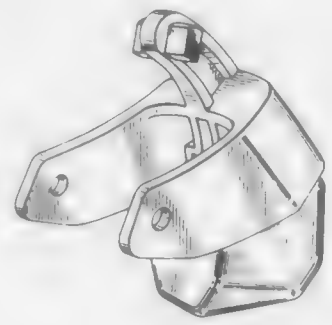
315,936
RESISTANCE STRAP FOR AN EXERCISE MACHINE
Jerry L. Wilson, 16170 SW. Jenne Lake Ct., Beaverton, Oreg. 97006; Jon Schneider, Hillsboro, and Frederick E. Collins, Cresswell, both of Oreg., assignors to Jerry L. Wilson, Hillsboro, Oreg.
Filed Sep. 12, 1988, Ser. No. 243,651
Term of patent 14 years
U.S. Cl. D21—191



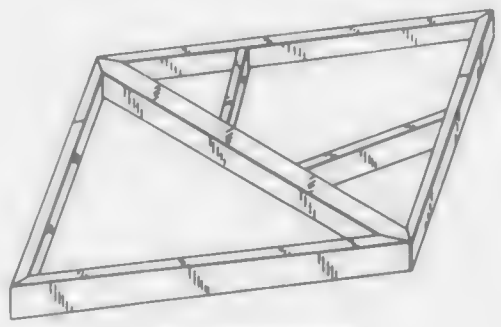
315,937
PHYSICAL EXERCISER
Jack D. Huggins, 212 Country Club Cir., and John Pannell, 11508 Surrey La., both of Midwest City, Okla. 73110
Filed Sep. 13, 1988, Ser. No. 243,670
Term of patent 14 years
U.S. Cl. D21—191



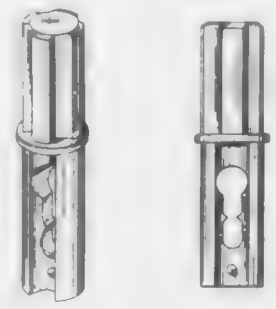
315,938
COMBINED BASKETBALL GAME GOAL AND BALL RETURN
[illegible]ra K. Doyle, P.O. Drawer 49467, Sarasota, Fla. 34230-6467
Filed Nov. 2, 1988, Ser. No. 2[illegible]924
Term of patent 14 years
U.S. Cl. D21—[illegible]01



315,939
IRON GOLF CLUB HEAD
Anthony J. Antonious, 205 E. Joppa Rd., Towson, Md. 21204
Filed Mar. 4, 1988, Ser. No. 164,001
The portion of the term of this patent subsequent to Mar. 19, 2005, has been disclaimed.
Term of patent 14 years
U.S. Cl. D21—220

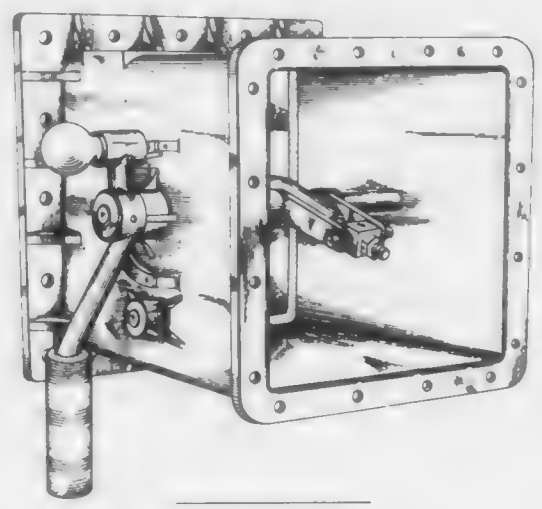


315,940
ROLLER SKATE
Stephen D. Wehmeyer, West Falls, N.Y., assignor to The Quaker Oats Company, Chicago, Ill.
Filed Aug. 15, 1988, Ser. No. 232,572
Term of patent 14 years
U.S. Cl. D21—226

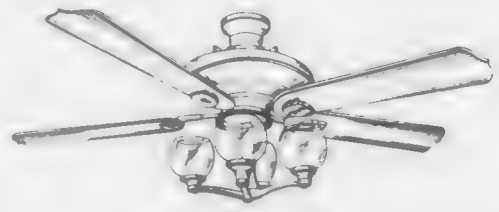


315,941
ROLLER SKATE BRAKE
Brennan J. Olson; Thomas J. Brace, both of Minneapolis, Minn., and Charles R. Frigard, Holland, Mich., assignors to Rollerblade, Inc., Minneapolis, Minn.
Filed Aug. 23, 1989, Ser. No. 397,304
Term of patent 14 y[illegible]s
U.S. Cl. D21—226

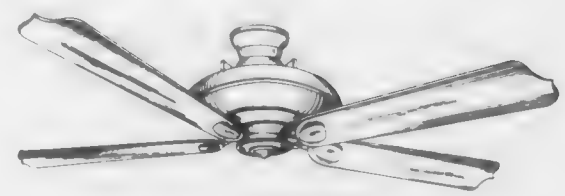
315,942
POOL RACK TRIANGLE
[illegible]avid Cahill, 7251 Weingartz, Centerline, Mich. 48015
Filed Mar. 7, 1988, Ser. No. 164,[illegible]43
Term of patent 14 years
U.S. Cl. D21—232



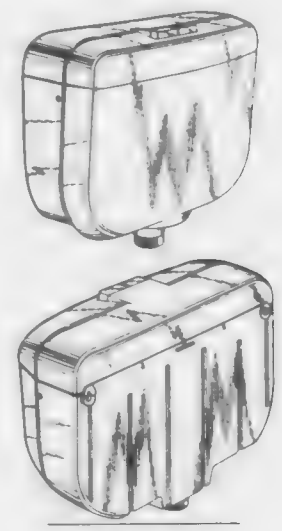
315,943
TENT POLE TIP
Steve C. Heller, Wauconda, Ill., assignor to Illinois Tool Works Inc., Glenview, Ill.
Filed Sep. 26, 1988, Ser. No. 250,121
Term of patent 14 years
U.S. Cl. D21—254



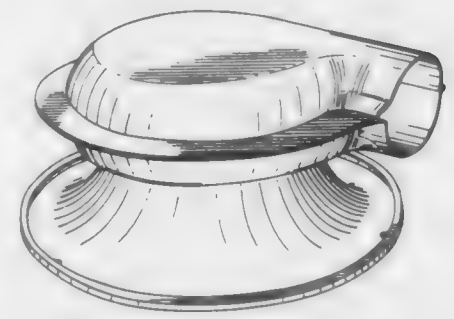
315,944
FISHING ROD OR THE LIKE
Gary J. Gibich, 611 E. 48th, Austin, Tex. 78751
Filed Mar. 18, 1988, Ser. No. 171,511
Term of patent 14 years
U.S. Cl. D22—142



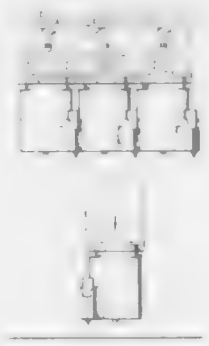
315,945
DUMP VALVE FOR ATTACHMENT TO FIRE ENGINE TANKERS
Theodore Ziaylek, Jr., 140 Riverview Dr., and Michael P. Ziaylek, 3 Brook La., both of Yardley, Pa. 19067
Filed Aug. 7, 1989, Ser. No. 390,912
Term of patent 14 years
U.S. Cl. D23—244



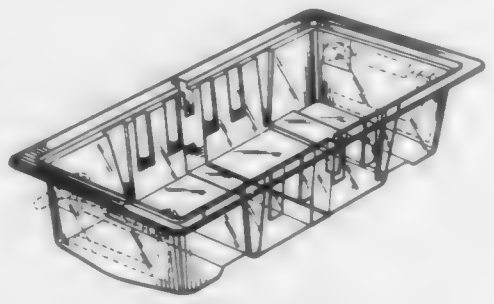
315,946
CEILING FAN AND LIGHT FIXTURE
Richard M. Hollbrook, Hermosa Beach, Calif., assignor to Casablanca Fan Company, Inc., City of Industry, Calif.
Filed Nov. 1, 1988, Ser. No. 265,663
Term of patent 14 years
U.S. Cl. D23—377



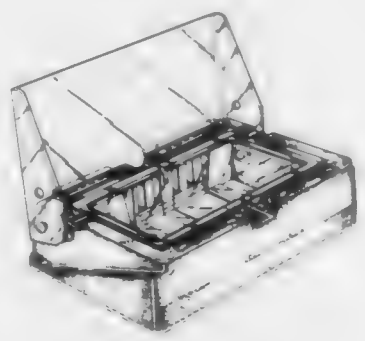
315,947
CEILING FAN
Richard M. Hollbrook, Hermosa Beach, Calif., assignor to Casablanca Fan Company, Inc., City of Industry, Calif.
Filed Nov. 1, 1988, Ser. No. 265,[illegible]64
Term of patent 14 years
U.S. Cl. D23—377



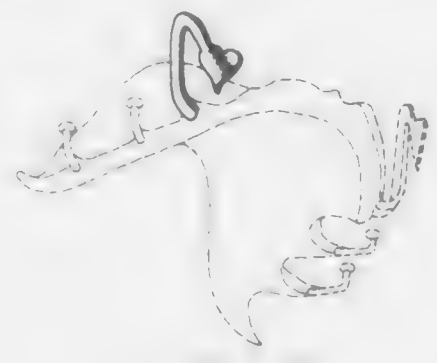
315,948
FLUSHING TANK
Bruce R. Thompson, Tranmere, Australia, assignor to Caroma Industries Limited, Australia
Filed Jun. 5, 1987, Ser. No. 58,378
Claims priority, application Australia, Dec. 10, 1986, [illegible]10/87
Term of patent 14 years
U.S. Cl. D23—313



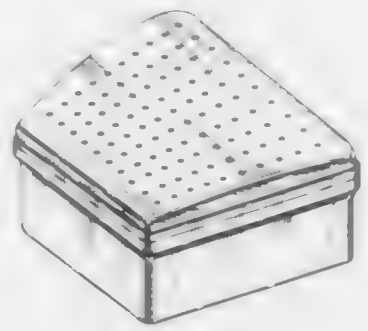
315,949
VENTILATOR
Bengt Sellö, Stockholm, Sweden, assignor to Soft Construction AB, Stockholm, Sweden
Filed Nov. 14, 1989, Ser. No. 436,534
Claims priority, application Sweden, May 23, 1989, 89-1243
Term of patent 14 years
U.S. Cl. D23—393



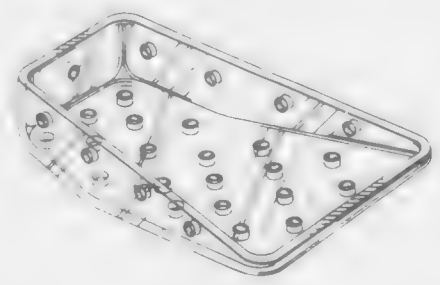
315,950
ANESTHESIA VAPORIZER UNIT
John C. Lundy, Tustin, Calif., assignor to Vaporflow Technology, Inc., Tustin, Calif.
Filed Oct. 9, 1987, Ser. No. 107,517
Term of patent 14 years
U.S. Cl. D24—8



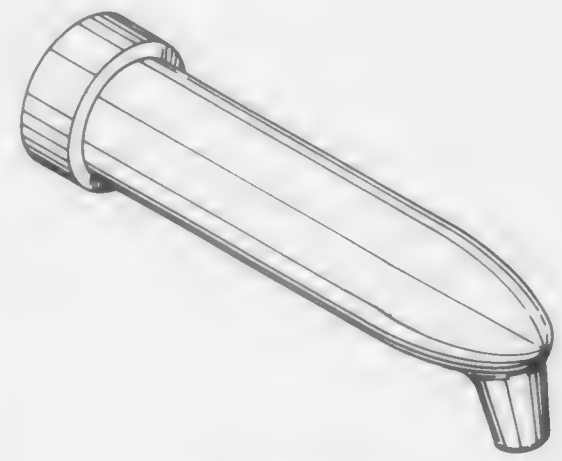
315,951
REACTION TANK FOR ELECTROPHORESIS APPARATUS
Mark Berninger, Gaithersburg, Md., and Michael Schuette, Vienna, Va., assignors to Life Technologies, Inc., Gaithersburg, Md.
Filed Jan. 29, 1988, Ser. No. 149,863
Term of patent 14 years
U.S. Cl. D24—8



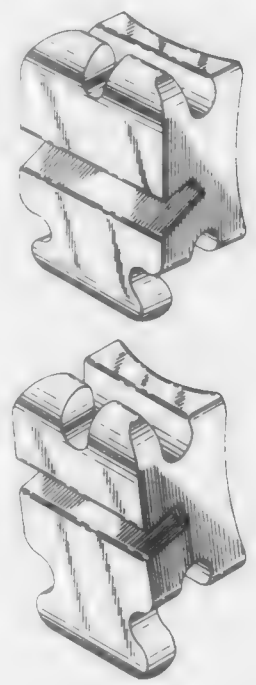
315,952
HORIZONTAL GEL ELECTROPHORESIS UNIT
Mark Berninger, Gaithersburg, Md., and Michael Schuette, Vienna, Va., assignors to Life Technologies, Inc., Gaithersburg, Md.
Filed Jan. 29, 1988, Ser. No. 149,[illegible]
Term of patent 14 years
U.S. Cl. D24—8



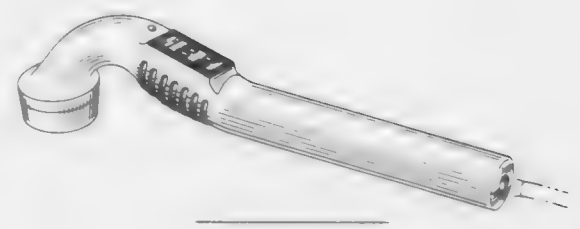
315,953
WIREFORM FOR AN ORTHODONTIC APPLIANCE OR SIMILAR ARTICLE
Ellen M. Moran, 4146 Hyde Park Ct. #H, Indianapolis, Ind., and James M. Moran, Indianapolis, Ind., assignors to Ellen M. Moran, Indianapolis, Ind.
Filed Oct. 27, 1988, Ser. No. 263,337
Term of patent 14 years
U.S. Cl. D24—16



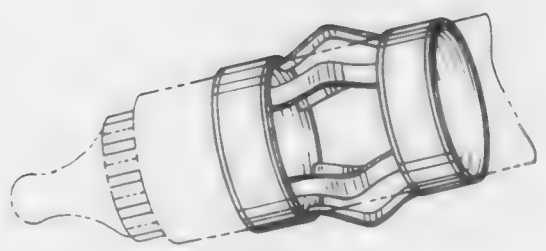
315,954
DENTURE CONTAINER
Maxine L. Berland, 659 Oak St., Lakewood, Colo. 80215
Filed Sep. 16, 1988, Ser. No. 245,544
Term of patent 14 years
U.S. Cl. D24—10



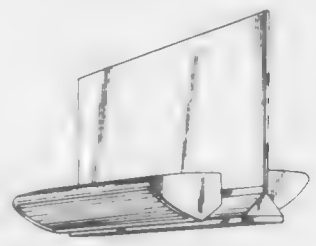
315,955
DENTAL IMPRESSION TRAY FOR SMALL ANIMALS
Lloyd J. Mann, Medford PO Sta. 3, P.O. Box 3503, Medford, Oreg. 97504
Filed Nov. 7, 1988, Ser. No. 267,914
Term of patent 14 years
U.S. Cl. D24—10



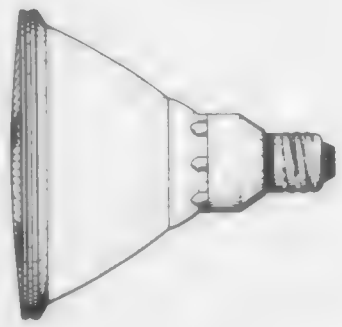
315,956
DENTAL SYRINGE TIP
William B. Dragan, 85 Burr St., Easton, Conn. 06612
Filed Feb. 6, 1989, Ser. No. 306,651
Term of patent 14 years
U.S. Cl. D24—14



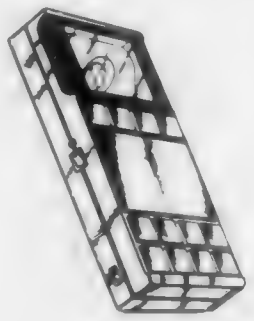
315,957
ORTHODONTIC BRACKET
John S. Kelly, Arcadia; Jerold S. Horn, Azusa, and Jirina V. Pospisil, Monrovia, all of Calif., assignors to Minnesota Mining and Manufacturing Company, St. Paul, Minn.
Continuation of Ser. No. 913,188, Sep. 29, 1986, abandoned. This application Nov. 13, 1989, Ser. No. 434,496
Term of patent 14 years
U.S. Cl. D24—16



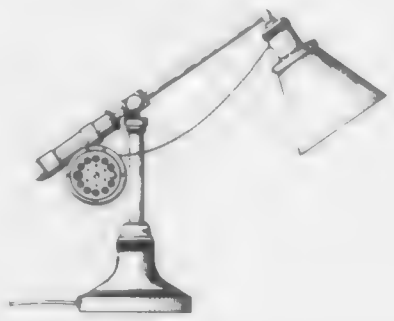
315,958
PHYSIOLOGICAL STIMULATOR
John C. Castel, Topeka, Kans., and Alexander Bally, Pittsburgh, Pa., assignors to Physio Technology, Inc., Topeka, Kans.
Filed Jun. 13, 1988, Ser. No. 207,055
Term of patent 14 years
U.S. Cl. D24—41



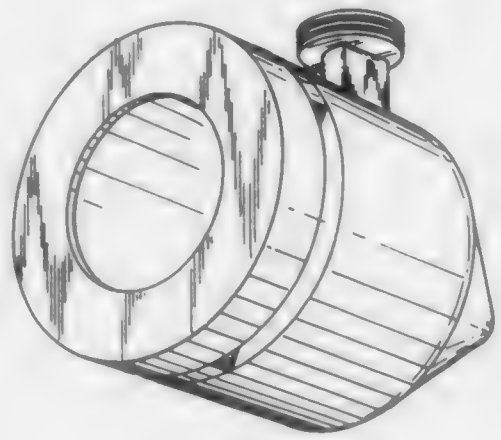
315,959
HANDLE GRIP FOR A BABY BOTTLE
Dona Bilangi, 3320 Ellenboro, Troy, Mich. 48083
Filed Jun. 9, 1989, Ser. No. 365,023
Term of patent 14 years
U.S. Cl. D24—48



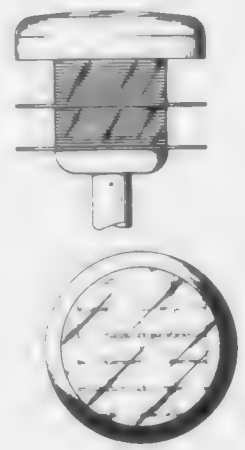
315,960
GLAZED EXTENSION PANEL
Charles Heidmann, Strasbourg, France, assignor to Steelcase Strafor, Strasbour, France
Filed Feb. 22, 1989, Ser. No. 314,419
Claims priority, application France, Aug. 30, 1988, 88 5496
Term of patent 14 years
U.S. Cl. D25—138



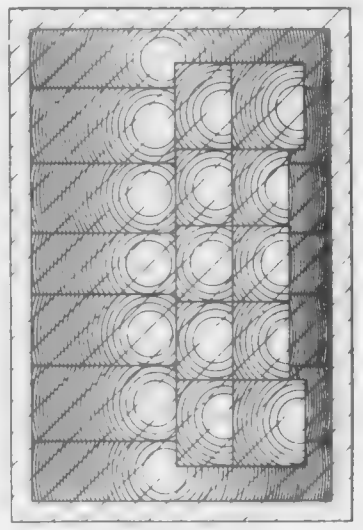
315,961
REFLECTOR LAMP
Carl F. Kackenmeister, and Michael R. Kling, both of Stratham, N.H., assignors to GTE Products Corporation, Danvers, Mass.
Filed Mar. 7, 1990, Ser. No. 490,166
Term of patent 14 years
U.S. Cl. D26—2



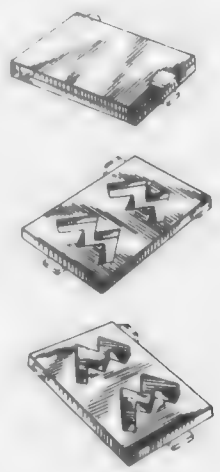
315,962
PORTABLE LIGHT PROJECTOR FOR PRODUCING MULTICOLORED LINE PATTERNS ON A WALL OR THE LIKE IN RESPONSE TO AN AUDIO INPUT SIGNAL
Joshua F. Lavinsky, 350 S. San Fernando Blvd., #301, Burbank, Calif. 91502, and Thomas M. Payne, Burbank, Calif., assignors to Joshua F. Lavinsky, Burbank, Calif.
Filed Mar. 16, 1988, Ser. No. 168,756
Term of patent 14 years
U.S. Cl. D26—24



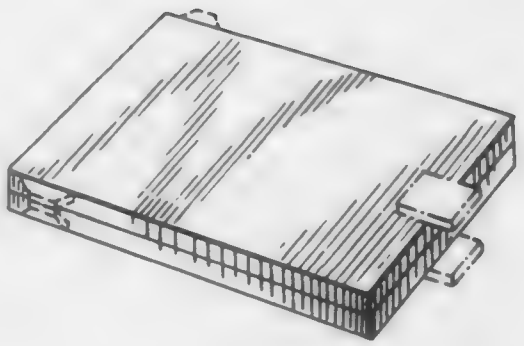
315,963
ADJUSTABLE DESK LAMP
Richard B. Greer, P.O. Box 4005, Carmichael, Calif. 95609
Filed Apr. 3, 1989, Ser. No. 331,899
Term of patent 14 years
U.S. Cl. D26—63



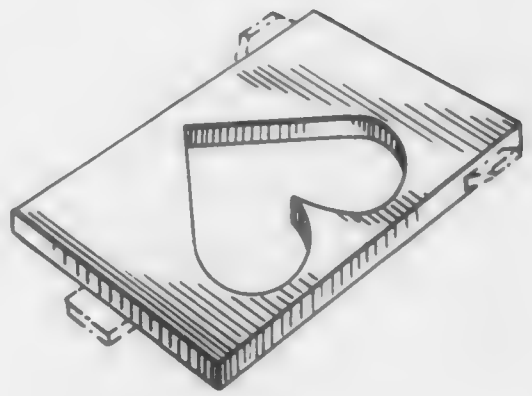
315,964
SPOTLIGHT HOUSING
Stefanus F. Joosten, Eindhoven, and Leonardus A. Krol, Gorichem, both of Netherlands, assignors to U. S. Philips Corporation, New York, N.Y.
Filed May 1, 1989, Ser. No. 345,506
Claims priority, application Netherlands, Nov. 9, 1988, DMA/000.874
Term of patent 14 years
U.S. Cl. D26—63

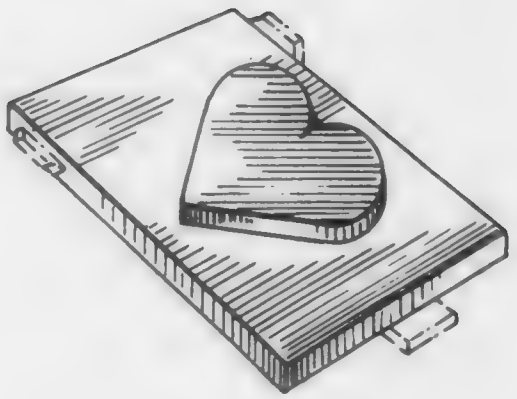


315,965
SOLAR POWERED WALKWAY LIGHT
John S. Frost, Thousand Oaks, Calif., assignor to Atlantic Richfield Company, Los Angeles, Calif.
Filed Aug. 1, 1989, Ser. No. 388,227
Term of patent 14 years
U.S. Cl. D26—67



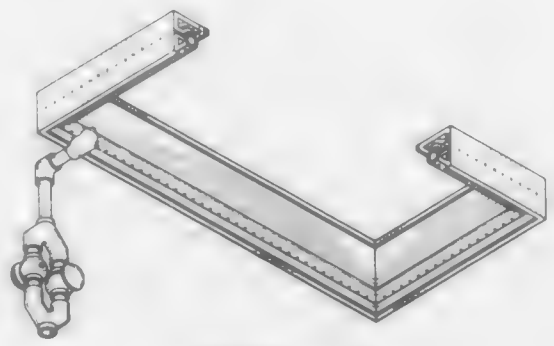
315,966
WIDE ANGLE FRESNEL LENS ARRAY FOR INFRARED MOTION DETECTOR SYSTEM
Richard N. Claytor, Arlington, and Russell G. Torti, Fort Worth, both of Tex., assignors to Fresnel Technologies, Inc., Fort Worth, Tex.
Filed Nov. 7, 1988, Ser. No. 267,788
The portion of the term of this patent subsequent to Mar. 12, 2005, has been disclaimed.
Term of patent 14 years
U.S. Cl. D26—122

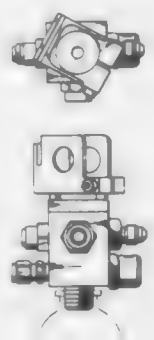




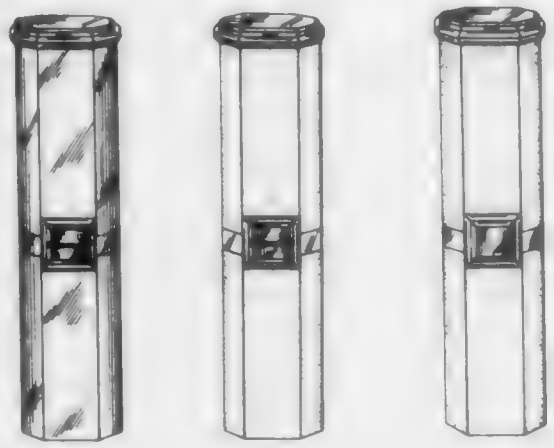
315,967
HAIR CRIMPING HEAD APPLIANCE
Leandro P. Rizzuto, Greenwich; Frank Lindsey, Stratford, both of Conn., and Anthony Leung, North Point, Hong Kong, assignors to Conair Corporation, Stamford, Conn.
Filed Jul. 27, 1989, Ser. No. 385,485
Term of patent 14 years
U.S. Cl. D28—35

315,968
HAIR CRIMPING HEAD APPLIANCE
Leandro P. Rizzuto, Greenwich; Frank Lindsey, Stratford, both of Conn., and Anthony Leung, North Point, Hong Kong, assignors to Conair Corporation, Stamford, Conn.
Filed Jul. 27, 1989, Ser. No. 385,790
Term of patent 14 years
U.S. Cl. D28—35

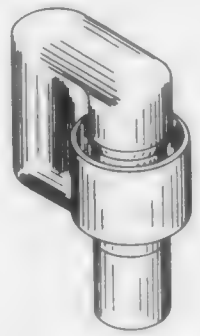




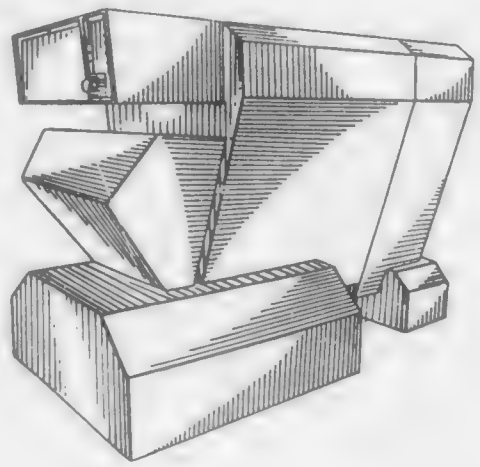
315,969
LIPSTICK CASE
Karen E. McCready, Suffern, N.Y., assignor to Elleance Ltd., New City, N.Y.
Filed Sep. 9, 1988, Ser. No. 242,290
Term of patent 14 years
U.S. Cl. D28—85



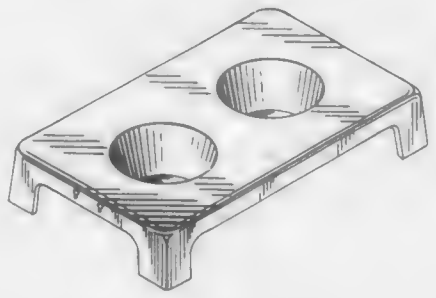
315,970
FIRE EXTINGUISHER
Aniano D. Ramos, 38 Passaic Rd., Goose Creek, S.C. 29445, and Wilhelm Gajeton, 5301 Marilyn Dr., Charleston, S.C. 29418
Filed Jun. 22, 1988, Ser. No. 211,397
Term of patent 14 years
U.S. Cl. D29—2

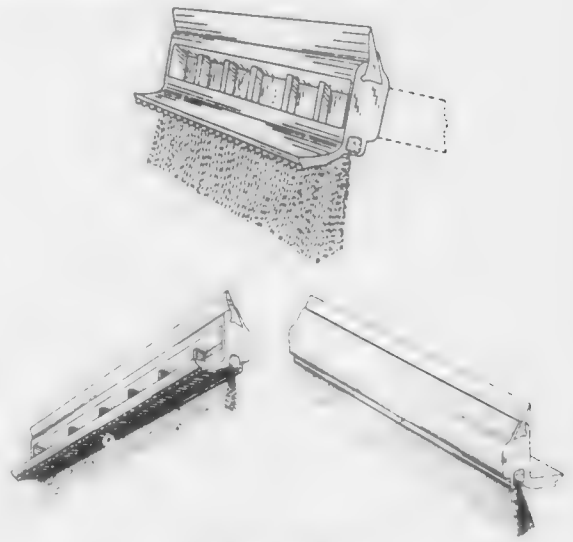


315,971
PRESSURE REDUCER UNIT FOR EMERGENCY BREATHING SYSTEMS
Albert R. Molzan, Alhambra, Calif., assignor to American Safety Flight Systems, Inc., Glendale, Calif.
Filed Jul. 21, 1986, Ser. No. 887,639
Term of patent 14 years
U.S. Cl. D29—6

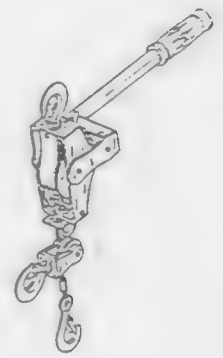


315,972
SNORKEL
Bruce J. Forman, 4455 Jasmine Ave., Culver City, Calif. 90230
Filed Sep. 19, 1988, Ser. No. 245,538
Term of patent 14 years
U.S. Cl. D29—7

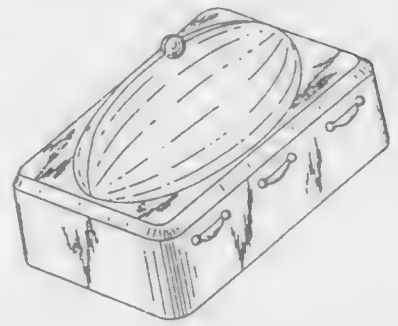




315,973
AUTOMATIC CATTLE FEEDER
Gaetan Beaudoin, Artabaska, and Jacques Cimon, Levis, both of Canada, assignors to Micro-Contact Inc., Quebec, Canada
Filed Mar. 31, 1989, Ser. No. 331,544
Term of patent 14 years
U.S. Cl. D30—122



315,974
ANIMAL FEEDING TABLE
Gerald Steiner, 2033 Virginia Ave. South, St. Louis Park, Minn. 55426
Filed Jul. 15, 1988, Ser. No. 219,178
Term of patent 14 years
U.S. Cl. D30—131



315,975
COMBINED BRUSH HEAD AND SCRAPER
Chii M. Huang, 7 Tuu Kuh North Road, Nan Tzu, POB6-53, Kaohsiung, Taiwan
Filed Jan. 7, 1988, Ser. No. 141,686
Term of patent 14 years
U.S. Cl. D32—41

315,976
MANUAL WINCH DEVICE
Y. S. Shieh, No. 15, Lane 493, Yuan-Chi Rd., Sec. 2, Yuan-Lin Jen, Chang Hua Hsien, Taiwan
Filed May 17, 1988, Ser. No. 194,718
Term of patent 14 years
U.S. Cl. D34—33

315,977
COFFIN
Jerina F. Best, 541 Guylyn Dr., Pittsburgh, Pa. 15235
Filed Feb. 16, 1988, Ser. No. 156,095
Term of patent 14 years
U.S. Cl. D99—1

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 2ND DAY OF APRIL, 1991

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

A. O. Smith Corporation: *See*—
King, James L., 5,004,942, Cl. 310-89.000.

ABB Environmental Services Inc. *See*—
Sublette, Kerry L., 5,004,551, Cl. 210-763.000.

Abbott Laboratories: *See*—
Becker, Wallace E., 5,004,651, Cl. 424-465.000.
Osip, Thomas W., Montgomery, Jerold W.; and Pezzoli, Paul A., 5,004,110, Cl. 215-232.000.

Abdel-Malik, Magdy M.. *See*—
Yalpani, Manssur; and Abdel-Malik, Magdy M., 5,004,808, Cl. 536-56.000.

Abe, Kunihiro, Sakamoto, Masanori; and Kobayashi, Tomoya, to Fuji Jukogyo Kabushiki Kaisha. Diagnosis system for a motor vehicle. 5,005,129, Cl. 364-424.030.

Abe, Masashi: *See*—
Takayama, Syuichi; Tsukaya, Takashi; Ueda, Yasuhiro; Hatta, Shinji, and Abe, Masashi, 5,003,991, Cl. 128-784.000.

Abe, Yuji. *See*—
Kano, Atsushi; Mizuno, Masayuki; Kajiwara, Manabu; Sakaue, Kenji, Abe, Yuji; and Nakamura, Kazuo, 5,004,217, Cl. 271-10.000.

Abkowitz, Martin A.: *See*—
Badesha, Santokh S., Stolka, Milan; Pai, Damodar M.; and Abkowitz, Martin A., 5,004,663, Cl. 430-59.000.

Acer Incorporated. *See*—
Lee, Sheau-Jiung, 5,004,938, Cl. 307-448.000.

ACF Industries, Inc.. *See*—
Schmidt, Kenneth D.; and Holt, Jan D., 5,004,386, Cl. 410-62.000.

Achiever Industries, Ltd.. *See*—
Chan, Yet, 5,005,034, Cl. 354-204.000.

Ackerman, John R.: *See*—
Stirling, Thomas E.; and Ackerman, John R., 5,004,484, Cl. 55-53.000.

Ackermann, Wilhelm, Langlitz, Karlheinz; and Schmitz, Gunter, to Mannesmann Aktiengesellschaft. Torque support for drives riding on trunnions, particularly for converter tilt drives. 5,003,835, Cl. 74-411.000.

Actronic Lighting CC: *See*—
Cockram, David J.; and Cockram, Edgar S. R., 5,004,960, Cl. 315-307.000.

Adachi, Kenichi, Katoh, Kazunobu; and Kawamura, Kouichi, to Fuji Photo Film Co., Ltd. Silver halide photosensitive material. 5,004,674, Cl. 430-333.000.

Adams, Ann H.. *See*—
Merickel, Michael B.; Adams, Ann H.; and Brookeman, James R., 5,003,979, Cl. 128-653.00A.

Adams, Frank H.: *See*—
Schmidt, Robert J.; Haizmann, Robert S.; Ford, Mark R.; Low, C David; and Adams, Frank H., 5,004,859, Cl. 585-741.000.

Adams, James, Gobel, Richard; and Lanham, Bryan, to Beloit Corporation. Shear hub. 5,004,028, Cl. 144-176.000.

Adany, Shalom; and Levi, Amram. Multi-annual calendar. 5,003,713, Cl. 40-113.000.

Adolph Coors Company: *See*—
Shriver, Frank L., 5,003,875, Cl. 101-350.000.

Advance Security Inc.. *See*—
Chen, Michael, 5,004,931, Cl. 307-10.200.

Advanced Cardiovascular Systems, Inc.. *See*—
Taylor, Charles S.; and Hampton, Hilary J., 5,003,989, Cl. 128-772.000.

Advanced Micro Devices, Inc.: *See*—
Bohrer, Mark W., 5,004,986, Cl. 330-257.000.
Radjy, Nader A.; and Briner, Michael S., 5,005,155, Cl. 365-185.000.

Aerotech, Inc.: *See*—
Hans, Paul C.; and Rosenfield, Gary C., 5,004,186, Cl. 244-3.250.

Agency of Industrial Science and Technology. *See*—
Suzuki, Susumu, Ishida, Kazuyuki, and Ozaki, Takeo, 5,003,977, Cl. 128-633.000.

Agfa-Gevaert Aktiengesellschaft. *See*—
Meckl, Heinz, Klotzer, Sieghart, Wolff, Erich; and Haseler, Helmut, 5,004,676, Cl. 430-398.000.

Agfa-Gevaert, N.V.: *See*—
Vermeulen, Leon L.; Pauwels, Robert S., De Smedt, Willy P.; and Vervloet, Ludovicus H., 5,004,659, Cl. 430-14.000.

Aghajanian, Michael K.: *See*—
Park, Eugene S.; and Aghajanian, Michael K., 5,004,034, Cl. 164-97.000.

Agracetus. *See*—
Umbeck, Paul F., 5,004,863, Cl. 800-205.000.

Agranat, Edward A.: *See*—
Kleven, Lawrence P.; Agranat, Edward A.; Crisafulli, Jerry; Robinson, Hugh; Smith, David J.; Wiseley, Thomas, Fortier, Richard C.; Johnson, Severne; and Menzin, Marvin, 5,004,954, Cl. 315-106.000.

Ahn, Chang S., to Goldstar Co., Ltd. Carriage device for an electronic typewriter using a two-row daisy wheel. 5,004,360, Cl. 400-144.200.

Aiello, Richard E.; Stillie, Donald G.; and Allgood, Christopher L., to AMP Incorporated. Printed circuit board edge connector. 5,004,434, Cl. 439-636.000.

Aisaka, Tatsuryoshi: *See*—
Shimamura, Keizo; Amano, Kagetaka; Aisaka, Tatsuryoshi; Hanai, Satoshi; and Nagata, Kohsoku, 5,004,498, Cl. 75-233.000.

Aisin AW Co., Ltd.: *See*—
Sakakibara, Shiro; and Furuya, Takashi, 5,004,082, Cl. 192-3.260.

Aisin AW Kabushiki Kaisha: *See*—
Suzuki, Akira, 5,004,440, Cl. 137-625.650.

Aisin Seiki Kabushiki Kaisha. *See*—
Takeda, Toshio, 5,003,957, Cl. 123-564.000.

Aisin Takaoka Co., Ltd.: *See*—
Oono, Toshio; and Uemura, Hiroki, 5,004,078, Cl. 188-218.00A.

Akagi, Toshimichi: *See*—
Shibata, Masanori; Okimoto, Haruo; Akagi, Toshimichi; and Tashima, Seiji, 5,003,781, Cl. 60-600.000.

Akao, Yasushi. *See*—
Nakada, Kunihiko; and Akao, Yasushi, 5,005,121, Cl. 364-200.000.

Akashi, Akira; Kadohara, Terutake. Ohnuki, Ichiro; and Higashihara, Masaki, to Canon Kabushiki Kaisha. Auto focus adjusting device. 5,005,037, Cl. 354-400.000.

Akishima Chemical Industries Co., Ltd.: *See*—
Tadenuma, Masahiko; Miyagi, Tetsuhiro; and Miyazawa, Tadashi, 5,004,776, Cl. 524-377.000.

Aktiebolaget SKF: *See*—
Berg, Sven-Olof; Broden, Ingemar; and Johansen, Odvar, 5,004,395, Cl. 414-412.000.

Al-Yazdi, Ahmed M. Apparatus and method for separating water from crude oil. 5,004,552, Cl. 210-789.000.

Albert-Frankenthal AG: *See*—
Prum, Sebastian, 5,004,451, Cl. 493-359.000.

Albrecht, Karoly: *See*—
Jekkel nee Bokany, Antonia; Albrecht, Karoly; Ambrus, Gabor; Lang, Tibor; Szabo, Istvan M.; Ilkoy, Eva; Konczol, Kalman, Moravcsik, Imre; Hantos, Gabor; Simonovits, Emilia; Lengyel nee Szemenyei, Zsuzsanna; Vida, Zsuzesanna, and Csajagi, Eva, 5,004,695, Cl. 435-253.100.

Alcan International Limited: *See*—
Hunter, John A.; Scamans, Geoffrey M.; O'Callaghan, Wilfred B.; and Wycliffe, Paul A., 5,004,654, Cl. 429-50.000.
Lyons, Nicholas; Baxter, William R. S.; Woodward, Adrian M.; and Clarke, Roger W., 5,004,542, Cl. 210-356.000.

Alfa Costruzioni Meccaniche S.p.A.: *See*—
Orlandi, Ireneo, 5,004,517, Cl. 156-567.000.

Alinovi, Mario B., to Omar S.n.c. di Mario Baiocchi Alinovi & C. Automatic skinner for non-scaly fish. 5,003,667, Cl. 452-125.000.

Alkermes. *See*—
Pardridge, William M., 5,004,697, Cl. 436-547.000.

Allen-Bradley Company: *See*—
Knutsen, Neil W., 5,005,152, Cl. 364-900.000.

Allen-Bradley International Limited: *See*—
Atkinson, Anthony; Gray, Richard; and Denes, Oscar L., 5,003,693, Cl. 29-849.000.

Allen, Floyd L.; Best, Glen H.; and Lindroth, Thomas A., to Merck & Co., Inc. Welan gum in cement compositions. 5,004,506, Cl. 106-729.000.

Allen, Jimmy D.: *See*—
Hillman, Robert S.; Cobb, Michael E.; Allen, Jimmy D.; Gibbons, Ian; Ostoich, Vladimir E.; and Winfrey, Laura J., 5,004,923, Cl. 250-341.000.

Allet, Bernard: *See*—
Fiers, Walter C.; and Allet, Bernard, 5,004,689, Cl. 435-69.510.

Alley, Russell I.; and Caine, George E., to CAC, Inc. Magnesium oxychloride cement compositions and methods for manufacture and use. 5,004,505, Cl. 106-685.000.

Allflex Europe S.A.: *See*—
Biggio, Alain; and Landrevie, Jacques, 5,004,897, Cl. 235-441.000.

Allgood, Christopher L.: *See*—
Aiello, Richard E.; Stillie, Donald G., and Allgood, Christopher L., 5,004,434, Cl. 439-636.000.

Allied-Signal Inc.: *See*—
Arnett, Eric M., 5,004,910, Cl. 250-226.000.
Das, Sajal; and Prevorsek, Dusan C., 5,004,788, Cl. 525-504.000.
Harnish, Daniel F.; Pickens, Donald; and Zweig, Andrew M., 5,004,790, Cl. 526-242.000.
Olson, Larry D.; and Kamla, Jeffrey R., 5,004,775, Cl. 524-371.000.

Stranford, Gerald T., Gonczy, Stephen T., and Mitsche, Roy T., 5,004,709, Cl. 501-97.000

Allport, Davies, to T-Systems Corp. Method for protecting drip irrigation hoses and other structures from root intrusion. 5,003,726, Cl. 47-48.500

Alm, Terry J. *See*—
Wagner, Oryn B., and Alm, Terry J., 5,004,398, Cl. 414-723.000

Alonso, Nelson. Bidet assembly with drainage. 5,003,645, Cl. 4-448.000

Alperk Limited. *See*—
Higgins, John, and McDonagh, Michael, 5,003,868, Cl. 99-357.000

Alpha Industries, Inc. *See*—
Borzym, John J., and Borzym, Alexander, 5,003,853, Cl. 83-318.000

Alpine Electronics Inc. *See*—
Kikuchi, Takashi, and Aoyagi, Shigeo, 5,005,090, Cl. 360-92.000

Alps Electric Co., Ltd. *See*—
Fuse, Masashi, 5,005,029, Cl. 346-107.00R
Ishikawa, Hiroshi; Hasegawa, Kazuo, and Gotoh, Masaki, 5,004,898, Cl. 235-475.000
Komatsu, Normasa, and Miyazaki, Asashi, 5,005,094, Cl. 360-105.000
Koutaka, Yoshirou, 5,004,880, Cl. 200-521.000
Onodera, Norio, 5,005,105, Cl. 361-398.000
Shigenai, Osamu, and Sato, Keiichi, 5,005,092, Cl. 360-99.060

Alread, Don. Exercise glove. 5,004,231, Cl. 272-143.000

Alt, Eckhard. Cardiac and pulmonary physiological analysis via intracardiac measurements with a single sensor. 5,003,976, Cl. 128-419.0PG

Altendorf, John M., and Wong, Marvin G., to Hewlett-Packard Company. Soldering interconnect method and apparatus for semiconductor packages. 5,005,070, Cl. 357-74.000

Altschuler, Martin D., and Whittington, Richard, to University of Pennsylvania. Interactive statistical system and method for predicting expert decisions. 5,005,143, Cl. 364-554.000

Aluminum Company of America. *See*—
Morton, Philip G., 5,003,747, Cl. 52-656.000

ALZA Corporation. *See*—
Osborne, James L., Nelson, Melinda, Enscore, David J., Yum, Su I., and Gale, Robert M., 5,004,610, Cl. 424-448.000

Amada Company, Limited. *See*—
Lim, Gnian C., 5,004,890, Cl. 219-121.830

Amana Refrigeration Inc. *See*—
Montuoro, Lou D., Vandarakis, Toni L., and Johnson, Richard L., 5,004,305, Cl. 312-214.000

Amano, Haruo, to NEC Corporation. Semiconductor device. 5,005,071, Cl. 357-85.000

Amano, Kagetaka. *See*—
Shimamura, Keizo, Amano, Kagetaka, Aisaka, Tatsuryoshi, Hanai, Satoshi, and Nagata, Kohsoku, 5,004,498, Cl. 75-233.000

Amano, Tetsuya, Mita, Seiichi, Izumita, Morishi, Doi, Nobukazu, Kaneko, Mamoru, Yamauchi, Hiroto, and Kasai, Susumu, to Hitachi, Ltd., Hitachi Denshi Kabushiki Kaisha, and Hitachi Video Engineering, Inc. Method and apparatus for waveform equalization. 5,005,184, Cl. 375-14.000

Ambrus, Gabor. *See*—
Jekkel nee Bokany, Antonia, Albrecht, Karoly, Ambrus, Gabor, Lang, Tibor, Szabo, Istvan M., Ilkoy, Eva, Konczol, Kalman, Moravesik, Imre, Hantos, Gabor, Simonovits, Emilia, Lengyel nee Szemenyei, Zsuzsanna, Vida, Zsuzesanna, and Csajagi, Eva, 5,004,695, Cl. 435-253.100

American Bank Note Holographics, Inc. *See*—
D'Amato, Salvatore F., Sorbo, Peter, and Dunning, Richard E., 5,003,915, Cl. 118-46.000

American Electric FL Industries, Inc., Division. *See*—
Suk, Eugene J., 5,004,199, Cl. 248-231.800

American Tourister, Inc. *See*—
Natho, Bradford J., Andrade, George L., Wheaton, John M., and Schmitt, Wayne I., 5,004,091, Cl. 190-18.00R

Ames, Matthew M., and Kovach, John S., to Mayo Foundation for Medical Education and Research. Hexamethylmelamine formulation exhibiting reduced neurotoxicity. 5,004,593, Cl. 424-10.000.

Amikura, Kazuo. *See*—
Ohzeki, Yoshiyuki; and Amikura, Kazuo, 5,004,941, Cl. 310-49.00R

Amoco Corporation. *See*—
Hansen, John S., and Waranius, William A., 5,004,860, Cl. 585-812.000

Dull, Raymond P.; Lavas, Bernard R.; and Baxter, William D., 5,003,740, Cl. 52-239.000.

Baxter, William R. S.: *See—*
Lyons, Nicholas; Baxter, William R. S.; Woodward, Adrian M.; and Clarke, Roger W., 5,004,542, Cl. 210-356.000.

Bayer Aktiengesellschaft: *See—*
Blum, Harald, Meixner, Jurgen; Schreckenberg, Manfred, Fleiter, Lothar, and Wellner, Wolfgang, 5,004,779, Cl. 524-591.000.
Kricheldorf, Hans-Rytger; Delius, Ulrich; and Wehrmann, Rolf, 5,004,836, Cl. 568-333.000.
Meier, Helmut-Martin; Kircher, Klaus; and Berg, Klaus, 5,004,569, Cl. 260-410.600.
Weissmuller, Joachim; Tietjen, Klaus-Gunther; Stendel, Wilhelm; and Wachendorff-Neumann, Ulrike, 5,004,744, Cl. 514-247.000.
Zecher, Wilfried; El-Sayed, Aziz, Haese, Wilfried, Kohler, Burkhard; and Meyer, Rolf-Volker, 5,004,795, Cl. 528-73.000.

Bayerische Motoren Werke AG: *See—*
Lemberger, Heinz, 5,003,947, Cl. 123-339.000.

Bayerische Motoren Werke Aktiengesellschaft: *See—*
Kappler, Guenter; and Rist, Dieter, 5,003,768, Cl. 60-39.230.

Bayern-Chemie Gesellschaft fuer flugchemische Antriebe mbH: *See—*
Unterforsthuber, Karl; and Koenig, Rudolf, 5,003,887, Cl. 102-531.000.

Bayless, Lee. Collapsible hammock. 5,003,652, Cl. 5-129.000.

Bayview Technology Group, Inc.: *See—*
Schanin, David J., 5,004,969, Cl. 323-235.000.

Bear Automotive Service Equipment Company: *See—*
Marino, Joseph A.; Makhija, Surender K.; Taghikhani, Majid, and Puetz, Peter A., 5,004,979, Cl. 324-160.000.

Beard, William Q., Jr.: *See—*
Hirschmann, Robert P.; Beard, William Q., Jr.; Mainz, Eric L.; Smith, Earl B., and Little, Barry M., 5,004,849, Cl. 570-224.000.

Beaston, Brook J., to Great Plains Industries, Inc. Dripless coupling device. 5,004,013, Cl. 137-614.050.

Beatty, Scott M., and Bishop, John R., to Sargent & Greenleaf, Inc. Dial and dial ring assembly with detenting feature. 5,003,802, Cl. 70-333.00A.

Beaumont, Alan R.: *See—*
Booth, Richard C.; Beaumont, Alan R.; Daymond-John, Barbara E.; Cunningham, David G.; and Stallard, William A., 5,004,314, Cl. 350-96.140.

Beaver, Phillip R.; DiGiacinto, Peter M.; Hutchinson, Donald O.; and Vega, Julio J., to Ethyl Corporation. Recovery of hexabromocyclododecane particles. 5,004,847, Cl. 570-186.000.

Beaver, Phillip R., to Ethyl Corporation. Method of elevating the melting point of a hexabromocyclododecane product. 5,004,848, Cl. 570-206.000.

Becker, Kurt J., to Lanxide Technology Company, LP. Method for making metal matrix composites by the use of a negative alloy mold and products produced thereby. 5,004,036, Cl. 164-97.000.

Becker, Richard: *See—*
Braunling, Hermann; and Becker, Richard, 5,004,560, Cl. 526-258.000.

Becker, Thomas P.; Rameshk, Sohrab S.; and Crass, Matthew M., to Snap-on Tools Corporation. Magnetic field pickup assembly for diagnositics on specific engine. 5,004,984, Cl. 324-402.000.

Becker, Wallace E., to Abbott Laboratories. Stabilizing system for solid dosage forms. 5,004,651, Cl. 424-465.000.

Becker, Wilfried: *See—*
Pahnke, Klaus-Dieter; Holl, Rolf; and Becker, Wilfried, 5,003,886, Cl. 102-521.000.

Beckman, John A.; Huang, Shu-Jen, and Ebrat, Abdol R., to Nalco Chemical Company. Method of paint sludge conversion for disposal. 5,004,550, Cl. 210-710.000.

Beckwith, Barry M., to United Technologies Corporation. Bypass conduit for gas turbine engine. 5,003,773, Cl. 60-262.000.

Beckwith, Paul H., to Lumonics Inc. Laser optics quality monitoring. 5,005,177, Cl. 372-34.000.

Becoat, Billie J. Kit for converting a bicycle to a dual wheel driven cycle. 5,004,258, Cl. 280-259.000.

Bedekovic, Davor: *See—*
Phaff, Rox, and Bedekovic, Davor, 5,004,813, Cl. 548-463.000.

Bednar, Fred H.: *See—*
Lipchak, John B.; Oblak, Tod A., Bednar, Fred H., Ciaramitaro, William, Hughes, Francis R., Smith, John R.; and Gisoni, Gregory A., 5,005,142, Cl. 364-550.000.

Behensky, Max L.; Monerief, Rick L., Margolin, Jed; and Mott, Stephanie J., to Atari Games Corporation. Driving simulator with moving painted dashboard. 5,005,148, Cl. 364-578.000.

Belkin, Nathan L.: *See—*
Benstock, Gerald M., Belkin, Nathan L., and Green, Robert, 5,003,902, Cl. 112-418.000.

Bell, Charles L.: *See—*
Markow, Paul A.; Nolle, William; and Bell, Charles L., 5,004,976, Cl. 324-154.00R.

Bell Communications Research, Inc.: *See—*
Arthurs, Edward; Goodman, Matthew S.; Kim, Chong K., and Lee, Tony T., 5,005,167, Cl. 370-4.000.

Bell & Howell GmbH: *See—*
Dreschel, Jurgen, Hog, Peter; and Mobs, Stephan, 5,004,220, Cl. 271-184.000.

Bell, Mark E.: *See—*
Moody, G. Lawrence, Leone, David A.; and Bell, Mark E., 5,004,875, Cl. 200-400.000.

Bellin, Howard T.: *See—*
Dingwall, Robert P.; and Bellin, Howard T., 5,003,983, Cl. 128-704.000.

Bellotti, Vittorio: *See—*
Bastioli, Catia, Garlisi, Salvatore; Fornara, Dario; and Bellotti, Vittorio, 5,004,817, Cl. 549-557.000.

Beloit Corporation: *See—*
Adams, James; Gobel, Richard; and Lanham, Bryan, 5,004,028, Cl. 144-176.000.

Bemis, Steve; and Stocker, Erwin E., to Gates Rubber Company, The. Method for forming a fiber composite sealing element. 5,004,513, Cl. 156-191.000.

Bender, Richard C. Automatic fluid flow sensor and fluid shut-off system. 5,004,014, Cl. 137-624.120.

Benham, Harold L.; and Mitchell, James A., to British Petroleum Company p.l.c., The. Process for treating metal surfaces. 5,004,646, Cl. 428-344.000.

Bennett, Mark. Sun-shield. 5,004,285, Cl. 296-1.100.

Benstock, Gerald M.; Belkin, Nathan L.; and Green, Robert, to Superior Surgical Manufacturing Co., Inc. Seam having liquid proof threads stichably securing first and second liquid proof materials foldably enclosing a meltable adhesive polymer film and method of manufacture of same. 5,003,902, Cl. 112-418.000.

Berchowitz, David M., to Sunpower, Inc. Asymmetric gas spring. 5,003,777, Cl. 60-520.000.

Berfield, Robert C., to Shop-Vac Corporation. Attachment system for liquid spray lance. 5,004,160, Cl. 239-525.000.

Berg, Klaus: *See—*
Meier, Helmut-Martin; Kircher, Klaus; and Berg, Klaus, 5,004,569, Cl. 260-410.600.

Berg, Sven-Olof, Broden, Ingemar; and Johansen, Odvar, to Pronova AB; and Aktiebolaget SKF. Apparatus for the emptying of a package band and an arrangement for it. 5,004,395, Cl. 414-412.000.

Berger, Kurt: *See—*
Mutterer, Francis; and Berger, Kurt, 5,004,759, Cl. 524-89.000.

Bergero, Jean-Pierre, and Couasnard, Claude, to Thomson Tubes Electroniques. Microwave load in small-length oversized waveguide form. 5,004,990, Cl. 333-22.00R.

Bergquist, Roger: *See—*
Wislinski, Martin; Bergquist, Roger; Schroeder, Manfred; Weir, Theodore; Monetti, Matthew; and Fung, Paul, 5,004,579, Cl. 264-517.000.

Berkley, Robert D.; and Shaughnessy, Terry P., to Packaging Industries Group, Inc. Flying game bird decoys. 5,003,722, Cl. 43-3.000.

Berkley, Robert D.: *See—*
Lenert, Steven A.; and Berkley, Robert D., 5,003,718, Cl. 43-3.000.

Bernard, Marc, to Thomson-Brandt Armements. System of vehicle guidance by continuous gas jets. 5,004,184, Cl. 244-3.220.

Bernard, Walter, Heppner, Joachim G., and Schwarz, Karl H., to Bodenseewerk Geratetechnik GmbH. Measuring device having a laser and a ring resonator. 5,004,342, Cl. 356-350.000.

Bernards, Roger F.; Fisher, Gordon; and Sonnenberg, Wade, to Shipley Company Inc. Copper electroplating composition. 5,004,525, Cl. 204-52.100.

Berner, John M.; and Roman, Thomas A., to Truth Incorporated. Window operator control. 5,004,961, Cl. 318-65.000.

Bernhardt, Everett A.; and Winters, Robert C., to Sentrol, Inc. Switch housing with resilient retainers. 5,004,879, Cl. 200-295.000.

Bernstein, Arnold. Disposable debris bag for lawnmowers and sweepers. 5,003,758, Cl. 56-202.000.

Berruex, Serge A. Apparatus for rinsing surfaces with a non-aqueous liquid. 5,004,000, Cl. 134-108.000.

Bertrams, Kurt U. Training aid for such side arms as revolvers and pistols. 5,004,423, Cl. 434-22.000.

Besik, Ferdinand K. Apparatus for ultra high energy efficient heating, cooling and dehumidifying of air. 5,003,961, Cl. 126-110.00R.

Besore, John K.: *See—*
Stocking, George E.; Stich, Richard A.; Besore, John K.; and Denham, Clarence W., 5,004,302, Cl. 312-214.000.

Bessinger, Walter L., to Knape & Vogt Manufacturing Company. Interlock shelving bracket and standard cover. 5,004,201, Cl. 248-243.000.

Bessinger, Walter L.: *See—*
Stumpf, William E.; Carlson, Casey L.; Knape, Richard S.; and Bessinger, Walter L., 5,004,202, Cl. 248-243.000.

Best, Glen H.: *See—*
Allen, Floyd L.; Best, Glen H.; and Lindroth, Thomas A., 5,004,506, Cl. 106-729.000.

Bethlehem Steel Corporation: *See—*
Russo, Thomas J., 5,004,131, Cl. 222-600.000.

Beyar, Mordechay; and Foux, Amnon, to Technion Research and Development Foundation Ltd. Auxiliary intra-urethral magnetic valve for persons suffering from urinary incontinence. 5,004,454, Cl. 600-30.000.

Bhargava, Rameshwar N.: *See—*
Shaulov, Avner A.; Herko, Samuel P.; Dorman, Donald R.; and Bhargava, Rameshwar N., 5,004,726, Cl. 505-1.000.

Bharya, Rajpal S.: *See—*
Dent, Peter R.; and Bharya, Rajpal S., 5,005,150, Cl. 364-736.000.

Bickel, Martin: *See—*
Baader, Ekkehard; Bickel, Martin; Brocks, Dietrich; Gunzler, Volkmar; Henke, Stephan; and Hanauske-Abel, Hartmut, 5,004,748, Cl. 514-350.000.

Bienaime, Patrick, to Unilever Patent Holdings B.Y. Pack made from board. 5,004,147, Cl. 229-198.200.

Bifano, Gabriel F.; and Reyes, Erenio, to Vinyl Corporation. Panel support member and support arrangement. 5,003,743, Cl. 52-282.000.

Biggio, Alain; and Landrevie, Jacques, to Allflex Europe S.A. Automatic connecting device designed for the quick and momentary supply of power to electronic circuits. 5,004,897, Cl. 235-441.000.

Billmers, Robert L., to National Starch and Chemical Investment Holding Corporation. Organosiloxane-containing polysaccharides. 5,004,791, Cl. 527-300.000.

Binder, Thomas P.; and Logan, Robert M., to Archer Daniels Midland Company. Aqueous-alcohol fructose crystallization. 5,004,507, Cl. 127-58.000.

Binks Manufacturing Company: *See—*
Culbertson, Samuel W.; and Williams, Keith G., 5,004,403, Cl. 417-53.000.

Biocyte Corporation: *See—*
Boyse, Edward A.; Broxmeyer, Hal E.; and Douglas, Gordon W., 5,004,681, Cl. 435-2.000.

Biogen, Massachusetts: *See—*
Fiers, Walter C.; and Allet, Bernard, 5,004,689, Cl. 435-69.510.

Biomechanics Corporation of America: *See—*
Gross, Clifford, 5,004,196, Cl. 248-118.300.

Bionix Corporation: *See—*
Glick, J. Leslie, 5,004,615, Cl. 424-692.000.

Biotrack, Inc.: *See—*
Hillman, Robert S.; Cobb, Michael E., Allen, Jimmy D.; Gibbons, Ian; Ostoich, Vladimir E.; and Winfrey, Laura J., 5,004,923, Cl. 250-341.000.

Bishop, John R.: *See—*
Beatty, Scott M.; and Bishop, John R., 5,003,802, Cl. 70-333.00A.

Bissett, Thomas D.: *See—*
Bruckert, William F.; and Bissett, Thomas D., 5,005,174, Cl. 371-68.300.

Blackstone, Scott C., to Unitrode Corporation. Inverted epitaxial process. 5,004,705, Cl. 437-225.000.

Blaisdell, Leonard L., to GTE Government Systems Corporation. Microwave antenna. 5,005,022, Cl. 343-753.000.

Blaszkiewicz, Peter; and Speck, Ulrich, to Schering Aktiengesellschaft. Substituted dicarboxylic acid-bis(3,5-dicarbamoyl-2,4,6-triiodoanilides), process for their production as well as X-ray contrast media containing them. 5,004,835, Cl. 564-153.000.

Bleckmann, Gerhard: *See—*
Dorow, Joachim; and Bleckmann, Gerhard, 5,003,878, Cl. 101-415.100.

Blezard, Robert C., to Charles Packaging Corporation. Straight line sorting and/or fill-to-weigh machine. 5,004,093, Cl. 198-430.000.

Blontrock, Daniel, to N.V. Verbrugge. Harness frame with detachable corner connections. 5,004,019, Cl. 139-91.000.

Bluhm, Terry L.: *See—*
Fuller, Timothy J.; Marchessault, Robert H.; and Bluhm, Terry L., 5,004,664, Cl. 430-106.600.

Blum, Harald; Meixner, Jurgen; Schreckenberg, Manfred; Fleiter, Lothar; and Wellner, Wolfgang, to Bayer Aktiengesellschaft. Process for the preparation of aqueous, oxidatively drying alkyd resins and their use in or as aqueous lacquers and coating compounds. 5,004,779, Cl. 524-591.000.

Blume, William F.: *See—*
Schumacher, Dean P.; Blume, William F.; and Bonds, John C., 5,004,245, Cl. 273-241.000.

Blumstock, Judith E.; and Morgan, Leslie P., to Protection Protection, Inc. Multi-compartment container. 5,004,106, Cl. 206-581.000.

BMC Software, Inc.: *See—*
Ernst, Theodore R., 5,005,137, Cl. 364-514.000.

Board of Governors of Wayne State University, The: *See—*
Schaap, Arthur P., 5,004,565, Cl. 252-700.000.

Board of Regents, The University of Texas System: *See—*
DeLozanne, A. L., 5,004,721, Cl. 505-1.000.

Boaz, Premakaran T., to Ford Motor Company. Method and apparatus for supporting a sheet of glass. 5,004,284, Cl. 294-119.000.

Bobst, Albert M.; and Pauley, Gary T., to University of Cincinnati. Nitroxide labeled nucleotides and nitroxide labeled hybridization probes. 5,004,809, Cl. 536-29.000.

Bobst SA: *See—*
Stark, Charles, 5,004,221, Cl. 271-194.000.

Bock, Mark G.: *See—*
Evans, Ben E.; Bock, Mark G.; and Freidinger, Roger M., 5,004,741, Cl. 514-221.000.

Bode, Robert E. Apparatus for injecting displacement plugs. 5,004,048, Cl. 166-70.000.

Bodenseewerk Geratetechnik GmbH: *See—*
Bernard, Walter; Heppner, Joachim G.; and Schwarz, Karl H., 5,004,342, Cl. 356-350.000.

Bodine Company, The: *See—*
McDonald, Charles W., 5,004,953, Cl. 315-86.000.

Boehler Ges. m.b.H.: *See—*
Kroisenbrunner, Walter, 5,004,653, Cl. 428-615.000.

Boehm, Jeffrey C.; Hecht, Sidney M.; Holden, Kenneth G.; Johnson, Randall K.; and Kingsbury, William D., to SmithKline Beecham Corporation. Water soluble camptothecin analogs useful for inhibiting the growth of animal tumor cells. 5,004,758, Cl. 514-283.000.

Boeing Company, The: *See—*
Ferrell, Philip J., 5,005,210, Cl. 455-115.000.
Jensen, Tom M.; and Shorey, Thomas H., 5,004,387, Cl. 410-69.000.
Wong, Kin Y.; and Thompson, Douglas, 5,003,826, Cl. 73-828.000.

Bohrer, Mark W., to Advanced Micro Devices, Inc. Op-amp with internally generated bias and precision voltage reference using same. 5,004,986, Cl. 330-257.000.

Boilen, Irving, to Trans-Action Marketing Corp. Changeable watch bezel locking mechanism. 5,005,161, Cl. 368-295.000.

Boinot, Francois; Cousin, Michel; Francois, Pierre-Michel; and Michel-Dansac, Francois, to Societe Chimiques des Charbonnages S.A. Resin compositions based on phenolic resins. 5,004,789, Cl. 525-506.000.

Boiteau, Richard; Labayle, Denis; and Tenaillon, Alain, to Medipro. Device for unblocking intubation tubes and tracheotomy cannulas in vivo. 5,003,657, Cl. 15-104.330.

Bolen, David T.: *See—*
Sodec, Franc; Hudson, Donald L.; and Bolen, David T., 5,003,867, Cl. 98-31.600.

Bolton, John S., to Automotive Products plc. Torsional vibration damper. 5,004,088, Cl. 192-106.200.

Bom, Cornelis J. G.: *See—*
van der Lely, Ary; and Bom, Cornelis J. G., 5,004,163, Cl. 239-661.000.

Bommer, Jerry C.; and Burnham, Bruce F., to Nippon Petrochemicals Company, Ltd. Tetrapyrrole aminocarboxylic acids. 5,004,811, Cl. 540-145.000.

Bommer, Rainer, to Dragerwerk Aktiengesellschaft. Colorimetric detector tube. 5,004,585, Cl. 422-58.000.

Bonds, John C.: *See—*
Schumacher, Dean P.; Blume, William F.; and Bonds, John C., 5,004,245, Cl. 273-241.000.

Bonnet, Maurice: *See—*
Nerrinck, Bernard; and Bonnet, Maurice, 5,003,711, Cl. 36-120.000.

Booth, Richard C.; Beaumont, Alan R., Daymond-John, Barbara E., Cunningham, David G.; and Stallard, William A., to British Telecommunications public limited company. Optical signal modulation device. 5,004,314, Cl. 350-96.140.

Borer, John W., Skilliter, William J.; and Conner, Lowell J., to Libbey-Owens-Ford Co. Glass sheet conveying and bending apparatus. 5,004,492, Cl. 65-289.000.

Borglum, Brian P., to Raytheon Company. Method of producing optically transparent yttrium oxide. 5,004,712, Cl. 501-126.000.

Born, Dieter; Knauf, Peter; and Retelsdorf, Hans-Joachim, to Durum Verschleissschutz GmbH. Method of applying wear-resistant layer and consumable electrode for carrying out the method. 5,004,886, Cl. 219-76.140.

Borom, Marcus P.: *See*—
Svec, Paul S., Borom, Marcus P.; Szala, Lawrence E., Brun, Milivoj K., Miller, Steven A.; and Mourer, David P., 5,004,629, Cl. 427-204.000.

Bortnick, Newman M.: *See*—
Hallden-Abberton, Michael P., Bortnick, Newman M., Cohen, Leslie A., Freed, William T., and Fromuth, Harry C., 5,004,777, Cl. 524-433.000.

Borzym, Alexander: *See*—
Borzym, John J.; and Borzym, Alexander, 5,003,853, Cl. 83-318.000.

Borzym, John J.; and Borzym, Alexander, to Alpha Industries, Inc. Cut-off die set. 5,003,853, Cl. 83-318.000.

Bosko, Robert S., and Barnes, Thomas C., to Aquatec Water Systems Incorporated. Water purification system. 5,004,535, Cl. 210-90.000.

Botterbusch, Carl N., and Frankhouser, Paul L., to Arrow International Investment Corporation. In-dwelling catheter. 5,004,456, Cl. 604-53.000.

Bouchard, Victorin. Foldable dome. 5,004,001, Cl. 135-97.000.

Boucher, Raymond M. G., to Wave Energy Systems, Inc. Virucidal low toxicity compositions. 5,004,757, Cl. 514-694.000.

Boudreau, Robert J., to Hedstrom Corp. Spring connection assembly. 5,004,216, Cl. 267-179.000.

Boulanger, Alain; and Rousseau, Andre J., to Geostock S.A.R.L., and Esys S.A. Method of rapidly abandoning large cavities washed-out in rock salt. 5,004,298, Cl. 299-5.000.

Bowen, Robert F., Dudley, Kenneth W.; and Maiellano, Joseph C., Jr., to Raytheon Company. Method of heating food. 5,004,617, Cl. 426-233.000.

Bowlin, Terry L.: *See*—
Liu, Paul S., Sunkara, Sai P.; and Bowlin, Terry L., 5,004,746, Cl. 514-299.000.

Bowthorpe EMP Limited: *See*—
Doone, Rodney M.; and Colbert, Henry J., 5,003,689, Cl. 29-613.000.

Boyse, Edward A.; Broxmeyer, Hal E.; and Douglas, Gordon W., to Biocyte Corporation. Preservation of fetal and neonatal hematopoietic stem and progenitor cells of the blood. 5,004,681, Cl. 435-2.000.

Braas & Co. GmbH. *See*—
Schulz, Hans E.; Braas, Jurgen; and Echl, Friedrich, 5,004,415, Cl. 425-297.000.

Braas, Jurgen. *See*—
Schulz, Hans E.; Braas, Jurgen; and Echl, Friedrich, 5,004,415, Cl. 425-297.000.

Bradley, Michael W., Harris, Norman, and Turner, Keith, to Davy McKee (London) Limited. Hydrogenation of aldehydes. 5,004,845, Cl. 568-885.000.

Brandt, Eckhard, to E.C.H. Will GmbH. Apparatus for transporting stacks of paper sheets to processing machines. 5,004,094, Cl. 198-460.000.

Bratrud, Lyle A. Cattle feeding trough. 5,003,926, Cl. 119-62.000.

Bratten, David R. Automatic water shut-off apparatus for building protection. 5,004,012, Cl. 137-560.000.

Braunling, Hermann, and Becker, Richard, to Wacker-Chemie GmbH. Basic polypyrrylenemethines and salts thereof, and a process for their preparation. 5,004,560, Cl. 526-258.000.

Brearley, Malcolm; and Moseley, Richard B., to Lucas Industries public limited company. Electronic braking system. 5,004,299, Cl. 303-15.000.

Brearley, Malcolm; and Moseley, Richard B., to Lucas Industries Public Limited Company. Electronic braking system. 5,004,300, Cl. 303-15.000.

Breen, Michael T.; and Skorupski, Jeffrey H., to Eaton Corporation. Trailer swing control. 5,005,130, Cl. 364-426.010.

Brennen, Kenneth R.: *See*—
Holleman, Timothy W.; Doan, Phong D., Brennen, Kenneth R.; and Swoyer, John M., 5,003,992, Cl. 128-785.000.

Breslin, Michael K. Pneumatically powered submersible fluids pump with integrated controls. 5,004,405, Cl. 417-131.000.

Bria, Frank: *See*—
Connors, Peter J., Scully, Sean, Bria, Frank; and ReFalo, John, III, 5,004,103, Cl. 206-372.000.

Bricken, Jonathan, to D.O.C.C., Inc. Process for sterile disposal of syringes. 5,003,892, Cl. 110-346.000.

Bridge, Andrew W.: *See*—
Ashton, Michael J.; Bridge, Andrew W., Chambers, Robert K., Dron, Donald I., Fenton, Garry; Harris, Neil V., Lythgoe, David J., McFarlane, Ian M., Newton, Christopher G., Riddell, David; Smith, Christopher, Stuttle, Keith A. J.; and Toft, Malcolm P., 5,004,747, Cl. 514-309.000.

Bridgestone Corp.: *See*—
Kadota, Kuninobu, Kohno, Yoshihide; and Koseki, Hiroyuki, 5,004,031, Cl. 152-538.000.

Bridgestone/Firestone, Inc.: *See*—
Gnebling, Stephen T., 5,004,635, Cl. 428-33.000.
Koopmann, Gary H., 5,003,819, Cl. 73-146.000.

Briggs, Beatrice E. Painters palette. 5,004,255, Cl. 280-79.500.

Briner, Michael S.: *See*—
Radjy, Nader A., and Briner, Michael S., 5,005,155, Cl. 365-185.000.

Brinkman, Robert J. Belt type garment with foldable seat cover. 5,003,634, Cl. 2-46.000.

Bristol, Samuel V., to Delco Electronics Corporation. Low residue soldering flux. 5,004,509, Cl. 148-23.000.

British Petroleum Company p.l.c., The. *See*—
Benham, Harold L.; and Mitchell, James A., 5,004,646, Cl. 428-344.000.

British Telecommunications public limited company. *See*—
Booth, Richard C., Beaumont, Alan R., Daymond-John, Barbara E.; Cunningham, David G.; and Stallard, William A., 5,004,314, Cl. 350-96.140.

Broadway Companies, Inc. *See*—
Bartley, Harold D., and Gaiser, William R., 5,004,109, Cl. 215-1.00C.

Brocks, Dietrich: *See*—
Baader, Ekkehard, Bickel, Martin; Brocks, Dietrich, Gunzler, Volkmar, Henke, Stephan; and Hanauske-Abel, Hartmut, 5,004,748, Cl. 514-350.000.

Brodart Co.: *See*—
Pugliese, Joseph S., and Garman, Charles L., 5,004,514, Cl. 156-251.000.

Broden, Ingemar. *See*—
Berg, Sven-Olof; Broden, Ingemar, and Johansen, Odvar, 5,004,395, Cl. 414-412.000.

Broderick, James, and Schaul, Malcolm. Buying guide. 5,004,270, Cl. 283-48.100.

Brokaw, Paul E.: *See*—
Nottingham, John R., Spirk, John W., Jr., and Brokaw, Paul E., 5,004,882, Cl. 219-10.55E.

Bronder, Joseph B., and Gossard, William H., to Westinghouse Electric Corp. Frequency division multiplex guardband communication system for sending information over the guardbands. 5,005,169, Cl. 370-76.000.

Brookeman, James R. *See*—
Merickel, Michael B., Adams, Ann H.; and Brookeman, James R., 5,003,979, Cl. 128-653.00A.

Brooks, David D., Brophy, Shirley A., and Goss, George R., to Oil-Dri Corporation of America. Oil bleaching method and composition for same. 5,004,570, Cl. 260-427.000.

Brookstein, David S.: *See*—
Fronk, David M., Brookstein, David S., and Skelton, John, 5,004,474, Cl. 623-13.000.

Brophy, Shirley A.: *See*—
Brooks, David D., Brophy, Shirley A., and Goss, George R., 5,004,570, Cl. 260-427.000.

Brossia, Charles E., and Wu, Samuel C. Fiber optic probe system. 5,005,005, Cl. 340-604.000.

Brother Kogyo Kabushiki Kaisha. *See*—
Ogawa, Masao, 5,003,899, Cl. 112-221.000.
Ogawa, Masao, 5,003,900, Cl. 112-242.000.
Sakaida, Atsuo; Ikezaki, Yoshiyuki, Iriguchi, Akira, and Inose, Toshio, 5,004,946, Cl. 310-328.000.
Yokoe, Masaaki; Kurono, Yoshikazu; and Hayashi, Koji, 5,003,897, Cl. 112-121.120.

Brotz, Gregory R. Electrostatic display device. 5,005,110, Cl. 362-84.000.

Broussard, Jerry A., Auerbach, Andrew B., Yang, Nan L., Paul, James L., Zheng, Yong C., and Zhang, Chong L., to Hoechst Celanese Corporation. Novel polyacetal copolymers of trioxane and trimethylolpropane formal derivatives. 5,004,798, Cl. 528-230.000.

Brown, Andrew F., and Webber, Peter B., to Calcor Space Facility, Inc. Method of fabricating plural shaped parts from a workpiece. 5,004,883, Cl. 219-69.120.

Brown, Donald G.; and Onufrak, Andrew F., to Rockwell International Corporation. High-range and resolution determinate mount and positioner. 5,004,205, Cl. 248-476.000.

Brown, Franklin L., to Ford Motor Company. Method of making glass substrate coated with tin oxide. 5,004,490, Cl. 60-60.520.

Brown, Gordon L., Jr., to Morrison Molded Fiber Glass Company. Apparatus for exercise of the human body. 5,004,226, Cl. 272-93.000.

Brown, James J. Ozone water purification system. 5,004,537, Cl. 210-192.000.

Brown, John C., to JCB Leasing Corp. Brush mower. 5,003,759, Cl. 56-249.000.

Brownrigg, Patrick C. *See*—
Vali, Victor, Chang, David B., and Brownrigg, Patrick C., 5,004,914, Cl. 250-227.270.

Broxmeyer, Hal E. *See*—
Boyse, Edward A.; Broxmeyer, Hal E., and Douglas, Gordon W., 5,004,681, Cl. 435-2.000.

Bruckert, William F., and Bissett, Thomas D., to Digital Equipment Corporation. Dual zone, fault tolerant computer system with error checking in I/O writes. 5,005,174, Cl. 371-68.300.

Bruhl, Daniel E., Jr., to Trident Medical Products, Inc. Integrally formed two-piece eyeshield. 5,004,333, Cl. 351-45.000.

Bruinink, Jacob. *See*—
Verhulst, Antonius G. H., Bruinink, Jacob, and Lenders, Emanuel J. W. M., 5,004,322, Cl. 350-320.000.

Brun, Milivoj K.: *See*—
Svec, Paul S., Borom, Marcus P.; Szala, Lawrence E.; Brun, Milivoj K., Miller, Steven A.; and Mourer, David P., 5,004,629, Cl. 427-204.000.

Brunswick Corporation: *See*—
McMorries, Lee W., IV; and Saatkamp, James B., 5,004,042, Cl. 165-41.000.

Bryant Grinder Corporation: *See*—
Halvorsen, James V., 5,003,730, Cl. 51-325.000.

Bublewicz, Leszek, to Phelps-Tointon, Inc. Door lock control system featuring a remote control for a pneumatically powered door lock mechanism. 5,003,800, Cl. 70-264.000.

Buchwald, Stephen L.; and Grossman, Robert B., to Massachusetts Institute of Technology. Preparation of chiral metallocene dihalides. 5,004,820, Cl. 556-53.000.

Buckholz, Lawrence L., Jr.; and Kasper-Lehmann, Robin, to International Flavors & Fragrances Inc. Process for preparing marinaded proteinaceous product and product produced thereby. 5,004,618, Cl. 426-281.000.

Buckley, John T. Expansion system for a medical and surgical dressing. 5,003,971, Cl. 128-156.000.

Buffalini, Jerry E.: *See*—
McGarvey, David C.; and Buffalini, Jerry E., 5,004,632, Cl. 427-410.000.

Bullard, James R., Muller, Richard P.; Grossi, Benedetto; and Cristine, John, to Bullard, James Roger. Laryngoscope. 5,003,963, Cl. 128-11.000.

Bullard, James Roger: *See*—
Bullard, James R.; Muller, Richard P.; Grossi, Benedetto; and Cristine, John, 5,003,963, Cl. 128-11.000.

Bunce, Kevin R., to Elopak A/S. Valve device for controlling liquid flow. 5,004,009, Cl. 137-512.300.

Bunch, Earnest B., Jr. Continuous form stationery folding machine with perforation alignment apparatus. 5,004,452, Cl. 493-414.000.

Burchette, Herbert L.; Hansen, Lee E.; West, James C.; and Nawrocki, Glen A., to United Technologies Corporation. Axial compressor stator construction. 5,004,402, Cl. 415-137.000.

Burd, Robert C.: *See*—
Fitzpatrick, Mark E.; and Burd, Robert C., 5,004,971, Cl. 323-312.000.

Burdea, Grigore C., to Rutgers University. Portable dextrous force feedback master for robot telemanipulation. 5,004,391, Cl. 414-6.000.

Burdukovsky, Alexandr I.: *See*—
Goikhman, Yakov A.; Krjukov, Georgy M.; Onotsky, Melis I.; Sorokin, Georgy M.; Filatov, Alexei V.; Tsarapkin, Viktor V.; Yakimov, Vadim P.; Smirnov, Gennady A.; Nikiforov, Ivan I.; Burdukovsky, Alexandr I.; Daibov, Sergei V.; and Kurdjukov, Alexandr S., 5,004,056, Cl. 175-293.000.

Burke, John T.; and Newkirk, Marc S., to Lanxide Technology Company, LP. Method of thermo-forming a novel metal matrix composite body and products produced therefrom. 5,004,035, Cl. 164-97.000.

Burnham, Bruce F.: *See*—
Bommer, Jerry C.; and Burnham, Bruce F., 5,004,811, Cl. 540-145.000.

Burnham, William L., to Eastman Kodak Company. Optical finder for camera with flip-up flash unit. 5,005,032, Cl. 354-149.110.

Burr Oak Tool & Gauge Company: *See*—
Milliman, James G.; and Franks, Lawrence A., 5,003,691, Cl. 29-727.000.

Burtin, Jacques: *See*—
Richalley, Gerard; and Burtin, Jacques, 5,004,548, Cl. 210-646.000.

Busby, Philip V. Power operated support or landing legs. 5,004,267, Cl. 280-766.100.

Busenhart, Peter: *See*—
Graf, Felix; and Busenhart, Peter, 5,004,170, Cl. 242-18.00R.

Buteev, Alexandr I.: *See*—
Ulyanitsky, Vladimir J.; Gavrilenko, Tamara P.; Nikolaev, Jury A.; and Buteev, Alexandr I., 5,004,021, Cl. 141-67.000.

Butler Manufacturing Company: *See*—
Penczak, John P., 5,003,737, Cl. 52-126.200.

Butskhrikidze, David S.: *See*—
Loladze, Teimuraz N.; Batiashvili, Boris I.; Mamulashvili, Gennady L.; Butskhrikidze, David S.; Grdzelishvili, Georgy J.; and Markevich, Jury I., 5,003,728, Cl. 51-165.800.

Buzzelli, Vincenzo. Catch basin. 5,004,534, Cl. 210-164.000.

Bylin Heating Systems, Inc.: *See*—
Montierth, Garry L.; Logan, Stephen A.; and Scott, Raymond J., 5,004,190, Cl. 246-428.000.

C. van der Lely N.V.: *See*—
van der Lely, Ary; and Bom, Cornelis J. G., 5,004,163, Cl. 239-661.000.

Cabourne, Michael K., to Precision Interconnect Corporation. Flexible pin type contact. 5,004,438, Cl. 439-825.000.

CAC, Inc.: *See*—
Alley, Russell I.; and Caine, George E., 5,004,505, Cl. 106-685.000.

Cadwallader, George W.; Highfill, Louis A.; Kurdys, Gregory D.; and Turiglatto, Richard S., to Monsanto Company. Process for preparing sodium tripolyphosphate. 5,004,589, Cl. 423-315.000.

Caine, George E.: *See*—
Alley, Russell I.; and Caine, George E., 5,004,505, Cl. 106-685.000.

Calcor Space Facility, Inc.: *See*—
Brown, Andrew F.; and Webber, Peter B., 5,004,883, Cl. 219-69.120.

Caldwell, J. Michael, to Sili-Tex, Inc. Silicone polymer-internally coated webs. 5,004,643, Cl. 428-246.000.

California Institute of Technology: *See*—
Janesick, James R., 5,005,063, Cl. 357-24.000.

Calvas, George T.: *See*—
Stinar, Robert P.; Calvas, George T.; and McNamara, David A., 5,003,801, Cl. 70-278.000.

Campbell, Andrew B.; and Simon, Ira J., to Triangle Brass Manufacturing Company. Flush bolt mechanism for double doors. 5,004,277, Cl. 292-166.000.

Campbell, Herbert W.: *See*—
Crawford, Paul M.; Campbell, Herbert W.; Myers, Michael J., and Siverns, Steven L., 5,003,814, Cl. 73-59.000.

Campbell, Jonathan: *See*—
Griffin, David; Campbell, Jonathan; Reilly, Michael; and Rosenbaum, Richard, 5,005,122, Cl. 364-200.000.

Canada, Her Majesty the Queen in Right of, as represented by the Minister of Communications: *See*—
Hill, Kenneth O.; Johnson, Derwyn C.; and Lamont, Robert G., 5,004,316, Cl. 350-96.150.

Candea, Cornell, to Chrysler Corporation. Forming bores in bendable layered materials. 5,003,683, Cl. 29-425.000.

Canon Kabushiki Kaisha: *See*—
Akashi, Akira; Kadohara, Terutake; Ohnuki, Ichiro; and Higashihara, Masaki, 5,005,037, Cl. 354-400.000.
Arahara, Kozo; Fukui, Tetsuro; Fukumoto, Hiroshi; Katayama, Masato; and Takasu, Yoshio, 5,004,667, Cl. 430-255.000.
Fukushima, Nobuo; Sakai, Shinji; Takdea, Osamu; Takei, Masahiro; Suzuki, Yasutomo; Okino, Tadashi; and Jinnai, Shigeru, 5,005,088, Cl. 360-69.000.
Kataoka, Kenichi; and Tsukimoto, Takayuki, 5,004,964, Cl. 318-128.000.
Miyakawa, Akira; and Inoue, Hiroyuki, 5,005,025, Cl. 346-25.000.
Nishimura, Yukuo; Eguchi, Ken; Kawada, Haruki; Tomida, Yoshinori; Nakagiri, Takashi; Saito, Kenji; Kimura, Toshiaki; Matsuda, Hiroshi; Sakai, Kunihiro; and Miyazaki, Toshihiko, 5,004,671, Cl. 430-286.000.
Ogawa, Yukio; Hirohata, Michio; Kodaira, Takanori; and Miyawaki, Makoto, 5,005,038, Cl. 354-400.000.
Otokawa, Mitsuhiro; and Takimoto, Hiroyuki, 5,004,965, Cl. 318-254.000.
Saijo, Yasutsugu; Chiku, Kazuyoshi; and Onoda, Shigeyoshi, 5,004,336, Cl. 353-122.000.
Sasaki, Kenichi, 5,004,326, Cl. 350-375.000.
Suda, Yasuo; Ohtaka, Keiji; Suzuki, Kenji; Ishizaki, Akira; and Aoyama, Keisuke, 5,005,041, Cl. 354-407.000.
Suzuki, Akio; Takada, Yoshihiro; Izumizaki, Masami; and Danzuka, Toshimitsu, 5,004,928, Cl. 250-559.000.
Suzuki, Masayuki; and Hattori, Jun, 5,004,328, Cl. 350-416.000.
Takahashi, Hiroto; Karita, Seiichiro; and Sato, Koichi, 5,005,024, Cl. 346-1.100.
Tamura, Yasuyuki; and Kaneko, Shuzo, 5,005,028, Cl. 346-76.00R.

Cantwell, Hugh F., to Rolls-Royce plc. Self-checking speed governor arrangement. 5,003,769, Cl. 60-39.281.

Capdebosco, Bernard, to Siemens Aktiengesellschaft. Device for fastening a die on a tool carrier cylinder of a rotary machine. 5,003,854, Cl. 83-331.000.

Carda, Dan D.: *See*—
Dunn, Wendell E., Jr.; Carda, Dan D.; and Storbeck, Timothy A., 5,004,500, Cl. 75-422.000.

Cardani, Silvestro; and Pareschi, Flavio, to SGS-Thomson Microelectronics S.r.l. Apparatus for treating silicon wafers in an acid bath. 5,003,999, Cl. 134-105.000.

Cardinal Scale Manufacturing Company: *See*—
Langford, Stephen R.; Stone, James R.; and Bagley, William C., 5,004,058, Cl. 177-25.130.

Carey, Michael J.; and Anderson, Adrian J., to Mitel Telecom Limited. Wireless telephone system. 5,005,183, Cl. 375-1.000.

Cargo Master Incorporated: *See*—
Thomas, John F., 5,004,293, Cl. 296-166.000.

Carl Hurth Maschinen- und Zahnradfabrik GmbH & Co.: *See*—
Pflaum, Hermann; and Strehler, Richard, 5,003,817, Cl. 73-118.100.

Carl-Zeiss-Stiftung: *See*—
Kuchel, Michael, 5,004,346, Cl. 356-360.000.

Carleton, Roland A. Detachable amber lens for a vehicle. 5,005,109, Cl. 362-61.000.

Carlqvist, Stig G., to Stig G. Carlqvist Motor Consultant, (C.M.C.) Aktiebolag. Motion transmitting mechanism. 5,003,832, Cl. 74-51.000.

Carlson, Casey L.: *See*—
Stumpf, William E.; Carlson, Casey L.; Knape, Richard S.; and Bessinger, Walter L., 5,004,202, Cl. 248-243.000.

Carlson, Edwin D.: *See*—
Hildinger, Henry W.; and Carlson, Edwin D., 5,004,862, Cl. 585-867.000.

Carlson, Harold L.; DeWitt, Michael D.; Martel, Louis, Jr.; Kelley, Larry W.; and Tayon, Jeffrey E., to Orscheln Co. Electromechanical parking brake system. 5,004,077, Cl. 188-2.00D.

Carlsson, Borje. Method and an arrangement for filling large sacks. 5,004,022, Cl. 141-114.000.

Carney, Jayne F.: *See*—
Roberts, Katherine P.; Geiger, Jon R.; and Carney, Jayne F., 5,004,682, Cl. 435-6.000.

Carpenter, Billy L.: *See*—
White, Curtis D.; and Carpenter, Billy L., 5,003,985, Cl. 128-716.000.

Carpenter, Dewey; and Ehster, Kathryn. Paper item receptacle. 5,004,099, Cl. 206-83.500.

Carr, Noel R., to Supertruss Pty. Ltd. Metal frame structure. 5,003,748, Cl. 52-693.000.

Carrier Corporation: *See*—
Drucker, Alan S., 5,004,008, Cl. 137-504.000.
Meier, Paul R.; and Mueller, Brian D., 5,004,047, Cl. 165-158.000.

Carter, John G., to Battelle Memorial Institute. Method for initiating in-situ vitrification using an impregnated cord. 5,004,373, Cl. 405-131.000.

Casio Computer Co., Ltd.: *See*—
Minamitaka, Junichi, 5,003,860, Cl. 84-609.000.
Tsukamoto, Akihiro; and Kobayashi, Keiichi, 5,005,013, Cl. 340-825.440.

Castaldi, Graziano; and Giordano, Claudio, to Zambon S.p.A. Preparing alpha-arylalkanoic acids. 5,004,832, Cl. 562-490.000.

Castaldo, Ronald. Long span sprue tube for investment casting. 5,004,037, Cl. 164-244.000.

Castaneda, Janet Y.: *See*—
Lochhead, Robert Y.; Castaneda, Janet Y.; and Hemker, Wilfred J., 5,004,598, Cl. 424-59.000.

Caterpillar Inc.: *See*—
Custer, Bruce C., 5,004,081, Cl. 180-68.500.

Catlin, Robert W., to Chips & Technologies, Inc. Apparatus for selectively providing RAS signals or RAS timing and coded RAS address signals. 5,005,157, Cl. 365-193.000.

Cattaneo, Pierr; and Gudel, Claude, to Liasons Electroniques-Mecaniques. Electric current sensing device. 5,004,974, Cl. 324-117.00R.

Cattarozzi, Andrea. Modular sectional container which can be transported manually, for conserving substances, in particular for alimentary use. 5,004,116, Cl. 220-4.340.

Caulfield, H. John; Hester, Charles F.; Kinser, Jason M.; and Shamir, Joseph, to Teledyne Brown Engineering. Neural processor with holographic optical paths and nonlinear operating means. 5,004,309, Cl. 350-3.680.

Caya, Mario. Bunk bed with ladder. 5,003,650, Cl. 5-9.100.

Caza, Lawrence A.: *See*—
Unger, William; and Caza, Lawrence A., 5,003,904, Cl. 114-140.000.

Ceccucci, Rudolph R., Jr. Mechanical tool for manipulating fittings and caps. 5,003,848, Cl. 81-176.200.

Cedarapids, Inc.: *See*—
Goodwin, Jon D., and Musil, Joseph E., 5,004,394, Cl. 414-346.000.
Ostergaard, David A., 5,004,169, Cl. 241-192.000.

Central Glass Company, Limited. *See*—
Aramaki, Minoru; Suenaga, Takashi; Sakaguchi, Hiroaki; and Hamana, Takanori, 5,004,829, Cl. 562-113.000.

Cerberus AG: *See*—
Ryser, Peter; and Strassler, Sigfrid, 5,005,003, Cl. 340-587.000.

Cerestar Holding B.V.: *See*—

Chen, Chun-Teh. Submerged-type gas cleaning system. 5,004,486, Cl. 55-222.000.

Chen, Evan N., to Warner-Lambert Company. Flexible razor head. 5,003,694, Cl. 30-49.000.

Chen, Hai C.; and Yeh, Felix W. H. Apparatus for controlling an electric elevator. 5,004,076, Cl. 187-130.000.

Chen, Kueing-Long, to Texas Instruments Incorporated. Self-aligned NPN bipolar transistor built in a double polysilicon CMOS technology. 5,005,066, Cl. 357-43.000.

Chen, Michael, to Advance Security Inc. Central lock control system adapted for automobile. 5,004,931, Cl. 307-10.200.

Chen, Shu-zi; and Wilson, Geoffrey G., to New England Biolabs, Inc. Method for producing the ACCI restriction endonuclease and methylase. 5,004,691, Cl. 435-172.300.

Chen, Yue Z.: *See*—
Yu, Meng W.; Su, Shihuai; Chen, Yue Z.; Zheng, Ticheng; Ji, Kebin; Ling, Shou R.; Lin, Jian C.; Deng, Jianhui; and Zhang, Kunwu, 5,004,510, Cl. 148-146.000.

Cheng, Syh Y., and Wang, Hong W., to Industrial Technology Research Institute. Heat cycle treatment for improving the performance of piezoelectric ceramics. 5,004,555, Cl. 252-62.900.

Cherukuri, Subraman R.; Chau, Tommy L.; Raman, Krishna P.; and Orama, Angel M., to Warner-Lambert Company. Multiple encapsulated flavor delivery system and method of preparation. 5,004,595, Cl. 424-48.000.

Cheski, Ronald A.: *See*—
Grunert, Kurt A.; Pabon, Delfin; and Cheski, Ronald A., 5,005,104, Cl. 361-355.000.

Chevron Research & Technology Company: *See*—
Nisula, Scott P.; and O'Callaghan, Christopher P., 5,004,588, Cl. 423-226.000.

Chicago Bridge & Iron Technical Services Company: *See*—
Engdahl, Gerald E.; and Shah, Tushar K., 5,003,784, Cl. 62-124.000.

Chih, Hsieh C. Toy submachine gun. 5,004,444, Cl. 446-406.000.

Chiku, Kazuyoshi. *See*—
Saijo, Yasutsugu, Chiku, Kazuyoshi; and Onoda, Shigeyoshi, 5,004,336, Cl. 353-122.000.

Chino, Masashi: *See*—
Hashimoto, Toru; Takabatake, Masato; Chino, Masashi, and Takahashi, Akira, 5,004,981, Cl. 324-207.220.

Chips & Technologies, Inc.: *See*—
Catlin, Robert W., 5,005,157, Cl. 365-193.000.

Chisso Corporation: *See*—
Yamamoto, Tetsushi, Niwano, Masaru; and Nakagawa, Etsuo, 5,003,919, Cl. 118-716.000.

Chitty, Gordon W.: *See*—
Kalmoski, Richard W.; Chitty, Gordon W., and Vignos, James H., 5,003,827, Cl. 73-861.240.

Choi, Jay J. Laryngoscope with double-angle blade. 5,003,962, Cl. 128-11.000.

Choi, Won-Taek: *See*—
Kwon, Oh-Hyun, Jang, Taek-Yong, Shin, Jung-Hyun; and Choi, Won-Taek, 5,005,103, Cl. 361-313.000.

Chong, Leang H.: *See*—
Teleki, Bela; Holden, Alan G.; and Chong, Leang H., 5,004,991, Cl. 333-168.000.

Choquette, Paul, to Corporation Salaison Melrose. Process for cooking and shaping meat pieces. 5,004,622, Cl. 426-513.000.

Chrysler Corporation: *See*—
Candea, Cornell, 5,003,683, Cl. 29-425.000.
Markow, Paul A.; Nolle, William; and Bell, Charles L., 5,004,976, Cl. 324-154.00R.
Moote, Richard K.; Weber, Gregory T.; and Robinson, William O., 5,003,944, Cl. 123-299.000.
Timmins, Lawrence J.; and Krause, Duane K., 5,004,102, Cl. 206-386.000.
Weglarz, Michael W.; Vincent, Michael T.; Prestel, James F.; and Sisoler, Paul G., 5,003,952, Cl. 123-478.000.
Weglarz, Michael W.; Vincent, Michael T., Prestel, James F.; and Sisoler, Paul G., 5,003,953, Cl. 123-478.000.

Chu, Jau-Jier: *See*—
Liu, Ru-Shi, Huang, Yao-Tsung; Chu, Jau-Jier; and Liang, Jiuh-Ming, 5,004,723, Cl. 505-1.000.

Chu, Robert J. Portable boot drying apparatus. 5,003,707, Cl. 34-104.000.

Chuma, Yoshihiro: *See*—
Narikiyo, Hidetoshi, Gotou, Yukifumi; and Chuma, Yoshihiro, 5,004,149, Cl. 236-49.300.

Chung, In J.: *See*—
Oh, Myung H., Lee, Kyung J.; Chung, In J.; Lee, Nam Y.; and Kim, Myung S., 5,004,573, Cl. 264-61.000.

Chung, Wilson. Flush controller for a toilet bowl. 5,003,643, Cl. 4-313.000.

Church, Fred E.: *See*—
Young, Alfred; and Church, Fred E., 5,004,141, Cl. 227-112.000.

Churchill, Jonathan D.; and Volmary, William T., to Kohler Co. Stepper motor throttle controller. 5,003,948, Cl. 123-352.000.

Chvertko, Anatoly I.: *See*—
Juschenko, Konstantin A.; Varenchuk, Pavel A.; Kovalev, Valentin D.; Chvertko, Anatoly I.; Privalov, Nikolai T.; and Kuzmenko, Vladimir G., 5,004,885, Cl. 219-73.200.

Chyugoku Paalu Distributing Corporation: *See*—
Miyake, Teruyoshi; and Yamamoto, Tatsuo, 5,003,638, Cl. 2-167.000.

Ciaramitaro, William: *See*—
Lipchak, John B.; Oblak, Tod A.; Bednar, Fred H.; Ciaramitaro, William, Hughes, Francis R.; Smith, John R.; and Gisoni, Gregory A., 5,005,142, Cl. 364-550.000.

Ciba-Geigy Corporation. *See*—
Cortolano, Frank P.; Seltzer, Raymond; and Patel, Ambelal R., 5,004,770, Cl. 524-99.000.
Dingwall, John G.; Ehrenfreund, Josef; Hall, Roger G.; and Jack, James, 5,004,826, Cl. 558-169.000.
Kvita, Vratislav, 5,004,814, Cl. 549-294.000.
Mutterer, Francis; and Berger, Kurt, 5,004,759, Cl. 524-89.000.
Phaff, Rox; and Bedekovic, Davor, 5,004,813, Cl. 548-463.000.
Rink, Hans, 5,004,781, Cl. 525-54.110.
Storni, Angelo, 5,004,755, Cl. 514-653.000.

Cincinnati Milacron, Inc.: *See*—
Morser, Alfred H.; Gildemeister, Walter M.; and Farmer, David M., 5,005,135, Cl. 364-474.350.

Ciupak, Lawrence F. Chopper with auto feed. 5,003,855, Cl. 83-346.000.

Claar, Terry D.; Johnson, William B.; and Rapp, Robert A., to Lanxide Technology Company, LP. Method of modifying ceramic composite bodies by a post-treatment process and articles produced thereby. 5,004,714, Cl. 501-134.000.

Clark, Adrian P., to National Research Development Corporation. Channel estimation and detection for digital communication systems. 5,005,188, Cl. 375-94.000.

Clark Equipment Company: *See*—
Wagner, Oryn B.; and Alm, Terry J., 5,004,398, Cl. 414-723.000.

Clarke, Donald A.: *See*—
Pryor, Timothy R.; Hageniers, Omer L.; Pastorius, Walter J.; Liptay-Wagner, Nicholas; and Clarke, Donald A., 5,004,339, Cl. 356-241.000.

Clarke, Roger W.: *See*—
Lyons, Nicholas; Baxter, William R. S.; Woodward, Adrian M.; and Clarke, Roger W., 5,004,542, Cl. 210-356.000.

Claude, Jacques, to Intertechnique. Device for connecting a breathing mask to a helmet. 5,003,632, Cl. 2-6.000.

Cleanlite Aire Inc.: *See*—
Suzuki, Atsushi, 5,004,600, Cl. 424-76.300.

Clinkenbeard, Jack L., to Ashland Oil, Inc. Automatic total reducers monitoring and adjustment system. 5,004,696, Cl. 436-51.000.

Clough, John M.: *See*—
Sugavanam, Balasubramanyan; Worthington, Paul A.; and Clough, John M., 5,004,494, Cl. 71-92.000.

Cobb, Michael E.: *See*—
Hillman, Robert S., Cobb, Michael E.; Allen, Jimmy D.; Gibbons, Ian; Ostoich, Vladimir E.; and Winfrey, Laura J., 5,004,923, Cl. 250-341.000.

Cocherell, Francis E.; Harper, Homer C.; and Hsieh, George. Anhydrous toothpaste or dental cream composition. 5,004,596, Cl. 424-52.000.

Cockram, David J.; and Cockram, Edgar S. R., to Actronic Lighting CC. Ignition device for a gas discharge lamp. 5,004,960, Cl. 315-307.000.

Cockram, Edgar S. R.: *See*—
Cockram, David J.; and Cockram, Edgar S. R., 5,004,960, Cl. 315-307.000.

Cody, George D.: *See*—
Baker, Charles L.; Cody, George D.; Joseph, Craig A., and Sela, Uri, 5,004,152, Cl. 239-8.000.

Cohen, Charles M.; and Crea, Roberto, to Creative Biomolecules, Inc. Process for producing human epidermal growth factor and analogs thereof. 5,004,686, Cl. 435-69.100.

Cohen, Leslie A.: *See*—
Hallden-Abberton, Michael P.; Bortnick, Newman M.; Cohen, Leslie A.; Freed, William T.; and Fromuth, Harry C., 5,004,777, Cl. 524-433.000.

Cohen, Samuel; and Manne, Liora G. Needle felted fabrics. 5,003,674, Cl. 28-109.000.

Colbert, Henry J.: *See*—
Doone, Rodney M.; and Colbert, Henry J., 5,003,689, Cl. 29-613.000.

Cole, James M.: *See*—
Mixon, Larry C.; Snyder, George W.; Hill, Scott D.; Johnson, Gregory L.; Wlodarski, J. Frank; von Spakovsky, Alexis P.; Emerson, John D.; Cole, James M.; and Tipton, John P., 5,003,883, Cl. 102-476.000.

Coleman, Paula M.; and Luecke, Mark T., to Lewis Gallob Toys, Inc. Dollhouse within a dollhouse. 5,004,445, Cl. 446-478.000.

Colgate-Palmolive Company: *See*—
Julemont, Michel; Zocchi, Germaine; Mineo, Nunzio; and Fonsny, Pierre, 5,004,556, Cl. 252-99.000.

Collet, Marnix G.: *See*—
Bakker, Jacobus G. C.; and Collet, Marnix G., 5,005,062, Cl. 357-24.000.

Collett, Donald H. Method and apparatus for cleaning and sanitizing HVAC systems. 5,003,998, Cl. 134-22.120.

Colli, Luigi; Badiali, Roberto; and Marangone, Nereo, to Savio S.p.A. High-productivity bobbin winding method and devices for its implementation. 5,004,171, Cl. 242-35.60R.

Collins, Donald A., Jr., to NCR Corporation. Scanning system having automatic laser shutdown upon detection of defective scanning element motion. 5,004,916, Cl. 250-235.000.

Colliva, Giovanni. Principles and appliances for the cutting of spherical-faceted gems and gems thus obtained. 5,003,791, Cl. 63-32.000.

Columbia in the City of New York, The Trustees of: *See*—
Stefaniak, Philip S.; and Fine, Daniel H., 5,004,124, Cl. 222-136.000.

Colwell, Joseph G., Jr., to J. M. Huber Corporation. Superconducting magnetic separator. 5,004,539, Cl. 210-222.000.

Combi Co., Ltd.: *See*—
Nakao, Shinroku; Suzuki, Yoshiyuki; and Kato, Hitoshi, 5,004,253, Cl. 280-47.380.

Communications Satellite Corporation: *See*—
Zaghloul, Amir I.; and Sorbello, Robert M., 5,005,019, Cl. 343-700.0MS.

Communications Test Design, Inc.: *See*—
Parsons, Gerald J., Greenwald, Brian D.; McGrath, John J.; and Andrasko, Stephen W., 5,005,197, Cl. 379-21.000.

Compuadd Corporation: *See*—
Mast, Thomas R., 5,004,867, Cl. 174-35.0GC.

Concord Industries, Inc.: *See*—
Somers, James S., 5,004,177, Cl. 242-99.000.

Connell, Richard A.; Keating, Raymond; Sansone, Ronald P.; and Schumacher, Karl H., to Pitney Bowes Inc. Method and apparatus for categorizing and certifying mail. 5,005,124, Cl. 364-401.000.

Conner, Lowell J.: *See*—
Borer, John W.; Skilliter, William J.; and Conner, Lowell J., 5,004,492, Cl. 65-289.000.

Connors, Peter J.; Scully, Sean; Bria, Frank; and ReFalo, John, III, to Remcon Plastics, Inc. Tool storage box. 5,004,103, Cl. 206-372.000.

Conoco Inc.: *See*—
Rosendahl, Finn; Fjeld, Svein; Salama, Mamdouh M.; and Gillen, Michael P., 5,004,051, Cl. 166-357.000.

Conprinta Ltd.: *See*—
Lauber, Peter, 5,003,873, Cl. 101-219.000.

Constantinou, Dennis: *See*—
Edelman, William; Constantinou, Dennis; Stefanovski, Miles; Jan, Yuh L.; Fahlen, Theodore S.; Hansen, Ronald L.; and Kramasz, Kenneth J., 5,005,180, Cl. 372-57.000.

Conway, Joseph. Display case. 5,004,303, Cl. 312-140.000.

Cook, Charles T. Studio easel. 5,004,204, Cl. 248-449.000.

Cook, George W. Oral appliance for improving breathing and methods of using and making same. 5,003,994, Cl. 128-848.000.

Cook, Stephen D., to Tulane University. Porous coated total hip replacement system. 5,004,476, Cl. 623-23.000.

Cooke, Kevin K.; Dewitt, John R., Galinis, Paul J.; and Koteff, Walter B., to International Business Machines Corp. Self-contained grounding strip. 5,004,866, Cl. 174-35.0GC.

Cooper Industries, Inc.: *See*—
Korczynski, Jacek M.; and Stack, Thomas J., 5,004,994, Cl. 337-66.000.
Lipscomb, Dennis E.; Wilhelm, Gary L.; Perna, Barbara G.; and Guenthner, Waldemar G., 5,003,695, Cl. 30-193.000.

Copal Co., Ltd.: *See*—
Ohzeki, Yoshiyuki; and Amikura, Kazuo, 5,004,941, Cl. 310-49.00R.

Cordery, Robert A., to Pitney Bowes Inc. Field generation and reception system for electronic article surveillance. 5,005,001, Cl. 340-551.000.

Corning Incorporated: *See*—
Bardhan, Pronob; and Yu, Chyang J., 5,004,713, Cl. 501-134.000.

Corporation Salaison Melrose: *See*—
Choquette, Paul, 5,004,622, Cl. 426-513.000.

Corry, Durrell. Rain gutter support and mounting bracket. 5,004,191, Cl. 248-48.200.

Cortec, Inc.: *See*—
Dingwall, Robert P.; and Bellin, Howard T., 5,003,983, Cl. 128-704.000.

Cortolano, Frank P.; Seltzer, Raymond; and Patel, Ambelal R., to Ciba-Geigy Corporation. Polymeric substrates stabilized with N-substituted hindered amines. 5,004,770, Cl. 524-99.000.

Costanza, Daniel W.: *See*—
Stokes, Ronald E.; Nowak, William J.; Attardi, Anthony A.; and Costanza, Daniel W., 5,005,054, Cl. 355-273.000.

Costanza, John R.: *See*—
Vicari, Richard; Costanza, John R.; Lamonte, Ronald R.; and Miano, Ralph M., 5,004,796, Cl. 528-179.000.

Cotton Incorporated: *See*—
Wilkes, Lambert H.; Mehner, Martin; and Lalor, William F., 5,003,669, Cl. 19-49.000.

Couasnard, Claude: *See*—
Bergero, Jean-Pierre; and Couasnard, Claude, 5,004,990, Cl. 333-22.00R.

Coulon, Jean-Claude: *See*—
Kawahara, Hideo; Sakata, Nobuhiro; Coulon, Jean-Claude; and Lovera, Patrick, 5,004,503, Cl. 106-287.180.

Councilman, Richard R., to Zebco Corporation. Convertible bail opening system. 5,004,182, Cl. 242-232.000.

Courtright, David A.: *See*—
O'Connor, James T.; and Courtright, David A., 5,005,191, Cl. 375-116.000.

Cousin, Michel: *See*—
Boinot, Francois; Cousin, Michel; Francois, Pierre-Michel; and Michel-Dansac, Francois, 5,004,789, Cl. 525-506.000.

Dalferth, G. Robert, to Morlock Mechanik GmbH Device for applying color to a block of a tampon printing machine. 5,003,872, Cl. 101-163.000.

Dallas Semiconductor Corporation. *See—*
Kurtowski, Hal, 5,005,151, Cl. 364-900.000.

D'Amato, Salvatore F.; Sorbo, Peter, and Dunning, Richard E., to American Bank Note Holographics, Inc. Apparatus for printing and for forming a hologram on sheet material. 5,003,915, Cl. 118-46.000

Dambre, Pierre, to Elevage Avicole de la Bohardiere. Egg incubation carriage for a ventilated incubation enclosure. 5,003,924, Cl. 119-44.000.

Danheiser, Rick L.; and Nowick, James S., to Massachusetts Institute of Technology. Method for synthesizing β-lactones and alkenes. 5,004,815, Cl. 549-328.000.

Daniel, Kenneth J.: *See—*
Rumbaugh, James E.; and Daniel, Kenneth J., 5,005,119, Cl. 364-200.000.

Dankwort, Rudolph C.; and Klem, Charles D., to Honeywell Inc. Time multiplexed fiber optic sensor. 5,004,911, Cl. 250-227.210.

Danzuka, Toshimitsu: *See—*
Suzuki, Akio, Takada, Yoshihiro; Izumizaki, Masami, and Danzuka, Toshimitsu, 5,004,928, Cl. 250-559.000

Daoud, Bassel H., to AT&T Bell Laboratories. Interconnection device. 5,004,433, Cl. 439-502.000.

Das, Sajal; and Prevorsek, Dusan C., to Allied-Signal Inc. Cyanato group containing phenolic resins, phenolic triazines derived therefrom 5,004,788, Cl. 525-504.000.

Dashevsky, Norm. Agricultural sprayer. 5,004,155, Cl. 239-127.000.

Dato, Paul: *See—*
Grage, Ludger, and Dato, Paul, 5,005,083, Cl. 358-181.000.

David Clark Company Incorporated *See—*
Bassick, John W.; and Dubois, Edward A., 5,003,630, Cl. 2-2.10A

Davy McKee (London) Limited: *See—*
Bradley, Michael W., Harris, Norman, and Turner, Keith, 5,004,845, Cl. 568-885.000.

Dayco Products-Eaglemotive, Inc.: *See—*
Settles, David J., 5,003,685, Cl. 29-525.000.

Daymond-John, Barbara E *See—*
Booth, Richard C., Beaumont, Alan R., Daymond-John, Barbara E.; Cunningham, David G.; and Stallard, William A., 5,004,314, Cl. 350-96.140.

De, Dilip K., to International Superconductor Corp. Superconductive quantum interference device for the non-destructive evaluation of metals. 5,004,724, Cl. 505-1.000.

Deaett, Michael A., to Raytheon Company. Digital sound synthesizer and method. 5,005,204, Cl. 381-51.000

Dean, Grant, to Ul-Tie-Mate Products, Inc. Tangle resistant pet tie apparatus and method. 5,003,929, Cl. 119-120.000.

De Bastiani, Basilio M. *See—*
Faccioli, Giovanni; De Bastiani, Basilio M.; Magnan, Bruno, and Soffiatti, Renzo, 5,004,501, Cl. 106-35.000.

De Castelli, Giorgio *See—*
Barbagli, Rino O.; and De Castelli, Giorgio, 5,004,060, Cl. 180-6.440.

DeCaul, Lorenzo C., Han, Scott; Palermo, Robert E., and Walsh, Dennis E., to Mobil Oil Corporation. Process for upgrading methane to higher hydrocarbons. 5,004,856, Cl. 585-500.000.

DeChristopher, Eugene L. Roller for forming a dough ball into a pizza shell. 5,004,350, Cl. 366-69.000

DeConti, John P., and Quenneville, Raymond N., to DeConti, John P. Energy absorbing device and torque measuring apparatus therefor. 5,003,829, Cl. 73-862.120.

deFigueiredo, Rui J. P. *See—*
Krishen, Kumar; Shaw, Scott W., and deFigueiredo, Rui J. P., 5,005,147, Cl. 364-578.000.

Deguchi, Toshihisa. *See—*
Sakamoto, Noriaki, Maeda, Shigemi; Yamanaka, Toshihiro; Deguchi, Toshihisa, Hone, Nobuyuki, Yamaguchi, Takeshi, and Kojima, Kunio, 5,005,164, Cl. 369-48.000

Degussa Aktiengesellschaft *See—*
Deller, Klaus, Ettlinger, Manfred; Klingel, Rainhard; and Krause, Helmfried, 5,004,719, Cl. 502-242.000.

Dehn, Rudolph A., and Macdonald, Andrew J., to General Electric Company. Ice detection system. 5,005,015, Cl. 340-962.000

Dekker, Johannes; and Cronje, Izak J., to National Energy Council. Recovery of humic acids. 5,004,831, Cl. 562-475.000.

Delco Electronics Corporation. *See—*
Bristol, Samuel V., 5,004,509, Cl. 148-23.000.

Delgado, Alex V. Method for reducing immunogenic and/or toxic substances in indoor air. 5,003,750, Cl. 52-742.000.

DelGuidice, Henry L.; and Marsh, Edward K., to AMP Incorporated. Panel mount electrical connector. 5,004,430, Cl. 439-350.000.

Delius, Ulrich *See—*
Kricheldorf, Hans-Rytger; Delius, Ulrich; and Wehrmann, Rolf, 5,004,836, Cl. 568-333.000.

Deller, Klaus, Ettlinger, Manfred; Klingel, Rainhard; and Krause, Helmfried, to Degussa Aktiengesellschaft. Molded articles based on pyrogenically produced zirconium dioxide method for their manufacture, and use thereof. 5,004,719, Cl. 502-242.000.

DeLozanne, A. L., to Board of Regents, The University of Texas System, and Motorola, Inc. As-deposited oxide superconductor films on silicon and aluminum oxide. 5,004,721, Cl. 505-1.000.

Delsey S.A. *See—*
Seynhaeve, Andre, 5,003,671, Cl. 24-265.00A.

DeMars, Robert A. Game timing apparatus. 5,005,160, Cl. 368-95.000.

Demuth, Robert. *See—*
Waeber, Rene; Demuth, Robert; Knabenhans, Fritz; and Bachmann, Othmar, 5,003,670, Cl. 19-66.0CC

Denes, Oscar L.: *See—*
Atkinson, Anthony; Gray, Richard; and Denes, Oscar L., 5,003,693, Cl. 29-849.000.

Deng, Jianhui *See—*
Yu, Meng W., Su, Shihuai; Chen, Yue Z., Zheng, Ticheng, Ji, Kebin; Ling, Shou R.; Lin, Jian C.; Deng, Jianhui; and Zhang, Kunwu, 5,004,510, Cl. 148-146.000.

Denham, Clarence W. *See—*
Stocking, George E., Stich, Richard A.; Besore, John K., and Denham, Clarence W., 5,004,302, Cl. 312-214.000.

Dent, Peter R., and Bharya, Rajpal S., to Texas Instruments Incorporated. Digital signal processors. 5,005,150, Cl. 364-736.000

de Oliveira, Antonio M. d. A., and Staerk, Jakob, to Siemens Aktiengesellschaft. Circuit configuration for accelerated charge reversal of the voltage level of a bus line of an integrated circuit. 5,004,937, Cl. 307-443.000

Desai, Jay, to Sheldahl, Inc. Rigid flex printed circuit configuration. 5,004,639, Cl. 428-138.000

Desconclois, Jean-Francois *See—*
Antoine, Michel, Barreau, Michel, Desconclois, Jean-Francois, Girard, Philippe, and Picaut, Guy, 5,004,745, Cl. 514-254.000.

Design Tool, Inc. *See—*
Young, Alfred, and Church, Fred E., 5,004,141, Cl. 227-112.000

De Smedt, Willy P. *See—*
Vermeulen, Leon L., Pauwels, Robert S.; De Smedt, Willy P., and Vervloet, Ludovicus H., 5,004,659, Cl. 430-14.000.

Desurvire, Emmanuel, Giles, Clinton R., Simpson, Jay R., and Zyskind, John L., to AT&T Bell Laboratories. Erbium-doped fiber amplifier. 5,005,175, Cl. 372-6.000

Dethier, Vincent B. *See—*
Wilson, William B., DiPietro, Matthew, Neace, Richard K.; Dethier, Vincent B., Hauss, Raymond G., and Louk, James R., 5,005,036, Cl. 354-322.000

Dethlefs, Ralf-Burkhard, Scholz, Bernd, Wysk, Wolfram; and Miefert, Elke, to Felix Schoeller jr. GmbH & Co. KG. Support material for photographic coatings. 5,004,644, Cl. 428-323.000

Dettbarn, Richard. Insulated wall assembly. 5,003,742, Cl. 52-282.000

Deutsche Thomson-Brandt GmbH *See—*
Gleim, Guunter, 5,005,114, Cl. 363-43.000
Rufray, Jean C., and Guillon, Jean C., 5,005,073, Cl. 358-21.00R.

Deutschle, Robert, to E. C. H. Will GmbH. Apparatus for manipulating rolls of convoluted paper webs and the like. 5,004,174, Cl. 242-58.600.

Devon, Thomas J., Phillips, Gerald W., Puckette, Thomas A.; Stavinoha, Jerome L., and Vanderbilt, Jeffrey J., to Eastman Kodak Company. Low pressure rhodium catalyzed hydroformylation of olefins. 5,004,823, Cl. 556-136.000

Devoss, John. *See—*
Jeffrey, Roy R., Jr.; and Devoss, John, 5,003,941, Cl. 123-142.50R

Dewitt, John R *See—*
Cooke, Kevin K., Dewitt, John R.; Galinis, Paul J., and Koteff, Walter B., 5,004,866, Cl. 174-35.0GC

DeWitt, Michael D. *See—*
Carlson, Harold L.; DeWitt, Michael D.; Martel, Louis, Jr., Kelley, Larry W.; and Tayon, Jeffrey E., 5,004,077, Cl. 188-2.00D

Dey, Thomas W., to Eastman Kodak Company. Modified Foucault for testing an imaging device in terms of the encircled energy test. 5,004,337, Cl. 356-124.000

Dickie, Gerald M., Liles, Steve L.; and Woldvedt, Alan H. Spill containment system. 5,004,372, Cl. 405-63.000

Dickinson, Clive F., to Pilkington plc. Producing molten glass and batch components therefor. 5,004,706, Cl. 501-27.000.

Diehl GmbH & Co.. *See—*
Rudolf, Karl, and Ringel, Konrad, 5,003,885, Cl. 102-494.000.

Diffhpp, Kurt *See—*
Franz, Karl-Heinz Ochs, Heinrich, and Diffhpp, Kurt, 5,003,871, Cl. 101-148.000

Diffracto Ltd *See—*
Pryor, Timothy R., Hageniers, Omer L., Pastorius, Walter J.; Liptay-Wagner, Nicholas, and Clarke, Donald A., 5,004,339, Cl. 356-241.000

Dighe, Shyam V *See—*
Wolf, Charles B.; Dighe, Shyam V., Martin, Paul E.; Taylor, Raymond F., Jr., and Melilli, William J., 5,004,888, Cl. 219-121.520

DiGiacinto, Peter M.. *See—*
Beaver, Phillip R.; DiGiacinto, Peter M., Hutchinson, Donald O.; and Vega, Julio J., 5,004,847, Cl. 570-186.000.

Digital Equipment Corporation *See—*
Bruckert, William F., and Bissett, Thomas D., 5,005,174, Cl. 371-68.300.
Griffin, David; Campbell, Jonathan, Reilly, Michael; and Rosenbaum, Richard, 5,005,122, Cl. 364-200.000.

Dillman, Robert O.. *See—*
Frincke, James M., Bartholomew, Richard M.; and Dillman, Robert O., 5,004,606, Cl. 424-85.800.

Dingwall, John G.; Ehrenfreund, Josef, Hall, Roger G.; and Jack, James, to Ciba-Geigy Corporation. Substituted propane-phosphonous acid compounds. 5,004,826, Cl. 558-169.000.

Dingwall, Robert P.; and Bellin, Howard T., to Cortec, Inc. Cardiac monitoring system. 5,003,983, Cl. 128-704.000.

DiNinno, Frank P.; Greenlee, Mark L.; and Salzmann, Thomas N., to Merck & Co., Inc. 2-phenanthrenyl carbapenem antibacterial agents. 5,004,739, Cl. 514-210.000.

Dininno, Frank P.; Salzmann, Thomas N.; and Greenlee, Mark L., to Merck & Co., Inc. 2-phenanthrenyl-carbapenem antibacterial agents. 5,004,740, Cl. 514-210.000.

Dinsmore, Howard. Animal guard for posts. 5,003,734, Cl. 52-101.000.

DiPietro, Matthew. *See—*
Wilson, William B.; DiPietro, Matthew; Neace, Richard K.; Dethier, Vincent B.; Hauss, Raymond G.; and Louk, James R., 5,005,036, Cl. 354-322.000.

DiSalvo, Rick. *See—*
England, Eric; and DiSalvo, Rick, 5,004,118, Cl. 220-216.000.

Dittbrenner, Eric. Electronic speedometer for snow skis. 5,003,820, Cl. 73-181.000

DiViesti, Anthony M. *See—*
Yagi, Masanori, DiViesti, Anthony M., Regnier, Kent E., Yamada, Shoji E., and Walse, Alan S., 5,004,429, Cl. 439-326.000

Dlouhy, Stephen J. Golf practice apparatus. 5,004,243, Cl. 273-195.00A.

Doan, Phong D. *See—*
Holleman, Timothy W., Doan, Phong D., Brennen, Kenneth R., and Swoyer, John M., 5,003,992, Cl. 128-785.000

Dobashi, Kenji, to Fuji Xerox Co., Ltd. Apparatus for changing the direction of conveying paper. 5,004,222, Cl. 271-225.000

Dr. Ing h.c.F. Porsche Aktiengesellschaft *See—*
Petri, Horst; and Monig, Michael, 5,003,785, Cl. 62-131.000

Doi, Nobukazu *See—*
Amano, Tetsuya, Mita, Seiichi, Izumita, Morishi, Doi, Nobukazu, Kaneko, Mamoru; Yamauchi, Hiroto, and Kasai, Susumu, 5,005,184, Cl. 375-14.000.

Dolphin Integration *See—*
Dupillier, Christian, 5,005,199, Cl. 379-375.000

Domizio, George T. Removable recess forming insert. 5,004,208, Cl. 249-91.000.

Domtar Inc.. *See—*
Yalpani, Manssur, and Abdel-Malik, Magdy M., 5,004,808, Cl. 536-56.000

Dong, Dennis F., and Loftfield, Richard E., to Huron Technologies, Inc. Anodes and method of making. 5,004,626, Cl. 427-58.000

Donivan, Lawrence J., and Laukaitis, Joseph F., to Eastman Kodak Company. Control of toner particle charge. 5,005,050, Cl. 355-208.000

Donley, Paul J., to Graco Inc. Adhesive supply unit. 5,003,916, Cl. 118-429.000

Donneky, Peter; and Gacs, Peter T., to GEC Mechanical Handling Limited. Airbridge. 5,004,188, Cl. 244-137.002

Doone, Rodney M.; and Colbert, Henry J., to Bowthorpe EMP Limited. Method and apparatus for manufacturing a surge arrester. 5,003,689, Cl. 29-613.000.

Dorman, Donald R.. *See—*
Shaulov, Avner A., Herko, Samuel P., Dorman, Donald R., and Bhargava, Rameshwar N., 5,004,726, Cl. 505-1.000

Dornblaser, Norman E.; and Hildermann, David F., to Haines & Emerson, Inc. Inside head inserting apparatus and method. 5,003,753, Cl. 53-415.000.

Dorow, Joachim; and Bleckmann, Gerhard, to BASF Aktiengesellschaft. Apparatus for clamping printing plates. 5,003,878, Cl. 101-415.100

Dorschner, Terry A.; and Smith, Irl W., to Raytheon Company. Multiple ring paths in one block. 5,004,343, Cl. 356-350.000.

D'Ottavio, Eugene D.; Hawkins, Robert E., Rodriguez, Stephen S.; and Rychwalski, James, to Shipley Company Inc. Electrophoretic method for applying photoresist to three dimensional circuit board substrate. 5,004,672, Cl. 430-314.000

Doughty, Dennis J.: *See—*
Seymour, Raymond K., Hart, Marshall B., Magnon, Gary D.; von Kannewurff, Michael C., and Doughty, Dennis J., 5,004,878, Cl. 200-144.00R.

Douglas, Gordon W.: *See—*
Boyse, Edward A.; Broxmeyer, Hal E.; and Douglas, Gordon W., 5,004,681, Cl. 435-2.000.

Dove, Georges: *See—*
Giddey, Claude, and Dove, Georges, 5,004,623, Cl. 426-564.000

Dow Chemical Company, The *See—*
Curnutt, Gerald L., 5,004,827, Cl. 558-277.000.
Durham, George R., and Hebert, Randy S., 5,004,851, Cl. 585-260.000.
Lee, Guo-shuh J.; Garces, Juan M.; Maj, Joseph J., and Rocke, Stephen C., 5,004,841, Cl. 568-678.000
Patton, Robert T., Vaughn, Walter L.; and McKeand, Thomas J., Jr., 5,004,760, Cl. 521-149.000

Dow Corning Corporation: *See—*
Maxson, Myron T., 5,004,792, Cl. 528-15.000

Doyle, Pat. Locking device for removable tailgate assembly. 5,004,287, Cl. 296-57.100.

Dragerwerk Aktiengesellschaft. *See—*
Bommer, Rainer, 5,004,585, Cl. 422-58.000

Draghetti, Fiorenzo, to G. D Societa' per Azioni. Method and device for producing tubular wrappings. 5,003,755, Cl. 53-466.000.

Draghi, Enrica: *See—*
Moay, Neomi; and Draghi, Enrica, 5,004,694, Cl. 435-240.270

Drain-All, Inc.: *See—*
Cummings, Ernie W., 5,004,004, Cl. 137-195.000

Draper, Kenneth G., to Schering Corporation. Antiviral oligomers. 5,004,810, Cl. 536-27.000.

Dreschel, Jurgen; Hog, Peter; and Mobs, Stephan, to Bell & Howell GmbH. Method and apparatus for changing the direction of sheet conveyance. 5,004,220, Cl. 271-184.000.

Drewnowski, Wojciech S.. *See—*
Hinzmann, Alfred, Shu, Timour T., Drewnowski, Wojciech S.; and Preisner, Peter M., 5,004,467, Cl. 604-904.000

Tibbitts, Gordon A.; and Jones, Mark L., 5,004,057, Cl. 175-408.000.
Eastman Kodak Company: *See*—
Burnham, William L., 5,005,032, Cl. 354-149.110.
Devon, Thomas J.; Phillips, Gerald W., Puckette, Thomas A.; Stavinoha, Jerome L.; and Vanderbilt, Jeffrey J., 5,004,823, Cl. 556-136.000.
Dey, Thomas W., 5,004,337, Cl. 356-124.000.
Donivan, Lawrence J.; and Laukaitis, Joseph F., 5,005,050, Cl. 355-208.000.
Kelbe, Richard R., 5,005,031, Cl. 354-106.000.
Niedospial, John J., 5,004,176, Cl. 242-71.100.
Pagano, Daniel M., 5,005,035, Cl. 354-206.000.
Tanaka, Yukio, 5,005,058, Cl. 357-17.000
Wilson, William B.; DiPietro, Matthew; Neace, Richard K.; Dethier, Vincent B.; Hauss, Raymond G.; and Louk, James R., 5,005,036, Cl. 354-322.000
Eaton Corporation: *See*—
Breen, Michael T.; and Skorupski, Jeffrey H., 5,005,130, Cl. 364-426.010
Schnut, Robert H., 5,004,873, Cl. 200-83.00P
Theisen, Peter J.; Wycklendt, Daniel A.; Juds, Mark A.; and Moldovan, Peter K., 5,004,874, Cl. 200-144.00R.
Ebara Corporation: *See*—
Sase, Toshitsugu; Matsuda, Michiaki; Yanagisawa, Kiyoshi; and Maeda, Mitsuru, 5,004,068, Cl. 181-276.000.
Ebrat, Abdol R.: *See*—
Beckman, John A.; Huang, Shu-Jen; and Ebrat, Abdol R., 5,004,550, Cl. 210-710.000.
Echl, Friedrich: *See*—
Schulz, Hans E. Braas, Jurgen; and Echl, Friedrich, 5,004,415, Cl. 425-297.000.
Edelman, William; Constantinou, Dennis; Stefanovski, Miles; Jan, Yuh L.; Fahlen, Theodore S.; Hansen, Ronald L.; and Kramasz, Kenneth J., to Schneider (USA) Inc. Laser catheter system. 5,005,180, Cl. 372-57.000.
Educational Testing Service: *See*—
Serrell, Robert; Smith, J. Lamar; and Kurst, Frederick L., 5,004,896, Cl. 235-437.000
Edwards, D. Brandon, to Edwards Optical Corporation. Telemicroscope with at least one light absorbing annular baffle fitting. 5,004,332, Cl. 350-453.000
Edwards Optical Corporation: *See*—
Edwards, D. Brandon, 5,004,332, Cl. 350-453.000
Edwards, Stanley A., to United Kingdom Atomic Energy Authority Optical fiber scanning system for heat sensing. 5,004,922, Cl. 250-340.000
Eguchi, Ken: *See*—
Nishimura, Yukuo; Eguchi, Ken; Kawada, Haruki; Tomida, Yoshinori; Nakagiri, Takashi; Saito, Kenji; Kimura, Toshiaki; Matsuda, Hiroshi; Sakai, Kunihiro, and Miyazaki, Toshihiko, 5,004,671, Cl. 430-286.000.
Ehrenfreund, Josef: *See*—
Dingwall, John G.; Ehrenfreund, Josef; Hall, Roger G.; and Jack, James, 5,004,826, Cl. 558-169.000.
Ehster, Kathryn: *See*—
Carpenter, Dewey; and Ehster, Kathryn, 5,004,099, Cl. 206-83.500.
Eiselen, Otto, to Drupp Kautex Maschinenbau GmbH. Process and apparatus for producing hollow bodies of thermoplastic material 5,004,578, Cl. 264-514.000.
Eklund, Ante: *See*—
Segerpalm, Hans; and Eklund, Ante, 5,004,304, Cl. 312-201.000.
Elder, Jack E. *See*—
Rush, William B., II; Elder, Jack E.; Shier, Richard K.; Foss, Jerry B.; Haltiner, Karl J., Jr.; and Wheeler, Grant M., 5,003,933, Cl. 123-52.0MC.
Electric Power Research Institute, Inc.: *See*—
Lee, Sunggyu; Ashok, Sawant; and Kulik, Conrad J., 5,004,717, Cl. 502-50.000.
Electro-Films, Inc. *See*—
Hjulstrom, Richard A., 5,004,658, Cl. 430-5.000
Electrolux Water Systems, Inc.: *See*—
Noll, John R.; and Montvila, Stephen V., 5,004,541, Cl. 210-251.000.
Electrophysiology Laboratories of Dallas, Inc.: *See*—
Finitzo, Terese; and Pool, Kenneth D., Jr., 5,003,986, Cl. 128-731.000.
Elenbaas, Tony J.: *See*—
Lanser, Mike L.; and Elenbaas, Tony J., 5,004,289, Cl. 296-97.120
Elevage Avicole de la Bohardiere. *See*—
Dambre, Pierre, 5,003,924, Cl. 119-44.000.
Elfaki, Mohamed G.: *See*—
Ragland, William L.; and Elfaki, Mohamed G., 5,004,607, Cl. 424-88.000.
Elkem a/s: *See*—
Aune, Jan A.; and Pedersen, Thor, 5,004,496, Cl. 75-10.280.
Elleaume, Philippe; and Prevost, Michel, to Thomson CSF Digital computation integrated circuit for convolution type computations. 5,005,149, Cl. 364-728.010.
Eller, Joe C., Leavens, James E.; and Wyatt, Charles H., to Enviro-Air Control Corporation. Particulate abatement and environmental control system. 5,004,483, Cl. 55-20.000.
Elliott, Albert O., Jr., to Huff, Richard; and Huuf, Amanda. Tube reaming and deburring device. 5,004,383, Cl. 408-211.000.
Elliott, Donald A.: *See*—
Guruswamy, Vinodhini; and Elliott, Donald A., 5,004,583, Cl. 422-58.000.
Elliott, Michael, Janes, Norman F., and Pulman, David A., to National Research Development Corporation. Insecticides. 5,004,822, Cl. 556-115.000.
Ellozy, Hamed A., Jeanty, Henry H., and Tappert, Charles C., to International Business Machines Corporation Handwriting recognition employing pairwise discriminant measures. 5,005,205, Cl. 382-3.000.
Elopak A/S: *See*—
Bunce, Kevin R., 5,004,009, Cl. 137-512.300.

El-Sayed, Aziz: *See*—
Zecher, Wilfried; El-Sayed, Aziz; Haese, Wilfried; Kohler, Burkhard; and Meyer, Rolf-Volker, 5,004,795, Cl. 528-73.000.
Eltoukhy, Atef H.: *See*—
Lal, Brij B.; and Eltoukhy, Atef H., 5,004,652, Cl. 428-611.000.
Emerson, John D.: *See*—
Mixon, Larry C.; Snyder, George W.; Hill, Scott D.; Johnson, Gregory L.; Wlodarski, J. Frank; von Spakovsky, Alexis P.; Emerson, John D.; Cole, James M.; and Tipton, John P., 5,003,883, Cl. 102-476.000.
EMI Limited: *See*—
Webb, Brian C.; Pedley, Derek G.; Prosser, Stephen J.; Hijikigawa, Masaya; and Furubayashi, Hisatoshi, 5,004,700, Cl. 437-42.000.
Emitec Gesellschaft fur Emissionstechnologie mbH: *See*—
Swars, Helmut, 5,004,370, Cl. 403-277.000.
Emmerling, Winfried; Wichelhaus, Juergen; and Podola, Tore, to Henkel Kommanditgesellschaft auf Aktien. Isocyanate prepolymers. 5,004,794, Cl. 528-52.000.
Empresa Brasileira De Compressores S/A Embraco: *See*—
Da Costa, Caio M. F. N., 5,004,408, Cl. 418-15.000.
Da Costa, Caio M. F. N., 5,004,410, Cl. 418-63.000.
Engdahl, Gerald E.; and Shah, Tushar K., to Chicago Bridge & Iron Technical Services Company. Apparatus and method of producing an ice slurry at the triple point of a solution. 5,003,784, Cl. 62-124.000.
Engelmann, Jurgen: *See*—
Mucic, Vinko; Thieme, Kurt; and Engelmann, Jurgen, 5,004,043, Cl. 165-118.000.
England, David R., to Rolls-Royce plc. Method and apparatus for electro chemical machining. 5,004,528, Cl. 204-129.200.
England, Eric; and DiSalvo, Rick. Container cover. 5,004,118, Cl. 220-216.000.
Enquist, Lynn W.; Robbins, Alan K.; and Whealy, Mary E., to Du Pont de Nemours, E. I., and Company. Pseudorabies virus recombinants and their use in the production of proteins. 5,004,693, Cl. 435-235.100.
Enscore, David J.: *See*—
Osborne, James L.; Nelson, Melinda; Enscore, David J.; Yum, Su I.; and Gale, Robert M., 5,004,610, Cl. 424-448.000.
Enviro-Air Control Corporation: *See*—
Eller, Joe C.; Leavens, James E.; and Wyatt, Charles H., 5,004,483, Cl. 55-20.000.
Environmental Research Institute of Michigan: *See*—
Vlannes, Nickolas P., 5,004,673, Cl. 430-325.000.
Epple, Gerhard, to BASF Aktiengesellschaft. Preparation of 1-amino-2-bromo-4-hydroxyanthraquinone. 5,004,819, Cl. 552-244.000.
Epstein, Marvin: *See*—
Cummiskey, Peter; Epstein, Marvin; Gilmour, Paul A.; and Kim, Richard, 5,005,168, Cl. 370-24.000.
Erber, Anton; Hoff, Heinz; Reuchlein, Gunter; Schaaf, Hanno; and Schiessl, Gerhard, to Man Technologie Aktiengesellschaft. Stirling engine. 5,003,778, Cl. 60-517.000.
Erichsen, Jonathan T.; Evinger, Craig; and Karten, Harvey J., to Research Foundation of State University of New York, The. Means for detecting and analyzing neuroanatomy. 5,004,683, Cl. 435-7.210.
Erickson, Frederick L.; and Richeson, William E., Jr., to Magnavox Government and Industrial Electronics Company. Pneumatically powered valve actuator. 5,003,938, Cl. 123-90.140.
Eriksson, Mats: *See*—
Ternstrom, Ingela; and Eriksson, Mats, 5,004,465, Cl. 604-385.100.
Ernst, Theodore R., to BMC Software, Inc. Method for optimizing data streams containing two-byte characters. 5,005,137, Cl. 364-514.000.
Eskandry, Ezra D.: *See*—
Farrar, James G.; and Eskandry, Ezra D., 5,005,125, Cl. 364-403.000.
Eskimo Pie Corporation: *See*—
Straight, Jay G., and Moore, Henry P., 5,004,620, Cl. 426-304.000.
Esser, Klaus; and Hacker, Hans-Eugen, to Herman Wangner GmbH & Co. KG. Separator for seaming machines. 5,003,675, Cl. 28-141.000.
Establissements Proteor: *See*—
Palfray, Michel, 5,004,477, Cl. 623-53.000.
Esys S.A.: *See*—
Boulanger, Alain; and Rousseau, Andre J., 5,004,298, Cl. 299-5.000.
Ethyl Corporation: *See*—
Beaver, Phillip R.; DiGiacinto, Peter M.; Hutchinson, Donald O.; and Vega, Julio J., 5,004,847, Cl. 570-186.000.
Beaver, Phillip R., 5,004,848, Cl. 570-206.000.
Lam, William Y.; and Liesen, Gregory P., 5,004,481, Cl. 44-435.000.
Presswood, J. Kenneth; and O'Quinn, Alethea H., 5,004,627, Cl. 427-133.000.
ETI-TEC Maschinenbau GmbH: *See*—
Zodrow, Rudolf, 5,004,518, Cl. 156-568.000.
Ettlinger, Manfred: *See*—
Deller, Klaus; Ettlinger, Manfred; Klingel, Rainhard; and Krause, Helmfried, 5,004,719, Cl. 502-242.000
Eurotool B.V.: *See*—
Van Den Brink, Anthonie, 5,004,416, Cl. 425-564.000.
Evans, Ben E.; Bock, Mark G.; and Freidinger, Roger M., to Merck & Co., Inc. Methods of antagonizing CCK or gastrin with benzodiazepine analogs. 5,004,741, Cl. 514-221.000.
Everbrite, Inc.: *See*—
Trame, Charles E.; Karsten, Robert A.; and Hobach, Michael W., 5,003,717, Cl. 40-518.000.
Everts, Robert G., to Inertia Dynamics Corporation. Connector for a convertible blower-vacuum. 5,003,662, Cl. 15-330.000.
Evinger, Craig: *See*—
Erichsen, Jonathan T.; Evinger, Craig; and Karten, Harvey J., 5,004,683, Cl. 435-7.210.
Expert Image Systems, Inc.: *See*—
Lanza, Richard C.; and Votano, Joseph R., 5,005,195, Cl. 378-62.000.
Lanza, Richard C.; and Votano, Joseph R., 5,005,196, Cl. 378-207.000.
Exxon Production Research Company: *See*—
Johnson, Dale V.; and Gordon, John R., 5,004,007, Cl. 137-501.000.
Krohn, Christine E., 5,005,159, Cl. 367-57.000.
Exxon Research and Engineering Company: *See*—
Anderson, Michael P., 5,004,710, Cl. 501-103.000
Baker, Charles L.; Cody, George D.; Joseph, Craig A.; and Sela, Uri, 5,004,152, Cl. 239-8.000.
Fabius, Albert. Supporting arm. 5,004,203, Cl. 248-285.000.
Fabricus, Claus, to Mator AG. Procedure for the metered addition of copper ions in cheese production. 5,003,869, Cl. 99-453.000.
Fabriques de Tabac Reunies, S.A.: *See*—
Tallier, Bernard; and Hagmann, Otto, 5,003,996, Cl. 131-84.200.
Faccioli, Giovanni; De Bastiani, Basilio M.; Magnan, Bruno; and Soffiatti, Renzo, to Tecres Spa. Two phase cement mixture, particularly suitable for othopaedics. 5,004,501, Cl. 106-35.000.
Fahlen, Theodore S.: *See*—
Edelman, William; Constantinou, Dennis; Stefanovski, Miles; Jan, Yuh L.; Fahlen, Theodore S.; Hansen, Ronald L.; and Kramasz, Kenneth J., 5,005,180, Cl. 372-57.000.
Falempin, Francois, to Office National d'Etudes et de Recherches Aerospatiales. Symmetrical, two dimensional, supersonic and hypersonic air intake for the combustion air of an aircraft engine. 5,004,187, Cl. 244-53.00B.
Falk, Timothy L.; and Rhoads, Geoffrey B., to Tektronix, Inc. Method and apparatus for calibrating a scan convertor. 5,005,145, Cl. 364-571.020.
Fallstrom, Robert D.: *See*—
Hanson, Charles M.; Koester, Vaughn J.; and Fallstrom, Robert D., 5,005,213, Cl. 455-617.000.
Fang, Ho-Tsung. Door of concavity surface. 5,003,745, Cl. 52-316.000.
Fanner, John C.; and Halstead, Nick V., to Onan Corporation. Governor assist mechanism. 5,003,949, Cl. 123-382.000.
Fanuc Ltd.: *See*—
Kanda, Kunio, 5,005,012, Cl. 340-750.000.
Mizuno, Toru; and Hara, Ryuichi, 5,004,968, Cl. 318-615.000.
Nakashima, Yoshihiro; and Kinoshita, Yasunori, 5,005,134, Cl. 364-474.010.
Yamazaki, Etsuo; Iehisa, Noburki; and Suzuki, Kazuhiro, 5,004,889, Cl. 219-121.610.
Farmer, David M.: *See*—
Morser, Alfred H.; Gildemeister, Walter M.; and Farmer, David M., 5,005,135, Cl. 364-474.350.
Farrar, James G.; and Eskandry, Ezra D., to Sensormatic Electronics Corporation. Surveillance, pricing and inventory system. 5,005,125, Cl. 364-403.000.
Faucheux, Marc A. F.: *See*—
Grynberg, Gilbert; Pinard, Michel M. E.; and Faucheux, Marc A. F., 5,004,341, Cl. 356-350.000.
Feagin, Roy C., to Remet Corporation. Refractory material. 5,004,039, Cl. 164-361.000.
Feder, Michel; and Frances, Jean-Marc, to Rhone-Poulenc Chimie. Aqueous dispersions of crosslinkable silicones/siliconates. 5,004,771, Cl. 524-161.000.
Fedorovich, George: *See*—
Messenger, Edward J.; and Fedorovich, George, 5,004,248, Cl. 277-37.000.
Feldman, Martin; and Simpson, Princess E., to AT&T Bell Laboratories. Resolution confocal microscope, and device fabrication method using same. 5,004,321, Cl. 350-320.000.
Felgentreu, Peter, to Koh-I-Noor Rapidograph, Inc. Drop-weight and tubular writing instrument. 5,004,365, Cl. 401-258.000.
Felix Schoeller jr. GmbH & Co. KG: *See*—
Dethlefs, Ralf-Burkhard; Scholz, Bernd; Wysk, Wolfram; and Miefert, Elke, 5,004,644, Cl. 428-323.000.
Fenton, Garry: *See*—
Ashton, Michael J.; Bridge, Andrew W.; Chambers, Robert K.; Dron, Donald I.; Fenton, Garry; Harris, Neil V.; Lythgoe, David J.; McFarlane, Ian M.; Newton, Christopher G.; Riddell, David; Smith, Christopher; Stuttle, Keith A. J.; and Toft, Malcolm P., 5,004,747, Cl. 514-309.000.
Ferag AG: *See*—
Meier, Jacques, 5,004,092, Cl. 198-347.300.
Ferrell, Philip J., to Boeing Company, The. Method and apparatus for characterizing a radio transmitter. 5,005,210, Cl. 455-115.000.
Fiatgeotech S.p.A.: *See*—
Barbagli, Rino O.; and De Castelli, Giorgio, 5,004,060, Cl. 180-6.440.
Fiers, Walter C.; and Allet, Bernard, to Biogen, Massachusetts. DNA sequences, recombinant DNA molecules and processes for producing gamma interferon-like polypeptides in high yields. 5,004,689, Cl. 435-69.510.
Filatov, Alexei V.: *See*—
Goikhman, Yakov A.; Krjukov, Georgy M.; Onotsky, Melis I.; Sorokin, Georgy M.; Filatov, Alexei V.; Tsarapkin, Viktor V.; Yakimov, Vadim P.; Smirnov, Gennady A.; Nikiforov, Ivan I.; Burdukovsky, Alexandr I.; Daibov, Sergei V.; and Kurdjukov, Alexandr S., 5,004,056, Cl. 175-293.000.
Fine, Daniel H.: *See*—
Stefaniak, Philip S.; and Fine, Daniel H., 5,004,124, Cl. 222-136.000.
Finitzo, Terese; and Pool, Kenneth D., Jr., to Pool, Kenneth D., Jr.; and Electrophysiology Laboratories of Dallas, Inc., a part interest. Hie-

rarchial analysis for processing brain stem signals to define a prominent wave. 5,003,986, Cl. 128-731.000.
Fischer, Addison M. Public key/signature cryptosystem with enhanced digital signature certification. 5,005,200, Cl. 380-30.000.
Fischer, Robert D., to Gas Research Institute. Gas engine driven heat pump system. 5,003,788, Cl. 62-238.700.
Fisher, Gene A., to Unique Mobility, Inc. Lightweight high power electromagnetic transducer. 5,004,944, Cl. 310-266.000.
Fisher, Gordon: *See*—
Bernards, Roger F.; Fisher, Gordon; and Sonnenberg, Wade, 5,004,525, Cl. 204-52.100.
Fitzpatrick, Mark E.; and Burd, Robert C., to Gazelle Microcircuits, Inc. Floating transistor switch. 5,004,971, Cl. 323-312.000.
Fjeld, Svein: *See*—
Rosendahl, Finn; Fjeld, Svein; Salama, Mamdouh M.; and Gillen, Michael P., 5,004,051, Cl. 166-357.000.
Fleiter, Lothar: *See*—
Blum, Harald; Meixner, Jurgen; Schreckenberg, Manfred; Fleiter, Lothar; and Wellner, Wolfgang, 5,004,779, Cl. 524-591.000.
Flora, David D.: *See*—
Legler, John G., Folkerth, Harold E.; Flora, David D.; and Hile, Barry L., 5,004,027, Cl. 144-136.00R.
Fluoroware, Inc.: *See*—
Linder, James C.; and McKenzie, Jeffrey J., 5,004,011, Cl. 137-556.000.
Flutec Fluidtechnische Gerate GmbH: *See*—
Jung, Rudiger, 5,004,006, Cl. 137-501.000.
Focke & Co., (GmbH & Co.): *See*—
Focke, Heinz, 5,004,396, Cl. 414-417.000.
Focke, Heinz, to Focke & Co., (GmbH & Co.) Apparatus for the feeding of (pack) blanks to a packaging machine. 5,004,396, Cl. 414-417.000.
Fodera, Frank. Method of making a stone veneer panel. 5,004,512, Cl. 156-153.000.
Folkerth, Harold E.: *See*—
Legler, John G., Folkerth, Harold E.; Flora, David D.; and Hile, Barry L., 5,004,027, Cl. 144-136.00R.
Fong, Dodd W., and Kowalski, David J., to Nalco Chemical Company. Process for producing sulfomethylamide polymers. 5,004,786, Cl. 525-344.000.
Fonsny, Pierre: *See*—
Julemont, Michel; Zocchi, Germaine; Mineo, Nunzio; and Fonsny, Pierre, 5,004,556, Cl. 252-99.000.
Fonss, Jack G., Silverberg, Howard Z.; and Gardiner, Martin H., to Arrow Marine, Inc. Automatic motor synchronizer. 5,004,962, Cl. 318-85.000.
Foot, John, to Paccar Inc. Vehicle nose pivotal hinge assembly 5,004,062, Cl. 180-69.210.
Ford, Mark R.: *See*—
Schmidt, Robert J.; Haizmann, Robert S.; Ford, Mark R., Low, C. David; and Adams, Frank H., 5,004,859, Cl. 585-741.000.
Ford, Mary A.: *See*—
Ford, Theodore H., and Ford, Mary A., 5,003,973, Cl. 128-201.250
Ford Motor Company: *See*—
Boaz, Premakaran T., 5,004,284, Cl. 294-118.000.
Brown, Franklin I., 5,004,490, Cl. 60-60.520
Duncan, Harold D., 5,003,932, Cl. 123-52.0MB.
Oslapas, Algis, and Rumpel, Manfred, 5,004,063, Cl. 180-79.100.
Stinar, Robert P.; Calvas, George T.; and McNamara, David A., 5,003,801, Cl. 70-278.000.
Ford, Theodore H., and Ford, Mary A. Rescue helmet apparatus. 5,003,973, Cl. 128-201.250.
Forestier, Serge: *See*—
Richard, Herve, Leduc, Madeleine; Forestier, Serge; and Lang, Gerard, 5,004,594, Cl. 424-47.000.
Fornara, Dario: *See*—
Bastioli, Catia; Garlisi, Salvatore; Fornara, Dario; and Bellotti, Vittorio, 5,004,817, Cl. 549-557.000.
Fortier, Richard C.: *See*—
Kleven, Lawrence P.; Agranat, Edward A.; Crisafulli, Jerry, Robinson, Hugh; Smith, David J., Wiseley, Thomas; Fortier, Richard C.; Johnson, Severne; and Menzin, Marvin, 5,004,954, Cl. 315-106.000.
Fortin, J. Andre, Ogilvie, Kelvin K., Tsantrizos, Youla S.; and Kope, Harry H., to Universite Laval. Biofungicidal composition 5,004,754, Cl. 514-570.000.
Forum Chemicals Ltd.: *See*—
Staniforth, John N., 5,004,614, Cl. 424-466.000
Foseco International Limited: *See*—
Wahl, Hans-Peter; Schlueter, Rudolf; Kaettlitz, Wolfgang, and Loos, Rolf, 5,004,545, Cl. 210-510.100.
Foss, Jerry B.: *See*—
Rush, William B., II, Elder, Jack E.; Shier, Richard K., Foss, Jerry B., Haltiner, Karl J., Jr., and Wheeler, Grant M., 5,003,933, Cl. 123-52.0MC

Francois, Pierre-Michel: *See*—
Boinot, Francois; Cousin, Michel; Francois, Pierre-Michel; and Michel-Dansac, Francois, 5,004,789, Cl. 525-506.000.
Frankhouser, Paul L.: *See*—
Botterbusch, Carl N.; and Frankhouser, Paul L., 5,004,456, Cl. 604-53.000.
Franks, Lawrence A.: *See*—
Milliman, James G.; and Franks, Lawrence A., 5,003,691, Cl. 29-727.000.
Franz, Karl-Heinz; Ochs, Heinrich; and Difflipp, Kurt, to MAN Roland Druckmaschinen AG. Inking unit for a rotary offset printing machine. 5,003,871, Cl. 101-148.000.
Franzen, Hans U.: *See*—
Pleschiutschnigg, Fritz-Peter; Parschat, Lothar; Franzen, Hans U.; Pfluger, Manfred, and Glaser, Josef, 5,004,040, Cl. 164-453.000.
Freadman, Tommyca. Packaging arrangement for transporting audio system components to and from an outdoor marine site. 5,004,105, Cl. 206-576.000.
Freed, William J.: *See*—
Wyatt, Richard J.; Freed, William J.; and Staub, Richard A., 5,004,457, Cl. 604-158.000.
Freed, William T.: *See*—
Hallden-Abberton, Michael P.; Bortnick, Newman M.; Cohen, Leslie A., Freed, William T.; and Fromuth, Harry C., 5,004,777, Cl. 524-433.000.
Frehaut, Jean-Pierre; and Pineau, Jean-Pierre, to Thomson-Brandt Armements. Device for tilting a sub-munition under a parachute into inclined position. 5,003,882, Cl. 102-387.000.
Freidinger, Roger M.: *See*—
Evans, Ben E.; Bock, Mark G.; and Freidinger, Roger M., 5,004,741, Cl. 514-221.000.
Fresenius A. G.: *See*—
Terness, Peter; and Opelz, Gerhard, 5,004,604, Cl. 424-85.500.
Frimel, Jody W.: *See*—
Nagarajan, Madukkarai K.; Wherley, Fred J.; and Frimel, Jody W., 5,004,557, Cl. 252-174.240.
Frincke, James M.; Bartholomew, Richard M.; and Dillman, Robert O., to Hybritech Incorporated. Non-covalent antibody-anthracycline immunocomplexes. 5,004,606, Cl. 424-85.800.
Fritz, Hans-Gerhard; and Loffel, Rudi, to Hoechst Aktiengesellschaft. Method and apparatus for detecting in conformity with process time mixing ratios in plastics and rubber compounding. 5,005,194, Cl. 378-53.000.
Fritz, Walter: *See*—
Petzold, Rainer; Fritz, Walter; and Wiencek, Norbert, 5,004,086, Cl. 192-85.00C.
Fromuth, Harry C.: *See*—
Hallden-Abberton, Michael P.; Bortnick, Newman M.; Cohen, Leslie A., Freed, William T.; and Fromuth, Harry C., 5,004,777, Cl. 524-433.000.
Fronk, David M.; Brookstein, David S.; and Skelton, John, to Baxter International Inc. Prosthetic anterior cruciate ligament design. 5,004,474, Cl. 623-13.000.
Fudono, Kanji; Ogawa, Hiroshi; Takahashi, Toshimasa; and Yamashita, Toshio, to Mitsubishi Jukogyo Kabushiki Kaisha. Refrigerating apparatus. 5,003,786, Cl. 62-156.000.
Fuji Electrochemical Co. Ltd.: *See*—
Matsuo, Yoshio; Nakano, Hirofumi; Kamiya, Masakuni; and Matsui, Kezuo, 5,004,580, Cl. 419-65.000.
Fuji Jukogyo Kabushiki Kaisha: *See*—
Abe, Kunihiro, Sakamoto, Masanori; and Kobayashi, Tomoya, 5,005,129, Cl. 364-424.030.
Furuyama, Masaaki, 5,003,816, Cl. 73-117.300.
Ide, Tohru, 5,004,450, Cl. 474-242.000
Tezuka, Kazunari, and Fujiki, Haruo, 5,004,064, Cl. 180-197.000.
Fuji Photo Film Co., Ltd.: *See*—
Adachi, Keiichi; Katoh, Kazunobu; and Kawamura, Kouichi, 5,004,674, Cl. 430-333.000.
Arai, Fuminori, and Kondo, Asaji, 5,004,685, Cl. 435-25.000.
Ishikawa, Akira, and Harada, Kazumasa, 5,003,751, Cl. 53-215.000.
Kondo, Syunichi; and Watarai, Syu, 5,004,641, Cl. 428-208.000.
Mifune, Hiroyuki, and Urabe, Shigeharu, 5,004,679, Cl. 430-567.000
Miyata, Yukihide; Ishizaka, Hideo; Saito, Yoshio; and Koizumi, Takashi, 5,004,582, Cl. 422-56.000
Namiki, Tomizo, Suzuki, Tamotsu; and Katayama, Masashi, 5,004,668, Cl. 430-256.000.
Okutsu, Eiichi; Hirano, Mitsunori; and Yagihara, Morio, 5,004,670, Cl. 430-265.000.
Seto, Nobuo, and Morigaki, Masakazu, 5,004,678, Cl. 430-548.000
Shimizu, Kunimasa; Shigyo, Masao; and Tanaka, Hiroshi, 5,004,917, Cl. 250-236.000
Takasaki, Yoshimi; and Horikawa, Kazuo, 5,004,906, Cl. 250-214.00A.
Terai, Fumitaka; Yukawa, Kimio; Suyefuji, Mineo; Saito, Hiroki, and Yamaguchi, Shigeru, 5,004,628, Cl. 427-389.900.
Ueda, Shinji, 5,004,677, Cl. 430-382.000.
Yoneyama, Hiroyuki; Takahashi, Osamu; Yoshida, Kazuaki; and Ishikawa, Takatoshi, 5,004,675, Cl. 430-377.000.
Fuji Xerox Co., Ltd: *See*—
Dobashi, Kenji, 5,004,222, Cl. 271-225.000.

Sakata, Yasushi; and Iwamori, Toshimichi, 5,005,067, Cl. 357-54.000.
Fujii, Akira: *See*—
Fujino, Akihiko; Inoue, Manabu; Omaki, Takanobu; Nakai, Masaaki; Fujii, Akira; and Sekida, Minoru, 5,005,047, Cl. 354-442.000.
Tomita, Masahiro; Hayashi, Satoshi; Oda, Shinro; Fujii, Akira; and Tanigawa, Masayoshi, 5,004,945, Cl. 310-328.000.
Fujii, Hiroyuki: *See*—
Tanahashi, Masaaki; Hagiwara, Hiroyuki; and Fujii, Hiroyuki, 5,004,172, Cl. 242-54.00R.
Fujii, Takeshi: *See*—
Mashita, Kentaro; Fujii, Takeshi; and Oomae, Tadayuki, 5,004,782, Cl. 525-64.000.
Fujiki, Haruo: *See*—
Tezuka, Kazunari; and Fujiki, Haruo, 5,004,064, Cl. 180-197.000.
Fujimura, Yasuo; and Fujiwara, Toshio, to Sumitsu & Company, Limited. Paper cutter. 5,003,856, Cl. 83-576.000.
Fujino, Akihiko; Inoue, Manabu; Omaki, Takanobu; Nakai, Masaaki; Fujii, Akira; and Sekida, Minoru, to Minolta Camera Kabushiki Kaisha. Camera data setting device. 5,005,047, Cl. 354-442.000.
Fujino, Ikuo: *See*—
Kuribara, Motoaki; and Fujino, Ikuo, 5,004,090, Cl. 192-112.000.
Fujino, Nobutsugu: *See*—
Aono, Yoshihito; Iwamatsu, Takanori; Minowa, Morihiko; Takenaka, Sadao; Daidoh, Yoshimasa; Nakamura, Hiroshi; and Fujino, Nobutsugu, 5,005,186, Cl. 375-82.000.
Fujisawa, Eiichi: *See*—
Yoneyama, Syuichi; Obana, Yoshinori; and Fujisawa, Eiichi, 5,003,958, Cl. 123-635.000.
Fujita, Shigeru; Tanaka, Hideo; and Harada, Susumu, to Toshiba Kikai Kabushiki Kaisha. Apparatus for displaying a profile and corresponding data of operating conditions. 5,005,116, Cl. 364-188.000.
Fujitsu Limited: *See*—
Aono, Yoshihito; Iwamatsu, Takanori; Minowa, Morihiko; Takenaka, Sadao; Daidoh, Yoshimasa; Nakamura, Hiroshi; and Fujino, Nobutsugu, 5,005,186, Cl. 375-82.000.
Hashimoto, Koichi, 5,005,046, Cl. 355-77.000.
Kakinoki, Yoshikazu; Nakashima, Masato; Koezuka, Tetsuo; Hiraoka, Noriyuki; Tsukahara, Hiroyuki; Suto, Yoshinori; Oshima, Yoshitaka; and Hashinami, Shinji, 5,004,929, Cl. 250-561.000.
Kawamoto, Masakazu, 5,005,172, Cl. 371-18.000.
Nakagawa, Kenji, 5,004,927, Cl. 250-492.200.
Takahashi, Yasushi; and Yasuda, Hiroshi, 5,004,925, Cl. 250-491.100.
Fujiwara, Toshio: *See*—
Fujimura, Yasuo; and Fujiwara, Toshio, 5,003,856, Cl. 83-576.000.
Fukada, Tetsuji; Wakamiya, Masayuki; and Kainou, Kikuo, to Matsushita Electric Industrial Co., Ltd. Vibration/acceleration sensor. 5,003,824, Cl. 73-651.000.
Fukase, Hiroshi: *See*—
Horii, Satoshi; and Fukase, Hiroshi, 5,004,838, Cl. 568-347.000.
Fukuchi, Hiroyuki, to Kirin Beer Kabushiki Kaisha. Method and apparatus for inspecting sidewalls of bottles using stripe pattern illumination. 5,004,909, Cl. 250-223.00B.
Fukuda Densky Co, Ltd.: *See*—
Muraki, Yoshiya; and Koike, Hiroyuki, 5,003,984, Cl. 128-710.000.
Fukuhara, Akihiko: *See*—
Kenmochi, Kazuhito; Yarita, Ikuo; Fukuhara, Akihiko; Komatu, Tomio; and Kishida, Akira, 5,003,804, Cl. 72-39.000.
Fukuhara, Hiroshige: *See*—
Kato, Koichiro; Fukuhara, Hiroshige; Kamishima, Hiroyuki; and Tsukahara, Hitoshi, 5,005,021, Cl. 343-717.000.
Fukui, Tetsuro: *See*—
Arahara, Kozo; Fukui, Tetsuro; Fukumoto, Hiroshi; Katayama, Masato; and Takasu, Yoshio, 5,004,667, Cl. 430-255.000.
Fukumochi, Yoji: *See*—
Kugimiya, Shuzo; Fukumochi, Yoji; Nakamura, Ichiko; Hirai, Tokuyuki; and Suzuki, Hitoshi, 5,005,127, Cl. 364-419.000.
Fukumoto, Hiroshi: *See*—
Arahara, Kozo; Fukui, Tetsuro; Fukumoto, Hiroshi; Katayama, Masato; and Takasu, Yoshio, 5,004,667, Cl. 430-255.000.
Fukushima, Nobuo; Saksi, Shinji; Takdea, Osamu; Takei, Masahiro; Suzuki, Yasutomo; Okino, Tadashi; and Jinnai, Shigeru, to Canon Kabushiki Kaisha. Recording and/or reproducing apparatus adapted to minimize electrical energy consumption. 5,005,088, Cl. 360-69.000.
Fukushima, Toru; Takabayashi, Tsunehisa; and Ogai, Mikio, to Furukawa Electric Company, Ltd., The. Semiconductor device. 5,005,179, Cl. 372-46.000.
Fuller, Timothy J.; Marchessault, Robert H.; and Bluhm, Terry L., to Xerox Corporation. Toner and developer compositions containing biodegradable semicrystalline polyesters. 5,004,664, Cl. 430-106.600.
Funaki, Keisuke: *See*—
Yamasaki, Komei; and Funaki, Keisuke, 5,004,649, Cl. 428-461.000.
Fung, Paul: *See*—
Wislinski, Martin; Bergquist, Roger; Schroeder, Manfred; Weir, Theodore; Monetti, Matthew; and Fung, Paul, 5,004,579, Cl. 264-517.000.
Furubayashi, Hisatoshi: *See*—
Webb, Brian C.; Pedley, Derek G.; Prosser, Stephen J.; Hijikigawa, Masaya; and Furubayashi, Hisatoshi, 5,004,700, Cl. 437-42.000.
Furukawa Electric Company, Ltd., The: *See*—
Fukushima, Toru; Takabayashi, Tsunehisa; and Ogai, Mikio, 5,005,179, Cl. 372-46.000.
Miyazaki, Hiroshi, 5,004,315, Cl. 350-96.150.
Furukawa, Kazunari, to Yamaha Corporation. Acoustic apparatus. 5,004,066, Cl. 181-160.000.
Furuno Electric Co., Ltd.: *See*—
Oshima, Hisaichi; and Yamashita, Masami, 5,005,027, Cl. 346-76.0PH.
Furuta, Kouichi, to Sharp Kabushiki Kaisha. Semiconductor integrated circuit and test method for characteristics. 5,004,934, Cl. 307-303.000.
Furuya, Takashi: *See*—
Sakakibara, Shiro; and Furuya, Takashi, 5,004,082, Cl. 192-3.260.
Furuya, Takeo: *See*—
Kobayashi, Kyoji; and Furuya, Takeo, 5,004,178, Cl. 242-107.000.
Furuya, Yhuzi: *See*—
Haruki, Shinichi; Furuya, Yhuzi; and Tsujita, Akio, 5,005,051, Cl. 355-221.000.
Furuyama, Masaaki, to Fuji Jukogyo Kabushiki Kaisha. Engine idling control apparatus. 5,003,816, Cl. 73-117.300.
Fuse, Masashi, to Alps Electric Co., Ltd. Transmitting radiation through a flexible printed circuit to an optical fiber bundle. 5,005,029, Cl. 346-107.00R.
Fushiya, Fusao; Yokoyama, Yoshio; and Hara, Akihito, to Makita Electric Works, Ltd. Electrically-operated tacker. 5,004,140, Cl. 227-8.000.
G. D Societa' per Azioni: *See*—
Draghetti, Fiorenzo, 5,003,755, Cl. 53-466.000.

Dyroff, David R.; Getman, Daniel P.; and Glascock, Joan K., 5,004,558, Cl. 252-95.000

Ghandehari, Mohammad H., to Union Oil Company of California. Rare earth-iron-boron compositions for polymer-bonded magnets. 5,004,499, Cl. 75-254.000.

Giaramita, Michael. Color dental kit and method of use. 5,004,417, Cl. 433-26.000.

Gibbons, Ian. *See*—
Hillman, Robert S.; Cobb, Michael E.; Allen, Jimmy D.; Gibbons, Ian; Ostoich, Vladimir E.; and Winfrey, Laura J., 5,004,923, Cl. 250-341.000.

Giddey, Claude; and Dove, Georges, to Battelle Memorial Institute. Aqueous foaming composition and method for homogenizingly incorporating water into lipophilic materials. 5,004,623, Cl. 426-564.000.

Gildemeister, Walter M.: *See*—
Morser, Alfred H.; Gildemeister, Walter M.; and Farmer, David M., 5,005,135, Cl. 364-474.350.

Giles, Clinton R.: *See*—
Desurvire, Emmanuel; Giles, Clinton R.; Simpson, Jay R.; and Zyskind, John L., 5,005,175, Cl. 372-6.000.

Gillard, Clive H., to Sony Corporation. Motion dependent video signal processing. 5,005,078, Cl. 358-140.000.

Gillard, Clive H.: *See*—
Samad, Raphael; and Gillard, Clive H., 5,005,077, Cl. 358-140.000.

Gillen, Michael P.: *See*—
Rosendahl, Finn, Fjeld, Svein; Salama, Mamdouh M.; and Gillen, Michael P., 5,004,051, Cl. 166-357.000.

Gillespie, Peter J. *See*—
Wasmer, William D., Gillespie, Peter J.; Lippmann, James G., and Le, Hiep M., 5,005,069, Cl. 357-72.000.

Gilmour, Paul A.: *See*—
Cummiskey, Peter; Epstein, Marvin; Gilmour, Paul A., and Kim, Richard, 5,005,168, Cl. 370-24.000.

Gimeno, Carlos V. Non-reusable syringe. 5,004,460, Cl. 604-228.000.

Giordano, Claudio. *See*—
Castaldi, Graziano; and Giordano, Claudio, 5,004,832, Cl. 562-490.000.

Girard, Philippe. *See*—
Antoine, Michel; Barreau, Michel; Desconclois, Jean-Francois, Girard, Philippe; and Picaut, Guy, 5,004,745, Cl. 514-254.000.

Gisoni, Gregory A. *See*—
Lipchak, John B.; Oblak, Tod A.; Bednar, Fred H.; Ciaramitaro, William, Hughes, Francis R.; Smith, John R.; and Gisoni, Gregory A., 5,005,142, Cl. 364-550.000.

Glascock, Joan K.: *See*—
Dyroff, David R.; Getman, Daniel P.; and Glascock, Joan K., 5,004,558, Cl. 252-95.000.

Glasener, Ted W.: *See*—
Hartmann, Jon P.; and Glasener, Ted W., 5,004,999, Cl. 340-539.000.

Glaser, Josef: *See*—
Pleschiutschnigg, Fritz-Peter; Parschat, Lothar; Franzen, Hans U., Pfluger, Manfred, and Glaser, Josef, 5,004,040, Cl. 164-453.000

Glass, Alastair M.; Knox, Wayne H., and Nolte, David D, to AT&T Bell Laboratories. Optical processing using a multilayer heterostructure. 5,004,325, Cl. 350-354.000.

Glasstech, Inc.: *See*—
McMaster, Ronald A.; and Shetterly, Donivan M., 5,004,491, Cl. 65-106.000.

Glatt, Jack E. *See*—
Strobl, Frederick P., Jr.; and Glatt, Jack E., 5,003,733, Cl. 52-86.000.

Gleason, John R.: *See*—
Johnston, Norman J.; St. Clair, Terry L.; Baucom, Robert M., and Gleason, John R., 5,004,575, Cl. 264-136.000.

Gleim, Guunter, to Deutsche Thomson-Brandt GmbH. Circuitry for generating phase-shifted sinusoidal voltages. 5,005,114, Cl. 363-43.000.

Glick, J. Leslie, to Bionix Corporation. Methods for diagnosing, monitoring and controlling the onset and progression of certain dementias and impeding memory loss or improving impairment of memory. 5,004,615, Cl. 424-692.000.

Glinecke, Robert: *See*—
Radebaugh, Galen W.; Murtha, John L.; and Glinecke, Robert, 5,004,613, Cl. 424-465.000.

Globe-Union Inc.: *See*—
Symanski, James S., 5,004,655, Cl. 429-82.000.

Glunz, Wolfgang; and Rau, Gunnar, to MAN Roland Druckmaschinen AG. Rotary printing machine system with a web path changing arrangement. 5,003,889, Cl. 101-228.000.

Gobel, Richard: *See*—
Adams, James; Gobel, Richard; and Lanham, Bryan, 5,004,028, Cl. 144-176.000.

Godlewski, Edward S. Up-feed conveyor system. 5,004,219, Cl. 271-116.000.

Goessler, Gerhard; Wilde, Eugen; and Seeburger, Rolf, to E.G.O. Elektro-Gerate Blanc U. Fischer. Radiant element. 5,004,892, Cl. 219-464.000.

Gohda, Eiichi; Tsubouchi, Hirohito; Nakayama, Hiroyuki; Hirono, Shuichi; Takahashi, Kozo; Hashimoto, Shuji; and Daikuhara, Yasushi, to Hashimoto, Shuji; Daikuhara, Yasushi; Gohda, Eiichi; Tsubouchi, Hirohito; and Mitsubishi Kasei Corporation. Hepatocyte growth factor. 5,004,805, Cl. 530-399.000.

Goikhman, Yakov A.; Krjukov, Georgy M.; Onotsky, Melis I.; Sorokin, Georgy M.; Filatov, Alexei V., Tsarapkin, Viktor V.; Yakimov, Vadim P.; Smirnov, Gennady A.; Nikiforov, Ivan I.; Burdukovsky, Alexandr I.; Daibov, Sergei V.; and Kurdjukov, Alexandr S. Percussion-rotary drilling tool. 5,004,056, Cl. 175-293.000.

Goldburt, Efim S., and Hemmer, Richard E., to North American Philips Corporation. Solid state light modulator incorporating metallized gel and method of metallization. 5,004,625, Cl. 427-38.000.

Goldowsky, Michael P. Balanced radial engine. 5,003,935, Cl. 123-55.00R.

Goldstar Co., Ltd.: *See*—
Ahn, Chang S., 5,004,360, Cl. 400-144.200.
Lee, Min Ki, 5,004,881, Cl. 219-10.770.

Goldstein, David, to United States of America, Navy. Geothermal energy conversion system. 5,003,779, Cl. 60-527.000.

Golio, John M., and Staudinger, Joseph, to Motorola, Inc. Digital-to-analog converting field effect device and circuitry. 5,005,059, Cl. 357-22.000.

Gonczy, Stephen T.: *See*—
Stranford, Gerald T.; Gonczy, Stephen T.; and Mitsche, Roy T., 5,004,709, Cl. 501-97.000.

Gonzalez, Fernando, to Micron Technology, Inc. Stacked cell design for 16-megabit DRAM array having a pair of interconnected poly layers which enfold a single field plate layer and connect to the cell's storage node junction. 5,005,072, Cl. 357-23.600.

Goodman, Matthew S.: *See*—
Arthurs, Edward; Goodman, Matthew S.; Kim, Chong K.; and Lee, Tony T., 5,005,167, Cl. 370-4.000.

Goodwin, Jon D.; and Musil, Joseph E., to Cedarapids, Inc. Vehicle positioning methods and apparatus with impact damper. 5,004,394, Cl. 414-346.000.

Gordon, John R.: *See*—
Johnson, Dale V.; and Gordon, John R., 5,004,007, Cl. 137-501.000.

Gorgenyi, Imre: *See*—
Taraci, Richard; Taraci, Brian; and Gorgenyi, Imre, 5,004,973, Cl. 324-158.00R.

Gorovenko, Georgy G.: *See*—
Sizonenko, Olga N.; Maxutov, Rafkhat A.; Maljushevsky, Pavel P.; Gorovenko, Georgy G.; Sokolov, Alexei V.; Lyapis, Diana N.; Schekin, Vladimir I.; and Kuskova, Natalya I., 5,004,050, Cl. 166-248.000.

Goss, George R.: *See*—
Brooks, David D.; Brophy, Shirley A.; and Goss, George R., 5,004,570, Cl. 260-427.000.

Goss, Raymond W., to Hercules Incorporated. Fabric lamination of unitary backed hot constructed carpet tile. 5,004,638, Cl. 428-95.000.

Gossard, William H.: *See*—
Bronder, Joseph B.; and Gossard, William H., 5,005,169, Cl. 370-76.000.

Goto, Hiroshi: *See*—
Toyoshi, Naoki; Oka, Tateki; and Goto, Hiroshi, 5,003,917, Cl. 118-653.000.

Goto, Nobutaka: *See*—
Koboshi, Shigeharu; Kobayashi, Kazuhiro; Goto, Nobutaka; Kurematsu, Masayuki; and Takabayashi, Naoki, 5,004,522, Cl. 159-47.003.

Gotoh, Masaki: *See*—
Ishikawa, Hiroshi; Hasegawa, Kazuo; and Gotoh, Masaki, 5,004,898, Cl. 235-475.000.

Gotou, Yukifumi: *See*—
Narikiyo, Hidetoshi; Gotou, Yukifumi; and Chuma, Yoshihiro, 5,004,149, Cl. 236-49.300.

Goud, Gilles R., to Salomon S.A. Ski brake. 5,004,065, Cl. 280-605.000.

Goulding, Frederick S.: *See*—
Loo, Billy W.; and Goulding, Frederick S., 5,003,980, Cl. 128-653.00R.

Goupil, Robert. Adaptor to convert a bottle fed water cooler into a device suppiied with pressurized water from the local piping system. 5,003,790, Cl. 62-389.000.

Graco Inc.: *See*—
Donley, Paul J., 5,003,916, Cl. 118-429.000.

Graf, Felix; and Busenhart, Peter, to Maschinenfabrik Rieter AG. Apparatus for compensating sag of the mandrel of a winding machine. 5,004,170, Cl. 242-18.00R.

Grage, Ludger; and Dato, Paul, to Siemens Aktiengesellschaft. FLIR system with two optical channels for observing a wide and a narrow field of view. 5,005,083, Cl. 358-181.000.

Graham, Anne C.: *See*—
Monte, Charles; White, Paul J.; and Graham, Anne C., 5,003,859, Cl. 84-423.00R.

Graillat, Gerard: *See*—
Provence, Marc; and Graillat, Gerard, 5,004,262, Cl. 280-615.000.

Grapha-Holding AG: *See*—
Duss, Hanspeter, 5,005,192, Cl. 377-8.000.

Grave, Georges A.; and Gaslonde, Jean-Pierre, to U.S. Philips Corporation. Method of controlling the speed of a D.C. motor and device for carrying out the method. 5,005,207, Cl. 388-816.000.

Graves, John G. Combination valve. 5,004,005, Cl. 137-269.500.

Gray, Charles H., Jr. Fire control valve with pivotal latch. 5,004,003, Cl. 137-75.000.

Gray, Richard: *See*—
Atkinson, Anthony; Gray, Richard; and Denes, Oscar L., 5,003,693, Cl. 29-849.000.

Grdzelishvili, Georgy J.: *See*—
Loladze, Teimuraz N.; Batiashvili, Boris I.; Mamulashvili, Gennady L.; Butskhrikidze, David S.; Grdzelishvili, Georgy J.; and Markevich, Jury I., 5,003,728, Cl. 51-165.800.

Great Plains Industries, Inc.: *See*—
Beaston, Brook J., 5,004,013, Cl. 137-614.050.

Green, John M.: *See*—
Perryman, James D.; and Green, John M., 5,005,099, Cl. 360-132.000.

Green, Robert: *See*—
Benstock, Gerald M.; Belkin, Nathan L.; and Green, Robert, 5,003,902, Cl. 112-418.000.

Greenlee, Mark L.: *See*—
DiNinno, Frank P.; Greenlee, Mark L.; and Salzmann, Thomas N., 5,004,739, Cl. 514-210.000.
Dininno, Frank P.; Salzmann, Thomas N.; and Greenlee, Mark L., 5,004,740, Cl. 514-210.000.

Greenwald, Brian D.: *See*—
Parsons, Gerald J.; Greenwald, Brian D.; McGrath, John J.; and Andrasko, Stephen W., 5,005,197, Cl. 379-21.000.

Greenwood, Eugene C.; and Hyatt, John. Infection-resistant catheter. 5,004,455, Cl. 604-43.000.

Gremaud, Henri; Gremaud, Martial; and Rollier, Michel, to Francis Rollier SA. Method and device for setting the angular position of a workpiece on a machine-tool by means of a laser beam. 5,004,930, Cl. 250-561.000.

Gremaud, Martial: *See*—
Gremaud, Henri; Gremaud, Martial; and Rollier, Michel, 5,004,930, Cl. 250-561.000.

Greve, Christopher G.: *See*—
Lapeyre, James M.; Weber, Peter G.; and Greve, Christopher G., 5,004,095, Cl. 198-660.000.
Lapeyre, James M.; Weber, Peter G.; and Greve, Christopher G., 5,004,096, Cl. 198-666.000.

Grey, Bettie. Method of laying out a pathway for piping. 5,004,374, Cl. 405-154.000.

Griebling, Stephen T., to Bridgestone/Firestone, Inc. Contoured liner for preassembled tire components. 5,004,635, Cl. 428-33.000.

Grieco, Steven E.; and Morris, Douglas A., to Motorola, Inc. Multiresonator ceramic filter and method for tuning and adjusting the resonators thereof. 5,004,992, Cl. 333-202.000.

Griffin, David; Campbell, Jonathan; Reilly, Michael; and Rosenbaum, Richard, to Digital Equipment Corporation. Arrangement with cooperating management server node and network service node. 5,005,122, Cl. 364-200.000.

Griffis, Steven C. Method and means for laundering contaminated clothing. 5,003,794, Cl. 68-3.00R.

Grimm, Duane H., to Sundstrand Corporation. Automatic lubrication device for mechanical actuation systems. 5,004,073, Cl. 184-6.120.

Grinwald, Paul M. Method and apparatus for enhanced drug permeation of skin. 5,003,987, Cl. 128-734.000.

Grodek, Raymond J., to Harshaw/Filtrol Partnership. Process of producing colloidal zirconia sols and powders using an ion exchange resin. 5,004,711, Cl. 501-103.000.

Grosch, Peter; Haas, Gerhard; and Kremer, Ingo, to Reinz-Dichtungs-Gesellschaft mbH. Flat gasket and process for its production. 5,004,249, Cl. 277-207.00R.

Gross, Clifford, to Biomechanics Corporation of America. Keyboard accessory. 5,004,196, Cl. 248-118.300.

Grossi, Benedetto: *See*—
Bullard, James R.; Muller, Richard P.; Grossi, Benedetto; and Cristine, John, 5,003,963, Cl. 128-11.000.

Grossler, Peter: *See*—
Nisal, Norbert; and Grossler, Peter, 5,003,884, Cl. 102-476.000.

Grossman, Robert B.: *See*—
Buchwald, Stephen L.; and Grossman, Robert B., 5,004,820, Cl. 556-53.000.

Grote & Hartmann GmbH & Co. KG: *See*—
Neumann, Andreas; and Wiese, Michael, 5,004,101, Cl. 206-343.000.

Gruedelbach, Hans-Dieter: *See*—
Hinzpeter, Juergen; and Gruedelbach, Hans-Dieter, 5,004,576, Cl. 264-40.500.

Grunert, Kurt A.; Pabon, Delfin; and Cheski, Ronald A., to Westinghouse Electric Corp. Clip-connected terminal conductor assembly. 5,005,104, Cl. 361-355.000.

Grunfeld, Hay; Lotan, Noah; and Sideman, Samuel, to Technion Research & Development Foundation Ltd. Method and apparatus for bioaffinity separation. 5,004,547, Cl. 210-635.000.

Grynberg, Gilbert; Pinard, Michel M. E.; and Faucheux, Marc A. F., to Quantel, S.A. Active optical gyrometer employing a phase conjugation. 5,004,341, Cl. 356-350.000.

Grzybowski, Kenneth F.; and Anthony, Brian J., to Gardner Asphalt Corporation. Asphalt roofing compositions especially adapted for cold applications. 5,004,772, Cl. 524-62.000.

GTE Government Systems Corporation: *See*—
Blaisdell, Leonard L., 5,005,022, Cl. 343-753.000.

Guay, Christopher B.: *See*—
Majeti, Satyanarayana; Guay, Christopher B.; and Crisanti, Mark M., 5,004,597, Cl. 424-52.000.

Gubernick, Franklin L.: *See*—
Monticup, Anthony, Jr.; and Gubernick, Franklin L., 5,004,023, Cl. 141-208.000.

Gubon, Peter; Sudmanns, Hans; and Teetz, Christoph, to MTU Friedrichshafen GmbH. Hood covering the space between cylinder banks of an internal-combustion engine which are arranged in a V-shape. 5,003,934, Cl. 123-52.0MV.

Gudel, Claude: *See*—
Cattaneo, Pierr; and Gudel, Claude, 5,004,974, Cl. 324-117.00R.

Guenthner, Waldemar G.: *See*—
Lipscomb, Dennis E.; Wilhelm, Gary L.; Perna, Barbara G.; and Guenthner, Waldemar G., 5,003,695, Cl. 30-193.000.

Guillon, Jean C.: *See*—
Rufray, Jean C.; and Guillon, Jean C., 5,005,073, Cl. 358-21.00R.

Guirguis, Raouf A., to La Mina Ltd. Modular multiple fluid sample preparation assembly. 5,003,988, Cl. 128-771.000.

Gunlocke Co., The: *See*—
Sorensen, Thomas V., 5,004,371, Cl. 403-327.000.

Gunzler, Volkmar: *See*—
Baader, Ekkehard; Bickel, Martin; Brocks, Dietrich; Gunzler, Volkmar; Henke, Stephan; and Hanauske-Abel, Hartmut, 5,004,748, Cl. 514-350.000.

Guong-Hong, Li. Device and method for collecting bee venom by attracting and electrocuting injurious bees. 5,004,446, Cl. 449-1.000.

Gupta, Balaram, to Hoechst Celanese Corp. Radiation curable compositions based on 4-acetoxystyrene and 4-hydroxystyrene homopolymers. 5,004,762, Cl. 522-121.000.

Guruswamy, Vinodhini; and Elliott, Donald A., to MedTest Systems, Inc. Universal sensor cartridge for use with a universal analyzer for sensing components in a multicomponent fluid. 5,004,583, Cl. 422-58.000.

Gut, Karl; Matejka, Wolfgang A.; Gysel, Walter; and Gerber, Urs, to Georg Fischer AG. Process for the impact healing of inner discontinuities or defects in the sub-surface region of a cast component. 5,003,880, Cl. 102-314.000.

Gutierrez, Carlos D., to Du Pont de Nemours, E. I., and Company. Apparatus with improved flow-through characteristics for the recovery of silver from silver-containing waste fluids. 5,004,212, Cl. 266-170.000.

Gysel, Walter: *See*—
Gut, Karl; Matejka, Wolfgang A., Gysel, Walter; and Gerber, Urs, 5,003,880, Cl. 102-314.000.

H-C Industries, Inc.: *See*—
McBride, Stephen W., 5,004,112, Cl. 215-252.000.

Ha, Byung J.: *See*—
Kim, Young D.; and Ha, Byung J., 5,004,737, Cl. 514-182.000.

Haas, Gerhard: *See*—
Grosch, Peter; Haas, Gerhard; and Kremer, Ingo, 5,004,249, Cl. 277-207.00R.

Haas, Oscar W., Prasad, Ravi; and Smolarek, James, to Union Carbide Corporation. Production of dry, high purity nitrogen. 5,004,482, Cl. 55-16.000.

Habu, Takeshi: *See*—
Yamada, Taketoshi; Habu, Takeshi; and Takamuki, Yasuhiko, 5,004,669, Cl. 430-264.000.

Hacker, Hans-Eugen: *See*—
Esser, Klaus; and Hacker, Hans-Eugen, 5,003,675, Cl. 28-141.000.

Hackett, Charles M., Jr. Detection of digital signals received from multipath channels. 5,005,189, Cl. 375-101.000.

Haese, Wilfried: *See*—
Zecher, Wilfried; El-Sayed, Aziz; Haese, Wilfried; Kohler, Burkhard; and Meyer, Rolf-Volker, 5,004,795, Cl. 528-73.000.

Hafele KG: *See*—
Walz, Rudiger, 5,004,200, Cl. 248-250.000.

Hafelfinger, Werner; Sholder, Jason A., King, Murray P.; and Duncan, James L., to Siemens-Pacesetter, Inc. Automatic electrode configuration of an implantable pacemaker. 5,003,975, Cl. 128-419.0PG.

Hafner, Paul: *See*—
Schiel, Christian; and Hafner, Paul, 5,003,863, Cl. 92-61.000.

Haga, Katsumi: *See*—
Arai, Tatsuo, and Haga, Katsumi, 5,004,378, Cl. 407-106.000.

Hagan, John: *See*—
Walter, Gerard S.; and Hagan, John, 5,004,437, Cl. 439-811.000.

Hageniers, Omer L.: *See*—
Pryor, Timothy R.; Hageniers, Omer L., Pastorius, Walter J.; Liptay-Wagner, Nicholas; and Clarke, Donald A., 5,004,339, Cl. 356-241.000.

Hagiwara, Hiroyuki: *See*—
Tanahashi, Masaaki; Hagiwara, Hiroyuki; and Fuju, Hiroyuki, 5,004,172, Cl. 242-54.00R.

Hagmann, Otto: *See*—
Talher, Bernard, and Hagmann, Otto, 5,003,996, Cl. 131-84.200.

Hagus, U.S.A., Inc.: *See*—
Storm, Manfred; and Storm, Greg J., 5,004,139, Cl. 224-324.000.

Haid, David A.: *See*—
Litz, Lawrence M.; Weise, Mark K.; and Haid, David A., 5,004,571, Cl. 261-91.000.

Haines & Emerson, Inc.: *See*—
Dornblaser, Norman E.; and Hildermann, David F., 5,003,753, Cl. 53-415.000.

Haizmann, Robert S.: *See*—
Schmidt, Robert J., Haizmann, Robert S.; Ford, Mark R., Low, C. David; and Adams, Frank H., 5,004,859, Cl. 585-741.000

Hakotani, Yasuhiko, Nakatani, Seiichi, Yuuhaku, Satoru; Nishimura, Tsutomu; and Ishida, Toru, to Matsushita Electric Industrial Co., Ltd. Dielectric ceramic composition and a multilayer ceramic capacitor and a method of manufacturing a multilayer ceramic capacitor. 5,004,715, Cl. 501-136.000.

Hale, John M., to Orbisphere Corporation. Amperometric cell. 5,004,532, Cl. 204-415.000.

Halem, Stephen; and Lichtman, Philip R. Fluid dispensing and mixing device. 5,004,158, Cl. 239-310.000.

Hall, Randolph L.; and Johnson, Christopher D., to Rockwell International Corporation. Rugate reflector. 5,004,308, Cl. 350-1.700.

Hall, Roger G.: *See*—
Dingwall, John G.; Ehrenfreund, Josef; Hall, Roger G.; and Jack, James, 5,004,826, Cl. 558-169.000

Hallam, Donald E.; Popper, Peter; Staunton, Harold F.; Taylor, Robert E., and Yngve, Paul W., to Du Pont de Nemours, E. I., and Company. Apparatus and process for forming alternate twist plied yarn and product therefrom. 5,003,763, Cl. 57-297.000.

Hallden-Abberton, Michael P.; Bortnick, Newman M.; Cohen, Leslie A.; Freed, William T.; and Fromuth, Harry C., to Rohm and Haas Company. Imide polymers. 5,004,777, Cl. 524-433.000.

Halliburton Company: *See*—
Handke, Wayne A., 5,004,400, Cl. 414-786.000

Halperin, Henry R., to Johns Hopkins University. Dynamic indentation system. 5,003,982. Cl. 128-695.000.

Halperin, Rachel. Hand held safety siren. 5,005,002, Cl. 340-574.000.

Halstead, Nick V.: *See*—
Fanner, John C.; and Halstead, Nick V., 5,003,949, Cl. 123-382.000.

Haltiner, Karl J., Jr.: *See*—
Rush, William B., II; Elder, Jack E., Shier, Richard K.; Foss, Jerry B.; Haltiner, Karl J., Jr.; and Wheeler, Grant M., 5,003,933, Cl. 123-52.0MC.

Halvorsen, James V., to Bryant Grinder Corporation. Radius dressing apparatus. 5,003,730, Cl. 51-325.000.

Hamada, Kenichi: *See*—
Iwamoto, Koji; Hamada, Kenichi; and Hirota, Katsuaki, 5,005,086, Cl. 358-227.000
Yano, Tadashi; and Hamada, Kenichi, 5,003,877, Cl. 101-363.000.

Hamada, Masataka; Ishida, Tokuji; and Ishibashi, Kenji, to Minolta Camera Kabushiki Kaisha. Autofocusing camera. 5,005,039, Cl. 354-402.000

Hamada, Masataka: *See*—
Norita, Toshio, Ishida, Tokuji; Hamada, Masataka; and Ishibashi, Kenji, 5,005,040, Cl. 354-402.000.

Hamana, Takanori: *See*—
Aramaki, Minoru; Suenaga, Takashi; Sakaguchi, Hiroaki; and Hamana, Takanori, 5,004,829, Cl. 562-113.000.

Hamilton, Douglas D.: *See*—
MacLennan, Charles; Hamilton, Douglas D.; and Palfy, Robert M., 5,004,026, Cl. 144-3.00D.

Hamilton Standard Controls, Inc.: *See*—
Mierzwinski, Eugene P., 5,005,123, Cl. 364-400.000.

Hamlin, Humphrey A. S., and Harral, Michael W., to Normalair-Garrett (Holdings) Ltd. Molecular sieve-type gas separation systems. 5,004,485, Cl. 55-160.000.

Hammerly, Jeffrey L.; and Rosenthal, David S. Model rocket car. 5,004,441, Cl. 446-211.000.

Hammond, John R. M.: *See*—
Simpson, William J.; and Hammond, John R. M., 5,004,684, Cl. 435-8.000.

Hampton, Hilary J.: *See*—
Taylor, Charles S., and Hampton, Hilary J., 5,003,989, Cl. 128-772.000

Hampton, Jeanne M.: *See*—
Hampton, William B., 5,003,697, Cl. 33-244.000.

Hampton, William B., to Hampton, William B.; and Hampton, Jeanne M. Telescopic sight lens protector. 5,003,697, Cl. 33-244.000.

Han, Scott: *See*—
DeCaul, Lorenzo C.; Han, Scott; Palermo, Robert E.; and Walsh, Dennis E., 5,004,856, Cl. 585-500.000.

Han, Sil. Master gear turning assembly. 5,003,702, Cl. 33-501.190.

Hanagan, Joseph J., to Thermos Company, Inc., The. Electronic grill control. 5,003,960, Cl. 126-39.0BA.

Hanai, Satoshi: *See*—
Shimamura, Keizo; Amano, Kagetaka; Aisaka, Tatsuryoshi; Hanai, Satoshi; and Nagata, Kohsoku, 5,004,498, Cl. 75-233.000.

Hanatani, Yasuyuki: *See*—
Mutoh, Naruki, Hanatani, Yasuyuki; and Nishiguchi, Toshihiko, 5,004,662, Cl. 430-59.000.

Hanauske-Abel, Hartmut: *See*—
Baader, Ekkehard; Bickel, Martin; Brocks, Dietrich, Gunzler, Volkmar; Henke, Stephan; and Hanauske-Abel, Hartmut, 5,004,748, Cl. 514-350.000.

Handke, Wayne A., to Halliburton Company. Automatic rate matching system. 5,004,400, Cl. 414-786.000.

Handler, Isidore. Side supported cable tray. 5,004,192, Cl. 248-49.000.

Hane, Toshioki; and Katayama, Shigeki, to Asahi Kasei Kogyo Kabushiki Kaisha. Fiber of a fluorocarbon polymer and a process for producing the same. 5,004,648, Cl. 428-364.000

Hanes, Ronnie M.; and Kwiatek, Jack, to National Distillers and Chemical Corporation. Carbonylation of allylic ethers to esters. 5,004,568, Cl. 260-410.000.

Hanley, Roger T., to Stanley Works, The. Push to close latch for self-cleaning oven. 5,004,276, Cl. 292-126.000.

Hannecart, Etienne: *See*—
Simoens, Anthony; and Hannecart, Etienne, 5,004,773, Cl. 524-178.000.

Hans, Paul C.; and Rosenfield, Gary C., to Aerotech, Inc. Finlock alignment mechanism for rockets. 5,004,186, Cl. 244-3.250

Hansard, Gregory R. Rotary vaned valves. 5,003,942, Cl. 123-190.00A.

Hansen, John S.; and Waranius, William A., to Amoco Corporation. Filter system. 5,004,860, Cl. 585-812.000.

Hansen, Lee E.: *See*—
Burchette, Herbert L.; Hansen, Lee E.; West, James C.; and Nawrocki, Glen A., 5,004,402, Cl. 415-137.000.

Hansen, Ronald L.: *See*—
Edelman, William; Constantinou, Dennis; Stefanovski, Miles; Jan, Yuh L.; Fahlen, Theodore S.; Hansen, Ronald L.; and Kramasz, Kenneth J., 5,005,180, Cl. 372-57.000.

Hanson, Charles M., Koester, Vaughn J.; and Fallstrom, Robert D., to Varo, Inc. Head mounted video display and remote camera system. 5,005,213, Cl. 455-617.000.

Hantos, Gabor: *See*—
Jekkel nee Bokany, Antonia; Albrecht, Karoly; Ambrus, Gabor; Lang, Tibor; Szabo, Istvan M.; Ilkoy, Eva; Konczol, Kalman; Moravcsik, Imre; Hantos, Gabor; Simonovits, Emilia; Lengyel nee Szemenyei, Zsuzsanna; Vida, Zsuzsanna; and Csajagi, Eva, 5,004,695, Cl. 435-253.100.

Hara, Akihito: *See*—
Fushiya, Fusao; Yokoyama, Yoshio; and Hara, Akihito, 5,004,140, Cl. 227-8.000.

Hara, Kazumasa; Sano, Yasuro; Koike, Mikio; and Nishijima, Mitsuru, to Janome Sewing Machine Co. Ltd. Device for guiding a lower thread in a sewing machine. 5,003,896, Cl. 112-121.110.

Hara, Ryuichi: *See*—
Mizuno, Toru; and Hara, Ryuichi, 5,004,968, Cl. 318-615.000.

Hara, Yasuhiro; Inoue, Mitsuhiro; Baba, Hideo; Okazaki, Tadashi; and Kudo, Shigeru, to Hitachi Chemical Company, Ltd. Clutch driven plates and method of producing the same. 5,004,089, Cl. 192-107.00M.

Harada, Kazumasa: *See*—
Ishikawa, Akira, and Harada, Kazumasa, 5,003,751, Cl. 53-215.000.

Harada, Shoichi: *See*—
Imai, Hajime; Kito, Shozo; Harada, Shoichi; Yokoyama, Yoshinobu; Nakamura, Syuzi; Miyoshi, Shigetoshi; and Muramatsu, Tadao, 5,003,799, Cl. 70-247.000.

Harada, Susumu: *See*—
Fujita, Shigeru; Tanaka, Hideo; and Harada, Susumu, 5,005,116, Cl. 364-188.000

Haraguchi, Hiroshi; Tamura, Hiroshi; Kodama, Katuhiko; and Kondo, Toshio, to Nippondenso Co., Ltd. Method of controlling air-fuel ratio. 5,003,955, Cl. 123-489.000.

Harandi, Mohsen N., to Mobil Oil Corp. Two-stage process for conversion of olefins to high octane gasoline. 5,004,852, Cl. 585-322.000.

Harin, Farouk A., to Texas Instruments Incorporated. Radiation heat shield for silicon melt-in manufacturing of single crystal silicon. 5,004,519, Cl. 156-620.400.

Harke, Alfons, to International Intec Patent Holding Establishment. Grouting anchor to be inserted in a predrilled hole. 5,003,749, Cl. 52-703.000

Harkins, James J. Screwdriver with holding sleeve. 5,003,850, Cl. 81-436.000

Harlow Chemical Company Limited: *See*—
Mahil, Mahinder S., and Cruden, John M., 5,004,768, Cl. 524-30.000.

Harnish, Daniel F.; Pickens, Donald; and Zweig, Andrew M., to Allied-Signal Inc. Fluorinated surfactant monomers for polymer surface modification. 5,004,790, Cl. 526-242.000.

Harper, Homer C.: *See*—
Cocherell, Francis E.; Harper, Homer C.; and Hsieh, George, 5,004,596, Cl. 424-52.000.

Harral, Michael W.: *See*—
Hamlin, Humphrey A. S.; and Harral, Michael W., 5,004,485, Cl. 55-160.000.

Harris, Halford S. Retractable cleat device. 5,004,388, Cl. 410-107.000.

Harris, James M., to Gardiner Communications Corporation. Dual band integrated LNB feedhorn system. 5,005,023, Cl. 343-756.000.

Harris, James P.: *See*—
Roy, James P.; and Harris, James P., 5,003,845, Cl. 81-3.400.

Harris, Neil V.: *See*—
Ashton, Michael J.; Bridge, Andrew W.; Chambers, Robert K.; Dron, Donald I.; Fenton, Garry; Harris, Neil V.; Lythgoe, David J.; McFarlane, Ian M.; Newton, Christopher G.; Riddell, David; Smith, Christopher, Stuttle, Keith A. J.; and Toft, Malcolm P., 5,004,747, Cl. 514-309.000.

Harris, Norman: *See*—
Bradley, Michael W.; Harris, Norman; and Turner, Keith, 5,004,845, Cl. 568-885.000.

Harrison, Daniel R.: *See*—
Mallard, Bobby J.; Knapp, Richard H.; Roper, W. J.; and Harrison, Daniel R., 5,004,071, Cl. 182-3.000.

Harrison, John R.; and Millard, Michael W., to Ward Machinery Company, The. Printing apparatus with dual inking system. 5,003,876, Cl. 101-350.000

Harshaw/Filtrol Partnership: *See*—
Grodek, Raymond J., 5,004,711, Cl. 501-103.000.

Hart, Marshall B.: *See*—
Seymour, Raymond K.; Hart, Marshall B.; Magnon, Gary D.; von Kannewurff, Michael C.; and Doughty, Dennis J., 5,004,878, Cl. 200-144.00R.

Hartman, Standish C.: *See*—
Lockhart, John C., Jr.; Hartman, Standish C.; Meuron, Bruce R.; and Lyons, Joseph B., Jr., 5,004,185, Cl. 224-3.140.

Hartmann, Jon P.; and Glasener, Ted W., to Honeywell, Inc. Extended RF range alarm system. 5,004,999, Cl. 340-539.000.

Haruki, Shinichi; Furuya, Yhuzi; and Tsujita, Akio, to Hitachi Koki Co., Ltd. Electrophotographic image recording apparatus using amorphous silicon hydride photosensitive drum. 5,005,051, Cl. 355-221.000.

Harwood, Jon W.: *See*—
Van Blaircum, Bennie A.; Harwood, Jon W.; and Kimmet, Mark S., 5,004,069, Cl. 181-282.000.

Hasegawa, Kazuo: *See*—
Ishikawa, Hiroshi; Hasegawa, Kazuo; and Gotoh, Masaki, 5,004,898, Cl. 235-475.000.

Hasegawa, Kimio: *See*—
Yamamoto, Yohzoh; Ishiwata, Shuichi; Yokoyama, Kenji; and Hasegawa, Kimio, 5,004,764, Cl. 523-400.000.

Haseler, Helmut: *See*—
Meckl, Heinz; Klotzer, Sieghart; Wolff, Erich; and Haseler, Helmut, 5,004,676, Cl. 430-398.000.

Haseltine, Eric C.; and Jones, Helene H., to Hughes Aircraft Company. Catadioptric projector, catadioptric projection system and process. 5,004,331, Cl. 350-443.000.

Hasenberg, Thomas C.: *See*—
Lam, Juan F.; and Hasenberg, Thomas C., 5,005,176, Cl. 372-10.000.

Hashimoto, Koichi, to Fujitsu Limited. Pattern forming method. 5,005,046, Cl. 355-77.000.

Hashimoto, Shuji: *See*—
Gohda, Eiichi; Tsubouchi, Hirohito; Nakayama, Hiroyuki; Hirono, Shuichi; Takahashi, Kozo; Hashimoto, Shuji; and Daikuhara, Yasushi, 5,004,805, Cl. 530-399.000.

Hashimoto, Takayoshi: *See*—
Kawada, Sunao; Hashimoto, Takayoshi; Itoh, Toyotsugu; and Koyanagi, Makoto, 5,003,851, Cl. 82-1.110.

Hashimoto, Toru; Takabatake, Masato; Chino, Masashi; and Takahashi, Akira, to Mitsubishi Jidosha Kogyo Kabushiki Kaisha. Detector device for simultaneously detecting both the direction and number of rotations of rotating member. 5,004,981, Cl. 324-207.220.

Hashinami, Shinji: *See*—
Kakinoki, Yoshikazu; Nakashima, Masato; Koezuka, Tetsuo; Hiraoka, Noriyuki; Tsukahara, Hiroyuki; Suto, Yoshinori; Oshima, Yoshitaka; and Hashinami, Shinji, 5,004,929, Cl. 250-561.000.

Haskin, Marvin E., to Prevail, Inc. System and method for remote presentation of diagnostic image in formation. 5,005,126, Cl. 364-413.130.

Hasler, Rudolf, to U.S. Philips Corp. Oscillator for controlling a mixer stage in a tuner. 5,004,989, Cl. 331-117.00R.

Hatano, Ako: *See*—
Izumiya, Toshihide; Ohba, Yasuo; and Hatano, Ako, 5,005,057, Cl. 357-17.000.

Hatta, Katuhiro; Hiramatsu, Takeo; and Takamiya, Bonnosuke, to Mitsubishi Jidosha Kogyo Kabushiki Kaisha. Control device for automatic transmission gear system. 5,003,842, Cl. 74-867.000.

Hatta, Shinji: *See*—
Takayama, Syuichi; Tsukaya, Takashi; Ueda, Yasuhiro; Hatta, Shinji; and Abe, Masashi, 5,003,991, Cl. 128-784.000.

Hattori, Jun: *See*—
Suzuki, Masayuki; and Hattori, Jun, 5,004,328, Cl. 350-416.000.

Hauni Richmond, Inc.: *See*—
Hinzmann, Alfred; Shu, Timour T.; Drewnowski, Wojciech S.; and Preisner, Peter M., 5,004,467, Cl. 604-904.000.

Hauss, Raymond G.: *See*—
Wilson, William B.; DiPietro, Matthew; Neace, Richard K.; Dethier, Vincent B.; Hauss, Raymond G.; and Louk, James R., 5,005,036, Cl. 354-322.000.

Havriluk, Rod, to Swimming Technology Research, Inc. Method and apparatus for monitoring hydrodynamic therapy and exercise. 5,005,140, Cl. 364-550.000.

Hawkins, Robert E.: *See*—
D'Ottavio, Eugene D.; Hawkins, Robert E.; Rodriguez, Stephen S.; and Rychwalski, James, 5,004,672, Cl. 430-314.000.

Hay, Robert A.; Willkens, Craig A.; and Arsenault, Normand P., to Norton Company. Reaction bonded silicon nitride filtration membranes. 5,004,544, Cl. 210-490.000.

Hay, Wayne R., to Systron Donner Corporation. Accelerometer based power control apparatus for aircraft subsystem. 5,004,963, Cl. 320-13.000.

Hayasaka, Hiroshi; and Nagata, Akio, to Hitachi Koko Company, Limited. Centrifuge. 5,004,453, Cl. 494-39.000.

Hayashi, Chihiro: *See*—
Nakasuji, Kazuyuki; and Hayashi, Chihiro, 5,004,143, Cl. 228-126.000.

Hayashi, Koji: *See*—
Yokoe, Masaaki; Kurono, Yoshikazu; and Hayashi, Koji, 5,003,897, Cl. 112-121.120.

Hayashi, Minoru; Kobari, Koichi; Sato, Kimiharu; and Kishimoto, Junichi, to Nippon Koki Co., Ltd. Gas generating apparatus for inflating air bag. 5,004,586, Cl. 422-164.000.

Hayashi, Satoshi: *See*—
Tomita, Masahiro; Hayashi, Satoshi; Oda, Shinro; Fujii, Akira; and Tanigawa, Masayoshi, 5,004,945, Cl. 310-328.000.

Hayashi, Shigeru; and Yamada, Kaneo, to Shiseido Company Ltd. Fibrinophilic urokinase complex. 5,004,609, Cl. 424-94.300.

Hayden, Theodore R. Vacuum system attachment. 5,004,428, Cl. 439-191.000.

Hayes Separations, Inc.: *See*—
Hayes, William V., 5,003,813, Cl. 73-49.200.

Hayes, William V., to Hayes Separations, Inc. Method and apparatus for monitoring storage tank leakage. 5,003,813, Cl. 73-49.200.

Hazbun, Edward A.: *See*—
Schon, Steven G.; and Hazbun, Edward A., 5,004,479, Cl. 44-302.000.

Hebert, Randy S.: *See*—
Durham, George R.; and Hebert, Randy S., 5,004,851, Cl. 585-260.000.

Hecht, Sidney M.: *See*—
Boehm, Jeffrey C.; Hecht, Sidney M.; Holden, Kenneth G.; Johnson, Randall K.; and Kingsbury, William D., 5,004,758, Cl. 514-283.000.

Hedstrom Corp.: *See*—
Boudreau, Robert J., 5,004,216, Cl. 267-179.000.

Hee, Roland, to JES, L.P. Magnetic snap assembly for connecting grounding cord to electrically conductive body band. 5,004,425, Cl. 439-37.000.

Heid, Walter: *See*—
Amrhein, Reinhard; Heid, Walter; and Muschong, Gunther, 5,004,015, Cl. 137-625.680.

Heidelberger Druckmaschinen: *See*—
Junghans, Rudi, 5,003,874, Cl. 101-348.000.

Helioprint As: *See*—
Stovring, Knud S., 5,005,045, Cl. 355-68.000.

Helpenstein, Klaus: *See*—
Loth, Helmut; Helpenstein, Klaus; Podola, Tore; and Knop, Bernhard, 5,004,769, Cl. 524-43.000.

Hembert, Claude L. Device to protect the ends of fluid tanks made of composite materials. 5,004,120, Cl. 220-414.000.

Hemker, Wilfred J.: *See*—
Lochhead, Robert Y.; Castaneda, Janet Y.; and Hemker, Wilfred J., 5,004,598, Cl. 424-59.000.

Hemmer, Richard E.: *See*—
Goldburt, Efim S.; and Hemmer, Richard E., 5,004,625, Cl. 427-38.000.

Hendricks, James B., to Ketema Process Equipment Division. Invertible filter-type centrifuge with improved bearing and seal assembly. 5,004,540, Cl. 210-232.000.

Hendry Mechanical Works: *See*—
Sevier, Richard W.; and Keenan, James J., 5,004,107, Cl. 211-26.000.

Henke, Stephan: *See*—
Baader, Ekkehard; Bickel, Martin; Brocks, Dietrich; Gunzler, Volkmar; Henke, Stephan; and Hanauske-Abel, Hartmut, 5,004,748, Cl. 514-350.000.

Henkel Kommanditgesellschaft auf Aktien: *See*—
Emmerling, Winfried; Wichelhaus, Juergen; and Podola, Tore, 5,004,794, Cl. 528-52.000.
Loth, Helmut; Helpenstein, Klaus; Podola, Tore; and Knop, Bernhard, 5,004,769, Cl. 524-43.000.

Heppner, Joachim G.: *See*—
Bernard, Walter; Heppner, Joachim G.; and Schwarz, Karl H., 5,004,342, Cl. 356-350.000.

Hercules Incorporated: *See*—
Goss, Raymond W., 5,004,638, Cl. 428-95.000.
Schimpf, Warren C., 5,004,590, Cl. 425-447.200.

Herko, Samuel P.: *See*—
Shaulov, Avner A.; Herko, Samuel P.; Dorman, Donald R.; and Bhargava, Rameshwar N., 5,004,726, Cl. 505-1.000.

Herman Wangner GmbH & Co. KG: *See*—
Esser, Klaus; and Hacker, Hans-Eugen, 5,003,675, Cl. 28-141.000.

Herold, Stanley J.; Howard, Charles D.; and LaGrange, Donald E., to United States of America, Navy. Aerial flare and igniter. 5,003,881, Cl. 102-337.000.

Herry, Robert E. Fish lure. 5,003,720, Cl. 43-42.390.

Hershenson, Susan; and Thomson, Jody, to Cetus Corporation. Low pH pharmaceutical compositions of recombinant β-interferon. 5,004,605, Cl. 424-85.600.

Hessman, Ingemar; Post, Karl G. Y.; and Norgren, Lars E., to Santrade Limited. Cutting insert. 5,004,380, Cl. 407-114.000.

Hester, Charles F.: *See*—
Caulfield, H. John; Hester, Charles F.; Kinser, Jason M.; and Shamir, Joseph, 5,004,309, Cl. 350-3.680.

Heuft-Qualiplus B.V.: *See*—
Swart, Nicholaas C., 5,004,347, Cl. 356-394.000.

Hewlett-Packard Company: *See*—
Altendorf, John M.; and Wong, Marvin G., 5,005,070, Cl. 357-74.000.
King, Philip N., 5,005,008, Cl. 340-653.000.
Morris, Carroll E., Jr.; Balliew, Robert E., Mathieu, Mark A.; and Johnsrud, Darrell B., 5,004,978, Cl. 324-158.00R.
Tullis, Barclay J.; and Kruger, James B., 5,004,340, Cl. 356-243.000.
Tung, Charles C., 5,005,139, Cl. 364-519.000.
Ty Tan, Michael R.; and Wang, Shih-Yuan, 5,004,313, Cl. 350-96.140.

Hibino, Katsuhiko: *See*—
Kozaki, Tetsuji; Ishikawa, Hiroshi; Yasui, Hideaki; Shimamoto, Mamoru; Hibino, Katsuhiko; and Suzuki, Motoshi, 5,004,264, Cl. 280-707.000.

Higashihara, Masaki: *See*—
Akashi, Akira; Kadohara, Terutake; Ohnuki, Ichiro; and Higashihara, Masaki, 5,005,037, Cl. 354-400.000.

Higgins, John; and McDonagh, Michael, to Alperk Limited. Food processing apparatus. 5,003,868, Cl. 99-357.000.

Highfill, Louis A.: *See*—
Cadwallader, George W.; Highfill, Louis A.; Kurdys, Gregory D.; and Turigliatto, Richard S., 5,004,589, Cl. 423-315.000.

Hijikigawa, Masaya: *See*—
Webb, Brian C.; Pedley, Derek G.; Prosser, Stephen J.; Hijikigawa, Masaya; and Furubayashi, Hisatoshi, 5,004,700, Cl. 437-42.000.

Hildermann, David F.: *See*—
Dornblaser, Norman E.; and Hildermann, David F., 5,003,753, Cl. 53-415.000.

Hildinger, Henry W.; and Carlson, Edwin D. Process for recycling and purifying condensate from a hydrocarbon or alcohol synthesis process. 5,004,862, Cl. 585-867.000.

Hile, Barry L.: *See*—
Legler, John G.; Folkerth, Harold E.; Flora, David D.; and Hile, Barry L., 5,004,027, Cl. 144-136.00R.

Hill, Amos G., to White Consolidated Industries, Inc. Close-trim mower deflector. 5,003,757, Cl. 56-17.400.

Hill, Kenneth O.; Johnson, Derwyn C.; and Lamont, Robert G., to Canada, Her Majesty the Queen in Right of, as represented by the Minister of Communications. Coupler fabrication techniques for dissimilar fibers. 5,004,316, Cl. 350-96.150.

Hill, Scott D.: *See*—
Mixon, Larry C.; Snyder, George W.; Hill, Scott D.; Johnson, Gregory L.; Wlodarski, J. Frank; von Spakovsky, Alexis P.; Emerson, John D.; Cole, James M.; and Tipton, John P., 5,003,883, Cl. 102-476.000.

Hillman, Robert S.; Cobb, Michael E.; Allen, Jimmy D.; Gibbons, Ian; Ostoich, Vladimir E.; and Winfrey, Laura J., to Biotrack, Inc. Capillary flow device. 5,004,923, Cl. 250-341.000.

Hiney, Leonard L.: *See*—
Terrell, John; Kadis, Paul M.; Hiney, Leonard L.; and Pfaff, Susan E., 5,003,807, Cl. 72-351.000.

Hinschlager, Robert A., to Huffy Corporation. Cover for the driving sprocket of a bicycle. 5,003,840, Cl. 74-594.200.

Hinzmann, Alfred; Shu, Timour T.; Drewnowski, Wojciech S.; and Preisner, Peter M., to Hauni Richmond, Inc. Tampon. 5,004,467, Cl. 604-904.000.

Hinzpeter, Juergen; and Gruedelbach, Hans-Dieter, to Wilhelm Fette GmbH. Process and apparatus for monitoring pressing forces in a tablet press. 5,004,576, Cl. 264-40.500.

Hirai, Isamu: *See*—
Sato, Osamu; and Hirai, Isamu, 5,005,042, Cl. 354-412.000.

Hirai, Tokuyuki: *See*—
Kugimiya, Shuzo; Fukumochi, Yoji; Nakamura, Ichiko; Hirai, Tokuyuki; and Suzuki, Hitoshi, 5,005,127, Cl. 364-419.000.

Hiramatsu, Takeo: *See*—
Hatta, Katuhiro; Hiramatsu, Takeo; and Takamiya, Bonnosuke, 5,003,842, Cl. 74-867.000.

Hirano, Mitsunori: *See*—
Okutsu, Eiichi; Hirano, Mitsunori; and Yagihara, Morio, 5,004,670, Cl. 430-265.000.

Hiraoka, Noriyuki: *See*—
Kakinoki, Yoshikazu; Nakashima, Masato; Koezuka, Tetsuo; Hiraoka, Noriyuki; Tsukahara, Hiroyuki; Suto, Yoshinori; Oshima, Yoshitaka; and Hashinami, Shinji, 5,004,929, Cl. 250-561.000.

Hirata, Eiji: *See*—
Tsubone, Akira; Tomiyoshi, Masanori; Yokomizo, Junichi; Tanaka, Nobuhiro, Moriguchi, Hideyuki; and Hirata, Eiji, 5,004,401, Cl. 414-786.000.

Hirata, Shinji, to West Electric Company, Ltd. Strobe apparatus. 5,004,958, Cl. 315-241.00P.

Hirohata, Michio: *See*—
Ogawa, Yukio; Hirohata, Michio; Kodaira, Takanori; and Miyawaki, Makoto, 5,005,038, Cl. 354-400.000.

Hirono, Shuichi: *See*—
Gohda, Eiichi; Tsubouchi, Hirohito; Nakayama, Hiroyuki; Hirono, Shuichi; Takahashi, Kozo; Hashimoto, Shuji; and Daikuhara, Yasushi, 5,004,805, Cl. 530-399.000.

Hirose, Hisashi: *See*—
Umehara, Keiichi; Hirose, Hisashi; and Kono, Kazuo, 5,004,915, Cl. 250-231.140.

Hirose, Ken-ichi: *See*—
Tamura, Mitsuhisa; Suzukamo, Gohu; and Hirose, Ken-ichi, 5,004,843, Cl. 568-670.000.

Hirose, Kenichi: *See*—
Sato, Hiroshi; Hirose, Kenichi; Nagai, Koichi; Yoshioka, Hiroshi; and Nagaoka, Yoshihiko, 5,004,846, Cl. 568-940.000.

Hirota, Katsuaki: *See*—
Iwamoto, Koji, Hamada, Kenichi; and Hirota, Katsuaki, 5,005,086, Cl. 358-227.000.

Hirschmann, Robert P.; Beard, William Q., Jr.; Mainz, Eric L.; Smith, Earl B., and Little, Barry M., to Vulcan Chemicals. Manufacture of perchloroethylene and trichloroethylene by catalytic oxychlorination, and improved catalysts therefor. 5,004,849, Cl. 570-224.000.

Hitachi Chemical Company, Ltd.: *See*—
Hara, Yasuhiro; Inoue, Mitsuhiro; Baba, Hideo; Okazaki, Tadashi; and Kudo, Shigeru, 5,004,089, Cl. 192-107.00M.

Hitachi Construction Machinery Co., Ltd.: *See*—
Kanai, Takashi; Ochiai, Masami; Oshima, Morio; and Sonoda, Mitsuo, 5,003,776, Cl. 60-434.000.

Hitachi Denshi Kabushiki Kaisha: *See*—
Amano, Tetsuya; Mita, Seiichi; Izumita, Morishi; Doi, Nobukazu; Kaneko, Mamoru; Yamauchi, Hiroto; and Kasai, Susumu, 5,005,184, Cl. 375-14.000.

Hitachi Koki Co., Ltd.: *See*—
Haruki, Shinichi; Furuya, Yhuzi; and Tsujita, Akio, 5,005,051, Cl 355-221.000.

Hitachi Koko Company, Limited: *See*—
Hayasaka, Hiroshi; and Nagata, Akio, 5,004,453, Cl. 494-39.000.

Hitachi, Ltd.: *See*—
Amano, Tetsuya; Mita, Seiichi; Izumita, Morishi; Doi, Nobukazu, Kaneko, Mamoru; Yamauchi, Hiroto; and Kasai, Susumu, 5,005,184, Cl. 375-14.000.
Ikeda, Shuji; Sasaki, Katsuro; Nagasawa, Kouichi; and Meguro, Satoshi, 5,005,068, Cl. 357-59.000.
Maejima, Hideo; and Masuda, Ikuro, 5,005,153, Cl. 364-900.000.
Nakada, Kunihiko; and Akao, Yasushi, 5,005,121, Cl. 364-200.000.
Nejime, Yoshito, 5,004,932, Cl. 307-201.000.
Sunagawa, Masao; Kubota, Kazuhiro; Ishii, Yoshitaro; and Satoh, Susumu, 5,003,663, Cl. 15-366.000.

Hitachi Maxell, Ltd.: *See*—
Sato, Kiyoshi; Yoshikawa, Hirokazu; Ikenari, Shigeru; and Yokoyama, Kenichi, 5,004,656, Cl. 429-162.000.

Hitachi Metals Ltd.: *See*—
Tanahashi, Masaaki; Hagiwara, Hiroyuki; and Fujii, Hiroyuki, 5,004,172, Cl. 242-54.00R.

Hitachi Video Engineering, Inc.: *See*—
Amano, Tetsuya; Mita, Seiichi; Izumita, Morishi; Doi, Nobukazu; Kaneko, Mamoru; Yamauchi, Hiroto; and Kasai, Susumu, 5,005,184, Cl. 375-14.000.

Hixson, William J. Quick adjust tappet assembly. 5,003,940, Cl 123-90.540.

Hjulstrom, Richard A., to Electro-Films, Inc. Adjustment of thin film capacitors. 5,004,658, Cl. 430-5.000.

HMT Technology Corporation: *See*—
Lal, Brij B.; and Eltoukhy, Atef H., 5,004,652, Cl. 428-611.000.

Hobach, Michael W.: *See*—
Trame, Charles E.; Karsten, Robert A.; and Hobach, Michael W., 5,003,717, Cl. 40-518.000.

Hobbs, Simon H.: *See*—
Barger, Paul T.; Barder, Timothy J.; Lin, David Y.; and Hobbs, Simon H., 5,004,853, Cl. 585-481.000.

Hochman, Haim: *See*—
Landa, Benzion; Hochman, Haim; and Yacoub, Naseem, 5,004,165, Cl. 241-21.000.

Hoechst Aktiengesellschaft: *See*—
Baader, Ekkehard; Bickel, Martin; Brocks, Dietrich; Gunzler, Volkmar; Henke, Stephan; and Hanauske-Abel, Hartmut, 5,004,748, Cl. 514-350.000.
Fritz, Hans-Gerhard; and Loffel, Rudi, 5,005,194, Cl. 378-53.000.
Rohrscheid, Freimund; Siegemund, Gunter; and Lau, Jurgen, 5,004,797, Cl. 528-206.000.

Hoechst Celanese Corporation: *See*—
Broussard, Jerry A.; Auerbach, Andrew B.; Yang, Nan L.; Paul, James L., Zheng, Yong C.; and Zhang, Chong L., 5,004,798, Cl. 528-230.000.
Gupta, Balaram, 5,004,762, Cl. 522-121.000.
Vicari, Richard; Costanza, John R., Lamonte, Ronald R.; and Miano, Ralph M., 5,004,796, Cl. 528-179.000.

Hoeptner, Herbert W., to Custom Chrome, Inc. Dual spark plug ignition system for motorcycle internal combustion engine. 5,003,945, Cl. 123-310.000.

Hoff, Heinz: *See*—
Erber, Anton; Hoff, Heinz; Reuchlein, Gunter; Schaaf, Hanno; and Schiessl, Gerhard, 5,003,778, Cl 60-517.000.

Hoffman, Ned, to Sports-Mitt International. Exercise apparatus. 5,004,227, Cl. 272-119.000.

Hoffmann-La Roche Inc.: *See*—
Leenhouts, Frans; and Schadt, Martin, 5,004,324, Cl. 350-347.00R.

Hofmann, Hartmut, to PPM Pure Metals GmbH. Production of phenylarsines. 5,004,821, Cl. 556-70.000.

Hog, Peter: *See*—
Dreschel, Jurgen; Hog, Peter; and Mobs, Stephan, 5,004,220, Cl. 271-184.000.

Hogeland, Robert. Article and method of improving exterior building appearance. 5,003,738, Cl. 52-202.000.

Hoke, A. Chyril. Lock protector. 5,003,795, Cl. 70-55.000.

Hoke Incorporated: *See*—
Dyer, John, 5,003,864, Cl. 92-132.000.

Holden, Alan G.: *See*—
Teleki, Bela; Holden, Alan G.; and Chong, Leang H., 5,004,991, Cl. 333-168.000.

Holden, Kenneth G.: *See*—
Boehm, Jeffrey C.; Hecht, Sidney M.; Holden, Kenneth G.; Johnson, Randall K.; and Kingsbury, William D., 5,004,758, Cl. 514-283.000.

Holl, Rolf: *See*—
Pahnke, Klaus-Dieter; Holl, Rolf; and Becker, Wilfried, 5,003,886, Cl. 102-521.000.

Holleman, Timothy W.; Doan, Phong D.; Brennen, Kenneth R.; and Swoyer, John M. Atraumatic screw-in lead. 5,003,992, Cl. 128-785.000.

Hollis, Ray A. Adjustable batting tee. 5,004,234, Cl. 273-26.00R.

Hollowell, George E., and Sample, Hugh D., to Neuville Industries, Inc. Method and apparatus for producing socks. 5,004,132, Cl. 223-1.000.

Holroyd, Trevor J.; and Tracey, Timothy E., to Stresswave Technology Limited. Method and apparatus for testing the response of a stress wave sensor. 5,004,985, Cl. 324-727.000.

Holt, Jan D.: *See*—
Schmidt, Kenneth D.; and Holt, Jan D., 5,004,386, Cl. 410-62.000.

Holzl, Klaus, to TMC Corporation. Anti-theft device. 5,004,261, Cl. 280-612.000.

Honda Giken Kogyo Kabushiki Kaisha: *See*—
Matsumoto, Yukihiro; Yoshihara, Kenji; Kajiura, Tetsuya; Niizato, Tomonori; and Yamada, Noriyuki, 5,003,937, Cl. 123-90.120.
Shibata, Katsuhiro; Azuma, Yuichi; and Suzuki, Tsuguya, 5,004,497, Cl. 75-229.000.
Yakuwa, Masahiko; Itoh, Tomofumi; and Igarashi, Hisashi, 5,003,954, Cl. 123-479.000.

Honda, Kazuo; Matsuura, Atsushi; and Sano, Hisanori, to Toshiba Lighting & Technology Corporation. Single side-sealed metal vapor discharge lamp. 5,004,951, Cl. 313-631.000.

Honeywell Inc.: *See*—
Dankwort, Rudolph C.; and Klem, Charles D., 5,004,911, Cl. 250-227.210.
Hartmann, Jon P.; and Glasener, Ted W., 5,004,999, Cl. 340-539.000.
McCracken, William L.; McDonald, Paul D.; and Kirschner, Roger S., 5,004,310, Cl. 350-6.800.
Roth, Roger R., 5,004,972, Cl. 323-320.000.

Hoodenpyle, James W.; Robinson, James P.; and Wright, John W., to Howell Instruments, Inc. Aircraft brake tester. 5,003,818, Cl. 73-121.000.

Hooykaas, Carel W. J., to Pelt & Hooykas B.V. Bearing part for a gas bearing. 5,004,357, Cl. 384-121.000.

Hopkins, Richard H.: *See*—
Kun, Zoltan K.; Cresswell, Michael W.; and Hopkins, Richard H., 5,004,956, Cl. 315-169.300.

Horgan, John J.; and Ociepka, Val S., to Avco Corporation. Compact rectilinear heat exhanger. 5,004,044, Cl. 165-145.000.

Horiba, Ltd.: *See*—
Horii, Yoshio, 5,004,998, Cl. 340-507.000.

Horie, Nobuyuki: *See*—
Sakamoto, Noriaki; Maeda, Shigemi; Yamanaka, Toshihiro; Deguchi, Toshihisa; Horie, Nobuyuki, Yamaguchi, Takeshi; and Kojima, Kunio, 5,005,164, Cl. 369-48.000.
Yamanaka, Toshihiro; Maeda, Shigemi; and Horie, Nobuyuki, 5,005,165, Cl. 369-58.000.

Horii, Satoshi; and Fukase, Hiroshi, to Takeda Chemical Industries, Ltd. Inosose derivatives, production and use thereof. 5,004,838, Cl. 568-347.000.

Horii, Yoshio, to Horiba, Ltd. Ion-measuring apparatus for use in process. 5,004,998, Cl. 340-507.000.

Horikawa, Kazuo: *See*—
Takasaki, Yoshimi; and Horikawa, Kazuo, 5,004,906, Cl 250-214.00A.

Horiuchi, Tetsuya: *See*—
Ida, Kozo; and Horiuchi, Tetsuya, 5,004,785, Cl. 525-305.000.

Horizons International Foods, Inc: *See*—
Shanbhag, Sudhakar P.; Cousminer, Joseph J., and Milani, Gerald, 5,004,616, Cl. 426-102.000.

Horne, G. Kent. Vehicle windowsill protective covering and arm rest apparatus. 5,004,292, Cl. 296-153.000.

Horsch, John D.: *See*—
Miller, Gregory A.; Pearson, Jeffery L., and Horsch, John D., 5,004,266, Cl. 280-743.000.

Hosmer, Jimmy D., to Hosmer Machinery & Engineering, Inc. Nozzle texturizer for yarn manufacturing. 5,003,764, Cl 57-333.000.

Hosmer Machinery & Engineering, Inc.: *See*—
Hosmer, Jimmy D., 5,003,764, Cl. 57-333.000.

Hosoi, Toshiaki. Drill. 5,004,384, Cl. 408-230.000

Hospal Industrie: *See*—
Richalley, Gerard; and Burtin, Jacques, 5,004,548, Cl. 210-646.000.

House, Roy F.; Wilkinson, Andree H.; and Cowan, Jack C., to Venture Innovations, Inc. Well working compositions, method of decreasing the seepage loss from such compositions, and additive therefor. 5,004,553, Cl. 252-8.510.

Howard, Charles D.: *See*—
Herold, Stanley J.; Howard, Charles D.; and LaGrange, Donald E., 5,003,881, Cl. 102-337.000.

Howe, David J., to Proctor & Gamble Company. Controlled heating baking pan. 5,004,121, Cl. 220-458.000

Howell Instruments, Inc.: *See*—
Hoodenpyle, James W., Robinson, James P.; and Wright, John W., 5,003,818, Cl. 73-121.000.

Hoya Corporation: *See*—
Ishibai, Isao; and Otsu, Hitonobu, 5,004,330, Cl 350-432.000
Kobayashi, Masato; Yamaguchi, Yoh-Ichi; Sugawara, Minoru; and Yamashiro, Kazuhide, 5,005,075, Cl. 378-35.000.

Hsieh, George: *See*—
Cocherell, Francis E.; Harper, Homer C.; and Hsieh, George, 5,004,596, Cl. 424-52.000.

Huang, Chin-Ming. Two-stage water discharge mechanism for flush toilet tank. 5,003,644, Cl 4-324.000

Huang, Dennis. Driving structure for mini-sewing machine. 5,003,898, Cl. 112-220.000.

Huang, Shu-Jen: *See*—
Beckman, John A.; Huang, Shu-Jen, and Ebrat, Abdol R., 5,004,550, Cl. 210-710.000.

Huang, Yao-Tsung: *See*—
Liu, Ru-Shi; Huang, Yao-Tsung; Chu, Jau-Jier; and Liang, Jiuh-Ming, 5,004,723, Cl. 505-1.000

Hubbard, Phillip W. Utility cart. 5,004,263, Cl. 280-645.000.

Huber, Jeffrey A., to Sundstrand Corporation. Turbo hydraulic unitized actuator. 5,003,772, Cl. 60-259.000.

Huber, Lothar, to Luk Lamellen und Kupplungsbau GmbH. Friction clutch. 5,004,087, Cl. 192-89.00B.

Hudson Associates, Inc.: *See*—
Sodec, Franc; Hudson, Donald L.; and Bolen, David T., 5,003,867, Cl. 98-31.600.

Hudson, Donald L.: *See*—
Sodec, Franc; Hudson, Donald L., and Bolen, David T., 5,003,867, Cl. 98-31.600.

Hudson, William S.: *See*—
Robb, Wendell E.; and Hudson, William S., 5,003,642, Cl. 4-287.000.

Huels Aktiengesellschaft: *See*—
Kelkenberg, Heike, 5,004,564, Cl. 252-546.000.

Huet, Wilfred. Hose rupture valve. 5,004,010, Cl. 137-513.300

Huff, Richard: *See*—
Elliott, Albert O., Jr., 5,004,383, Cl. 408-211.000.

Huffy Corporation: *See*—
Hinschlager, Robert A., 5,003,840, Cl. 74-594.200.

Hughes Aircraft Company: *See*—
Haseltine, Eric C.; and Jones, Helene H., 5,004,331, Cl. 350-443.000.
Isaak, Harlan, 5,003,870, Cl. 101-127.100.
Lam, Juan F.; and Hasenberg, Thomas C., 5,005,176, Cl. 372-10.000.
Vali, Victor; Chang, David B.; and Brownrigg, Patrick C., 5,004,914, Cl. 250-227.270.

Hughes, Francis R.: *See*—
Lipchak, John B.; Oblak, Tod A.; Bednar, Fred H.; Ciaramitaro, William; Hughes, Francis R.; Smith, John R.; and Gisoni, Gregory A., 5,005,142, Cl. 364-550.000.

Hughes, Robert J.; and Williams, Robert C. Masonry clip. 5,003,701, Cl. 33-409.000.

Humphries, Martyn; Nemcek, Jozef; Padget, John C.; and Mollett, Christopher C., to Imperial Chemical Industries PLC. Surface treatment with sulfonate ester polymer. 5,004,631, Cl. 427-385.500.

Hung, Yau Y. Dual-lens shearing interferometer. 5,004,345, Cl. 356-353.000.

Hunter, John A.; Scamans, Geoffrey M.; O'Callaghan, Wilfred B., and Wycliffe, Paul A., to Alcan International Limited. Aluminium batteries. 5,004,654, Cl. 429-50.000.

Hurley, Leslie C., to Piezo Crystal Company. Temperature compensated crystal resonator found in a dual-mode oscillator. 5,004,987, Cl. 331-70.000.

Huron Technologies, Inc.: *See*—
Dong, Dennis F.; and Loftfield, Richard E., 5,004,626, Cl. 427-58.000.

Huschauer, Helmuth, to Vereinigte Kesselwerke AG. Method of and device for maintaining a parameter constant in a fluidized-bed furnace. 5,003,931, Cl. 122-4.00D.

Hutchinson, Donald O.: *See*—
Beaver, Phillip R.; DiGiacinto, Peter M., Hutchinson, Donald O.; and Vega, Julio J., 5,004,847, Cl. 570-186.000

Hutchinson, Francis G., to Imperial Chemical Industries PLC. Continuous release pharmaceutical compositions formed by freeze drying acetic acid solutions of polylactide. 5,004,602, Cl. 424-78.000

Hutchison, Richard M., to Sundstrand Corporation. Method of scavenging air and oil and gear pump therefor. 5,004,407, Cl. 418-1.000.

Huttner, Gerhard; Kruckel, Peter, and Mock, Gerhard, to Schwan-Stabilo Schwanhausser GmbH & Co. Applicator device for cosmetic uses. 5,004,363, Cl. 401-75.000.

Huuf, Amanda *See*—
Elliott, Albert O., Jr., 5,004,383, Cl. 408-211.000

Huynh-Ba, Gia, to Du Pont de Nemours, E. I., and Company Polymer blends containing isocyanate reacting agents. 5,004,784, Cl. 525-123.000.

Hyatt, John: *See*—
Greenwood, Eugene C.; and Hyatt, John, 5,004,455, Cl. 604-43.000

Hybritech Incorporated: *See*—
Frincke, James M.; Bartholomew, Richard M.; and Dillman, Robert O., 5,004,606, Cl. 424-85.800

Hydro Air Industries, Inc.: *See*—
Stamp, Roger A.; and Williams, Farrell D., 5,003,646, Cl. 4-542.000.

Ichige, Toshio: *See*—
Ishida, Nobuyoshi; Michimoto, Takashi, Miyake, Katsutaro; and Ichige, Toshio, 5,004,718, Cl. 502-217.000

ICI Americas Inc.: *See*—
Jerusik, Russell J., and Mahon, Paul F., 5,004,749, Cl. 514-372.000

Ida, Kozo; and Horiuchi, Tetsuya, to Mitsubishi Rayon Co., Ltd. Light-diffusing methacrylic resin and process for production thereof. 5,004,785, Cl. 525-305.000

Ida, Tomoyasu; Nohara, Makoto; and Seo, Nobuyuki, to Koyo Seiko Co., Ltd. Wheel bearing apparatus provided with compact wheel rotation speed detector lying within the outside periphery of the bearing apparatus. 5,004,980, Cl. 324-166.000

Ide, Tohru, to Fuji Jukogyo Kabushiki Kaisha; and Van Doorne's Transmissie B.V. Belt for a continuously variable transmission. 5,004,450, Cl. 474-242.000

Idemitsu Kosan Co., Ltd.: *See*—
Yamasaki, Komei, and Funaki, Keisuke, 5,004,649, Cl. 428-461.000

Idemitsu Petrochemical Co., Ltd.: *See*—
Matsui, Kazufumi, 5,004,356, Cl. 383-63.000.

Iehisa, Nobuaki *See*—
Yamazaki, Etsuo; Iehisa, Nobuaki; and Suzuki, Kazuhiro, 5,004,889, Cl. 219-121.610.

Igarashi, Hisashi: *See*—
Yakuwa, Masahiko; Itoh, Tomofumi, and Igarashi, Hisashi, 5,003,954, Cl. 123-479.000.

Igram, Dale J. Reconfigurable airfoil. 5,004,189, Cl. 244-219.000.

Iida, Shigeharu: *See*—
Yoshida, Tutomu; and Iida, Shigeharu, 5,004,825, Cl. 558-131.000

Iida, Shoji; Miyazaki, Kazuo; and Takizawa, Nobuyuki, to Nippon Petrochemicals Company, Limited. Method for continuously producing low molecular weight polymer of conjugated diolefin. 5,004,857, Cl. 585-507.000.

Ikeda, Chikako: *See*—
Terauchi, Makoto; Ikeda, Chikako; and Aritomi, Mitsutoshi, 5,004,800, Cl. 528-351.000.

Ikeda, Shuji; Sasaki, Katsuro; Nagasawa, Kouichi; and Meguro, Satoshi, to Hitachi, Ltd. Semiconductor memory device. 5,005,068, Cl. 357-59.000.

Ikeda, Yuji: *See*—
Nakajima, Tsuyoshi; and Ikeda, Yuji, 5,005,144, Cl. 364-565.000.

Ikenari, Shigeru: *See*—
Sato, Kiyoshi; Yoshikawa, Hirokazu; Ikenari, Shigeru; and Yokoyama, Kenichi, 5,004,656, Cl. 429-162.000.

Ikes, Jacques; Le Fur, Joel; and Nugues, Pierre, to Thomson-CSF. Vacuum-tight window for microwave electron tube and travelling wave tube including this window. 5,004,952, Cl. 315-3.500.

Ikezaki, Yoshiyuki: *See*—
Sakaida, Atsuo; Ikezaki, Yoshiyuki; Inguchi, Akira; and Inose, Toshio, 5,004,946, Cl. 310-328.000

Ikumi, Nobuyuki, to Kabushiki Kaisha Toshiba. Three-dimensional computer graphics apparatus with two-port memory for storing depth information. 5,005,117, Cl. 364-200.000.

Ilkoy, Eva: *See*—
Jekkel nee Bokany, Antonia; Albrecht, Karoly; Ambrus, Gabor; Lang, Tibor; Szabo, Istvan M.; Ilkoy, Eva, Konczol, Kalman; Moravcsik, Imre; Hantos, Gabor; Simonovits, Emilia; Lengyel nee Szemenyei, Zsuzsanna; Vida, Zsuzsanna; and Csajagi, Eva, 5,004,695, Cl. 435-253.100.

Imaeda, Makoto *See*—
Kuroyanagi, Masatoshi; Suzuki, Masahiko; Matsui, Kazuma, Imaeda, Makoto, Nagai, Kouzi; and Ito, Yoshiaki, 5,004,406, Cl. 417-273.000.

Imagawa, Kiyotaka, to Sakura Color Products Corporation. Water base erasable ink compositions. 5,004,763, Cl. 523-161.000.

Imahashi, Issei, to Tokyo Electron Limited. Wafer transport apparatus for ion implantation apparatus. 5,004,924, Cl. 250-442.100.

Imai, Hajime; Kito, Shozo; Harada, Shoichi; Yokoyama, Yoshinobu, Nakamura, Syuzi; Miyoshi, Shigetoshi, and Muramatsu, Tadao, to Kabushiki Kaisha Tokai-Rika-Denki-Seisakusho; and Toyota Jidosha Kabushiki Kaisha. Device for locking shift lever of automatic transmission. 5,003,799, Cl. 70-247.000.

Imaseki, Takashi; and Kobari, Yuji, to Nissan Motor Co., Ltd. Slip control device for differential. 5,005,131, Cl. 364-426.020.

Imperial Chemical Industries PLC: *See*—
Humphries, Martyn, Nemcek, Jozef; Padget, John C., and Mollett, Christopher C., 5,004,631, Cl. 427-385.500.
Hutchinson, Francis G., 5,004,602, Cl. 424-78.000
Jerusik, Russell J., and Mahon, Paul F., 5,004,749, Cl. 514-372.000
Pinto, Alwyn, 5,004,592, Cl. 423-652.000
Ramshaw, Colin, 5,004,526, Cl. 204-73.00A
Sugavanam, Balasubramanyan; Worthington, Paul A., and Clough, John M., 5,004,494, Cl. 71-92.000.

Inaba, Masahito *See*—
Sato, Tsuyoshi; Inaba, Masahito; and Takata, Naoya, 5,004,349, Cl. 356-402.000

Industrial Nut Corp.: *See*—
Spinger, J. William; and Schlett, Eugene, 5,004,389, Cl. 411-304.000

Industrial Technology Research Institute: *See*—
Cheng, Syh Y., and Wang, Hong W., 5,004,555, Cl. 252-62.900
Liu, Ru-Shi; Huang, Yao-Tsung, Chu, Jau-Jier, and Liang, Jiuh-Ming, 5,004,723, Cl. 505-1.000.

Industrias Techno-Matic S.A.: *See*—
Gabas, Carlos, 5,004,138, Cl. 224-312.000.

Inertia Dynamics Corporation: *See*—
Everts, Robert G., 5,003,662, Cl. 15-330.000.

Innovative Building Products, Inc.: *See*—
Taylor, John R., 5,003,744, Cl. 52-308.000

Inomata, Hiroshi: *See*—
Takaoka, Akio, and Inomata, Hiroshi, 5,004,824, Cl. 556-412.000.

Inose, Toshio: *See*—
Sakaida, Atsuo, Ikezaki, Yoshiyuki; Inguchi, Akira, and Inose, Toshio, 5,004,946, Cl. 310-328.000

Inoue, Hiroyuki: *See*—
Miyakawa, Akira; and Inoue, Hiroyuki, 5,005,025, Cl. 346-25.000

Inoue, Manabu: *See*—
Fujino, Akihiko, Inoue, Manabu, Omaki, Takanobu, Nakai, Masaaki, Fujii, Akira; and Sekida, Minoru, 5,005,047, Cl. 354-442.000

Inoue, Masahiro *See*—
Koshikawa, Nobuo, and Inoue, Masahiro, 5,003,964, Cl. 128-4.000

Inoue, Masaki, to Toyoda Gosei Co., Ltd. Method of manufacturing tubular vibration-insulating bushing. 5,003,684, Cl. 29-447.000

Inoue, Masao *See*—
Tsuno, Katsushige; and Inoue, Masao, 5,004,918, Cl. 250-311.000

Inoue, Mitsuhiro *See*—
Hara, Yasuhiro, Inoue, Mitsuhiro; Baba, Hideo; Okazaki, Tadashi, and Kudo, Shigeru, 5,004,089, Cl. 192-107.00M

Inoue, Nobuhiro, to Tachi-S Co., Ltd. Pocket in automotive seat. 5,004,295, Cl. 297-191.000.

Inoue, Yoshihisa; and Arai, Yasunori, to Nakamichi Corporation. Recording and/or reproducing apparatus with cartridge lock mechanism. 5,005,093, Cl. 360-99.060.

Instrumentarium Corporation: *See*—
Kankkunen, Lauri P. A.; Piskunen, Raimo A. T., and Rantala, Borje T., 5,003,981, Cl. 128-677.000.

Insys Ltd.: *See*—
Shisgal, Ben Z., and Tzelnick, Tzvi, 5,004,997, Cl. 340-436.000

Interior Specialists Corporation: *See*—
Jager, Paul A., 5,004,198, Cl. 248-225.100.

International Business Machines Corp.: *See*—
Cooke, Kevin K., Dewitt, John R., Galinis, Paul J.; and Koteff, Walter B., 5,004,866, Cl. 174-35.0GC
Ellozy, Hamed A., Jeanty, Henry H.; and Tappert, Charles C., 5,005,205, Cl. 382-3.000.
Ishikawa, Jun; and Takada, Kazuhiko, 5,004,207, Cl. 248-632.000
Jackson, Kenneth P.; and Raver, Norman, 5,004,317, Cl. 350-96.200.
Krounbi, Mohamad T.; and Wang, Po-Kang, 5,005,096, Cl. 360-113.000.
Mace, Everitt W.; Sickler, Janet; and Srinivasan, Varadarajan, 5,004,508, Cl. 148-22.000
Martin, Yves; and Wickramasinghe, Hemantha K., 5,003,815, Cl. 73-105.000

International Clamp Company: *See*—
Miller, Jack E., 5,004,275, Cl. 285-373.000.

International Flavors & Fragrances Inc.: *See*—
Buckholz, Lawrence L., Jr.; and Kasper-Lehmann, Robin, 5,004,618, Cl. 426-281.000.

International Intec Patent Holding Establishment: *See*—
Harke, Alfons, 5,003,749, Cl. 52-703.000.

International Superconductor Corp.: *See*—
De, Dilip K., 5,004,724, Cl. 505-1.000
Tallman, Richard L., 5,004,722, Cl. 505-1.000.

Interpharm Laboratories Ltd.: *See*—
Moay, Neomi; and Draghi, Enrica, 5,004,694, Cl. 435-240.270

Interstate Chemical, Inc.: *See*—
Wilson, Ewert J. A., 5,004,850, Cl. 585-1.000.

Intertechnique: *See*—
Claude, Jacques, 5,003,632, Cl. 2-6.000

InterVentional Technologies, Inc.: *See*—
Olson, Thomas E., and Vigil, Dennis M., 5,003,918, Cl. 118-665.000

Inverness Corporation: *See*—
Mann, Samuel J., 5,004,470, Cl. 606-188.000.
Mann, Samuel J., 5,004,471, Cl. 606-188.000.

Iowa State University Research Foundation, Inc.: *See*—
Robertson, Donald S.; and Stinard, Philip S., 5,004,864, Cl. 800-235.000.

Inguchi, Akira: *See*—
Sakaida, Atsuo, Ikezaki, Yoshiyuki; Inguchi, Akira; and Inose, Toshio, 5,004,946, Cl. 310-328.000

Inkura, Tsutomu *See*—
Kobashi, Yasuhiro; and Inkura, Tsutomu, 5,005,107, Cl. 361-540.000

Irwin, Lawrence F., to Augerscope, Inc. Drain sealing apparatus. 5,004,119, Cl. 220-247.000.

Irwin, Robert S., to Du Pont de Nemours, E. I., and Company. Preparation of polyamides from unstable diamines. 5,004,834, Cl. 564-142.000

Isaak, Harlan, to Hughes Aircraft Company. Antistretch screen printing arrangement. 5,003,870, Cl. 101-127.100.

Isayev, Avraam I., to University of Akron. Composite thermoplastic elastomer blend and process for preparing the same. 5,004,766, Cl. 524-30.000

Ishibai, Isao, and Otsu, Hitonobu, to Hoya Corporation. Aspherical glass lens element formed by a low dispersion glass material. 5,004,330, Cl. 350-432.000

Ishibashi, Kenji *See*—
Hamada, Masataka; Ishida, Tokuji, and Ishibashi, Kenji, 5,005,039, Cl. 354-402.000
Norita, Toshio, Ishida, Tokuji, Hamada, Masataka, and Ishibashi, Kenji, 5,005,040, Cl. 354-402.000

Ishida, Kazuyuki *See*—
Suzuki, Susumu; Ishida, Kazuyuki, and Ozaki, Takeo, 5,003,977, Cl. 128-633.000.

Ishida, Nobuyoshi, Michimoto, Takashi; Miyake, Katsutaro; and Ichige, Toshio, to Babcock-Hitachi Kabushiki Kaisha. Process for calcining a denitrating catalyst. 5,004,718, Cl. 502-217.000.

Ishida, Tokuji: *See*—
Hamada, Masataka; Ishida, Tokuji; and Ishibashi, Kenji, 5,005,039, Cl. 354-402.000
Norita, Toshio, Ishida, Tokuji; Hamada, Masataka; and Ishibashi, Kenji, 5,005,040, Cl. 354-402.000

Ishida, Toru. *See*—
Hakotani, Yasuhiko; Nakatani, Senichi; Yuuhaku, Satoru, Nishimura, Tsutomu; and Ishida, Toru, 5,004,715, Cl. 501-136.000.

Ishii, Yoshitaro. *See*—
Sunagawa, Masao; Kubota, Kazuhiro, Ishii, Yoshitaro; and Satoh, Susumu, 5,003,663, Cl. 15-366.000

Ishikawa, Akira, and Harada, Kazumasa, to Fuji Photo Film Co., Ltd. Packaging system. 5,003,751, Cl. 53-215.000.

Ishikawa Gasket Co., Ltd. *See*—
Udagawa, Tsunekazu, 5,004,250, Cl. 277-236.000.

Ishikawa, Hiroshi; Hasegawa, Kazuo, and Gotoh, Masaki, to Alps Electric Co., Ltd. Optical reading device. 5,004,898, Cl. 235-475.000.

Ishikawa, Hiroshi. *See*—
Kozaki, Tetsuji; Ishikawa, Hiroshi; Yasui, Hideaki; Shimamoto, Mamoru; Hibino, Katsuhiko; and Suzuki, Motoshi, 5,004,264, Cl. 280-707.000.

Ishikawa, Jun, and Takada, Kazuhiko, to International Business Machines Corporation. Shock mounting structure and magnetic disk apparatus. 5,004,207, Cl. 248-632.000.

Ishikawa, Takatoshi: *See*—
Yoneyama, Hiroyuki; Takahashi, Osamu; Yoshida, Kazuaki; and Ishikawa, Takatoshi, 5,004,675, Cl. 430-377.000

Ishikawa, Yuji. *See*—
Watanabe, Junji; and Ishikawa, Yuji, 5,005,052, Cl. 355-231.000.

Ishimoto, Kazumi. *See*—
Izumi, Yasuo, Ishimoto, Kazumi; and Makino, Yutaka, 5,003,692, Cl. 29-834.000.

Ishiwata, Shuichi: *See*—
Yamamoto, Yohzoh; Ishiwata, Shuichi; Yokoyama, Kenji; and Hasegawa, Kimio, 5,004,764, Cl. 523-400.000.

Ishizaka, Hideo: *See*—
Miyata, Yukihide; Ishizaka, Hideo; Saito, Yoshio; and Koizumi, Takashi, 5,004,582, Cl. 422-56.000.

Ishizaki, Akira: *See*—
Suda, Yasuo; Ohtaka, Keiji; Suzuki, Kenji, Ishizaki, Akira; and Aoyama, Keisuke, 5,005,041, Cl. 354-407.000.

Isotopenforschung Dr. Sauerwein GmbH: *See*—
Link, Rainer; and Nuding, Wolfgang, 5,003,831, Cl. 73-865.900

Isowa Industry Company Ltd.: *See*—
Kawai, Hideshi, 5,004,173, Cl. 242-57.000

Issaurat, Hubert. *See*—
Thompson, Barry A., 5,004,603, Cl. 424-81.000

Italiano, Anthony J., to Orschlen Co. Curved cable end connector. 5,003,837, Cl. 74-501.50R.

Ito, Shuji *See*—
Ashizawa, Masaaki; Nishimoto, Kazuo; Oomura, Atsushi; and Ito, Shuji, 5,004,650, Cl. 428-463.000

Ito, Yoshiaki *See*—
Kuroyanagi, Masatoshi; Suzuki, Masahiko, Matsui, Kazuma; Imaeda, Makoto; Nagai, Kouzi, and Ito, Yoshiaki, 5,004,406, Cl. 417-273.000.

Itoh, Akira, to Itoh Seiki Co., Ltd. Face protector. 5,003,633, Cl. 2-9.000.

Itoh, Masataka: *See*—
Yoshinouchi, Atsushi, Itoh, Masataka, and Tsuchimoto, Shuhei, 5,004,905, Cl. 250-208.100

Itoh Seiki Co., Ltd.: *See*—
Itoh, Akira, 5,003,633, Cl. 2-9.000.

Itoh, Tomofumi. *See*—
Yakuwa, Masahiko; Itoh, Tomofumi, and Igarashi, Hisashi, 5,003,954, Cl. 123-479.000.

Itoh, Toyotsugu: *See*—
Kawada, Sunao; Hashimoto, Takayoshi; Itoh, Toyotsugu, and Koyanagi, Makoto, 5,003,851, Cl. 82-1.110.

Itoi, Satoshi, to NEC Home Electronics Ltd. Window system synchronizing protective circuit. 5,005,190, Cl. 375-108.000.

ITT Corporation: *See*—
Cummiskey, Peter; Epstein, Marvin; Gilmour, Paul A., and Kim, Richard, 5,005,168, Cl. 370-24.000
Loch, Eugene W.; Ball, David D., and Mack, George F., 5,004,129, Cl. 220-366.000.
Schap, William W., 5,004,280, Cl. 292-341.160

Iura, Kazuo; Tsuji, Kazunori; and Saka, Kazuhito, to Sumitomo Wiring System, Ltd. Method and apparatus for manufacturing compact conductors. 5,003,761, Cl. 57-58.520.

Ivers, Douglas E.; and Nobles, Charles M., to Lord Corporation. Semi-active damper valve means and method. 5,004,079, Cl. 188-282.000.

Iwamatsu, Takanori: *See*—
Aono, Yoshihito; Iwamatsu, Takanori; Minowa, Monhiko; Takenaka, Sadao; Daidoh, Yoshimasa, Nakamura, Hiroshi, and Fujino, Nobutsugu, 5,005,186, Cl. 375-82.000

Iwamori, Toshimichi: *See*—
Sakata, Yasushi; and Iwamori, Toshimichi, 5,005,067, Cl. 357-54.000.

Iwamoto, Akio; and Yuzuriha, Yoshiki, to Japan Electronic Control Systems Co., Ltd. Electronic fuel injection control system for a multi-fuel internal combustion engine and method therefore. 5,003,956, Cl. 123-494.000.

Iwamoto, Koji; Hamada, Kenichi; and Hirota, Katsuaki, to Sony Corporation. Focus control apparatus having two focusing speeds. 5,005,086, Cl. 358-227.000.

Iwanaga, Takeshi; and Ohnishi, Akio, to Sumitomo Rubber Industries, Ltd. Iron gold club head and method of producing the same. 5,004,242, Cl. 273-169.000.

Iyama, Kunihiko: *See*—
Shibazaki, Toshiji; Okano, Masaru; Kishida, Naoto; Ozaki, Yoshihiro; and Iyama, Kunihiko, 5,004,996, Cl. 338-36.000.

Izawa, Ichiro: *See*—
Yoshino, Yoshimi; Ao, Kenichi; Izawa, Ichiro; and Arasuna, Toshikazu, 5,005,064, Cl. 357-27.000.

Izumi, Yasuo; Ishimoto, Kazumi; and Makino, Yutaka, to Matsushita Electric Industrial Co., Ltd. Electric component mounting method. 5,003,692, Cl. 29-834.000.

Izumita, Morishi: *See*—
Amano, Tetsuya; Mita, Seiichi; Izumita, Morishi; Doi, Nobukazu; Kaneko, Mamoru; Yamauchi, Hiroto; and Kasai, Susumu, 5,005,184, Cl. 375-14.000.

Izumiya, Toshihide; Ohba, Yasuo; and Hatano, Ako, to Kabushiki Kaisha Toshiba. Semiconductor light-emitting diode and method of manufacturing the same. 5,005,057, Cl. 357-17.000.

Izumizaki, Masami: *See*—
Suzuki, Akio; Takada, Yoshihiro; Izumizaki, Masami, and Danzuka, Toshimitsu, 5,004,928, Cl. 250-559.000.

J. M. Huber Corporation: *See*—
Colwell, Joseph G., Jr., 5,004,539, Cl. 210-222.000

J. M. Voith GmbH: *See*—
Schiel, Christian; and Hafner, Paul, 5,003,863, Cl. 92-61.000

Jaccaud, Michel *See*—
Millet, Jean-Christophe; and Jaccaud, Michel, 5,004,527, Cl. 204-82.000.

Jack, James: *See*—
Dingwall, John G.; Ehrenfreund, Josef; Hall, Roger G.; and Jack, James, 5,004,826, Cl. 558-169.000

Jackson, Kenneth P.; and Raver, Norman, to International Business Machines Corp. Wire bond connection system with cancellation of mutual coupling. 5,004,317, Cl. 350-96.200.

Jacobson, Bo O., to SKF Industrial Trading and Development Co. B.V. Roller bearing. 5,004,359, Cl. 384-526.000.

Jaeger, Marc J., to University of Florida, The. Heat transfer system without mass transfer. 5,004,041, Cl. 165-8.000.

Jager, Paul A., to Interior Specialists Corporation. Fixture-mounting post and assembly method therefor. 5,004,198, Cl. 248-225.100.

Jakob, Claus P.: *See*—
Vogel, Hans-Henning; Rath, Hans P.; Jakob, Claus P.; and Oppenlaender, Knut, 5,004,478, Cl. 44-398.000.

Jambor, George F.: *See*—
Wirth, Gary J.; and Jambor, George F., 5,003,797, Cl. 70-180.000

James, Robert B., Jr.: *See—*
Kalnes, Tom N.; and James, Robert B., Jr., 5,004,533, Cl. 208-50.000.
Jammet, Jean-Claude. Multiple socket attachment. 5,004,435, Cl. 439-652.000.
Jan, Yuh L.: *See—*
Edelman, William; Constantinou, Dennis, Stefanovski, Miles, Jan, Yuh L.; Fahlen, Theodore S., Hansen, Ronald L., and Kramasz, Kenneth J., 5,005,180, Cl. 372-57.000.
Janes, Norman F.: *See—*
Elliott, Michael; Janes, Norman F.; and Pulman, David A., 5,004,822, Cl. 556-115.000.
Janesick, James R., to California Institute of Technology CCD imaging sensor with flashed backside metal film. 5,005,063, Cl. 357-24.000.
Jang, Sung H *See—*
Yeo, Jong K.; Kim, Chung S.; Lee, Dong J.; and Jang, Sung H., 5,004,774, Cl. 524-262.000.
Jang, Taek-Yong: *See—*
Kwon, Oh-Hyun; Jang, Taek-Yong; Shin, Jung-Hyun, and Choi, Won-Taek, 5,005,103, Cl. 361-313.000.
Janome Sewing Machine Co. Ltd.: *See—*
Hara, Kazumasa; Sano, Yasuro; Koike, Mikio, and Nishijima, Mitsuru, 5,003,896, Cl. 112-121.110
Japan Aircraft Mfg Co., Ltd.: *See—*
Okazaki, Kakuma; and Kitamura, Takayuki, 5,003,736, Cl. 52-108.000.
Japan Electronic Control Systems Co., Ltd.: *See—*
Iwamoto, Akio; and Yuzuriha, Yoshiki, 5,003,956, Cl. 123-494.000.
Jarrett, Bobby R., to United States of America, Navy Switched comparator system for obtaining dynamic range. 5,004,183, Cl 244-3.110.
Jasinski, Leon, to Motorola, Inc System and method for optimally transmitting acknowledge back responses. 5,005,014, Cl. 340-825.440.
JCB Leasing Corp.: *See—*
Brown, John C., 5,003,759, Cl. 56-249.000.
Jeanty, Henry H: *See—*
Ellozy, Hamed A.; Jeanty, Henry H.; and Tappert, Charles C., 5,005,205, Cl. 382-3.000.
Jeffrey, Roy R., Jr.; and Devoss, John. Engine heating unit. 5,003,941, Cl. 123-142.50R.
Jekkel nee Bokany, Antonia; Albrecht, Karoly; Ambrus, Gabor; Lang, Tibor; Szabo, Istvan M., Ilkoy, Eva, Konczol, Kalman, Moravesik, Imre; Hantos, Gabor; Simonovits, Emilia, Lengyel nee Szemenyei, Zsuzsanna; Vida, Zsuzesanna, and Csajagi, Eva, to Richter Gedeon Vegyeszeti Gyar R T. Microbiological process for preparing 9α-hydroxy-4-androstene-3,17-dione. 5,004,695, Cl. 435-253.100.
Jenkner, Erwin. Drilling machine for planar face and/or end face drilling on panel-type workpieces or panel blanks. 5,004,381, Cl. 408-31.000.
Jensen, David G. Chain elongation indicator and method. 5,003,913, Cl. 116-208.000.
Jensen, Tom M.; and Shorey, Thomas H., to Boeing Company, The. Rollout stop. 5,004,387, Cl. 410-69.000.
Jeol, Ltd.: *See—*
Kondo, Yukihito, 5,004,919, Cl. 250-311.000
Tsuno, Katsushige, and Inoue, Masao, 5,004,918, Cl 250-311.000
Jepson, Peter; and Tofield, Graham M., to Thorn Emi Flow Measurement Limited. Fluid meter. 5,003,810, Cl. 73-3.000.
Jerusik, Russell J.; and Mahon, Paul F., to Imperial Chemical Industries plc; and ICI Americas Inc. Concentrated aqueous solution of glutaraldehyde and 1,2-benzisothiazolin-3-one. 5,004,749, Cl. 514-372.000.
JES, L.P.: *See—*
Hee, Roland, 5,004,425, Cl. 439-37.000.
Jesco Products Company, Inc.: *See—*
Standlick, Ronald E., 5,004,125, Cl. 222-145.000.
Jewess, Gordon, to Sundstrand Corporation. Overfill filler pipe assembly. 5,004,074, Cl. 184-105.100.
Ji, Kebin: *See—*
Yu, Meng W.; Su, Shihua; Chen, Yue Z.; Zheng, Ticheng; Ji, Kebin; Ling, Shou R., Lin, Jian C., Deng, Jianhui; and Zhang, Kunwu, 5,004,510, Cl. 148-146.000.

Yeo, Jong K., Kim, Chung S., Lee, Dong J., and Jang, Sung H., 5,004,774, Cl. 524-262.000

Kim, Myung S. *See—*
Oh, Myung H., Lee, Kyung J., Chung, In J., Lee, Nam Y., and Kim, Myung S., 5,004,573, Cl. 264-61.000

Kim, Richard. *See—*
Cummiskey, Peter, Epstein, Marvin; Gilmour, Paul A., and Kim, Richard, 5,005,168, Cl. 370-24.000

Kim, Soonih, Takeda, Kazuhisa, and Sasatani, Seiei, to Ono Pharmaceutical Co., Ltd. Pharmaceutical compositions comprising esters or amides as active ingredients. 5,004,612, Cl. 424-450.000

Kim, Young D., and Ha, Byung J., to Pacific Chemical Co., Ltd. Quaternary ammonium-substituted sterol derivatives. 5,004,737, Cl. 514-182.000

Kim, Young Sul. 1,1-dioxopenicillanoyl oxymethyl D-6-(α-(methyleneamino) phenylacetamido)-penicillanate and a process for the preparation thereof. 5,004,738, Cl. 514-195.000.

Kim, Youngchol. Sun blind for use in automobile. 5,004,290, Cl. 296-99.100

Kimmet, Mark S. *See—*
Van Blaircum, Bennie A., Harwood, Jon W., and Kimmet, Mark S., 5,004,069, Cl. 181-282.000

Kimura, Toshiaki. *See—*
Nishimura, Yukuo, Eguchi, Ken, Kawada, Haruki, Tomida, Yoshinori, Nakagiri, Takashi, Saito, Kenji, Kimura, Toshiaki, Matsuda, Hiroshi, Sakai, Kunihiro, and Miyazaki, Toshihiko, 5,004,671, Cl. 430-286.000

Kinczel, Peter; Balazs, Laszlo, and Sajo, Gabor, to Tungsram Reszvenytarsasag (Tungsram RT). Luminescent material, especially for application in mercury vapor gas discharge light sources, and mercury vapor gas discharge light source. 5,004,948, Cl. 313-486.000

Kinetic Concepts, Inc. *See—*
Vrzalik, John H., 5,003,654, Cl. 5-453.000

King, Brian T. Valve duration and lift variator for internal combustion engines. 5,003,939, Cl. 123-90.160

King, James L., to A. O. Smith Corporation. Power and control chamber for dynamoelectric machines. 5,004,942, Cl. 310-89.000

King, Murray P. *See—*
Hafelfinger, Werner, Sholder, Jason A., King, Murray P., and Duncan, James L., 5,003,975, Cl. 128-419.0PG

King, Philip N., to Hewlett Packard Company. Method and apparatus for providing thermodynamic protection of a driver circuit used in an in-circuit tester. 5,005,008, Cl. 340-653.000

Kingsbury, William D. *See—*
Boehm, Jeffrey C., Hecht, Sidney M., Holden, Kenneth G., Johnson, Randall K., and Kingsbury, William D., 5,004,758, Cl. 514-283.000

Kino, Gordon S., and Mansfield, Scott M., to Leland Stanford Junior University, The Board of Trustees of the. Near field and solid immersion optical microscope. 5,004,307, Cl. 350-1.200

Kinoshita, Kiyoshi. *See—*
Tamura, Yukio, Kinoshita, Kiyoshi, Uwaji, Tetsuo, and Mizuno, Takashi, 5,004,352, Cl. 366-343.000

Kinoshita, Masaaki. *See—*
Kaneko, Shozo and Kinoshita, Masaaki, 5,003,891, Cl. 110-341.000

Kinoshita, Yasunori. *See—*
Nakashima, Yoshihiro, and Kinoshita, Yasunori, 5,005,134, Cl. 364-474.010

Kinser, Jason M. *See—*
Caulfield, H. John; Hester, Charles F., Kinser, Jason M., and Shamir, Joseph, 5,004,309, Cl. 350-3.680

Kipp, Robert M., to Shell Oil Company. Tendon bottom connector for a tension leg platform. 5,004,272, Cl. 285-24.000

Kircher, Klaus. *See—*
Meier, Helmut-Martin, Kircher, Klaus, and Berg, Klaus, 5,004,569, Cl. 260-410.600

Kirin Beer Kabushiki Kaisha. *See—*
Fukuchi, Hiroyuki, 5,004,909, Cl. 250-223.00B

Kirschbaum, Robert. *See—*
Waagen, Geert N., Basthaansen, Cornelis W. M., and Kirschbaum, Robert, 5,004,778, Cl. 524-474.000

Kirschner, Kraig A. Adjustable load bolt adapter bracket assembly. 5,004,193, Cl. 248-59.000

Kirschner, Roger S. *See—*
McCracken, William L., McDonald, Paul D., and Kirschner, Roger S., 5,004,310, Cl. 350-6.800

Kishi, Ikuo. *See—*
Ogawa, Osamu, Kishi, Ikuo, Tahara, Yoshiyuki, and Sugita, Masanori, 5,004,756, Cl. 514-655.000

Kishi, Katsunobu, to Nitto Kohki Co., Ltd. Chamfering machine. 5,004,385, Cl. 409-180.000

Kishida, Akira. *See—*
Kenmochi, Kazuhito, Yarita, Ikuo, Fukuhara, Akihiko, Komatu, Tomio, and Kishida, Akira, 5,003,804, Cl. 72-39.000

Nishino, Yoshinori, and Kishigami, Junjiro, 5,004,895, Cl. 219-528.000

Kishimoto, Junichi. *See—*
Hayashi, Minoru, Kobari, Koichi, Sato, Kimiharu, and Kishimoto, Junichi, 5,004,586, Cl. 422-164.000

Kissel, Charles L., to Union Oil Company of California. Latex/sol or gel systems. 5,004,562, Cl. 252-518.000

Kissel, Charles L., to Union Oil Company of California. Antistatic textile compositions and sol/gel/polymer compositions. 5,004,563, Cl. 252-518.000

Kistner, Kenneth J., to Specified Equipment Systems Company, Inc. Method and apparatus for applying single of multicomponent materials. 5,004,159, Cl. 239-337.000

Kitamura, Koichi, Mimura, Hidenori; Yamamoto, Kazuo; and Ohta, Yasumitsu, to Nippon Steel Corporation. Contact type image sensor device with specific capacitance ratio. 5,004,903, Cl. 250-208.100

Kitamura, Takayuki. *See—*
Okazaki, Kakuma, and Kitamura, Takayuki, 5,003,736, Cl. 52-108.000

Kito, Shozo. *See—*
Imai, Hajime, Kito, Shozo, Harada, Shoichi, Yokoyama, Yoshinobu, Nakamura, Syuzi, Miyoshi, Shigetoshi, and Muramatsu, Tadao, 5,003,799, Cl. 70-247.000

Kitsuda, Sakae. Safety cylinder cap. 5,004,117, Cl. 220-85.00P.

Kleinerman, Marcos. Remote measurement of physical variables with fiber optic systems - methods, materials and devices. 5,004,913, Cl. 250-227.210.

Klem, Charles D. *See—*
Dankwort, Rudolph C.; and Klem, Charles D., 5,004,911, Cl. 250-227.210.

Klemarczyk, Philip T.; and Okamoto, Yoshihisa, to Loctite Corporation. Aromatic vinyl ether compounds and compositions, and method of making the same. 5,004,842, Cl. 568-640.000

Klesius, Konrad. Plastic closure for a plastic container. 5,004,126, Cl. 222-153.000.

Kleven, Lawrence P., Agranat, Edward A.; Crisafulli, Jerry; Robinson, Hugh; Smith, David J., Wiseley, Thomas, Fortier, Richard C.; Johnson, Severne; and Menzin, Marvin, to Texas Instruments Incorporated. Current sensing relay. 5,004,954, Cl. 315-106.000

Kliewer, Justin J. Pipe thread protector device. 5,004,016, Cl. 138-96.00T

Kline, Joseph M. Scalers for periodontal use. 5,004,419, Cl. 433-143.000.

Klingel, Rainhard. *See—*
Deller, Klaus; Ettlinger, Manfred; Klingel, Rainhard; and Krause, Helmfried, 5,004,719, Cl. 502-242.000.

Klotzer, Sieghart. *See—*
Meckl, Heinz; Klotzer, Sieghart; Wolff, Erich; and Haseler, Helmut, 5,004,676, Cl. 430-398.000.

Kluft, Cornelis, to Nederlandse Centrale Organisatie voor Teegepast-Natturwentenschappelijk Orderzoel 100KDa protein from blood which binds to and inhibits the activity of plasminogen activators. 5,004,802, Cl. 530-380.000.

Kluitmans, Johannes T. M.; and Tjassens, Hindrik, to U.S. Philips Corp. Laser diode module. 5,005,178, Cl. 372-36.000.

Knabenhans, Fritz. *See—*
Waeber, Rene; Demuth, Robert; Knabenhans, Fritz; and Bachmann, Othmar, 5,003,670, Cl. 19-66.0CC.

Knape, Richard S. *See—*
Stumpf, William E., Carlson, Casey L.; Knape, Richard S.; and Bessinger, Walter L., 5,004,202, Cl. 248-243.000.

Knape & Vogt Manufacturing Company. *See—*
Bessinger, Walter L., 5,004,201, Cl. 248-243.000.
Stumpf, William E.; Carlson, Casey L., Knape, Richard S.; and Bessinger, Walter L., 5,004,202, Cl. 248-243.000.

Knapp, Richard H. *See—*
Mallard, Bobby J., Knapp, Richard H., Roper, W. J., and Harrison, Daniel R., 5,004,071, Cl. 182-3.000.

Knauf, Peter. *See—*
Born, Dieter; Knauf, Peter; and Retelsdorf, Hans-Joachim, 5,004,886, Cl. 219-76.140

Kniewske, Reinhard. *See—*
Krause, Frank; and Kniewske, Reinhard, 5,004,767, Cl. 524-30.000.

Knop, Bernhard. *See—*
Loth, Helmut; Helpenstein, Klaus; Podola, Tore; and Knop, Bernhard, 5,004,769, Cl. 524-43.000.

Knox, Wayne H. *See—*
Glass, Alastair M.; Knox, Wayne H., and Nolte, David D., 5,004,325, Cl. 350-354.000.

Knutsen, Neil W., to Allen-Bradley Company. Industrial controller with decompilable user program. 5,005,152, Cl. 364-900.000.

Kobari, Koichi. *See—*
Hayashi, Minoru; Kobari, Koichi; Sato, Kimiharu; and Kishimoto, Junichi, 5,004,586, Cl. 422-164.000.

Kobari, Yuji. *See—*
Imaseki, Takashi; and Kobari, Yuji, 5,005,131, Cl. 364-426.020.

Kobashi, Yasuhiro, and Irikura, Tsutomu, to Matsushita Electric Industrial Co., Ltd. Solid electrolytic capacitor. 5,005,107, Cl. 361-540.000.

Kobayashi, Atsushi; Suzuki, Takashi, and Kosugi, Yasuhiko, to Seiko Epson Corporation. Image forming apparatus. 5,005,043, Cl. 355-27.000.

Kobayashi, Hiroaki. *See—*
Yamakawa, Tsutomu; and Kobayashi, Hiroaki, 5,004,904, Cl. 250-207.000.

Kobayashi, Jiro, to Nissan Motor Co., Ltd. Fuel check valve assembly for fuel tank. 5,004,002, Cl. 137-39.000.

Kobayashi, Kazuhiro. *See—*
Koboshi, Shigeharu; Kobayashi, Kazuhiro; Goto, Nobutaka; Kurematsu, Masayuki; and Takabayashi, Naoki, 5,004,522, Cl. 159-47.003.

Kobayashi, Keiichi. *See—*
Tsukamoto, Akihiro; and Kobayashi, Keiichi, 5,005,013, Cl. 340-825.440.

Kobayashi, Kyoji; and Furuya, Takeo, to Jidosha Denki Kogyo K.K. Seat belt apparatus. 5,004,178, Cl. 242-107.000.

Kobayashi, Masao. Production method of forming solid state food material completely wrapped and sealed in a clayish state food material. 5,004,619, Cl. 426-297.000.

Kobayashi, Masato; Yamaguchi, Yoh-Ichi; Sugawara, Minoru; and Yamashiro, Kazuhide, to Hoya Corporation. X-ray mask and method of manufacturing an X-ray mask. 5,005,075, Cl. 378-35.000.

Kobayashi, Tomoya. *See—*
Abe, Kunihiro; Sakamoto, Masanori; and Kobayashi, Tomoya, 5,005,129, Cl. 364-424.030.

Kobayashi, Toshio; Uchikawa, Fusaoki; Nomura, Kenji; Morita, Masao; and Yokoyama, Shouichi, to Mitsubishi Denki Kabushiki Kaisha. Process for producing a superconductor of an oxide system from acetylacetonates. 5,004,720, Cl. 505-1.000.

Kobayashi, Yoshiharu: *See—*
Sato, Shuichi; and Kobayashi, Yoshiharu, 5,003,901, Cl. 112-316.000.

Koblitz, Francis F.; O'Shea, Thomas M.; Stoner, Beverly A.; and Yula, Joseph J., to AMP Incorporated. Electrical connector containing adipic acid polyester sealant composition. 5,004,869, Cl. 174-84.00C.

Koboshi, Shigeharu; Kobayashi, Kazuhiro; Goto, Nobutaka; Kurematsu, Masayuki, and Takabayashi, Naoki, to Konica Corporation. Method of treating photographic process waste liquor through concentration by evaporation. 5,004,522, Cl. 159-47.003.

Kodaira, Takanori. *See—*
Ogawa, Yukio; Hirohata, Michio; Kodaira, Takanori; and Miyawaki, Makoto, 5,005,038, Cl. 354-400.000.

Kodama, Katuhiko. *See—*
Haraguchi, Hiroshi; Tamura, Hiroshi; Kodama, Katuhiko; and Kondo, Toshio, 5,003,955, Cl. 123-489.000

Koehler, Juergen, to Konvekta GmbH. Installation for heating, ventilation or air-conditioning of a long-distance bus. 5,004,150, Cl. 237-12.30A.

Koenig, Rudolf. *See—*
Unterforsthuber, Karl; and Koenig, Rudolf, 5,003,887, Cl. 102-531.000.

Koerner, Gotz; and Schaefer, Dietmar, to Th. Goldschmidt AG. Polyoxyalkylene-polysiloxane block copolymers as demulsifiers for water-containing oil. 5,004,559, Cl. 252-345.000.

Koester, Vaughn J. *See—*
Hanson, Charles M.; Koester, Vaughn J.; and Fallstrom, Robert D., 5,005,213, Cl. 455-617.000.

Koezuka, Tetsuo. *See—*
Kakunoki, Yoshikazu; Nakashima, Masato; Koezuka, Tetsuo; Hiraoka, Noriyuki; Tsukahara, Hiroyuki; Suto, Yoshinori; Oshima, Yoshitaka; and Hashinami, Shinji, 5,004,929, Cl. 250-561.000.

Kofman, Anatoly; and Kavitsky, Avraham. Vehicle locking device. 5,003,798, Cl. 70-238.000.

Koga, Yukihiro; and Koyama, Yukio, to Mitsubishi Jukogyo Kabushiki Kaisha. Apparatus for bonding adhesive rubber tape to both edges of a steel cord fabric. 5,004,516, Cl. 156-463.000.

Koh-I-Noor Rapidograph, Inc. *See—*
Felgentreu, Peter, 5,004,365, Cl. 401-258.000.

Kohler, Burkhard. *See—*
Zecher, Wilfried; El-Sayed, Aziz; Haese, Wilfried, Kohler, Burkhard; and Meyer, Rolf-Volker, 5,004,795, Cl. 528-73.000.

Kohler Co. *See—*
Churchill, Jonathan D.; and Volmary, William T., 5,003,948, Cl. 123-352.000.

Kohls, Dennis E.; and Moser, Francis M., to Reece Construction Company, Inc. Pelletized sulfur concrete and method of preparing same. 5,004,799, Cl. 528-389.000.

Kohno, Teruhisa. *See—*
Yamada, Shinji; Kohno, Teruhisa; and Takata, Koji, 5,004,301, Cl. 303-115.000

Kohno, Yoshihide. *See—*
Kadota, Kuninobu; Kohno, Yoshihide; and Koseki, Hiroyuki, 5,004,031, Cl. 152-538.000.

Koike, Hiroyuki. *See—*
Muraki, Yoshiya; and Koike, Hiroyuki, 5,003,984, Cl. 128-710.000.

Koike, Mikio. *See—*
Hara, Kazumasa; Sano, Yasuro; Koike, Mikio; and Nishijima, Mitsuru, 5,003,896, Cl. 112-121.110.

Koizumi, Takashi. *See—*
Miyata, Yukihide; Ishizaka, Hideo; Saito, Yoshio; and Koizumi, Takashi, 5,004,582, Cl. 422-56.000.

Kojima, Kunio. *See—*
Sakamoto, Noriaki; Maeda, Shigemi; Yamanaka, Toshihiro; Deguchi, Toshihisa; Horie, Nobuyuki, Yamaguchi, Takeshi; and Kojima, Kunio, 5,005,164, Cl. 369-48.000.

Komai, Takeshi. *See—*
Matsuyama, Kazuo; Sugiura, Takashi; and Komai, Takeshi, 5,004,780, Cl. 525-27.000.

Komatsu, Norimasa; and Miyazaki, Asashi, to Alps Electric Co., Ltd. Mode changeover mechanism with flat cam surface for a tape player. 5,005,094, Cl. 360-105.000.

Komatu, Tomio. *See—*
Kenmochi, Kazuhito; Yarita, Ikuo; Fukuhara, Akihiko; Komatu, Tomio; and Kishida, Akira, 5,003,804, Cl. 72-39.000.

Komurasaki, Satosi, to Mitsubishi Denki Kabushiki Kaisha. Control apparatus for internal combustion engine. 5,003,951, Cl. 123-425.000.

Konczol, Kalman. *See—*
Jekkel nee Bokany, Antonia; Albrecht, Karoly; Ambrus, Gabor; Lang, Tibor; Szabo, Istvan M.; Ilkoy, Eva; Konczol, Kalman; Moravcsik, Imre; Hantos, Gabor; Simonovits, Emilia; Lengyel nee Szemenyei, Zsuzsanna; Vida, Zsuzesanna; and Csajagi, Eva, 5,004,695, Cl. 435-253.100.

Kondo, Asaji. *See—*
Arai, Fuminori; and Kondo, Asaji, 5,004,685, Cl. 435-25.000.

Kondo, Syunichi; and Watarai, Syu, to Fuji Photo Film Co., Ltd. Electroconducting semiconductor and binder or binder precursor coated in a subbing layer. 5,004,641, Cl. 428-208.000.

Kondo, Toshio. *See—*
Haraguchi, Hiroshi; Tamura, Hiroshi; Kodama, Katuhiko; and Kondo, Toshio, 5,003,955, Cl. 123-489.000.

Kondo, Yukihito, to Jeol, Ltd. Transmission electron microscope. 5,004,919, Cl. 250-311.000.

Konica Corporation: *See—*
Kawada, Sunao; Hashimoto, Takayoshi; Itoh, Toyotsugu; and Koyanagi, Makoto, 5,003,851, Cl. 82-1.110
Koboshi, Shigeharu; Kobayashi, Kazuhiro; Goto, Nobutaka; Kurematsu, Masayuki; and Takabayashi, Naoki, 5,004,522, Cl. 159-47.003.
Okui, Susumu, 5,004,223, Cl. 271-275.000.
Tomono, Makoto; Tarumi, Noriyoshi; and Sato, Masayuki, 5,004,666, Cl. 430-110.000
Yagi, Toshihiko; Kumashiro, Kenji; and Takiguchi, Hideki, 5,004,680, Cl. 430-603.000.
Yamada, Taketoshi; Habu, Takeshi; and Takamuki, Yasuhiko, 5,004,669, Cl. 430-264.000.

Kono, Kazuo: *See—*
Umehara, Keiichi; Hirose, Hisashi; and Kono, Kazuo, 5,004,915, Cl. 250-231.140.

Konvekta GmbH: *See—*
Koehler, Juergen, 5,004,150, Cl. 237-12.30A.

Koopmann, Gary H., to Bridgestone/Firestone, Inc. Suspension simulator. 5,003,819, Cl. 73-146.000.

Kope, Harry H.: *See—*
Fortin, J. Andre ; Ogilvie, Kelvin K., Tsantrizos, Youla S., and Kope, Harry H., 5,004,754, Cl. 514-570.000.

Korczynski, Jacek M ; and Stack, Thomas J., to Cooper Industries, Inc. Push-to-trip high-amp circuit breaker. 5,004,994, Cl. 337-66.000.

Kordts, Jurgen: *See—*
Martens, Gerhard; Kordts, Jurgen; and Weidinger, Georg, 5,004,912, Cl. 250-227.140.

Korea Institute of Science and Technology: *See—*
Oh, Myung H., Lee, Kyung J., Chung, In J.; Lee, Nam Y ; and Kim, Myung S., 5,004,573, Cl. 264-61.000.

Koschak, Francis L.; and Sarno, Felicismo S., to Star-kist Foods, Inc. Semi-moist pet food having free gravy and process for preparation thereof. 5,004,624, Cl. 426-623.000.

Koseki, Hiroyuki: *See—*
Kadota, Kuninobu; Kohno, Yoshihide; and Koseki, Hiroyuki, 5,004,031, Cl. 152-538.000.

Koshikawa, Nobuo; and Inoue, Masahiro, to Kabushiki Kaisha Machida Seisakusho. Endoscope and jig for processing signal conductors of endoscope. 5,003,964, Cl. 128-4.000.

Koslov, Joshua L.: *See—*
Zdepski, Joel W.; and Koslov, Joshua L., 5,005,082, Cl. 358-174.000.

Kosugi, Yasuhiko: *See—*
Kobayashi, Atsushi; Suzuki, Takashi, and Kosugi, Yasuhiko, 5,005,043, Cl. 355-27.000.

Koteff, Walter B.: *See—*
Cooke, Kevin K., Dewitt, John R ; Galinis, Paul J ; and Koteff, Walter B., 5,004,866, Cl. 174-35 0GC.

Kotobuki Seiyaku Company Limited: *See—*
Tomiyama, Tsuyoshi; Tomiyama, Akira; and Kubota, Koichi, 5,004,750, Cl. 514-382.000.

Koutaka, Yoshirou, to Alps Electric Co., Ltd. Click-type push button switch with improved leaf spring. 5,004,880, Cl. 200-521.000.

Kovach, John S.: *See—*
Ames, Matthew M.; and Kovach, John S., 5,004,593, Cl. 424-10.000.

Kovalev, Valentin D.: *See—*
Juschenko, Konstantin A.; Varenchuk, Pavel A., Kovalev, Valentin D.; Chvertko, Anatoly I.; Privalov, Nikolai T., and Kuzmenko, Vladimir G., 5,004,885, Cl. 219-73.200.

Kowalczyk, Thaddeus. Filter assembly for protecting motor vehicle occupants from pollution. 5,004,487, Cl. 55-269.000.

Kowalski, David J.: *See—*
Fong, Dodd W.; and Kowalski, David J., 5,004,786, Cl. 525-344.000.

Koyama, Takeshi: *See—*
Murayama, Akihiro; and Koyama, Takeshi, 5,004,935, Cl. 307-353.000.

Koyama, Yukio: *See—*
Koga, Yukihiro; and Koyama, Yukio, 5,004,516, Cl. 156-463.000.

Koyanagi, Makoto: *See—*
Kawada, Sunao; Hashimoto, Takayoshi, Itoh, Toyotsugu; and Koyanagi, Makoto, 5,003,851, Cl. 82-1.110.

Koyo Seiko Co., Ltd.: *See—*
Ida, Tomoyasu; Nohara, Makoto; and Seo, Nobuyuki, 5,004,980, Cl. 324-166.000.

Kozaki, Tetsuji; Ishikawa, Hiroshi; Yasui, Hideaki, Shimamoto, Mamoru; Hibino, Katsuhiko; and Suzuki, Motoshi, to Nippondenso Co., Ltd. Position control device and automotive suspension system employing same. 5,004,264, Cl. 280-707.000.

Kozuka, Nobuhiko, to Mita Industrial Co., Ltd. Image-forming machine having a process assembly comprising two independently movable units. 5,005,053, Cl. 355-245.000.

Kragten, Ubaldus F.: *See—*
Baur, Henricus A. C.; and Kragten, Ubaldus F., 5,004,837, Cl. 568-342.000.

Kramasz, Kenneth J.: *See—*
Edelman, William; Constantinou, Dennis; Stefanovski, Miles; Jan, Yuh L.; Fahlen, Theodore S ; Hansen, Ronald L ; and Kramasz, Kenneth J., 5,005,180, Cl. 372-57.000.

Kramer, Ralf: *See—*
Schmidt, Konrad; and Kramer, Ralf, 5,005,016, Cl. 341-142.000.

Kraper, Wayne. Shopping basket accessory. 5,004,252, Cl. 280-33.992.

Krasicki, Walter, Jr.: *See—*
Krasicki, Walter, Sr.; and Krasicki, Walter, Jr., 5,003,857, Cl. 84-266.000.

Krasicki, Walter, Sr., and Krasicki, Walter, Jr ; to W & W Musical Instrument Company. Spindle for harp. 5,003,857, Cl. 84-266.000.

Krause, Duane K.: *See—*
Timmins, Lawrence J.; and Krause, Duane K., 5,004,102, Cl. 206-386.000.

Krause, Frank, and Kniewske, Reinhard, to Cerestar Holding B.V. Polymer compositions. 5,004,767, Cl. 524-30.000.

Krause, Helmfried: *See—*
Deller, Klaus; Ettlinger, Manfred; Klingel, Rainhard; and Krause, Helmfried, 5,004,719, Cl. 502-242.000.

Krause, William R.: *See—*
Azer, Samir N., Salman, Naser N.; and Krause, William R., 5,003,969, Cl. 128-87.00R.

Kreitmair, Xaver: *See—*
Vesely, Ivan; and Kreitmair, Xaver, 5,003,680, Cl. 29-227.000.

Kremer, Ingo. *See—*
Grosch, Peter, Haas, Gerhard; and Kremer, Ingo, 5,004,249, Cl 277-207.00R.

Krenzer, Eberhard, to Barmag AG. Method and apparatus for processing a textured yarn. 5,003,677, Cl 28-220.000.

Kreyenborg Verwaltungen und Beteiligungen KG: *See—*
Stude, Rolf-Rudiger; and Wilken-Trenkamp, Ludger, 5,004,414, Cl. 425-185.000.

Kricheldorf, Hans-Rytger; Delius, Ulrich; and Wehrmann, Rolf, to Bayer Aktiengesellschaft. Aromatic polyethers containing keto groups in side chains. 5,004,836, Cl. 568-333.000.

Krief, Alain, and Dumont, Willy, to Roussel Uclaf. Novel process for preparing semi-caronic aldehydes. 5,004,840, Cl. 568-486.000.

Krishen, Kumar; Shaw, Scott W.; and deFigueiredo, Rui J. P., to United States of America, Administrator, the National Aeronautics and Space Administration. Method and apparatus for sensor fusion. 5,005,147, Cl. 364-578.000.

Krjukov, Georgy M. *See—*
Goikhman, Yakov A.; Krjukov, Georgy M., Onotsky, Melis I.; Sorokin, Georgy M.; Filatov, Alexei V ; Tsarapkin, Viktor V., Yakimov, Vadim P., Smirnov, Gennady A ; Nikiforov, Ivan I.; Burdukovsky, Alexandr I.; Daibov, Sergei V.; and Kurdjukov, Alexandr S., 5,004,056, Cl. 175-293.000.

Krohn, Christine E., to Exxon Production Research Company. Continuity logging using differenced signal detection. 5,005,159, Cl. 367-57.000.

Krosenbrunner, Walter, to Boehler Ges. m.b.H. Preliminary material for the production of composite material parts and method of making. 5,004,653, Cl. 428-615.000.

Kronfeld, David S. *See—*
Chalupa, William; Kronfeld, David S.; Schneider, Paul L ; and Sklan, David, 5,004,728, Cl. 514-12.000.

Krounbi, Mohamad T., and Wang, Po-Kang, to International Business Machines Corporation. Magnetoresistive read transducer having hard magnetic shunt bias. 5,005,096, Cl. 360-113.000.

Kruckel, Peter. *See—*
Huttner, Gerhard; Kruckel, Peter; and Mock, Gerhard, 5,004,363, Cl. 401-75.000.

Kruger, James B. *See—*
Tullis, Barclay J ; and Kruger, James B , 5,004,340, Cl. 356-243.000.

Krukovsky, Yuri. Simulated observation flight apparatus. 5,004,225, Cl. 272-18.000.

Krupnicki, Theodore A. Splicing device for fluid-cooled electric cables. 5,004,865, Cl. 174-15.700.

Kubota, Kazuhiro: *See—*
Sunagawa, Masao; Kubota, Kazuhiro; Ishii, Yoshitaro; and Satoh, Susumu, 5,003,663, Cl. 15-366.000.

Kubota, Koichi: *See—*
Tomiyama, Tsuyoshi; Tomiyama, Akira; and Kubota, Koichi, 5,004,750, Cl. 514-382.000.

Kucerija, Zoran. Gas expander based power plant system. 5,003,782, Cl. 60-648.000.

Kuchel, Michael, to Carl-Zeiss-Stiftung. Method of examining an optical component. 5,004,346, Cl. 356-360.000.

Kudo, Shigeru. *See—*
Hara, Yasuhiro; Inoue, Mitsuhiro; Baba, Hideo; Okazaki, Tadashi; and Kudo, Shigeru, 5,004,089, Cl. 192-107.00M.

Kugimiya, Shuzo; Fukumochi, Yoji; Nakamura, Ichiko; Hirai, Tokuyuki; and Suzuki, Hitoshi, to Sharp Kabushiki Kaisha. System including means to translate only selected portions of an input sentence and means to translate selected portions according to distinct rules. 5,005,127. Cl. 364-419.000.

Kulik, Conrad J.: *See—*
Lee, Sunggyu; Ashok, Sawant; and Kulik, Conrad J , 5,004,717, Cl 502-50.000.

Kumashiro, Kenji: *See—*
Yagi, Toshihiko, Kumashiro, Kenji; and Takiguchi, Hideki, 5,004,680, Cl. 430-603.000.

Kume, Hidehiro: *See—*
Mitsumori, Koji; and Kume, Hidehiro, 5,005,162, Cl. 369-44.120.

Kun, Zoltan K.; Cresswell, Michael W ; and Hopkins, Richard H., to Westinghouse Electric Corp. Thin film electroluminescent edge emitter structure on a silicon substrate. 5,004,956, Cl. 315-169.300.

Kunde, Klaus: *See—*
Leins, Eberhard; and Kunde, Klaus, 5,003,793, Cl. 66-9.00B.

Kung, Roland; and Widmer, Hanspeter, to Zellweger Telecommunications AG. Process and apparatus for the transmission of selective addresses and/or emergency messages in shortwave radio networks. 5,005,209, Cl. 455-32.000.

Kung, Viola T., to Molecular Devices Corporation. Nitrocellulose filtration to remove proteins from polynucleotides. 5,004,806, Cl. 530-415.000.

Kuo, George; Masiarz, Frank, Truett, Martha; and Valenzuela, Pablo, to Nordisk Gentofte. Method and composition for preparation of factor VIIIC. 5,004,804, Cl. 530-387.000.

Kurdjukov, Alexandr S.: *See—*
Goikhman, Yakov A., Krjukov, Georgy M.; Onotsky, Melis I.; Sorokin, Georgy M.; Filatov, Alexei V.; Tsarapkin, Viktor V.; Yakimov, Vadim P., Smirnov, Gennady A., Nikiforov, Ivan I.; Burdukovsky, Alexandr I.; Daibov, Sergei V.; and Kurdjukov, Alexandr S., 5,004,056, Cl. 175-293.000.

Kurdys, Gregory D.: *See—*
Cadwallader, George W.; Highfill, Louis A.; Kurdys, Gregory D., and Turigliatto, Richard S., 5,004,589, Cl. 423-315.000.

Kurematsu, Masayuki: *See—*
Koboshi, Shigeharu; Kobayashi, Kazuhiro; Goto, Nobutaka, Kurematsu, Masayuki; and Takabayashi, Naoki, 5,004,522, Cl. 159-47.003

Kurihara, Motoaki; and Fujino, Ikuo, to Mitsuba Electric Mfg. Co., Ltd. Rotation device with a sealing plate. 5,004,090, Cl. 192-112.000.

Kurimoto, Kazunori, to Tokai Chemical Industries, Ltd. Method of producing skin tube for annular foam product, and assembly of the skin tube and core structure. 5,004,572, Cl. 264-46.600.

Kuriyama, Minoru, to Ube Industries, Ltd. Degassing apparatus for mold. 5,004,038, Cl. 164-305.000.

Kuriyama, Shigemi, to Mitsubishi Jukogyo Kabushiki Kaisha. Regulated D.C.-D.C. power converter having multiple D.C. outputs. 5,005,112, Cl. 363-21.000.

Kurkowski, Hal, to Dallas Semiconductor Corporation. Interleaved arbitration scheme for interfacing parallel and serial ports to a parallel system port. 5,005,151, Cl. 364-900.000.

Kurono, Yoshikazu: *See—*
Yokoe, Masaaki; Kurono, Yoshikazu; and Hayashi, Koji, 5,003,897, Cl. 112-121.120.

Kuroyanagi, Masatoshi; Suzuki, Masahiko; Matsui, Kazuma; Imaeda, Makoto; Nagai, Kouzi, and Ito, Yoshiaki, to Nippondenso Co., Ltd. Radial piston pump. 5,004,406, Cl. 417-273.000.

Kurst, Frederick L.: *See—*
Serrell, Robert; Smith, J. Lamar; and Kurst, Frederick L., 5,004,896, Cl. 235-437.000

Kusano, Hiromi: *See—*
Nagai, Takao; and Kusano, Hiromi, 5,004,320, Cl. 350-276.00R.

Kuskova, Natalya I.: *See—*
Sizonenko, Olga N ; Maxutov, Rafkhat A.; Maljushevsky, Pavel P.; Gorovenko, Georgy G.; Sokolov, Alexei V.; Lyapis, Diana N.; Schekin, Vladimir I.; and Kuskova, Natalya I., 5,004,050, Cl. 166-248.000.

Kuzmenko, Vladimir G.: *See—*
Juschenko, Konstantin A.; Varenchuk, Pavel A.; Kovalev, Valentin D., Chvertko, Anatoly I., Privalov, Nikolai T.; and Kuzmenko, Vladimir G., 5,004,885, Cl. 219-73.200.

Kvita, Vratislav, to Ciba-Geigy Corporation. Substituted α-pyrones and process for their preparation. 5,004,814, Cl. 549-294.000.

Kwiatek, Jack: *See—*
Hanes, Ronnie M.; and Kwiatek, Jack, 5,004,568, Cl. 260-410.000.

Kwon, Oh-Hyun; Jang, Taek-Yong; Shin, Jung-Hyun; and Choi, Won-Taek, to Samsung Electronics Co., Ltd. Method of manufacturing folded capacitors in semiconductor and folded capacitors fabricated thereby. 5,005,103, Cl. 361-313.000

Kyowa Hakko Kogyo Co., Ltd. *See—*
Yasuzawa, Toru; Nakanishi, Satoshi; Murakata, Chikara; Kase, Hiroshi, Sano, Hiroshi; and Yamada, Koji, 5,004,833, Cl. 536-18.200.

La Mina Ltd. *See—*
Guirguis, Raouf A ; 5,003,988, Cl. 128-771.000

Labate, Micheal D. Method for producing ultra clean steel. 5,004,495, Cl. 75-10.220.

Labayle, Denis: *See—*
Botteau, Richard; Labayle, Denis; and Tenaillon, Alain, 5,003,657, Cl. 15-104.330.

Labinal Components and Systems, Inc.: *See—*
Lindeman, Richard J ; 5,004,427, Cl. 439-101.000.

Laboratoire Roger Bellon: *See—*
Antoine, Michel, Barreau, Michel; Desconclois, Jean-Francois; Girard, Philippe; and Picaut, Guy, 5,004,745, Cl. 514-254.000.

Laboure, Bernard: *See—*
Schegerin, Robert; Laboure, Bernard; and Standish, Robert, 5,003,770, Cl. 60-226.200

Lafferty, James G. Seeder clutch for tramlines. 5,003,894, Cl. 111-178.000

Lafferty, Theodore B., Sr. Engine air intake shutoff apparatus. 5,003,943, Cl. 123-198.00D.

LaGrange, Donald E.: *See—*
Herold, Stanley J.; Howard, Charles D.; and LaGrange, Donald E., 5,003,881, Cl. 102-337.000.

L'Air Liquide, Societe Anonyme pour l'Etude et l'Exploitation des Procedes Georges Claude: *See—*
Reale, Serge, 5,003,783, Cl. 62-51.200.
Rotman, Frederic, Rancon, Yannick, Queille, Philippe; and Olivier, Michel, 5,004,489, Cl. 65-32.200

Laitram Corporation, The: *See—*
Lapeyre, James M.; Weber, Peter G.; and Greve, Christopher G., 5,004,095, Cl. 198-660.000.

Lapeyre, James M.; Weber, Peter G.; and Greve, Christopher G., 5,004,096, Cl. 198-666.000

Lakatos, Tamas; Molnar, Jozsef; and Madarasz, Endre, to Magyar Tudomanyos Akademia Atommag Kutato Intezete. Signal processing method for nuclear spectrometers. 5,005,146, Cl. 364-573.000.

Lal, Brij B.; and Eltoukhy, Atef H., to HMT Technology Corporation. High-coercivity thin-film recording medium and method. 5,004,652, Cl. 428-611.000.

Lalor, William F.: *See—*
Wilkes, Lambert H.; Mehner, Martin, and Lalor, William F., 5,003,669, Cl. 19-49.000.

Lam, Juan F.; and Hasenberg, Thomas C., to Hughes Aircraft Company. Method and apparatus for Q-switching a laser. 5,005,176, Cl. 372-10.000.

Lam, William Y.; and Liesen, Gregory P., to Ethyl Corporation. Fuel compositions containing sulfur-bridged phenolic antioxidants. 5,004,481, Cl. 44-435.000.

Lamont, Robert G.: *See—*
Hill, Kenneth O.; Johnson, Derwyn C.; and Lamont, Robert G., 5,004,316, Cl. 350-96.150.

Lamonte, Ronald R.: *See—*
Vicari, Richard; Costanza, John R.; Lamonte, Ronald R.; and Miano, Ralph M., 5,004,796, Cl. 528-179.000.

Landa, Benzion; Hochman, Haim; and Yacoub, Naseem, to Spectrum Sciences B.V. Dispersion apparatus. 5,004,165, Cl. 241-21.000.

Landis, Robert A., to Mead Corporation, The. Two-stage method and apparatus for glossing a developer sheet. 5,004,891, Cl. 219-388.000.

Landrevie, Jacques: *See—*
Biggio, Alain; and Landrevie, Jacques, 5,004,897, Cl. 235-441.000.

Lang, Gerard: *See—*
Richard, Herve; Leduc, Madeleine; Forestier, Serge; and Lang, Gerard, 5,004,594, Cl. 424-47.000.

Lang, Tibor: *See—*
Jekkel nee Bokany, Antonia; Albrecht, Karoly; Ambrus, Gabor; Lang, Tibor; Szabo, Istvan M.; Ilkoy, Eva; Konczol, Kalman; Moravcsik, Imre, Hantos, Gabor, Simonovits, Emilia; Lengyel nee Szemenyei, Zsuzsanna; Vida, Zsuzsanna; and Csajagi, Eva, 5,004,695, Cl. 435-253.100.

Langford, Stephen R.; Stone, James R.; and Bagley, William C., to Cardinal Scale Manufacturing Company. Weigh scale using multiple digital load cells. 5,004,058, Cl. 177-25.130.

Langlitz, Karlheinz: *See—*
Ackermann, Wilhelm; Langlitz, Karlheinz; and Schmitz, Gunter, 5,003,835, Cl. 74-411.000.

Lanham, Bryan: *See—*
Adams, James; Gobel, Richard; and Lanham, Bryan, 5,004,028, Cl. 144-176.000.

Lanser, Mike L.; and Elenbaas, Tony J., to Prince Corporation. Visor torque control. 5,004,289, Cl. 296-97.120.

Lanxide Technology Company, LP. *See—*
Becker, Kurt J., 5,004,036, Cl. 164-97.000
Burke, John T.; and Newkirk, Marc S., 5,004,035, Cl. 164-97.000.
Claar, Terry D.; Johnson, William B., and Rapp, Robert A., 5,004,714, Cl. 501-134.000
Park, Eugene S.; and Aghajanian, Michael K., 5,004,034, Cl 164-97.000.

Lanza, Richard C.; and Votano, Joseph R., to Expert Image Systems, Inc. Digital readout system for radiographic imaging. 5,005,195, Cl. 378-62.000.

Lanza, Richard C.; and Votano, Joseph R., to Expert Image Systems, Inc. Limb positioning and calibration apparatus for radiographic imaging. 5,005,196, Cl. 378-207.000.

Lapeyre, James M.; Weber, Peter G.; and Greve, Christopher G., to Laitram Corporation, The. Apparatus for use in variable operating temperatures. 5,004,095, Cl. 198-660.000.

Lapeyre, James M., Weber, Peter G., and Greve, Christopher G., to Laitram Corporation, The. Screw conveyor coupling apparatus. 5,004,096, Cl. 198-666.000.

Lapp, Roger H., and Paraska, Theodore F., to Johns Hopkins University, The. Overmoded waveguide elbow and fabrication process. 5,003,687, Cl. 29-600.000.

Larminie, James, to Johnson Matthey Public Limited Company. Apparatus for demonstrating and studying the operation of a fuel cell. 5,004,424, Cl. 434-301.000.

Larson, William L., to Ramtron Corporation. Multilayer electrodes for integrated circuit capacitors. 5,005,102, Cl. 361-313.000.

Lasley, Daniel G., to Summagraphics Corporation. Digitizer tablet with pressure stylus. 5,004,872, Cl. 178-18.000.

Latassa, Frank M.; and Leyh, Thomas O., to North American Philips Corporation. Fluorescent lamp with grounded electrode guard. 5,004,949, Cl. 313-492.000.

Lau, Jurgen: *See—*
Rohrscheid, Freimund; Siegemund, Gunter; and Lau, Jurgen, 5,004,797, Cl. 528-206.000.

Lauber, Peter, to Conprinta Ltd. Flexographic printing machine, especially for flexographic blank printing. 5,003,873, Cl. 101-219.000.

Laukaitis, Joseph F.: *See—*
Donivan, Lawrence J.; and Laukaitis, Joseph F., 5,005,050, Cl. 355-208.000.

Launer, Russell C. Work platform apparatus for roofs. 5,004,072, Cl. 182-45.000.

Lavas, Bernard R.: *See—*
Dull, Raymond P.; Lavas, Bernard R.; and Baxter, William D., 5,003,740, Cl. 52-239.000.

Law, Kock-Yee; and Bailey, F. Courtney, to Xerox Corporation. Photoconductive member having symmetrical and unsymmetrical squaraine compositions. 5,004,661, Cl. 430-59.000.

Lawn-Wright, Inc.: *See*—
Velke, James D.; and Wright, William R., 5,004,251, Cl. 280-32.700.

Lawrie, Warwick W. Alignment sleeve for hand tool having a universal joint. 5,003,849, Cl. 81-184.000.

Lazarof, Sargon. Dental implant and method of using same. 5,004,421, Cl. 433-173.000.

Le, Hiep M.: *See*—
Wasmer, William D.; Gillespie, Peter J.; Lippmann, James G., and Le, Hiep M., 5,005,069, Cl. 357-72.000.

Le, Toby: *See*—
Shannon, Leland K.; Gentry, Ted L.; and Le, Toby, 5,003,811, Cl. 73-12.000.

Leath, Robert P. Janitorial utility belt for carrying spray bottles, gloves, dusters, and cleaning towels. 5,004,136, Cl. 224-253.000.

Leavens, James E.: *See*—
Eller, Joe C.; Leavens, James E.; and Wyatt, Charles H., 5,004,483, Cl. 55-20.000.

Lederle (Japan) Ltd.: *See*—
Ogawa, Osamu; Kishi, Ikuo; Tahara, Yoshiyuki, and Sugita, Masanori, 5,004,756, Cl. 514-655.000.

Leduc, Madeleine: *See*—
Richard, Herve; Leduc, Madeleine; Forestier, Serge; and Lang, Gerard, 5,004,594, Cl. 424-47.000.

Seto, Nobuo; and Morigaki, Masakazu, 5,004,678, Cl. 430-548.000

Moriguchi, Hideyuki *See—*
Tsubone, Akira; Tomiyoshi, Masanori; Yokomizo, Junichi; Tanaka Nobuhiro; Moriguchi, Hideyuki; and Hirata, Eiji, 5,004,401, Cl 414-786.000

Morita, Masao *See—*
Kobayashi, Toshio; Uchikawa, Fusaoki; Nomura, Kenji; Morita, Masao; and Yokoyama, Shouichi, 5,004,720, Cl. 505-1.000

Moritz, Kjell; to Skanska Slakterimaskiner. Automatic front leg cutter in a transport slaughtering line. 5,003,665, Cl. 452-185.000

Moritz, Werner; to Kabelschlepp Gesellschaft mit beschrankter Haftung. Guide or feeder chain. 5,003,765, Cl. 59-78.100

Moriyama, Yasuyuki *See—*
Satoh, Yasuta; and Moriyama, Yasuyuki, 5,003,714, Cl. 40-414.000

Morlock Mechanik GmbH *See—*
Dalferth, G. Robert, 5,003,872, Cl. 101-163.000

Moroz, Michael *See—*
Norton, Paul R.; Moroz, Michael; and Talley, Carol S., 5,004,698, Cl. 437-3.000

Morris, Carroll E., Jr.; Balliew, Robert E.; Mathieu, Mark A.; and Johnsrud, Darrell B.; to Hewlett-Packard Company. Method for regenerating in-circuit test sequences for circuit board components. 5,004,978, Cl. 324-158.00R

Morris, Douglas A. *See—*
Grieco, Steven E.; and Morris, Douglas A., 5,004,992, Cl 333-202.000

Morrison Molded Fiber Glass Company *See—*
Brown, Gordon L., Jr., 5,004,226, Cl. 272-93.000

Morrow, Clifford E. Method and apparatus for attenuation and measurement of laser power at the end of a laser guide. 5,004,338, Cl 356-218.000

Morser, Alfred H.; Gildemeister, Walter M.; and Farmer, David M.; to Cincinnati Milacron, Inc. Dynamic correction of servo following errors in a computer-numerically controlled system and fixed cycle utilizing same. 5,005,135, Cl. 364-474.350.

Morton, Henry H. *See—*
Peabody, Alan M.; Anderson, Olin S., Jr.; and Morton, Henry H., 5,004,459, Cl. 604-29.000.

Morton, Philip G.; to Aluminum Company of America. Window assembly of extruded plastics material. 5,003,747, Cl. 52-656.000.

Moscovitch, Marko; to Solon Technologies, Inc. Mixed field personnel dosimetry method and apparatus for determination of risk related quantity via a nearly tissue equivalent multi-element thermoluminescent dosimeter. 5,004,921, Cl. 250-337.000.

Moseley, Richard B. *See—*
Brearley, Malcolm; and Moseley, Richard B., 5,004,299, Cl 303-15.000
Brearley, Malcolm; and Moseley, Richard B., 5,004,300, Cl 303-15.000

Moser, Francis M. *See—*
Kohls, Dennis E.; and Moser, Francis M., 5,004,799, Cl 528-389.000.

Motai, Noboru; Tanaka, Sakae; and Watanabe, Yoshiaki, to Nippon Precision Circuits Ltd., and Seikosha Co., Ltd. Amorphous-silicon thin film transistor array substrate. 5,005,056, Cl. 357-2.000.

Motokawa, Kazumasu, to NEC Corporation. Method of forming isolation region in integrated circuit semiconductor device. 5,004,701, Cl 437-47.000.

Motorola *See—*
Zdebel, Peter J.; and Vasquez, Barbara, 5,004,703, Cl. 437-67.000

Motorola, Inc.: *See—*
DeLozanne, A. L., 5,004,721, Cl. 505-1.000.
Golio, John M.; and Staudinger, Joseph, 5,005,059, Cl. 357-22.000
Grieco, Steven E.; and Morris, Douglas A., 5,004,992, Cl. 333-202.000.
Jasinski, Leon, 5,005,014, Cl. 340-825.440.
Robb, Stephen P.; Phipps, John P.; and Gadberry, Michael D., 5,005,061, Cl. 357-23.130
Wasmer, William D.; Gillespie, Peter J.; Lippmann, James G.; and Le, Hiep M., 5,005,069, Cl. 357-72.000

Mott, Stephanie J. *See—*
Behensky, Max L.; Monerief, Rick L.; Margolin, Jed; and Mott, Stephanie J., 5,005,148, Cl. 364-578.000.

Mou, Lin-Her. First-aid gas mask. 5,003,974, Cl. 128-201.250

Mourer, David P. *See—*
Svec, Paul S.; Borom, Marcus P.; Szala, Lawrence E.; Brun, Milivoj K.; Miller, Steven A.; and Mourer, David P., 5,004,629, Cl. 427-204.000

MTU Friedrichshafen GmbH *See—*
Gubon, Peter; Sudmanns, Hans; and Teetz, Christoph, 5,003,934, Cl. 123-52.0MV.

Mucic, Vinko, Thieme, Kurt, and Engelmann, Jurgen, to TCH Thermo-Consulting-Heidelberg GmbH. Internal tubular falling film apparatus for the evaporation of liquids and for the absortion or degassing of solutions of two or more substances. 5,004,043, Cl. 165-118.000.

Muckerheide, Myron C., to Seton Health Care Foundation. Laser pumping apparatus. 5,005,182, Cl. 372-72.000

Muelas-Medrano, Santiago *See—*
Vidal, Henri; Muelas-Medrano, Santiago; and Segrestin, Pierre, 5,004,376, Cl. 405-284.000.

Mueller, Brian D. *See—*
Meier, Paul R.; and Mueller, Brian D., 5,004,047, Cl. 165-158.000

Muller, Erich R.; Pniwitzer, Gunther; and Martin, Felix. Servo synchronization with mechanical inter lock. 5,003,834, Cl. 74-339.000.

Muller, Richard P. *See—*
Bullard, James R.; Muller, Richard P.; Grossi, Benedetto; and Cristine, John, 5,003,963, Cl. 128-11.000.

Mullins, Richard M *See—*
Wood, Richard B.; Mullins, Richard M.; and Wojtowicz, John A., 5,004,549, Cl. 210-699.000.

Murakami, Hidenobu: *See—*
Tobuse, Hiroaki; Murakami, Hidenobu; and Kamio, Masashi, 5,005,138, Cl. 364-519.000.

Murakami, Kimihiro: *See—*
Mochida, Ei; Murakami, Kimihiro; Kato, Kazuo; Kato, Katsuaki; Okuda, Jun; and Miwa, Ichitomo, 5,004,751, Cl. 514-390.000

Murakata, Chikara: *See—*
Yasuzawa, Toru; Nakanishi, Satoshi; Murakata, Chikara; Kase, Hiroshi; Sano, Hiroshi; and Yamada, Koji, 5,004,833, Cl. 536-18.200.

Muraki, Yoshiya, and Koike, Hiroyuki, to Fukuda Densky Co. Ltd. Apparatus for alerting a doctor by radio to provide an alarm for a patient. 5,003,984, Cl. 128-710.000.

Muramatsu, Tadao: *See—*
Imai, Hajime; Kito, Shozo; Harada, Shoichi; Yokoyama, Yoshinobu; Nakamura, Syuzi, Miyoshi, Shigetoshi, and Muramatsu, Tadao, 5,003,799, Cl. 70-247.000

Murayama, Akihiro, and Koyama, Takeshi, to Kabushiki Kaisha Toshiba. Sample and hold circuit. 5,004,935, Cl. 307-353.000.

Murphy, Judy A.: *See—*
Lee, Richard J.; Smith, Barbara A.; Theys, Robert G.; Theys, Robert A.; and Murphy, Judy A., 5,004,920, Cl. 250-304.000.

Murtha, John L.: *See—*
Radebaugh, Galen W.; Murtha, John L.; and Glinecke, Robert, 5,004,613, Cl. 424-465.000.

Muschong, Gunther. *See—*
Amrhein, Reinhard; Heid, Walter; and Muschong, Gunther, 5,004,015, Cl. 137-625.680

Musil, Joseph E.: *See—*
Goodwin, Jon D.; and Musil, Joseph E., 5,004,394, Cl. 414-346.000.

Mutoh, Nariaki; Hanatani, Yasuyuki, and Nishiguchi, Toshihiko, to Mita Industrial Co., Ltd. Electrophotographic photosensitive material containing m-phenylenediamine compound. 5,004,662, Cl. 430-59.000.

Mutterer, Francis; and Berger, Kurt, to Ciba-Geigy Corporation. Stabilisation of polyphenylene ethers with macrocyclic polyalkylpiperidine compounds. 5,004,759, Cl. 524-89.000.

Myers, Michael J.: *See—*
Crawford, Paul M.; Campbell, Herbert W.; Myers, Michael J.; and Siverns, Steven L., 5,003,814, Cl. 73-59.000

Naab, Jakob, to Zoller-Kipper GmbH. Device for emptying containers, especially refuse bins. 5,004,392, Cl. 414-21.000.

Nagai, Koichi: *See—*
Sato, Hiroshi; Hirose, Kenichi, Nagai, Koichi; Yoshioka, Hiroshi, and Nagaoka, Yoshihiko, 5,004,846, Cl. 568-940.000.

Nagai, Kouzi. *See—*
Kuroyanagi, Masatoshi, Suzuki, Masahiko, Matsui, Kazuma; Imaeda, Makoto, Nagai, Kouzi, and Ito, Yoshiaki, 5,004,406, Cl 417-273.000.

Nagai, Takao; and Kusano, Hiromi, to Mitsubishi Denki Kabushiki Kaisha. Anti-reflection device for a VDT. 5,004,320, Cl. 350-276.00R

Nagano, Masashi, to Shimano Industrial Co., Ltd. Bicycle pedal 5,003,841, Cl. 74-594.400

Nagaoka, Hisayuki; Zenbayashi, Michio; and Shimizu, Chiyuki, to Toshiba Silicone Co., Ltd. Room temperature-curable composition 5,004,793, Cl. 528-15.000

Nagaoka, Yoshihiko *See—*
Sato, Hiroshi; Hirose, Kenichi, Nagai, Koichi, Yoshioka, Hiroshi, and Nagaoka, Yoshihiko, 5,004,846, Cl. 568-940.000

Nagarajan, Madukkarai K., Wherley, Fred J., and Frimel, Jody W.; to B.F. Goodrich Company, The. Aqueous laundry detergent compositions containing acrylic acid polymers. 5,004,557, Cl. 252-174.240

Nagasawa, Kouichi *See—*
Ikeda, Shuji; Sasaki, Katsuro; Nagasawa, Kouichi; and Meguro, Satoshi, 5,005,068, Cl. 357-59.000

Nagata, Akio *See—*
Hayasaka, Hiroshi; and Nagata, Akio, 5,004,453, Cl 494-39.000

Nagata, Kohsoku *See—*
Shimamura, Keizo, Amano, Kagetaka, Aisaka, Tatsuryoshi, Hanai, Satoshi, and Nagata, Kohsoku, 5,004,498, Cl 75-233.000.

Nagato, Hiroyasu *See—*
Matsuo, Hirokazu; and Nagato, Hiroyasu, 5,005,055, Cl 355-311.000

Naillon, Martine; and Theeten, Jean-Bernard, to U.S. Philips Corporation. Method of and arrangement for image data compression by means of a neural network. 5,005,206, Cl. 382-56.000.

Nakada, Kunihiko; and Akao, Yasushi, to Hitachi, Ltd. Integrated CPU and DMA with shared executing unit. 5,005,121, Cl. 364-200.000.

Nakagawa, Etsuo *See—*
Yamamoto, Tetsushi, Niwano, Masaru; and Nakagawa, Etsuo, 5,003,919, Cl. 118-716.000

Nakagawa, Kenji, to Fujitsu Limited. Process for forming a fine pattern having a high aspect ratio. 5,004,927, Cl. 250-492.200

Nakagiri, Takashi *See—*
Nishimura, Yukuo, Eguchi, Ken, Kawada, Haruki; Tomida, Yoshinori; Nakagiri, Takashi, Saito, Kenji, Kimura, Toshiaki, Matsuda, Hiroshi, Sakai, Kunihiro, and Miyazaki, Toshihiko, 5,004,671, Cl. 430-286.000.

Nakahara, Takashi *See—*
Tojo, Tetsuo; Okada, Keiji, Nakahara, Takashi, and Kikuchi, Yoshiharu, 5,004,787, Cl. 525-332.100

Nakai, Masaaki. *See—*
Fujino, Akihiko; Inoue, Manabu, Omaki, Takanobu, Nakai, Masaaki, Fujii, Akira; and Sekida, Minoru, 5,005,047, Cl. 354-442.000.

Nakajima, Tsuyoshi; and Ikeda, Yuji. Signal processing system for flow velocity in laser doppler velocimeter. 5,005,144, Cl. 364-565.000

Nakamichi Corporation. *See—*
Inoue, Yoshihisa, and Arai, Yasunori, 5,005,093, Cl. 360-99.060
Yamamoto, Makoto, and Terada, Akio, 5,005,163, Cl. 369-44.360

Nakamura, Arata, to Omron Tateisi Electronics Co. Reflection type photoelectric switch for detecting the presence of an object 5,004,908, Cl. 250-221.000.

Nakamura, Hiroshi *See—*
Aono, Yoshihito; Iwamatsu, Takanori; Minowa, Morihiko; Takenaka, Sadao; Daidoh, Yoshimasa, Nakamura, Hiroshi, and Fujino, Nobutsugu, 5,005,186, Cl. 375-82.000

Nakamura, Ichiko. *See—*
Kugimiya, Shuzo, Fukumochi, Yoji, Nakamura, Ichiko, Hirai, Tokuyuki; and Suzuki, Hitoshi, 5,005,127, Cl. 364-419.000.

Nakamura, Kazuo: *See—*
Kano, Atsushi; Mizuno, Masayuki, Kajiwara, Manabu, Sakaue, Kenji; Abe, Yuji, and Nakamura, Kazuo, 5,004,217, Cl 271-10.000.

Nakamura, Shigeo *See—*
Mori, Tatsuya, Ohsumi, Tadashi, Nakamura, Shigeo; Maeda, Kiyoto, Nishida, Sumio; and Takano, Hirotaka, 5,004,816, Cl 549-462.000.

Nakamura, Syuzi: *See—*
Imai, Hajime; Kito, Shozo; Harada, Shoichi, Yokoyama, Yoshinobu; Nakamura, Syuzi, Miyoshi, Shigetoshi, and Muramatsu, Tadao, 5,003,799, Cl 70-247.000

Nakanishi, Satoshi *See—*
Yasuzawa, Toru; Nakanishi, Satoshi, Murakata, Chikara; Kase, Hiroshi, Sano, Hiroshi; and Yamada, Koji, 5,004,833, Cl 536-18.200.

Nakano, Hirofumi: *See—*
Matsuo, Yoshio; Nakano, Hirofumi; Kamiya, Masakuni; and Matsui, Kezuo, 5,004,580, Cl. 419-65.000.

Nakao, Shinroku; Suzuki, Yoshiyuki, and Kato, Hitoshi, to Combi Co., Ltd. Guard attachment/removal structure in baby carriage 5,004,253, Cl. 280-47.380.

Nakashima, Masato: *See—*
Kakinoki, Yoshikazu; Nakashima, Masato, Koezuka, Tetsuo; Hiraoka, Noriyuki; Tsukahara, Hiroyuki, Suto, Yoshinori; Oshima, Yoshitaka, and Hashinami, Shinji, 5,004,929, Cl. 250-561.000

Nakashima, Yoshihiro; and Kinoshita, Yasunori, to Fanuc Ltd. Numerical control apparatus with simultaneous function execution 5,005,134, Cl. 364-474.010

Nakasuji, Kazuyuki, and Hayashi, Chihiro, to Sumitomo Metal Industries, Ltd. Method of manufacturing clad bar. 5,004,143, Cl. 228-126.000.

Nakatani, Seiichi, Yuhaku, Satoru, Nishimura, Tsutomu, Terada, Yukio, and Baba, Yasuyuki, to Matsushita Electric Industrial Co., Ltd. Multilayered ceramic substrates and method for manufacturing the same. 5,004,640, Cl. 428-195.000.

Nakatani, Seiichi. *See*—
Hakotani, Yasuhiko, Nakatani, Seiichi, Yuuhaku, Satoru, Nishimura, Tsutomu, and Ishida, Toru, 5,004,715, Cl. 501-136.000.

Nakayama, Hiroshi. *See*—
Tsuji, Masahiro; Kawauchi, Susumu; and Nakayama, Hiroshi, 5,004,520, Cl. 156-630.000.

Nakayama, Hiroyuki. *See*—
Gohda, Eiichi, Tsubouchi, Hirohito; Nakayama, Hiroyuki, Hirono, Shuichi, Takahashi, Kozo, Hashimoto, Shuji, and Daikuhara, Yasushi, 5,004,805, Cl. 530-399.000.

Nakhmanson, Raoul S. Displacement machine. 5,004,409, Cl. 418-58.000.

Nalco Chemical Company. *See*—
Beckman, John A., Huang, Shu-Jen, and Ebrat, Abdol R., 5,004,550, Cl. 210-710.000.
Fong, Dodd W.; and Kowalski, David J., 5,004,786, Cl. 525-344.000.

Namiki, Tomizo, Suzuki, Tamotsu, and Katayama, Masashi, to Fuji Photo Film Co., Ltd. Image-receiving sheet material and process for the formation of transferred image. 5,004,668, Cl. 430-256.000.

Namioka, Takashi. *See*—
Okamura, Masatoshi; Namioka, Takashi; and Shiba, Haruo, 5,004,180, Cl. 242-198.000.

Narikiyo, Hidetoshi; Gotou, Yukifumi; and Chuma, Yoshihiro, to Kabushiki Kaisha Toshiba. Central air conditioning system having compensating control function for total heat load in a plurality of rooms. 5,004,149, Cl. 236-49.300.

Narita, Kenichi. *See*—
Nomura, Isao; and Narita, Kenichi, 5,004,561, Cl. 252-511.000.

Natho, Bradford J.; Andrade, George L., Wheaton, John M., and Schmitt, Wayne I., to American Tourister, Inc. Compression-molded carrying case. 5,004,091, Cl. 190-18.00R.

National Distillers and Chemical Corporation. *See*—
Hanes, Ronnie M.; and Kwiatek, Jack, 5,004,568, Cl. 260-410.000.

National Energy Council. *See*—
Dekker, Johannes, and Cronje, Izak J., 5,004,831, Cl. 562-475.000.

National Research Development Corporation. *See*—
Clark, Adrian P., 5,005,188, Cl. 375-94.000.
Elliott, Michael; Janes, Norman F.; and Pulman, David A., 5,004,822, Cl. 556-115.000.

National Starch and Chemical Investment Holding Corporation. *See*—
Billmers, Robert L., 5,004,791, Cl. 527-300.000.

Naumburg, Per. Isolated insertion chute for suction-operated garbage disposal systems. 5,004,377, Cl. 406-120.000.

Nawrocki, Glen A.. *See*—
Burchette, Herbert L.; Hansen, Lee E., West, James C., and Nawrocki, Glen A., 5,004,402, Cl. 415-137.000.

NCR Corporation. *See*—
Collins, Donald A., Jr., 5,004,916, Cl. 250-235.000.

Neace, Richard K.. *See*—
Wilson, William B.; DiPietro, Matthew; Neace, Richard K.; Dethier, Vincent B.; Hauss, Raymond G., and Louk, James R., 5,005,036, Cl. 354-322.000.

Nebashi, Yukichi; and Wada, Takaaki, to Kabushiki Kaisha Sankyo Seiki Seisakusho. Automatic paper feeder. 5,004,515, Cl. 156-350.000.

NEC Corporation. *See*—
Amano, Haruo, 5,005,071, Cl. 357-85.000.
Masuda, Hajime, 5,005,154, Cl. 365-96.000.
Mizoguchi, Shoichi; and Matsuura, Hideki, 5,005,185, Cl. 375-15.000.
Motokawa, Kazumasu, 5,004,701, Cl. 437-47.000.
Shimizu, Haruhito, 5,004,312, Cl. 350-96.130.
Suzuki, Syuji, and Nishio, Makoto, 5,005,166, Cl. 370-1.000.
Takai, Yasuhiro, 5,005,156, Cl. 365-189.050.

NEC Environment Engineering, Ltd. *See*—
Yamamoto, Yohzoh; Ishiwata, Shuichi; Yokoyama, Kenji, and Hasegawa, Kimio, 5,004,764, Cl. 523-400.000.

NEC Home Electronics Ltd.. *See*—
Itoi, Satoshi, 5,005,190, Cl. 375-108.000.

Nederlandse Centrale Organisatie voor Teegepast-Natturwentenschappelijk Orderzoel. *See*—
Kluft, Cornelis, 5,004,802, Cl. 530-380.000.

Nejime, Yoshito, to Hitachi, Ltd. Unit circuit for constructing a neural network and a semiconductor integrated circuit having the same. 5,004,932, Cl. 307-201.000.

Nelson, Donald R., to AT&T Bell Laboratories. Multi-rate multiplexing arrangement efficiently utilizing multiplexed channel bandwidth. 5,005,170, Cl. 370-84.000.

Nelson, Donald R.. *See*—
Modisette, David R., Jr.; and Nelson, Donald R., 5,005,171, Cl. 370-110.100.

Nelson, Melinda. *See*—
Osborne, James L.; Nelson, Melinda; Enscore, David J., Yum, Su I.; and Gale, Robert M., 5,004,610, Cl. 424-448.000.

Nemcek, Jozef. *See*—
Humphries, Martyn; Nemcek, Jozef; Padget, John C.; and Mollett, Christopher C., 5,004,631, Cl. 427-385.500.

Nemoto, Isao. Apparatus for producing curvilinear tubes. 5,003,806, Cl. 72-260.000.

Nerrinck, Bernard, and Bonnet, Maurice, to Salomon S.A. Alpine ski boot. 5,003,711, Cl. 36-120.000.

Neumann, Andreas, and Wiese, Michael, to Grote & Hartmann GmbH & Co. KG. Beltable plastic casing for electric plug connectors. 5,004,101, Cl. 206-343.000.

Neuville Industries, Inc.. *See*—
Hollowell, George E., and Sample, Hugh D., 5,004,132, Cl. 223-1.000.

New England Biolabs, Inc. *See*—
Chen, Shu-zi, and Wilson, Geoffrey G., 5,004,691, Cl. 435-172.300.

Newkirk, Marc S.. *See*—
Burke, John T., and Newkirk, Marc S., 5,004,035, Cl. 164-97.000.

Newsome, R. Wayne. Chimney facade system. 5,003,739, Cl. 52-219.000.

NewTech Products, Inc. *See*—
Meinershagen, Charles I., 5,004,020, Cl. 140-93.600.

Newton, Christopher G. *See*—
Ashton, Michael J., Bridge, Andrew W.; Chambers, Robert K., Dron, Donald I.; Fenton, Garry, Harris, Neil V., Lythgoe, David J., McFarlane, Ian M., Newton, Christopher G., Riddell, David, Smith, Christopher, Stuttle, Keith A. J., and Toft, Malcolm P., 5,004,747, Cl. 514-309.000.

Newton, Geoffrey C. Stump burner. 5,003,890, Cl. 110-239.000.

Ney, Hermann, to U.S. Philips Corporation. Method of recognizing continuously spoken words. 5,005,203, Cl. 381-43.000.

NGK Insulators, Ltd. *See*—
Terada, Nobuhiro; Shimizu, Masataka; and Matsuzawa, Soichiro, 5,003,688, Cl. 29-603.000.

NHK Spring Co., Ltd. *See*—
Kazama, Toshio, 5,004,977, Cl. 324-158.00P.
Ojima, Juji, 5,004,448, Cl. 474-111.000.
Ojima, Juji, 5,004,449, Cl. 474-138.000.

Nichias Corporation. *See*—
Ashizawa, Masaaki, Nishimoto, Kazuo; Oomura, Atsushi, and Ito, Shuji, 5,004,650, Cl. 428-463.000.

Niedospial, John J., to Eastman Kodak Company. Film cassette. 5,004,176, Cl. 242-71.100.

Niessen, Cornelius. *See*—
Van Berkel, Cornelis H.; Saeijs, Ronald W. J. J., and Niessen, Cornelius, 5,005,136, Cl. 364-490.000.

Nifco, Inc.. *See*—
Oshida, Tsutomu, 5,004,306, Cl. 312-319.000.

Nigay, Pierre, to Kilrush Limited. Permanent receptacle for collecting urine from women. 5,004,463, Cl. 604-329.000.

Nihon Dempa Kogyo Co., Ltd.. *See*—
Ueno, Yoshifusa; Tanzawa, Takihei, and Suzuki, Takayuki, 5,004,988, Cl. 331-116.00R.

Nihon Kaiheiki Kogyo Kabushiki Kaisha. *See*—
Ohashi, Shigeo, 5,004,318, Cl. 350-96.200.

Niiro, Yasunori. *See*—
Satoh, Toshio; Niiro, Yasunori; Kakegawa, Hisao, and Matsumoto, Hitoshi, 5,004,742, Cl. 514-226.500.

Niizato, Tomonori. *See*—
Matsumoto, Yukihiro, Yoshihara, Kenji; Kajiura, Tetsuya, Niizato, Tomonori; and Yamada, Noriyuki, 5,003,937, Cl. 123-90.120.

Niki, Etsuko. *See*—
Niki, Motohiro; Niki, Etsuko; Kidachi, Misako, Kidachi, Atsushi, Niki, Mieko; Lee, Kap J.; and Lee, Yun, 5,003,922, Cl. 119-15.000.

Niki, Mieko. *See*—
Niki, Motohiro; Niki, Etsuko, Kidachi, Misako; Kidachi, Atsushi, Niki, Mieko; Lee, Kap J.; and Lee, Yun, 5,003,922, Cl. 119-15.000.

Niki, Motohiro; Niki, Etsuko; Kidachi, Misako; Kidachi, Atsushi; Niki, Mieko; Lee, Kap J., and Lee, Yun. Cage for small experimental animals. 5,003,922, Cl. 119-15.000.

Nikiforov, Ivan I.. *See*—
Goikhman, Yakov A.; Krjukov, Georgy M.; Onotsky, Melis I., Sorokin, Georgy M., Filatov, Alexei V., Tsarapkin, Viktor V.; Yakimov, Vadim P.; Smirnov, Gennady A.; Nikiforov, Ivan I., Burdukovsky, Alexandr I.; Daibov, Sergei V., and Kurdjukov, Alexandr S., 5,004,056, Cl. 175-293.000.

Nikolaev, Jury A.. *See*—
Ulyanitsky, Vladimir J.; Gavrilenko, Tamara P.; Nikolaev, Jury A., and Buteev, Alexandr I., 5,004,021, Cl. 141-67.000.

Nikon Corporation. *See*—
Magome, Nobutaka, 5,004,348, Cl. 356-401.000.

Nilssen, Ole K.. Fluorescent lamp ballast with high power factor. 5,004,947, Cl. 315-224.000.

Nilssen, Ole K. Electronic ballast with shock protection feature. 5,004,955, Cl. 315-119.000.

Nilssen, Ole K. Fluorescent lamp ballast with adjustable lamp current. 5,004,959, Cl. 315-291.000.

Nippon Basic Technology Laboratory Co., Ltd.. *See*—
Nishino, Yoshinori, and Kishigami, Junjiro, 5,004,895, Cl. 219-528.000.

Nippon Colin Co., Ltd. *See*—
White, Curtis D.; and Carpenter, Billy L., 5,003,985, Cl. 128-716.000.

Nippon Hypox Laboratories Incorporated. *See*—
Satoh, Toshio; Niiro, Yasunori, Kakegawa, Hisao, and Matsumoto, Hitoshi, 5,004,742, Cl. 514-226.500.

Nippon Koki Co., Ltd. *See*—
Hayashi, Minoru; Kobari, Koichi; Sato, Kimiharu; and Kishimoto, Junichi, 5,004,586, Cl. 422-164.000.

Nippon Mining Co., Ltd.. *See*—
Tsuji, Masahiro, Kawauchi, Susumu; and Nakayama, Hiroshi, 5,004,520, Cl. 156-630.000.

Nippon Oil and Fats Co., Ltd.. *See*—
Matsuyama, Kazuo, Sugiura, Takashi; and Komai, Takeshi, 5,004,780, Cl. 525-27.000.

Nippon Petrochemicals Company, Ltd. *See*—
Bommer, Jerry C.; and Burnham, Bruce F., 5,004,811, Cl. 540-145.000.
Iida, Shoji; Miyazaki, Kazuo; and Takizawa, Nobuyuki, 5,004,857, Cl. 585-507.000.

Nippon Precision Circuits Ltd.. *See*—
Motai, Noboru; Tanaka, Sakae; and Watanabe, Yoshiaki, 5,005,056, Cl. 357-2.000.

Nippon Seiko Kabushiki Kaisha. *See*—
Yamamoto, Kazuo, 5,004,268, Cl. 280-804.000.

Nippon Steel Corporation. *See*—
Kitamura, Koichi; Mimura, Hidenori; Yamamoto, Kazuo; and Ohta, Yasumitsu, 5,004,903, Cl. 250-208.100.

Nippondenso Co., Ltd.. *See*—
Haraguchi, Hiroshi; Tamura, Hiroshi; Kodama, Katuhiko; and Kondo, Toshio, 5,003,955, Cl. 123-489.000.
Kozaki, Tetsuji, Ishikawa, Hiroshi, Yasui, Hideaki; Shimamoto, Mamoru; Hibino, Katsuhiko; and Suzuki, Motoshi, 5,004,264, Cl. 280-707.000.
Kuroyanagi, Masatoshi; Suzuki, Masahiko; Matsui, Kazuma; Imaeda, Makoto; Nagai, Kouzi; and Ito, Yoshiaki, 5,004,406, Cl. 417-273.000.
Tomita, Masahiro; Hayashi, Satoshi; Oda, Shinro; Fujii, Akira; and Tanigawa, Masayoshi, 5,004,945, Cl. 310-328.000.
Yoshino, Yoshimi, Ao, Kenichi, Izawa, Ichiro; and Arasuna, Toshikazu, 5,005,064, Cl. 357-27.000.

Nishida, Fumihiko. *See*—
Yahata, Makoto; and Nishida, Fumihiko, 5,005,044, Cl. 355-40.000.

Nishida, Sumio. *See*—
Mori, Tatsuya; Ohsumi, Tadashi; Nakamura, Shigeo; Maeda, Kiyoto, Nishida, Sumio; and Takano, Hirotaka, 5,004,816, Cl. 549-462.000.

Nishiguchi, Toshihiko. *See*—
Mutoh, Nariaki; Hanatani, Yasuyuki; and Nishiguchi, Toshihiko, 5,004,662, Cl. 430-59.000.

Nishijima, Mitsuru. *See*—
Hara, Kazumasa, Sano, Yasuro, Koike, Mikio, and Nishijima, Mitsuru, 5,003,896, Cl. 112-121.110.

Nishimoto, Kazuo. *See*—
Ashizawa, Masaaki; Nishimoto, Kazuo; Oomura, Atsushi; and Ito, Shuji, 5,004,650, Cl. 428-463.000.

Nishimura, Tsutomu. *See*—
Hakotani, Yasuhiko; Nakatani, Seiichi; Yuuhaku, Satoru; Nishimura, Tsutomu; and Ishida, Toru, 5,004,715, Cl. 501-136.000.
Nakatani, Seiichi; Yuhaku, Satoru; Nishimura, Tsutomu; Terada, Yukio; and Baba, Yasuyuki, 5,004,640, Cl. 428-195.000.

Nishimura, Yukuo; Eguchi, Ken, Kawada, Haruki; Tomida, Yoshinori, Nakagiri, Takashi, Saito, Kenji; Kimura, Toshiaki; Matsuda, Hiroshi; Sakai, Kunihiro; and Miyazaki, Toshihiko, to Canon Kabushiki Kaisha. Optical recording medium and optical recording method. 5,004,671, Cl. 430-286.000.

Nishino, Yoshinori, and Kishigami, Junjiro, to Nippon Basic Technology Laboratory Co., Ltd. Heater device used for floor material etc. and floor material with heater contained therein. 5,004,895, Cl. 219-528.000.

Nishio, Makoto. *See*—
Suzuki, Syuji; and Nishio, Makoto, 5,005,166, Cl. 370-1.000.

Nissan Motor Co., Ltd.. *See*—
Imaseki, Takashi; and Kobari, Yuji, 5,005,131, Cl. 364-426.020.
Kato, Koichiro; Fukuhara, Hiroshige; Kamishima, Hiroyuki; and Tsukahara, Hitoshi, 5,005,021, Cl. 343-717.000.
Kobayashi, Jiro, 5,004,002, Cl. 137-39.000.
Takahashi, Hiroshi, 5,005,133, Cl. 364-426.040.
Yoneyama, Syuichi; Obana, Yoshinori; and Fujisawa, Eiichi, 5,003,958, Cl. 123-635.000.

Nisshin Flour Milling Co., Ltd.. *See*—
Ogawa, Osamu; Kishi, Ikuo; Tahara, Yoshiyuki; and Sugita, Masanori, 5,004,756, Cl. 514-655.000.
Okamoto, Yasushi; Tahara, Yoshiyuki; and Mishima, Yoshio, 5,004,735, Cl. 514-134.000.

Nissl, Norbert, and Grossler, Peter, to Messerschmitt-Bolkow-Blohm Gesellschaft mit beschrankter Haftung. Hollow of projectile charge. 5,003,884, Cl. 102-476.000.

Nisula, Scott P., and O'Callaghan, Christopher P., to Chevron Research & Technology Company. Composition and method for removal of hydrogen sulfide. 5,004,588, Cl. 423-226.000.

Nitto Kohki Co., Ltd.. *See*—
Kishi, Katsunobu, 5,004,385, Cl. 409-180.000.

Niwano, Masaru. *See*—
Yamamoto, Tetsushi; Niwano, Masaru; and Nakagawa, Etsuo, 5,003,919, Cl. 118-716.000.

NNC Limited. *See*—
Utton, Donald B.; and Windebank, Stephen R., 5,004,354, Cl. 374-29.000.

Nobles, Charles M.. *See*—
Ivers, Douglas E.; and Nobles, Charles M., 5,004,079, Cl. 188-282.000.

Nogawa, Atsuhiko, to Terumo Kabushiki Kaisha. Plug and blood circulation device with the plug. 5,004,113, Cl. 215-358.000.

Nohara, Makoto. *See*—
Ida, Tomoyasu; Nohara, Makoto; and Seo, Nobuyuki, 5,004,980, Cl. 324-166.000.

Noll, John R.; and Montvila, Stephen V., to Electrolux Water Systems, Inc. Fluid purification system. 5,004,541, Cl. 210-251.000.

Nolle, William. *See*—
Markow, Paul A.; Nolle, William, and Bell, Charles L., 5,004,976, Cl. 324-154.00R.

Nolte, David D.. *See*—
Glass, Alastair M.; Knox, Wayne H.; and Nolte, David D., 5,004,325, Cl. 350-354.000.

Nomura, Isao; and Narita, Kenichi, to Mitsubishi Gas Chemical Company, Inc. Electromagnetic wave-shielding thermoplastic resin composition. 5,004,561, Cl. 252-511.000.

Nomura, Kenji. *See*—
Kobayashi, Toshio; Uchikawa, Fusaoki, Nomura, Kenji; Morita, Masao; and Yokoyama, Shouichi, 5,004,720, Cl. 505-1.000.

Nordica S.p.A.. *See*—
Pozzobon, Alessandro, 5,003,710, Cl. 36-117.000.

Nordisk Gentofte. *See*—
Kuo, George, Masiarz, Frank; Truett, Martha; and Valenzuela, Pablo, 5,004,804, Cl. 530-387.000.

Norgren, Lars E.. *See*—
Hessman, Ingemar; Post, Karl G. Y., and Norgren, Lars E., 5,004,380, Cl. 407-114.000.

Norita, Toshio; Ishida, Tokuji; Hamada, Masataka, and Ishibashi, Kenji, to Minolta Camera Kabushiki Kaisha. Automatic focus adjusting apparatus of a camera. 5,005,040, Cl. 354-402.000.

Normalair-Garrett (Holdings) Ltd.. *See*—
Hamlin, Humphrey A. S.; and Harral, Michael W., 5,004,485, Cl. 55-160.000.

Norris, Dale M. Method for inducing resistance in plants using environmentally safe antioxidants. 5,004,493, Cl. 71-88.000.

North American Philips Corporation. *See*—
Goldburt, Efim S.; and Hemmer, Richard E., 5,004,625, Cl. 427-38.000.
Latassa, Frank M.; and Leyh, Thomas O., 5,004,949, Cl. 313-492.000.
Shaulov, Avner A.; Herko, Samuel P.; Dorman, Donald R.; and Bhargava, Rameshwar N., 5,004,726, Cl. 505-1.000.
Skinner, Kenneth R., 5,005,084, Cl. 358-194.100.

Northrop Corporation. *See*—
Richardson, William T., 5,003,631, Cl. 2-6.000.

Norton Company. *See*—
Hay, Robert A.; Willkens, Craig A.; and Arsenault, Normand P., 5,004,544, Cl. 210-490.000.

Norton, Paul R.; Moroz, Michael; and Talley, Carol S., to Santa Barbara Research Center. Method of making photodetector with P layer covered by N layer. 5,004,698, Cl. 437-3.000.

Norwegian Contracts A/S. *See*—
Rosendahl, Finn; Fjeld, Svein; Salama, Mamdouh M.; and Gillen, Michael P., 5,004,051, Cl. 166-357.000.

Nottingham, John R.; Spirk, John W., Jr., and Brokaw, Paul E., to G & S Metal Products Company, Inc. Microwavable metal baking pan with insulating girdle. 5,004,882, Cl. 219-10.55E.

Nowak, William J.. *See*—
Stokes, Ronald E.; Nowak, William J.; Attardi, Anthony A.; and Costanza, Daniel W., 5,005,054, Cl. 355-273.000.

Nowick, James S.. *See*—
Danheiser, Rick L.; and Nowick, James S., 5,004,815, Cl. 549-328.000.

NSM Apparatebau GmbH & Co. KG. *See*—
Menke, Wilhelm, 5,004,247, Cl. 273-376.000.

nuArc Company, Inc.. *See*—
Leonhart, Charles J., 5,005,048, Cl. 355-93.000.

Nuding, Wolfgang. *See*—
Link, Rainer, and Nuding, Wolfgang, 5,003,831, Cl. 73-865.900.

Nugues, Pierre. *See*—
Ikes, Jacques; Le Fur, Joel; and Nugues, Pierre, 5,004,952, Cl. 315-3.500.

N.V. Verbrugge. *See*—
Blontrock, Daniel, 5,004,019, Cl. 139-91.000.

Nysten, Bernhard, to William Prym-Werke GmbH. & Co. KG. Snap fastener. 5,003,673, Cl. 24-662.000.

O&K Orenstrein & Koppel Aktiengesellschaft. *See*—
Schwappach, Dieter, 5,004,397, Cl. 414-686.000.

Oba, Hidehiro. *See*—
Kato, Senji; and Oba, Hidehiro, 5,003,950, Cl. 123-422.000.

Obana, Yoshinori. *See*—
Yoneyama, Syuichi; Obana, Yoshinori; and Fujisawa, Eiichi, 5,003,958, Cl. 123-635.000.

Oblak, Tod A.. *See*—
Lipchak, John B.; Oblak, Tod A.; Bednar, Fred H., Ciaramitaro, William; Hughes, Francis R., Smith, John R.; and Gisoni, Gregory A., 5,005,142, Cl. 364-550.000.

O'Brien, Edward F.. *See*—
Sogge, Dale R.; O'Brien, Edward F.; and Czarn, David A., 5,004,876, Cl. 200-83.00P.

O'Callaghan, Christopher P.. *See*—
Nisula, Scott P.; and O'Callaghan, Christopher P., 5,004,588, Cl. 423-226.000.

O'Callaghan, Wilfred B.. *See*—
Hunter, John A.; Scamans, Geoffrey M., O'Callaghan, Wilfred B., and Wycliffe, Paul A., 5,004,654, Cl. 429-50.000.

Ochiai, Masami: *See—*
Kanai, Takashi; Ochiai, Masami; Oshina, Morio; and Sonoda, Mitsuo, 5,003,776, Cl. 60-434.000.

Ochs, Heinrich: *See—*
Franz, Karl-Heinz; Ochs, Heinrich; and Difflipp, Kurt, 5,003,871, Cl. 101-148.000.

Ociepka, Val S.: *See—*
Horgan, John J.; and Ociepka, Val S., 5,004,044, Cl. 165-145.000.

O'Connor, James T.; and Courtright, David A., to SGS-Thomson Microelectronics, Inc. System for synchronizing data frame groups in a serial bit stream. 5,005,191, Cl. 375-116.000.

Oda, Shinro. *See—*
Tomita, Masahiro; Hayashi, Satoshi; Oda, Shinro; Fujii, Akira, and Tanigawa, Masayoshi, 5,004,945, Cl. 310-328.000.

Office National d'Etudes et de Recherches Aerospatiales: *See—*
Falempin, Francois, 5,004,187, Cl. 244-53.00B.

Ogai, Mikio: *See—*
Fukushima, Toru; Takabayashi, Tsunehisa; and Ogai, Mikio, 5,005,179, Cl. 372-46.000.

Oganesyan, Suren. Method of making a channel set ring. 5,003,678, Cl. 29-10.000.

Ogasawara, Hiromitsu, to Tachi-S Co., Ltd. Method and device for controlling slide motion of a vehicle seat. 5,004,967, Cl. 318-568.100.

Ogawa, Hiroshi. *See—*
Fudono, Kanji; Ogawa, Hiroshi; Takahashi, Toshimasa; and Yamashita, Toshio, 5,003,786, Cl. 62-156.000.

Ogawa, Masahide, Sato, Teiji, Tanaka, Masanori; and Takahashi, Noriyuki, to Mizusawa International Chemicals, Ltd. Synthetic stevensite and process for preparation thereof. 5,004,716, Cl. 501-141.000.

Ogawa, Masanobu; and Shibata, Shinya, to Asahi Glass Company, Ltd. Transparent glass antenna for an automobile. 5,005,020, Cl. 343-713.000.

Ogawa, Masao, to Brother Kogyo Kabushiki Kaisha. Apparatus for disconnecting a needle bar and threading on a sewing machine. 5,003,899, Cl. 112-221.000.

Ogawa, Masao, to Brother Kogyo Kabushiki Kaisha. Thread securing device in a sewing machine. 5,003,900, Cl. 112-242.000.

Ogawa, Osamu; Kishi, Ikuo; Tahara, Yoshiyuki; and Sugita, Masanori, to Lederle (Japan) Ltd., and Nisshin Flour Milling Co., Ltd. Anticancer activity potentiator. 5,004,756, Cl. 514-655.000.

Ogawa, Yukio; Hirohata, Michio; Kodaira, Takanori; and Miyawaki, Makoto, to Canon Kabushiki Kaisha. Focal length changeable camera. 5,005,038, Cl. 354-400.000.

Ogilvie, Kelvin K.: *See—*
Fortin, J. Andre ; Ogilvie, Kelvin K ; Tsantrizos, Youla S., and Kope, Harry H., 5,004,754, Cl. 514-570.000.

Oh, Myung H.; Lee, Kyung J ; Chung, In J., Lee, Nam Y ; and Kim, Myung S., to Korea Institute of Science and Technology. Fabrication method for high voltage zinc oxide varistor. 5,004,573, Cl. 264-61.000.

Ohashi, Shigeo, to Nihon Kaiheiki Kogyo Kabushiki Kaisha. Small optical fiber switch. 5,004,318, Cl. 350-96.200.

Ohba, Yasuo: *See—*
Izumiya, Toshihide; Ohba, Yasuo; and Hatano, Ako, 5,005,057, Cl. 357-17.000.

Ohnishi, Akio: *See—*
Iwanaga, Takeshi; and Ohnishi, Akio, 5,004,242, Cl. 273-169.000.

Ohnuki, Ichiro: *See—*
Akashi, Akira; Kadohara, Terutake; Ohnuki, Ichiro; and Higashihara, Masaki, 5,005,037, Cl. 354-400.000.

Ohsumi, Tadashi: *See—*
Mori, Tatsuya, Ohsumi, Tadashi; Nakamura, Shigeo, Maeda, Kiyoto; Nishida, Sumio; and Takano, Hirotaka, 5,004,816, Cl. 549-462.000.

Ohta, Wasaburo: *See—*
Yagawara, Shinji; Manaka, Junji; and Ohta, Wasaburo, 5,003,812, Cl. 73-31.060.

Ohta, Yasumitsu: *See—*
Kitamura, Koichi; Mimura, Hidenori; Yamamoto, Kazuo, and Ohta, Yasumitsu, 5,004,903, Cl. 250-208.100.

Ohtaka, Keiji: *See—*
Suda, Yasuo; Ohtaka, Keiji; Suzuki, Kenji, Ishizaki, Akira, and Aoyama, Keisuke, 5,005,041, Cl. 354-407.000.

Ohtani, Junji; Anno, Masahiro; Sano, Eiichi, Machida, Junji, and Masuda, Fumio, to Minolta Camera Kabushiki Kaisha. Toner containing polymeric-magnetic coordination complex. 5,004,665, Cl. 430-106.600.

Ohtuka, Nobuo; and Matsumoto, Kouichi, to Sanyo Electric Co., Ltd. Hybrid circuit module having bridge circuit and rectifying circuit disposed on a same substrate. 5,005,113, Cl. 363-37.000.

Ohzeki, Yoshiyuki; and Amikura, Kazuo, to Copal Co., Ltd. Stepper motor with input connector array. 5,004,941, Cl. 310-49.00R.

Oil-Dri Corporation of America: *See—*
Brooks, David D.; Brophy, Shirley A.; and Goss, George R., 5,004,570, Cl. 260-427.000.

Ojima, Juji, to NHK Spring Co., Ltd. Tensioner. 5,004,448, Cl. 474-111.000.

Ojima, Juji, to NHK Spring Co., Ltd. Sealed tensioner. 5,004,449, Cl. 474-138.000.

Oka, Tateki: *See—*
Toyoshi, Naoki; Oka, Tateki; and Goto, Hiroshi, 5,003,917, Cl. 118-653.000.

Okada, Haruo: *See—*
Takahashi, Hiroaki; Okada, Haruo; Matsumoto, Katsuya; and Umino, Masuo, 5,004,546, Cl. 210-635.000.

Okada, Kazuo, to Universal Company, Ltd. Ball-shooting game machine. 5,004,238, Cl. 273-121.00B.

Okada, Kazuo: *See—*
Seya, Masatomo; Tadokoro, Michihiro; and Okada, Kazuo, 5,004,900, Cl. 250-201.500.

Okada, Keiji: *See—*
Tojo, Tetsuo; Okada, Keiji; Nakahara, Takashi; and Kikuchi, Yoshiharu, 5,004,787, Cl. 525-332.100.

Okamoto, Yasushi, Tahara, Yoshiyuki, and Mishima, Yoshio, to Nisshin Flour Milling Co., Ltd. Pharmaceutical compositions for the inhibition of tumor metastasis. 5,004,735, Cl. 514-134.000.

Okamoto, Yoshihisa: *See—*
Klemarczyk, Philip T.; and Okamoto, Yoshihisa, 5,004,842, Cl. 568-640.000.

Okamura, Masatoshi; Namioka, Takashi, and Shiba, Haruo, to TDK Corporation. Magnetic tape cassette. 5,004,180, Cl. 242-198.000.

Okano, Masaru: *See—*
Shibazaki, Toshiji; Okano, Masaru; Kishida, Naoto; Ozaki, Yoshihiro; and Iyama, Kunihiko, 5,004,996, Cl. 338-36.000.

Okayasu, Hideo: *See—*
Okayasu, Kenji, and Okayasu, Hideo, 5,003,709, Cl. 36-107.000.

Okayasu, Kenji; and Okayasu, Hideo, to Rikio Co., Ltd. Prick-preventing shoe. 5,003,709, Cl. 36-107.000.

Okazaki, Kakuma, and Kitamura, Takayuki, to Japan Aircraft Mfg. Co., Ltd. Deployable and collapsible structure. 5,003,736, Cl. 52-108.000.

Okazaki, Tadashi: *See—*
Hara, Yasuhiro, Inoue, Mitsuhiro; Baba, Hideo, Okazaki, Tadashi, and Kudo, Shigeru, 5,004,089, Cl. 192-107.00M.

Okimoto, Haruo: *See—*
Shibata, Masanori, Okimoto, Haruo, Akagi, Toshimichi; and Tashima, Seiji, 5,003,781, Cl. 60-600.000.

Okino, Tadashi. *See—*
Fukushima, Nobuo, Sakai, Shinji; Takdea, Osamu, Takei, Masahiro; Suzuki, Yasutomo; Okino, Tadashi; and Jinnai, Shigeru, 5,005,088, Cl. 360-69.000.

Okita, Hajime: *See—*
Taguchi, Toshio; and Okita, Hajime, 5,003,706, Cl. 34-92.000.

Okuda, Jun. *See—*
Mochida, Eiji; Murakami, Kimihiro, Kato, Kazuo; Kato, Katsuaki, Okuda, Jun; and Miwa, Ichitomo, 5,004,751, Cl. 514-390.000.

Okui, Susumu, to Konica Corporation. Document conveyance apparatus facilitating conveyance belt replacement. 5,004,223, Cl. 271-275.000.

Okun, Jerome M. *See—*
Perlman, Stephen G., Okun, Jerome M., Palevich, John H ; and Lundblad, James A , 5,005,011, Cl. 340-728.000.

Okutsu, Eiichi, Hirano, Mitsunori, and Yagihara, Morio, to Fuji Photo Film Co., Ltd. High-contrast development process for silver halide photographic material. 5,004,670, Cl. 430-265.000.

Olesen, Paul, to Swingline Inc. Guide anvil including movable clinching wings for stapler. 5,004,142, Cl. 227-155.000.

Olin Corporation. *See—*
Roberts, Katherine P., Geiger, Jon R.; and Carney, Jayne F., 5,004,682, Cl. 435-6.000.
Wood, Richard B., Mullins, Richard M., and Wojtowicz, John A., 5,004,549, Cl. 210-699.000.

Olivier, Michel. *See—*
Rotman, Frederic; Rancon, Yannick; Queille, Philippe, and Olivier, Michel, 5,004,489, Cl. 65-32.200.

Olsen, Eric. Fluid foil system. 5,003,903, Cl. 114-102.000.

Olson, Larry D , and Kamla, Jeffrey R., to Allied-Signal Inc. Polyimide resin laminates. 5,004,775, Cl. 524-371.000.

Olson, Thomas E , and Vigil, Dennis M., to InterVentional Technologies, Inc. Apparatus for manufacturing atherectomy torque tubes. 5,003,918, Cl. 118-665.000.

Olympus Optical Co., Ltd. *See—*
Matsui, Hiroshi, and Toda, Akitoshi, 5,004,902, Cl. 250-201.800.
Miyasaka, Tetsuo, 5,005,033, Cl. 354-289.100.
Takayama, Syuichi; Tsukaya, Takashi; Ueda, Yasuhiro; Hatta, Shinji; and Abe, Masashi, 5,003,991, Cl. 128-784.000.
Tsuchida, Hirofumi, 5,004,329, Cl. 350-427.000.

Omaki, Takanobu. *See—*
Fujino, Akihiko; Inoue, Manabu; Omaki, Takanobu; Nakai, Masaaki, Fujii, Akira, and Sekida, Minoru, 5,005,047, Cl. 354-442.000.

Omar S.n c. di Mario Baiocchi Alinovi & C. *See—*
Alinovi, Mario B., 5,003,667, Cl. 452-125.000.

Omron Tateisi Electronics Co. *See—*
Nakamura, Arata, 5,004,908, Cl. 250-221.000.

Onan Corporation: *See—*
Fanner, John C , and Halstead, Nick V., 5,003,949, Cl. 123-382.000.

Ono Pharmaceutical Co., Ltd. *See—*
Kim, Soonih; Takeda, Kazuhisa; and Sasatani, Seiei, 5,004,612, Cl. 424-450.000.

Onoda, Shigeyoshi: *See—*
Saijo, Yasutsugu; Chiku, Kazuyoshi; and Onoda, Shigeyoshi, 5,004,336, Cl. 353-122.000.

Onodera, Norio, to Alps Electric Co., Ltd. Stress-relieving flexible circuit board holder plate. 5,005,105, Cl. 361-398.000.

Onotsky, Melis I. *See—*
Goikhman, Yakov A.; Krjukov, Georgy M.; Onotsky, Melis I., Sorokin, Georgy M., Filatov, Alexei V , Tsarapkin, Viktor V , Yakimov, Vadim P , Smirnov, Gennady A , Nikiforov, Ivan I., Burdukovsky, Alexandr I., Daibov, Sergei V.; and Kurdjukov, Alexandr S., 5,004,056, Cl. 175-293.000.

Onoue, Akihiro, to Sanshin Kogyo Kabushiki Kaisha. Speed detecting device for marine propulsion unit. 5,004,439, Cl. 440-2.000.

Onufrak, Andrew F.: *See—*
Brown, Donald G.; and Onufrak, Andrew F., 5,004,205, Cl. 248-476.000.

Oohinata, Osamu; and Yanagida, Jun. Cosmetic applicator and method of producing the same. 5,003,660, Cl. 15-244.100.

Oohira, Jun: *See—*
Uda, Masashi; and Oohira, Jun, 5,004,466, Cl. 604-385.200.

Oomae, Tadayuki: *See—*
Mashita, Kentaro; Fujii, Takeshi; and Oomae, Tadayuki, 5,004,782, Cl. 525-64.000.

Oomura, Atsushi: *See—*
Ashizawa, Masaaki; Nishimoto, Kazuo; Oomura, Atsushi; and Ito, Shuji, 5,004,650, Cl. 428-463.000.

Oono, Toshio; and Uemura, Hiroki, to Aisin Takaoka Co., Ltd. Ventilated disk and process for making same. 5,004,078, Cl. 188-218.00A.

Opelz, Gerhard: *See—*
Terness, Peter; and Opelz, Gerhard, 5,004,604, Cl. 424-85.500.

Oppenlaender, Knut: *See—*
Vogel, Hans-Henning; Rath, Hans P.; Jakob, Claus P.; and Oppenlaender, Knut, 5,004,478, Cl. 44-398.000.

O'Quinn, Alethea H.: *See—*
Presswood, J. Kenneth; and O'Quinn, Alethea H., 5,004,627, Cl. 427-133.000.

Orama, Angel M.: *See—*
Cherukuri, Subraman R., Chau, Tommy L.; Raman, Krishna P.; and Orama, Angel M., 5,004,595, Cl. 424-48.000.

Orbisphere Corporation: *See—*
Hale, John M., 5,004,532, Cl. 204-415.000.

Orlandi, Ireneo, to Alfa Costruzioni Meccaniche S.p.A. Device for the alignment of bottles provided with a reference molding in rotary labeling machinery. 5,004,517, Cl. 156-567.000.

Orscheln Co.: *See—*
Carlson, Harold L.; DeWitt, Michael D.; Martel, Louis, Jr.; Kelley, Larry W., and Tayon, Jeffrey E., 5,004,077, Cl. 188-2.00D.

Orschlen Co.: *See—*
Italiano, Anthony J., 5,003,837, Cl. 74-501.50R.

Orthopedic Designs, Inc. *See—*
Azer, Samir N.; Salman, Naser N.; and Krause, William R., 5,003,969, Cl. 128-87.00R.

Osborn, John J. Polar co-ordinate digitizer. 5,004,870, Cl. 178-18.000.

Osborne, James L.; Nelson, Melinda; Enscore, David J.; Yum, Su I., and Gale, Robert M., to ALZA Corporation. Subsaturated nicotine transdermal therapeutic symstem. 5,004,610, Cl. 424-448.000.

O'Shea, Thomas M. *See—*
Koblitz, Francis F.; O'Shea, Thomas M.; Stoner, Beverly A.; and Yula, Joseph J., 5,004,869, Cl. 174-84.00C.

Oshida, Tsutomu, to Nifco, Inc. Drawer device. 5,004,306, Cl. 312-319.000.

Oshima, Hisaichi; and Yamashita, Masami, to Furuno Electric Co., Ltd. Thermal recorder. 5,005,027, Cl. 346-76.0PH.

Oshima, Yoshitaka: *See—*
Kakinoki, Yoshikazu; Nakashima, Masato; Koezuka, Tetsuo; Hiraoka, Noriyuki; Tsukahara, Hiroyuki; Suto, Yoshinori; Oshima, Yoshitaka; and Hashinami, Shinji, 5,004,929, Cl. 250-561.000.

Oshina, Morio: *See—*
Kanai, Takashi; Ochiai, Masami; Oshina, Morio; and Sonoda, Mitsuo, 5,003,776, Cl. 60-434.000.

Osip, Thomas W.; Montgomery, Jerold W.; and Pezzoli, Paul A., to Abbott Laboratories. Retortable closure for plastic container. 5,004,110, Cl. 215-232.000.

Oslapas, Algis; and Rumpel, Manfred, to Ford Motor Company. Steering system for the rear wheels of a vehicle. 5,004,063, Cl. 180-79.100.

Ostergaard, David A., to Cedarapids, Inc. Impeller bar assembly with adjustable locking mechanism. 5,004,169, Cl. 241-192.000.

Ostoich, Vladimir E.: *See—*
Hillman, Robert S.; Cobb, Michael E.; Allen, Jimmy D.; Gibbons, Ian; Ostoich, Vladimir E., and Winfrey, Laura J., 5,004,923, Cl. 250-341.000.

Osypka, Peter. Apparatus for implanting electrodes and the like in animal bodies. 5,003,990, Cl. 128-772.000.

Otaka, Ken; Matsuo, Noritada; Tsushima, Kazunori; and Yano, Toshihiko, to Sumitomo Chemical Company, Limited. Novel carboxylic acid esters, method for their production and insecticides containing them as active ingredient. 5,004,753, Cl. 514-531.000.

Otis Engineering Corporation: *See—*
Arterbury, Bryant A., 5,004,049, Cl. 166-228.000.

Otokawa, Mitsuhiro; and Takimoto, Hiroyuki, to Canon Kabushiki Kaisha. Brushless motor with torque compensation. 5,004,965, Cl. 318-254.000.

Otsu, Hitonobu: *See—*
Ishibai, Isao; and Otsu, Hitonobu, 5,004,330, Cl. 350-432.000.

Oudet, Claude; Drey, Gilbert; and Veignat, Norbert, to Portescap. Method of manufacturing a synchronous electric motor with magnetized rotar. 5,003,686, Cl. 29-596.000.

Ovonic Synthetic Materials Company Inc.: *See—*
Ovshinsky, Stanford R.; and Young, Rosa, 5,004,725, Cl. 505-1.000.

Ovshinsky, Stanford R.; and Young, Rosa, to Ovonic Synthetic Materials Company Inc. Parametrically modified superconductor material. 5,004,725, Cl. 505-1.000.

Owen, Donald W., to Southwest Electric Company. Transient-filtered transformer. 5,005,100, Cl. 361-35.000.

Oyama, Masayuki, to Mitsuba Electric Mfg. Co., Ltd. Method of mounting and demounting molds to and from press molding machine. 5,003,809, Cl. 72-446.000.

Ozaki, Takeo: *See—*
Suzuki, Susumu; Ishida, Kazuyuki; and Ozaki, Takeo, 5,003,977, Cl. 128-633.000.

Ozaki, Yoshihiro: *See—*
Shibazaki, Toshiji; Okano, Masaru; Kishida, Naoto; Ozaki, Yoshihiro; and Iyama, Kunihiko, 5,004,996, Cl. 338-36.000.

Ozawa, Nobuyuki: *See—*
Tomura, Yoshihiro; Maruhashi, Keiji; and Ozawa, Nobuyuki, 5,004,364, Cl. 401-110.000.

Pabon, Delfin: *See—*
Grunert, Kurt A.; Pabon, Delfin; and Cheski, Ronald A., 5,005,104, Cl. 361-355.000.

Paccar Inc.: *See—*
Foot, John, 5,004,062, Cl. 180-69.210.

Pacific Chemical Co., Ltd.: *See—*
Kim, Young D.; and Ha, Byung J., 5,004,737, Cl. 514-182.000.

Packaging Industries Group, Inc.: *See—*
Berkley, Robert D.; and Shaughnessy, Terry P., 5,003,722, Cl. 43-3.000.

Padget, John C.: *See—*
Humphries, Martyn; Nemcek, Jozef; Padget, John C.; and Mollett, Christopher C., 5,004,631, Cl. 427-385.500.

Paepke, Edwin E. Cleaning apparatus. 5,003,659, Cl. 15-209.00D.

Pagano, Daniel M., to Eastman Kodak Company. Camera operating mechanism. 5,005,035, Cl. 354-206.000.

Pahnke, Klaus-Dieter; Holl, Rolf; and Becker, Wilfried, to Rheinmetall GmbH. Projectile for combatting actively and passively recting armor. 5,003,886, Cl. 102-521.000.

Pai, Damodar M.: *See—*
Badesha, Santokh S.; Stolka, Milan; Pai, Damodar M.; and Abkowitz, Martin A., 5,004,663, Cl. 430-59.000.

Palermo, Robert E.: *See—*
DeCaul, Lorenzo C.; Han, Scott; Palermo, Robert E.; and Walsh, Dennis E., 5,004,856, Cl. 585-500.000.

Palevich, John H.: *See—*
Perlman, Stephen G.; Okun, Jerome M.; Palevich, John H.; and Lundblad, James A., 5,005,011, Cl. 340-728.000.

Palfray, Michel, to Establissements Proteor. Prosthesis for leg amputation and a process for its manufacture. 5,004,477, Cl. 623-53.000.

Palfy, Robert M.: *See—*
MacLennan, Charles; Hamilton, Douglas D.; and Palfy, Robert M., 5,004,026, Cl. 144-3.00D.

Palmer, Leon Robert. Mechanical pencil. 5,004,362, Cl. 401-53.000.

Palmieri, Beniamino; and Garlati, Rodolfo, to Ricerche Biomediche S.r.l. Improvements in automatic mechanical suturing guns. 5,004,469, Cl. 606-139.000.

Pandl, Klaus; and Patsch, Manfred, to BASF Aktiengesellschaft. Copper formazan reactive dyes containing a monofluorotriazine or monochlorotriazine group. 5,004,807, Cl. 534-618.000.

PanZhiHua Iron & Steel Co.: *See—*
Yu, Meng W.; Su, Shihuai; Chen, Yue Z.; Zheng, Ticheng; Ji, Kebin; Ling, Shou R.; Lin, Jian C.; Deng, Jianhui; and Zhang, Kunwu, 5,004,510, Cl. 148-146.000.

Paquette, Louis J., to Du Pont de Nemours, E. I., and Company. Dry disconnect coupling and safety cap for portable tanks. 5,004,209, Cl. 251-144.000.

Paraska, Theodore F.: *See—*
Lapp, Roger H.; and Paraska, Theodore F., 5,003,687, Cl. 29-600.000.

Pardridge, William M., to Univ. of CA; and Alkermes. Cationized antibodies for delivery through the blood-brain barrier. 5,004,697, Cl. 436-547.000.

Pareschi, Flavio: *See—*
Cardani, Silvestro; and Pareschi, Flavio, 5,003,999, Cl. 134-105.000.

Park, Chang M.; and Schammel, Wayne P., to Amoco Corporation. Process for oxidation of alkyl aromatic compounds. 5,004,830, Cl. 562-413.000.

Park, Eugene S.; and Aghajanian, Michael K., to Lanxide Technology Company, LP. Method of surface bonding materials together by use of a metal matrix composite, and products produced thereby. 5,004,034, Cl. 164-97.000.

Parker, A. Bruce; and Miller, Donna F., to Parker Medical Associates. Roll form medical bandaging product, method of constructing same and container for roll form bandaging product. 5,003,970, Cl. 128-90.000.

Parker, Jeffery R.: *See—*
Pristash, David J.; and Parker, Jeffery R., 5,005,108, Cl. 362-31.000.

Parker Medical Associates: *See—*
Parker, A. Bruce; and Miller, Donna F., 5,003,970, Cl. 128-90.000.

Parker, Robert P.: *See—*
Rumreich, Mark F.; and Parker, Robert P., 5,005,201, Cl. 381-24.000.

Parrette, Kim S.: *See—*
Roach, John E.; and Parrette, Kim S., 5,003,907, Cl. 114-221.00R.

Parris, Michael. Roll-type toilet tissue having hemorrhoid-treating medication therein. 5,004,636, Cl. 428-43.000.

Parschat, Lothar: *See—*
Pleschiutschnigg, Fritz-Peter; Parschat, Lothar; Franzen, Hans U.; Pfluger, Manfred; and Glaser, Josef, 5,004,040, Cl. 164-453.000.

Parsons, Gerald J.; Greenwald, Brian D.; McGrath, John J.; and Andrasko, Stephen W., to Communications Test Design, Inc. Method and apparatus as for testing a telephone line interface card. 5,005,197, Cl. 379-21.000.

Pasternak, Mordechai; Bartels, Craig R.; and Reale, John, Jr., to Texaco Inc. Process for pervaporization using membrane separating means. 5,004,861, Cl. 585-818.000.

Pastorius, Walter J.: *See—*
Pryor, Timothy R.; Hageniers, Omer L.; Pastorius, Walter J.; Liptay-Wagner, Nicholas; and Clarke, Donald A., 5,004,339, Cl. 356-241.000.

Patel, Ambelal R.: *See—*
Cortolano, Frank P.; Seltzer, Raymond; and Patel, Ambelal R., 5,004,770, Cl. 524-99.000.

Paton, Anthony D.: *See—*
Bartky, W. Scott; Paton, Anthony D.; Temple, Stephen; and Michaelis, A. John, 5,003,679, Cl. 29-25.350.

Patronis, Eugene T. Cinema sound system for unperforated screens. 5,004,067, Cl. 181-188.000.

Patsch, Manfred: *See—*
Pandl, Klaus; and Patsch, Manfred, 5,004,807, Cl. 534-618.000.

Patterson, E. Ennalls. Carton handling device. 5,004,145, Cl. 229-117.260.

Patton, Robert T.; Vaughn, Walter L.; and McKeand, Thomas J., Jr., to Dow Chemical Company, The. Biocidal foams. 5,004,760, Cl. 521-149.000.

Paul, James L.: *See—*
Broussard, Jerry A.; Auerbach, Andrew B.; Yang, Nan L.; Paul, James L.; Zheng, Yong C.; and Zhang, Chong L., 5,004,798, Cl 528-230.000.

Paul, Marius A. Gas turbine engine. 5,003,766, Cl. 60-39.150.

Pauley, Gary T.: *See—*
Bobst, Albert M.; and Pauley, Gary T., 5,004,809, Cl. 536-29.000.

Pauwels, Robert S.: *See—*
Vermeulen, Leon L.; Pauwels, Robert S.; De Smedt, Willy P.; and Vervloet, Ludovicus H., 5,004,659, Cl. 430-14.000.

Okayasu, Kenji, and Okayasu, Hideo, 5,003,709, Cl. 36-107.000.

Ringel, Konrad *See—*
Rudolf, Karl, and Ringel, Konrad, 5,003,885, Cl. 102-494.000.

Rink, Hans, to Ciba-Geigy Corporation. Synthetic polystyrene resin and its use in solid phase peptide synthesis. 5,004,781, Cl. 525-54.110.

Riordan, Dennis E. Kit containing components for an alarm screen assembly. 5,005,000, Cl. 340-550.000.

Rist, Dieter *See—*
Kappler, Guenter, and Rist, Dieter, 5,003,768, Cl. 60-39.230.

RIV-SKF Officine di Villar Perosa S.p.A. *See—*
Varvello, Angelo, Vignotto, Angelo, and Moretti, Roberto, 5,004,358, Cl. 384-446.000.

Rivero-Olmedo, Jose M. Meter box or meter yoke expansion mechanism. 5,003,821, Cl. 73-201.000.

RJ Lee Group, Inc. *See—*
Lee, Richard J., Smith, Barbara A.; Theys, Robert G., Theys, Robert A., and Murphy, Judy A., 5,004,920, Cl. 250-304.000.

Roach, John E., and Parrette, Kim S. Boat hook. 5,003,907, Cl. 114-221.00R.

Robb, Stephen P., Phipps, John P., and Gadberry, Michael D., to Motorola, Inc. Avalanche stress protected semiconductor device having variable input impedance. 5,005,061, Cl. 357-23.130.

Robb, Wendell E., and Hudson, William S. Foreign matter trap for shower drain. 5,003,642, Cl. 4-287.000.

Robbins, Alan K. *See—*
Enquist, Lynn W., Robbins, Alan K., and Whealy, Mary E., 5,004,693, Cl. 435-235.100.

Robbins, David L. Method and apparatus for slowly dispensing a solution for unclogging drains. 5,004,025, Cl. 141-364.000.

Robert Bosch GmbH *See—*
Vishnitsky, Alexander, 5,004,529, Cl. 204-212.000.

Roberts, John D. Fish food dispenser. 5,003,925, Cl. 119-51.040.

Roberts, John K., to K. W. Muth Company, Inc. Method and apparatus for multiple object viewing. 5,005,009, Cl. 340-705.000.

Roberts, Katherine P., Geiger, Jon R., and Carney, Jayne F., to Olin Corporation. Method and kit for detecting live microorganisms in chlorine- or bromine-treated water. 5,004,682, Cl. 435-6.000.

Roberts, Malcolm T. *See—*
Robins, Michael P., and Roberts, Malcolm T., 5,005,128, Cl. 364-424.020.

Robertson, Donald S., and Stinard, Philip S., to Iowa State University Research Foundation, Inc. Dominant amylose-extender mutant of maize. 5,004,864, Cl. 800-235.000.

Robins, Michael P., and Roberts, Malcolm T., to General Electric Company, p.l.c., The. Automated vehicle control. 5,005,128, Cl. 364-424.020.

Robinson, Hugh *See—*
Kleven, Lawrence P.; Agranat, Edward A.; Crisafulli, Jerry; Robinson, Hugh; Smith, David J., Wiseley, Thomas, Fortier, Richard C., Johnson, Severne, and Menzin, Marvin, 5,004,954, Cl. 315-106.000.

Robinson, James P.: *See—*
Hoodenpyle, James W.; Robinson, James P.; and Wright, John W., 5,003,818, Cl. 73-121.000.

Robinson, William O.: *See—*
Moote, Richard K.; Weber, Gregory T.; and Robinson, William O., 5,003,944, Cl. 123-299.000.

Rocke, Stephen C.: *See—*
Lee, Guo-shuh J.; Garces, Juan M.; Maj, Joseph J.; and Rocke, Stephen C., 5,004,841, Cl. 568-678.000.

Rockwell International Corporation *See—*
Brown, Donald G.; and Onufrak, Andrew F., 5,004,205, Cl. 248-476.000.
Hall, Randolph L.; and Johnson, Christopher D., 5,004,308, Cl. 350-1.700.

Rodgers, Colin, to Sundstrand Corporation. Gas turbine starter system with power augmentation. 5,003,767, Cl. 60-39.142.

Rodriguez, Stephen S.. *See—*
D'Ottavio, Eugene D.; Hawkins, Robert E.; Rodriguez, Stephen S.; and Rychwalski, James, 5,004,672, Cl. 430-314.000.

Rohm and Haas Company. *See—*
Hallden-Abberton, Michael P.; Bortnick, Newman M.; Cohen, Leslie A., Freed, William T.; and Fromuth, Harry C., 5,004,777, Cl. 524-433.000.

Rohrscheid, Freimund; Siegemund, Gunter; and Lau, Jurgen, to Hoechst Aktiengesellschaft. Partly fluorinated carboxylic acids and derivatives thereof, processes for their preparation and their use. 5,004,797, Cl. 528-206.000.

Romestad, Gerald C., and Straight, Michael R., to Ashworth Bros., Inc. Replaceable snap-on modular overlay for rod and link turn-curve conveyor belts. 5,004,097, Cl. 198-803.010.

Rollers, Dennis A. Compact sanitary toothbrush. 5,003,658, Cl. 15-185.000.

Rollier, Michel: *See—*
Gremaud, Henri, Gremaud, Martial, and Rollier, Michel, 5,004,930, Cl. 250-561.000.

Rolls-Royce plc *See—*
Cantwell, Hugh F., 5,003,769, Cl. 60-39.281.
England, David R., 5,004,528, Cl. 204-129.200.
Webster, John R., 5,004,059, Cl. 177-210.00R.

Roman, Thomas A.: *See—*
Berner, John M.; and Roman, Thomas A., 5,004,961, Cl. 318-65.000.

Ronchetti, Luigi. *See—*
Stroppina, Mario; and Ronchetti, Luigi, 5,005,076, Cl. 358-135.000.

Roobeek, Cornelis F. *See—*
Van Leeuwen, Petrus W. N. M.; and Roobeek, Cornelis F., 5,004,844, Cl. 568-880.000.

Roper, W. J.: *See—*
Mallard, Bobby J.; Knapp, Richard H., Roper, W. J., and Harrison, Daniel R., 5,004,071, Cl. 182-3.000.

Roschmann, Peter: *See—*
Proksa, Roland, Roschmann, Peter; and van den Berg, Noel J. M., 5,004,983, Cl. 324-322.000.

Rosen, Ake, to Svecia Antiqua Limited. Light-polarizing material in the form of sheets or of a web and a method for the manufacture of the material. 5,004,327, Cl. 350-398.000.

Rosen, Karl G. Crib with vibration attenuating means. 5,003,651, Cl. 5-109.000.

Rosenbaum, Richard: *See—*
Griffin, David, Campbell, Jonathan, Reilly, Michael; and Rosenbaum, Richard, 5,005,122, Cl. 364-200.000.

Rosendahl, Finn, Fjeld, Svein; Salama, Mamdouh M.; and Gillen, Michael P., to Norwegian Contracts A/S, and Conoco Inc. Method and means for cleansing and storing drill cuttings from drilling operations in the sea bottom. 5,004,051, Cl. 166-357.000.

Rosenfield, Gary C.: *See—*
Hans, Paul C.; and Rosenfield, Gary C., 5,004,186, Cl. 244-3.250.

Rosenthal, David S. *See—*
Hammerly, Jeffrey L., and Rosenthal, David S., 5,004,441, Cl. 446-211.000.

Ross, Ludwig; and Schumann, Werener, to Schott Glaswerke. Lightwave guide produced from special substrate glasses by ion exchange against CS^+ ions. 5,004,707, Cl. 501-37.000.

Roth, Roger R., to Honeywell Inc. Integrated power level control and on/off function circuit. 5,004,972, Cl. 323-320.000.

Rotman, Frederic; Rancon, Yannick, Queille, Philippe; and Olivier, Michel, to L'Air Liquide, Societe Anonyme pour l'Etude et l'Exploitation des Procedes Georges Claude. Process for producing a glass-metal connection. 5,004,489, Cl. 65-32.200.

Rousseau, Andre J. *See—*
Boulanger, Alain; and Rousseau, Andre J., 5,004,298, Cl. 299-5.000.

Roussel Uclaf. *See—*
Krief, Alain; and Dumont, Willy, 5,004,840, Cl. 568-486.000.

Rowell, Frances E. Portable resonating platform and T-bar for securing the endpin and enhancing the tone of a cello. 5,003,858, Cl. 84-280.000.

Roy, James P.; and Harris, James P. Radiator cap remover. 5,003,845, Cl. 81-3.400.

Ruane, George W. Salt truck. 5,004,164, Cl. 239-666.000.

Rudolf, Karl, and Ringel, Konrad, to Diehl GmbH & Co. Warhead for an airborne body. 5,003,885, Cl. 102-494.000.

Rudolph, Alan S.: *See—*
Schnur, Joel M., Rudolph, Alan S.; and Testoff, Mary A., 5,004,566, Cl. 260-403.000.

Ruetz, Peter A., to LSI Logic Corporation. Compensating time delay in filtering signals of multi-dimensional reconvigurable array processors. 5,005,120, Cl. 364-200.000.

Rufray, Jean C., and Guillon, Jean C., to Deutsche Thomson-Brandt GmbH. Demultiplexer for providing a color television signal having an increased image frequency. 5,005,073, Cl. 358-21.00R.

Rule Industries, Inc.. *See—*
Wilkinson, Bruce S., 5,003,910, Cl. 114-304.000.

Rumbaugh, James E.; and Daniel, Kenneth J., to General Electric Company. User interactive control of computer programs and corresponding versions of input/output data flow. 5,005,119, Cl. 364-200.000.

Rumpel, Manfred: *See—*
Oslapas, Algis; and Rumpel, Manfred, 5,004,063, Cl. 180-79.100.

Rumreich, Mark F.; and Parker, Robert P., to RCA Licensing Corporation. Apparatus and method thereof for improvement of stereophonic sound. 5,005,201, Cl. 381-24.000.

Rush, William B., II; Elder, Jack E.; Shier, Richard K.; Foss, Jerry B.; Haltiner, Karl J., Jr., and Wheeler, Grant M., to General Motors Corporation. Integrated induction system. 5,003,933, Cl. 123-52.0MC.

Russo, Thomas J., to Bethlehem Steel Corporation. Molten metal slide gate valve. 5,004,131, Cl. 222-600.000.

Rutgers University: *See—*
Burdea, Grigore C., 5,004,391, Cl. 414-6.000.

Rx Rocker Corporation: *See—*
Ayers, Robert C.; and Lee, Ted, 5,004,259, Cl. 280-304.100.

Ryan, Wayne L., to Streck Laboratories, Inc. Temperature measuring apparatus. 5,004,355, Cl. 374-194.000.

Rychwalski, James: *See—*
D'Ottavio, Eugene D., Hawkins, Robert E., Rodriguez, Stephen S.; and Rychwalski, James, 5,004,672, Cl. 430-314.000.

Ryser, Peter; and Strassler, Sigfrid, to Cerberus AG. Method of detecting fire in an early stage. 5,005,003, Cl. 340-587.000.

Saatkamp, James B.: *See—*
McMorries, Lee W., IV; and Saatkamp, James B., 5,004,042, Cl. 165-41.000.

Sachan Media Corporation: *See—*
Lee, Jaeduck, 5,004,175, Cl. 242-68.500.

Saeijs, Ronald W. J. J.: *See—*
Van Berkel, Cornelis H.; Saeijs, Ronald W. J. J.; and Niessen, Cornelius, 5,005,136, Cl. 364-490.000.

Saijo, Yasutsugu, Chiku, Kazuyoshi, and Onoda, Shigeyoshi, to Canon Kabushiki Kaisha. Transmissive original projecting apparatus. 5,004,336, Cl. 353-122.000.

St. Clair, Terry L.: *See—*
Johnston, Norman J.; St. Clair, Terry L., Baucom, Robert M., and Gleason, John R., 5,004,575, Cl. 264-136.000.

Saint-Gobain Vitrage: *See—*
Kawahara, Hideo, Sakata, Nobuhiro, Coulon, Jean-Claude; and Lovera, Patrick, 5,004,503, Cl. 106-287.180.

Saito, Hiroki: *See—*
Terai, Fumitaka; Yukawa, Kimio, Suyefuji, Mineo; Saito, Hiroki; and Yamaguchi, Shigeru, 5,004,628, Cl. 427-389.900.

Saito, Kenji: *See—*
Nishimura, Yukuo; Eguchi, Ken; Kawada, Haruki; Tomida, Yoshinori; Nakagiri, Takashi; Saito, Kenji, Kimura, Toshiaki, Matsuda, Hiroshi; Sakai, Kunihiro; and Miyazaki, Toshihiko, 5,004,671, Cl. 430-286.000.

Saito, Yoshio: *See—*
Miyata, Yukihide; Ishizaka, Hideo, Saito, Yoshio, and Koizumi, Takashi, 5,004,582, Cl. 422-56.000.

Sajo, Gabor. *See—*
Kinczel, Peter; Balazs, Laszlo, and Sajo, Gabor, 5,004,948, Cl. 313-486.000.

Saka, Kazuhito: *See—*
Iura, Kazuo; Tsuji, Kazunori, and Saka, Kazuhito, 5,003,761, Cl. 57-58.520.

Saka, Kenji, Terai, Masao, and Yamamoto, Kanji, to Kanebo, Ltd. Suction device. 5,003,966, Cl. 128-39.000.

Sakaguchi, Hiroaki: *See—*
Aramaki, Minoru, Suenaga, Takashi, Sakaguchi, Hiroaki, and Hamana, Takanori, 5,004,829, Cl. 562-113.000.

Sakaguchi, Shuichi; Yamaguchi, Tadamasa, and Yamashita, Itaru, to Kawasaki Steel Corporation. Method of submerged arc welding a thick steel plate with large heat input and submerged arc welding flux. 5,004,884, Cl. 219-73.000.

Sakai, Katsuyuki, to Sharp Kabushiki Kaisha. Thermal head separating mechanisms. 5,005,026, Cl. 346-76.0PH.

Sakai, Kunihiro. *See—*
Nishimura, Yukuo, Eguchi, Ken, Kawada, Haruki; Tomida, Yoshinori; Nakagiri, Takashi, Saito, Kenji, Kimura, Toshiaki, Matsuda, Hiroshi, Sakai, Kunihiro; and Miyazaki, Toshihiko, 5,004,671, Cl. 430-286.000.

Sakai, Shinji: *See—*
Fukushima, Nobuo; Sakai, Shinji, Takdea, Osamu, Takei, Masahiro, Suzuki, Yasutomo, Okino, Tadashi; and Jinnai, Shigeru, 5,005,088, Cl. 360-69.000.

Sakaida, Atsuo; Ikezaki, Yoshiyuki, Iriguchi, Akira; and Inose, Toshio, to Brother Kogyo Kabushiki Kaisha. Parallel four-link mechanism. 5,004,946, Cl. 310-328.000.

Sakakibara, Shiro; and Furuya, Takashi, to Aisin AW Co., Ltd. Starting device of an automatic transmission for vehicle. 5,004,082, Cl. 192-3.260.

Sakamoto, Masanori: *See—*
Abe, Kunihiro; Sakamoto, Masanori; and Kobayashi, Tomoya, 5,005,129, Cl. 364-424.030.

Sakamoto, Noriaki; Maeda, Shigemi; Yamanaka, Toshihiro; Deguchi, Toshihisa; Horie, Nobuyuki; Yamaguchi, Takeshi; and Kojima, Kunio, to Sharp Kabushiki Kaisha Recording and reproducing apparatus 5,005,164, Cl. 369-48.000.

Sakata, Nobuhiro: *See*—
Kawahara, Hideo; Sakata, Nobuhiro; Coulon, Jean-Claude; and Lovera, Patrick, 5,004,503, Cl. 106-287.180.

Sakata, Yasushi; and Iwamori, Toshimichi, to Fuji Xerox Co., Ltd. Semiconductor integrated circuit. 5,005,067, Cl. 357-54.000.

Sakaue, Kenji *See*—
Kano, Atsushi; Mizuno, Masayuki; Kajiwara, Manabu; Sakaue, Kenji; Abe, Yuji; and Nakamura, Kazuo, 5,004,217, Cl. 271-10.000.

Sakura Color Products Corporation: *See*—
Imagawa, Kiyotaka, 5,004,763, Cl. 523-161.000.

Salaba, Timothy A.; and Wilfong, Debra L., to Minnesota Mining & Manufacturing Company. Reaction injection molding machine 5,004,351, Cl. 366-152.000.

Salama, Mamdouh M. *See*—
Rosendahl, Finn; Fjeld, Svein; Salama, Mamdouh M.; and Gillen, Michael P., 5,004,051, Cl. 166-357.000.

Salek, Jeffrey S. *See*—
Pugach, Joseph; and Salek, Jeffrey S., 5,004,839, Cl. 568-390.000.

Salloum, James S., to Creative Techniques, Inc. Molded sectional reel 5,004,179, Cl. 242-118.600.

Salman, Naser N. *See*—
Azer, Samir N.; Salman, Naser N.; and Krause, William R., 5,003,969, Cl. 128-87.00R.

Salomon S.A. *See*—
Goud, Gilles R., 5,004,065, Cl. 280-605.000.
Nerrinck, Bernard; and Bonnet, Maurice, 5,003,711, Cl. 36-120.000.
Provence, Marc; and Graillat, Gerard, 5,004,262, Cl. 280-615.000.

Salzmann, Thomas N. *See*—
DiNinno, Frank P.; Greenlee, Mark L.; and Salzmann, Thomas N., 5,004,739, Cl. 514-210.000.
Dininno, Frank P.; Salzmann, Thomas N.; and Greenlee, Mark L., 5,004,740, Cl. 514-210.000.

Samad, Raphael; and Gillard, Clive H., to Sony Corporation. Motion dependent video signal processing. 5,005,077, Cl. 358-140.000.

Samata, Shuichi; and Matsushita, Yoshiaki, to Kabushiki Kaisha Toshiba. Preparation method of selective growth silicon layer doped with impurities. 5,004,702, Cl. 437-57.000.

Sample, Hugh D. *See*—
Hollowell, George E.; and Sample, Hugh D., 5,004,132, Cl. 223-1.000.

Sampson, Edward J., to Shiley Infusaid, Inc. Implantable device 5,004,458, Cl. 604-175.000.

Samsung Electron Devices Co., Ltd.: *See*—
Lee, Seung-Woo, 5,004,950, Cl. 313-582.000.

Samsung Electronics Co., Ltd. *See*—
Kwon, Oh-Hyun; Jang, Taek-Yong; Shin, Jung-Hyun; and Choi, Won-Taek, 5,005,103, Cl. 361-313.000.

Sanada, Kazunori; and Kawai, Jyoji, to Mitsubishi Denki Kabushiki Kaisha. Phase-locked loop circuit 5,005,141, Cl. 364-550.000.

Sandt, Hartley. Method of making a composite structural element 5,004,574, Cl. 264-101.000.

Sano, Eiichi *See*—
Ohtani, Junji; Anno, Masahiro; Sano, Eiichi; Machida, Junji; and Masuda, Fumio, 5,004,665, Cl. 430-106.600.

Sano, Hiroshi: *See*—
Yasuzawa, Toru; Nakanishi, Satoshi; Murakata, Chikara; Kase, Hiroshi; Sano, Hiroshi; and Yamada, Koji, 5,004,833, Cl. 536-18.200.

Sano, Hisanori: *See*—
Honda, Kazuo; Matsuura, Atsushi; and Sano, Hisanori, 5,004,951, Cl. 313-631.000.

Sano, Yasuro: *See*—
Hara, Kazumasa; Sano, Yasuro; Koike, Mikio; and Nishijima, Mitsuru, 5,003,896, Cl. 112-121.110.

Sanshin Kogyo Kabushiki Kaisha. *See*—
Onoue, Akihiro, 5,004,439, Cl. 440-2.000.

Sansone, Ronald P. *See*—
Connell, Richard A.; Keating, Raymond; Sansone, Ronald P.; and Schumacher, Karl H., 5,005,124, Cl. 364-401.000.

Santa Barbara Research Center. *See*—
Norton, Paul R.; Moroz, Michael; and Talley, Carol S., 5,004,698, Cl. 437-3.000.

Santrade Limited. *See*—
Hessman, Ingemar; Post, Karl G. Y.; and Norgren, Lars E., 5,004,380, Cl. 407-114.000.

Sanyo Electric Co., Ltd.: *See*—
Ohtuka, Nobuo; and Matsumoto, Kouichi, 5,005,113, Cl. 363-37.000.
Satomi, Hideo, 5,005,079, Cl. 358-158.000.

Sardano, Peter A.; and Kazmierczak, Irvin J., to Xerox Corporation. Retard feeder with pivotal nudger ski for reduced smudge. 5,004,218, Cl. 271-35.000.

Sargent & Greenleaf, Inc.: *See*—
Beatty, Scott M.; and Bishop, John R., 5,003,802, Cl. 70-333.00A.

Sarno, Felicisimo S.: *See*—
Koschak, Francis L.; and Sarno, Felicisimo S., 5,004,624, Cl. 426-623.000.

Sarno, Russell J., to Magic Plastics. Gate valve 5,004,210, Cl. 251-279.000.

Sasaki, Katsuro *See*—
Ikeda, Shuji; Sasaki, Katsuro; Nagasawa, Kouichi; and Meguro, Satoshi, 5,005,068, Cl. 357-59.000.

Sasaki, Kenichi, to Canon Kabushiki Kaisha. Magneto-optical information reproducing apparatus having a polarizing beam splitter disposed with an inclination of 45 degrees 5,004,326, Cl. 350-375.000.

Sasatani, Seiei: *See*—
Kim, Soonih; Takeda, Kazuhisa; and Sasatani, Seiei, 5,004,612, Cl. 424-450.000.

Sase, Toshitsugu; Matsuda, Michiaki; Yanagisawa, Kiyoshi; and Maeda, Mitsuru, to Ebara Corporation. Muffler 5,004,068, Cl. 181-276.000.

Sato, Hiroshi; Hirose, Kenichi; Nagai, Koichi; Yoshioka, Hiroshi; and Nagaoka, Yoshihiko, to Sumitomo Chemical Company, Ltd. Process for producing nitrobenzenes. 5,004,846, Cl. 568-940.000.

Sato, Kenichi *See*—
Shigenai, Osamu; and Sato, Kenichi, 5,005,092, Cl. 360-99.060.

Sato, Kimiharu *See*—
Hayashi, Minoru; Koban, Koichi; Sato, Kimiharu; and Kishimoto, Junichi, 5,004,586, Cl. 422-164.000.

Sato, Kiyoshi; Yoshikawa, Hirokazu; Ikenari, Shigeru; and Yokoyama, Kenichi, to Hitachi Maxell, Ltd. Flat type sealed battery with hermetic sealing structure 5,004,656, Cl. 429-162.000.

Sato, Koichi *See*—
Takahashi, Hiroto; Karita, Seiichiro; and Sato, Koichi, 5,005,024, Cl. 346-1.100.

Sato, Masayuki *See*—
Tomono, Makoto; Tarumi, Noriyoshi; and Sato, Masayuki, 5,004,666, Cl. 430-110.000.

Sato, Osamu; and Hirai, Isamu, to Asahi Kogaku Kogyo Kabushiki Kaisha. Electric control camera 5,005,042, Cl. 354-412.000.

Sato, Shin *See*—
Yoneda, Tetsuya; and Sato, Shin, 5,004,657, Cl. 429-193.000.

Sato, Shuichi; and Kobayashi, Yoshiharu, to SSMC Inc. Feeding rate adjusting unit of a sewing machine 5,003,901, Cl. 112-316.000.

Sato, Teiji *See*—
Ogawa, Masahide; Sato, Teiji; Tanaka, Masanori; and Takahashi, Noriyuki, 5,004,716, Cl. 501-141.000.

Sato, Tsuyoshi; Inaba, Masahito; and Takata, Naoya, to Minolta Camera Kabushiki Kaisha. Lighting apparatus and color measuring apparatus using the same 5,004,349, Cl. 356-402.000.

Satoh, Susumu *See*—
Sunagawa, Masao; Kubota, Kazuhiro; Ishii, Yoshitaro; and Satoh, Susumu, 5,003,663, Cl. 15-366.000.

Satoh, Toshio; Niiro, Yasunori; Kakegawa, Hisao; and Matsumoto, Hitoshi, to Nippon Hypox Laboratories Incorporated. Benzothiazine-1,1-dioxide derivatives 5,004,742, Cl. 514-226.500.

Satoh, Yasuta; and Moriyama, Yasuyuki, to Takara Co., Ltd. Figure moving article 5,003,714, Cl. 40-414.000.

Satomi, Hideo, to Sanyo Electric Co., Ltd. Automatic frequency control circuit 5,005,079, Cl. 358-158.000.

Sauer-Sundstrand S.p.A. *See*—
Zanardi, Angelo; Mei, Daniele; and Toselli, Vittorio, 5,004,412, Cl. 418-132.000.

Saulas, Alain, to Mead Corporation, The. Multi-unit package particularly for parallelepiped cartons 5,004,104, Cl. 206-526.000.

Savant Instruments *See*—
Zlobinsky, Yury, 5,003,787, Cl. 62-185.000.

Savio S.p.A. *See*—
Colli, Luigi; Badiali, Roberto; and Marangone, Nereo, 5,004,171, Cl. 242-35.60R.

Sawada, Shizuo *See*—
Maeda, Satoshi; and Sawada, Shizuo, 5,004,704, Cl. 437-195.000.

Sawyer, Thomas F., to General Electric Company. Melt system for spray-forming. 5,004,153, Cl. 239-81.000.

Scaglia, Enzo. Automatic feeder and feeding method for textile machines 5,003,762, Cl. 57-281.000.

Scamans, Geoffrey M. *See*—
Hunter, John A.; Scamans, Geoffrey M.; O'Callaghan, Wilfred B.; and Wycliffe, Paul A., 5,004,654, Cl. 429-50.000.

Schaaf, Hanno: *See*—
Erber, Anton; Hoff, Heinz; Reuchlein, Gunter; Schaaf, Hanno; and Schiessl, Gerhard, 5,003,778, Cl. 60-517.000.

Schaap, Arthur P., to Board of Governors of Wayne State University, The. Method and compositions providing enhanced chemiluminescence from 1,2-dioxetanes. 5,004,565, Cl. 252-700.000.

Schadt, Martin: *See*—
Leenhouts, Frans; and Schadt, Martin, 5,004,324, Cl. 350-347.00R.

Schaefer, Dietmar *See*—
Koerner, Gotz; and Schaefer, Dietmar, 5,004,559, Cl. 252-345.000.

Schammel, Wayne P. *See*—
Park, Chang M.; and Schammel, Wayne P., 5,004,830, Cl. 562-413.000.

Schanin, David J., to Bayview Technology Group, Inc. Phase control switching circuit without zero crossing detection. 5,004,969, Cl. 323-235.000.

Schap, William W., to ITT Corporation. Variable power drive for sliding door 5,004,280, Cl. 292-341.160.

Schauder, Colin D., to Westinghouse Electric Corp. Forced-commutated current-source converter and AC motor drive using the same 5,005,115, Cl. 363-159.000.

Schaul, Malcolm *See*—
Broderick, James; and Schaul, Malcolm, 5,004,270, Cl. 283-48.100.

Schegerin, Robert; Laboure, Bernard; and Standish, Robert, to Societe de Construction des Avions Hurel-Bubois. Thrust reverser for a jet engine of the type with doors equipped with auxiliary flaps 5,003,770, Cl. 60-226.200.

Schekin, Vladimir I.: *See*—
Sizonenko, Olga N.; Maxutov, Rafkhat A.; Maljushevsky, Pavel P.; Gorovenko, Georgy G.; Sokolov, Alexei V.; Lyapis, Diana N.; Schekin, Vladimir I.; and Kuskova, Natalya I., 5,004,050, Cl. 166-248.000.

Scher, Richard K. Method of treating nails. 5,004,599, Cl. 424-61.000.

Scherer, Peter. Cylinder of an internal combustion engine having variable volume. 5,003,936, Cl. 123-78.0AA.

Schering Aktiengesellschaft: *See*—
Blaszkiewicz, Peter; and Speck, Ulrich, 5,004,835, Cl. 564-153.000.
Raduechel, Bernd; Skuballa, Werner; Vorbrueggen, Helmut; Loge, Olaf; and Schilliner, Ekkehard, 5,004,752, Cl. 514-530.000.

Schering Corporation. *See*—
Draper, Kenneth G., 5,004,810, Cl. 536-27.000.

Scheurer, Robert S.. *See*—
Sullivan, John F., 5,004,283, Cl. 294-61.000.

Schiel, Christian; and Hafner, Paul, to J. M. Voith GmbH. Cylinder-piston unit for displacing a roll at right angles to its longitudinal axis. 5,003,863, Cl. 92-61.000.

Schiessl, Gerhard: *See*—
Erber, Anton; Hoff, Heinz; Reuchlein, Gunter; Schaaf, Hanno; and Schiessl, Gerhard, 5,003,778, Cl. 60-517.000.

Schilliner, Ekkehard *See*—
Raduechel, Bernd; Skuballa, Werner; Vorbrueggen, Helmut; Loge, Olaf; and Schilliner, Ekkehard, 5,004,752, Cl. 514-530.000.

Schimpf, Warren C., to Hercules Incorporated. Carbon fibers. 5,004,590, Cl. 425-447.200.

Schlett, Eugene. *See*—
Spinger, J. William; and Schlett, Eugene, 5,004,389, Cl. 411-304.000.

Schley, Paul E. Brake tool. 5,003,681, Cl. 29-239.000.

Schlueter, Rudolf *See*—
Wahl, Hans-Peter; Schlueter, Rudolf; Kaettlitz, Wolfgang; and Loos, Rolf, 5,004,545, Cl. 210-510.100.

Schmidt, Kenneth D.; and Holt, Jan D., to ACF Industries, Inc. Protective cover for railcar hitch. 5,004,386, Cl. 410-62.000.

Schmidt, Konrad; and Kramer, Ralf, to U.S. Philips Corporation. Hybrid phase-locked loop. 5,005,016, Cl. 341-142.000.

Schmidt, Robert J.; Haizmann, Robert S.; Ford, Mark R.; Low, C. David; and Adams, Frank H., to UOP. Catalyst for the isomerization of alkanes. 5,004,859, Cl. 585-741.000.

Schmitt, Marcella H. Portable, safety, play chair. 5,004,297, Cl. 297-270.000.

Schmitt, Wayne I. *See*—
Natho, Bradford J.; Andrade, George L.; Wheaton, John M.; and Schmitt, Wayne I., 5,004,091, Cl. 190-18.00R.

Schmitz, Gunter: *See*—
Ackermann, Wilhelm; Langlitz, Karlheinz; and Schmitz, Gunter, 5,003,835, Cl. 74-411.000.

Schneider, Paul L.. *See*—
Chalupa, William; Kronfeld, David S.; Schneider, Paul L.; and Sklan, David, 5,004,728, Cl. 514-12.000.

Schneider (USA) Inc.: *See*—
Edelman, William; Constantinou, Dennis; Stefanovski, Miles; Jan, Yuh L.; Fahlen, Theodore S.; Hansen, Ronald L.; and Kramasz, Kenneth J., 5,005,180, Cl. 372-57.000.

Schnur, Joel M.; Rudolph, Alan S.; and Testoff, Mary A., to Geo-Centers, Inc. Process for fabrication of lipid microstructures from dry organic solvent. 5,004,566, Cl. 260-403.000.

Schnut, Robert H., to Eaton Corporation. Plural set point pressure responsive switching apparatus utilizing a single pressure sensing driver element. 5,004,873, Cl. 200-83.00P.

Scholz, Bernd: *See*—
Dethlefs, Ralf-Burkhard; Scholz, Bernd; Wysk, Wolfram; and Miefert, Elke, 5,004,644, Cl. 428-323.000.

Schon, Steven G., and Hazbun, Edward A., to Arco Chemical Technology, Inc. Methanol as cosurfactant for microemulsions. 5,004,479, Cl. 44-302.000.

Schott Glaswerke: *See*—
Ross, Ludwig; and Schumann, Werener, 5,004,707, Cl. 501-37.000.

Schreckenberg, Manfred: *See*—
Blum, Harald; Meixner, Jurgen; Schreckenberg, Manfred; Fleiter, Lothar; and Wellner, Wolfgang, 5,004,779, Cl. 524-591.000.

Schroeder, Manfred. *See*—
Wislinski, Martin; Bergquist, Roger; Schroeder, Manfred; Weir, Theodore; Monetti, Matthew; and Fung, Paul, 5,004,579, Cl. 264-517.000.

Schroeder, Rodney G.; and Sharangpani, Anand S. G., to BASF. Transparent iron oxide pigments. 5,004,504, Cl. 106-456.000.

Schubert, Burton L., to Schubert Farms, Inc. Distance measuring device and method for use with vehicles. 5,003,704, Cl. 33-775.000.

Schubert Farms, Inc.: *See*—
Schubert, Burton L., 5,003,704, Cl. 33-775.000.

Schuh, Paul A.: *See*—
Mehr-Ayin, Kourosh; and Schuh, Paul A., 5,004,084, Cl. 192-0.033.

Schulte, Helmut, to Luhn & Pulvermacher GmbH & Co. Leaf-spring hardener. 5,004,213, Cl. 266-116.000.

Schulz, Hans E.; Braas, Jurgen, and Echl, Friedrich, to Braas & Co. GmbH. Apparatus for producing concrete roof tiles. 5,004,415, Cl. 425-297.000.

Schumacher, Dean P.; Blume, William F.; and Bonds, John C. Method and apparatus for playing a game. 5,004,245, Cl. 273-241.000.

Schumacher, Karl H.: *See*—
Connell, Richard A.; Keating, Raymond; Sansone, Ronald P.; and Schumacher, Karl H., 5,005,124, Cl. 364-401.000.

Schumann, Werener: *See*—
Ross, Ludwig; and Schumann, Werener, 5,004,707, Cl. 501-37.000.

Schwan-Stabilo Schwanhausser GmbH & Co. *See*—
Huttner, Gerhard; Kruckel, Peter; and Mock, Gerhard, 5,004,363, Cl. 401-75.000.

Schwappach, Dieter, to O&K Orenstrein & Koppel Aktiengesellschaft. Attachment holder for interchangeable equipment on the superstructure of a mobile shovel excavator. 5,004,397, Cl. 414-686.000.

Schwarz, Karl H.: *See*—
Bernard, Walter; Heppner, Joachim G.; and Schwarz, Karl H., 5,004,342, Cl. 356-350.000.

Scott, Hugh: *See*—
Porritt, John; and Scott, Hugh, 5,004,055, Cl. 175-20.000.

Scott, Raymond J.: *See*—
Montierth, Garry L.; Logan, Stephen A.; and Scott, Raymond J., 5,004,190, Cl. 246-428.000.

Scully, Sean: *See*—
Connors, Peter J.; Scully, Sean; Bria, Frank; and ReFalo, John, III, 5,004,103, Cl. 206-372.000.

Sebag, Henri: *See*—
Philippe, Michel; and Sebag, Henri, 5,004,729, Cl. 514-29.000.
Philippe, Michel; and Sebag, Henri, 5,004,730, Cl. 514-029.000.
Philippe, Michel; and Sebag, Henri, 5,004,731, Cl. 514-29.000.
Philippe, Michel; and Sebag, Henri, 5,004,732, Cl. 514-29.000.
Philippe, Michel; and Sebag, Henri, 5,004,733, Cl. 514-029.000.
Philippe, Michel; and Sebag, Henri, 5,004,734, Cl. 514-29.000.

Secoolish, Ronald H.: *See*—
Dutcher, Davy L.; and Secoolish, Ronald H., 5,003,723, Cl. 43-42.130.

Seeburger, Rolf: *See*—
Goessler, Gerhard; Wilde, Eugen; and Seeburger, Rolf, 5,004,892, Cl. 219-464.000.

Segerpalm, Hans; and Eklund, Ante, to Swede Space Design AB. Arrangement for displaceable supporting articles of furniture. 5,004,304, Cl. 312-201.000.

Segrestin, Pierre: *See*—
Vidal, Henri; Muelas-Medrano, Santiago; and Segrestin, Pierre, 5,004,376, Cl. 405-284.000.

Seibu Electric and Machinery Co., Ltd.: *See*—
Tsubone, Akira; Tomiyoshi, Masanori, Yokomizo, Junichi; Tanaka, Nobuhiro; Moriguchi, Hideyuki; and Hirata, Eiji, 5,004,401, Cl. 414-786.000.

Seiko Epson Corporation: *See*—
Kobayashi, Atsushi; Suzuki, Takashi; and Kosugi, Yasuhiko, 5,005,043, Cl. 355-27.000.

Seikosha Co., Ltd.: *See*—
Motai, Noboru; Tanaka, Sakae; and Watanabe, Yoshiaki, 5,005,056, Cl. 357-2.000.

Sekida, Minoru: *See*—
Fujino, Akihiko; Inoue, Manabu; Omaki, Takanobu; Nakai, Masaaki; Fujii, Akira; and Sekida, Minoru, 5,005,047, Cl. 354-442.000.

Sela, Uri: *See*—
Baker, Charles L.; Cody, George D.; Joseph, Craig A.; and Sela, Uri, 5,004,152, Cl. 239-8.000.

Selga, Betty J. Reusable fabric gift wrap 5,004,144, Cl. 229-87.190.

Sellar, John G. Apparatus for employing destructive resonance. 5,004,166, Cl. 241-36.000.

Selman, Willis M., Jr. Toilet lid safety lock 5,003,641, Cl. 4-253.000.

Seltzer, Raymond: *See*—
Cortolano, Frank P.; Seltzer, Raymond; and Patel, Ambelal R., 5,004,770, Cl. 524-99.000.

Sensormatic Electronics Corporation: *See*—
Farrar, James G.; and Eskandry, Ezra D., 5,005,125, Cl. 364-403.000.

Sentrol, Inc.: *See*—
Bernhardt, Everett A.; and Winters, Robert C., 5,004,879, Cl. 200-295.000.

Seo, Nobuyuki. *See*—
Ida, Tomoyasu; Nohara, Makoto; and Seo, Nobuyuki, 5,004,980, Cl. 324-166.000.

Serrell, Robert, Smith, J. Lamar; and Kurst, Frederick L., to Educational Testing Service. Optical document scanning and mark sensing. 5,004,896, Cl. 235-437.000.

Seto, Nobuo; and Morigaki, Masakazu, to Fuji Photo Film Co., Ltd. Silver halide color photographic material 5,004,678, Cl. 430-548.000.

Seton Health Care Foundation. *See*—
Muckerheide, Myron C., 5,005,182, Cl. 372-72.000.

Settles, David J., to Dayco Products-Eaglemotive, Inc. Method of making a clutch for a cooling fan of a motor vehicle. 5,003,685, Cl. 29-525.000.

Sevier, Richard W.; and Keenan, James J., to Hendry Mechanical Works. Earthquake braced racks. 5,004,107, Cl. 211-26.000.

Seya, Masatomo; Tadokoro, Michihiro, and Okada, Kazuo, to Mitsubishi Denki Kabushiki Kaisha. Focusing error detecting apparatus with light switching and detector sampling. 5,004,900, Cl. 250-201.500.

Seymour, Raymond K.; Hart, Marshall B.; Magnon, Gary D.; von Kannewurff, Michael C.; and Doughty, Dennis J., to General Electric Company. Molded case circuit breaker movable contact arm arrangement. 5,004,878, Cl. 200-144.00R.

Seynhaeve, Andre, to Delsey S.A. Device for affixing the straps of articles of luggage. 5,003,671, Cl. 24-265.00A.

SGS-Thomson Microelectronics, Inc.: *See*—
McClure, David C.; and Lysinger, Mark A., 5,005,158, Cl. 365-200.000.

O'Connor, James T., and Courtright, David A., 5,005,191, Cl. 375-116.000.

SGS-Thomson Microelectronics S.r.l.: *See*—
Cardani, Silvestro; and Pareschi, Flavio, 5,003,999, Cl. 134-105.000
Mazzali, Stefano, 5,005,060, Cl. 357-23.500.

SGS-Thomson Microelectronics S.A.: *See*—
Barou, Michel, 5,004,970, Cl. 323-277.000.

Shah, Gautam P., to W. R. Grace & Co.-Conn. Oxygen barrier biaxially oriented film. 5,004,647, Cl. 428-349.000.

Shah, Tushar K. *See*—
Engdahl, Gerald E.; and Shah, Tushar K., 5,003,784, Cl. 62-124.000.

Shamir, Joseph: *See*—
Caulfield, H. John; Hester, Charles F.; Kinser, Jason M.; and Shamir, Joseph, 5,004,309, Cl. 350-3.680.

Shanbhag, Sudhakar P.; Cousminer, Joseph J., and Milani, Gerald, to Horizons International Foods, Inc. Process for preparing microwave-reheatable french fried potatoes and product thereof. 5,004,616, Cl. 426-102.000.

Shannon, Leland K., Gentry, Ted L., and Le, Toby, to Cubic Defense Systems. Shock testing apparatus. 5,003,811, Cl. 73-12.000.

Sharangpani, Anand S. G.: *See*—
Schroeder, Rodney G., and Sharangpani, Anand S. G., 5,004,504, Cl. 106-456.000.

Sharp Kabushiki Kaisha: *See*—
Furuta, Kouichi, 5,004,934, Cl. 307-303.000.
Kugimiya, Shuzo; Fukumochi, Yoji; Nakamura, Ichiko, Hirai, Tokuyuki; and Suzuki, Hitoshi, 5,005,127, Cl. 364-419.000.
Sakai, Katsuyuki, 5,005,026, Cl. 346-76.0PH
Sakamoto, Noriaki; Maeda, Shigemi; Yamanaka, Toshihiro; Deguchi, Toshihisa; Horie, Nobuyuki, Yamaguchi, Takeshi, and Kojima, Kunio, 5,005,164, Cl. 369-48.000.
Toda, Manabu, 5,005,198, Cl. 379-58.000.
Webb, Brian C., Pedley, Derek G., Prosser, Stephen J.; Hijikigawa, Masaya; and Furubayashi, Hisatoshi, 5,004,700, Cl. 437-42.000.
Yamanaka, Toshihiro, Maeda, Shigemi; and Horie, Nobuyuki, 5,005,165, Cl. 369-58.000.
Yoneda, Tetsuya; and Sato, Shin, 5,004,657, Cl. 429-193.000.
Yoshinouchi, Atsushi, Itoh, Masataka; and Tsuchimoto, Shuhei, 5,004,905, Cl. 250-208.100.

Shaughnessy, Terry P. *See*—
Berkley, Robert D.; and Shaughnessy, Terry P., 5,003,722, Cl. 43-3.000.

Shaulov, Avner A.; Herko, Samuel P.; Dorman, Donald R., and Bhargava, Rameshwar N., to North American Philips Corp. Apparatus and methodology for the non-contact testing of materials for superconductivity by detecting odd harmonics above a threshold. 5,004,726, Cl. 505-1.000.

Shaw, Scott W.: *See*—
Krishen, Kumar; Shaw, Scott W., and deFigueiredo, Rui J. P., 5,005,147, Cl. 364-578.000.

Shaw-Walker Company, The: *See*—
Dull, Raymond P., Lavas, Bernard R., and Baxter, William D., 5,003,740, Cl. 52-239.000.

Sheen, Dony, to Regitar Power Tools Co., Ltd. Electric drill with speed and torque control. 5,004,054, Cl. 173-12.000.

Sheldahl, Inc.: *See*—
Desai, Jay, 5,004,639, Cl. 428-138.000.

Shell Oil Company: *See*—
Kipp, Robert M., 5,004,272, Cl. 285-24.000.
Van Leeuwen, Petrus W. N. M., and Roobeek, Cornelis F., 5,004,844, Cl. 568-880.000.

Shellhause, Ronald L. Fluidic valve mechanism. 5,003,780, Cl. 60-585.000.

Shepherd, James E. Saw chain holding mechanism for grinding machines. 5,003,843, Cl. 76-78.100.

Sherby, James E., to PPG Industries, Inc. Support system for abrasive jet cutting. 5,003,729, Cl. 51-283.00R.

Sherwin-Williams Company, The. *See*—
Mathai, John, 5,004,828, Cl. 560-224.000.

Shetterly, Donivan M.: *See*—
McMaster, Ronald A.; and Shetterly, Donivan M., 5,004,491, Cl. 65-106.000.

Shiba, Haruo: *See*—
Okamura, Masatoshi; Namioka, Takashi; and Shiba, Haruo, 5,004,180, Cl. 242-198.000.

Shibata, Katsuhiro; Azuma, Yuichi; and Suzuki, Tsuguya, to Honda Giken Kogyo Kabushiki Kaisha. Friction material. 5,004,497, Cl. 75-229.000.

Shibata, Masanori; Okimoto, Haruo; Akagi, Toshimichi; and Tashima, Seiji, to Mazda Motor Corporation. Air supply and exhaust control systems for turbocharged internal combustion engines. 5,003,781, Cl. 60-600.000.

Shibata, Seiichi. Method for preparation of nephritogenoside. 5,004,818, Cl. 530-322.000.

Shibata, Shinya: *See*—
Ogawa, Masanobu; and Shibata, Shinya, 5,005,020, Cl. 343-713.000.

Shibazaki, Toshiji; Okano, Masaru; Kishida, Naoto; Ozaki, Yoshihiro; and Iyama, Kunihiko, to Toyo Denso Kabushiki Kaisha. Hydraulic actuating apparatus. 5,004,996, Cl. 338-36.000.

Shields, Michael R. Animal training collar. 5,003,930, Cl. 119-106.000.

Shier, Richard K.: *See*—
Rush, William B., II; Elder, Jack E.; Shier, Richard K.; Foss, Jerry B.; Haltiner, Karl J., Jr., and Wheeler, Grant M., 5,003,933, Cl. 123-52.0MC.

Shigenai, Osamu; and Sato, Keiichi, to Alps Electric Co., Ltd. Shutter opening device. 5,005,092, Cl. 360-99.060.

Shigyo, Masao: *See*—
Shimizu, Kunimasa; Shigyo, Masao; and Tanaka, Hiroshi, 5,004,917, Cl. 250-236.000.

Shiley Infusaid, Inc.: *See*—
Sampson, Edward J., 5,004,458, Cl. 604-175.000.

Shimamoto, Mamoru: *See*—
Kozaki, Tetsuji, Ishikawa, Hiroshi; Yasui, Hideaki, Shimamoto, Mamoru; Hibino, Katsuhiko; and Suzuki, Motoshi, 5,004,264, Cl. 280-707.000.

Shimamura, Keizo; Amano, Kagetaka; Aisaka, Tatsuryoshi, Hanai, Satoshi; and Nagata, Kohsoku, to Kabushiki Kaisha Toshiba. Dispersion strengthened copper alloy and a method of manufacturing the same. 5,004,498, Cl. 75-233.000.

Shimano Industrial Co., Ltd.: *See*—
Nagano, Masashi, 5,003,841, Cl. 74-594.400

Shimizu, Chiyuki: *See*—
Nagaoka, Hisayuki, Zenbayashi, Michio; and Shimizu, Chiyuki, 5,004,793, Cl. 528-15.000.

Shimizu, Haruhito, to NEC Corporation. Method for controlling a polarization of light. 5,004,312, Cl. 350-96.130.

Shimizu, Kunimasa, Shigyo, Masao; and Tanaka, Hiroshi, to Fuji Photo Film Co., Ltd. Radiation image information reading apparatus. 5,004,917, Cl. 250-236.000.

Shimizu, Masataka: *See*—
Terada, Nobuhiro, Shimizu, Masataka, and Matsuzawa, Soichiro, 5,003,688, Cl. 29-603.000.

Shimoda, Kyouji: *See*—
Yoshimoto, Kyosuke; and Shimoda, Kyouji, 5,004,901, Cl. 250-201.500.

Shin-Etsu Chemical Co., Ltd.: *See*—
Takaoka, Akio, and Inomata, Hiroshi, 5,004,824, Cl. 556-412.000.

Shin, Jung-Hyun: *See*—
Kwon, Oh-Hyun; Jang, Taek-Yong; Shin, Jung-Hyun, and Choi, Won-Taek, 5,005,103, Cl. 361-313.000.

Shinagawa Fuel Co., Ltd.: *See*—
Miyake, Teruyoshi; and Yamamoto, Tatsuo, 5,003,638, Cl. 2-167.000.

Shinanen New Ceramic Corporation: *See*—
Miyake, Teruyoshi, and Yamamoto, Tatsuo, 5,003,638, Cl. 2-167.000.

Shipley Company Inc.: *See*—
Bernards, Roger F., Fisher, Gordon, and Sonnenberg, Wade, 5,004,525, Cl. 204-52.100.

Staerk, Jakob: *See*—
de Oliveira, Antonio M. d. A.; and Staerk, Jakob, 5,004,937, Cl. 307-443.000.

Stall, Alan D.; and Raudys, Vytas A., to Viskase Corporation. Method and apparatus for making stuffed casing products having one flat end. 5,003,666, Cl. 452-21.000.

Stallard, William A.: *See*—
Booth, Richard C., Beaumont, Alan R., Daymond-John, Barbara E.; Cunningham, David G.; and Stallard, William A., 5,004,314, Cl. 350-96.140.

Stamicarbon B.V.: *See*—
Baur, Henricus A. C.; and Kragten, Ubaldus F., 5,004,837, Cl. 568-342.000.
Waagen, Geert N.; Bastiaansen, Cornelis W. M.; and Kirschbaum, Robert, 5,004,778, Cl. 524-474.000.

Stamp, Roger A.; and Williams, Farrell D., to Hydro Air Industries, Inc. Hydrotherapy apparatus. 5,003,646, Cl. 4-542.000.

Standard Oil Company, The: *See*—
Percec, Elena S.; and Takigawa, Doreen Y., 5,004,783, Cl. 525-77.000

Standish, Robert: *See*—
Schegerin, Robert; Laboure, Bernard; and Standish, Robert, 5,003,770, Cl. 60-226.200.

Standlick, Ronald E., to Jesco Products Company, Inc. Multiple component flow gun. 5,004,125, Cl. 222-145.000.

Staniforth, John N., to Forum Chemicals Ltd. Controlled release device with an impermeable coating having an orifice for release of drug. 5,004,614, Cl. 424-466.000.

Stanley Works, The. *See*—
Hanley, Roger T., 5,004,276, Cl. 292-126.000.

Star-kist Foods, Inc.: *See*—
Koschak, Francis L.; and Sarno, Felicisimo S., 5,004,624, Cl 426-623.000.

Stark, Charles, to Bobst SA. Device for conveying plate-like matter within a rotary printing machine. 5,004,221, Cl. 271-194.000.

Staub, Richard A.: *See*—
Wyatt, Richard J.; Freed, William J.; and Staub, Richard A., 5,004,457, Cl. 604-158.000.

Staudinger, Joseph: *See*—
Golio, John M., and Staudinger, Joseph, 5,005,059, Cl 357-22.000

Staunton, Harold F. *See*—
Hallam, Donald E.; Popper, Peter; Staunton, Harold F., Taylor, Robert E.; and Yngve, Paul W., 5,003,763, Cl. 57-297.000

Stavinoha, Jerome L.: *See*—
Devon, Thomas J.; Phillips, Gerald W.; Puckette, Thomas A., Stavinoha, Jerome L.; and Vanderbilt, Jeffrey J., 5,004,823, Cl 556-136.000.

Stefaniak, Philip S., and Fine, Daniel H., to Columbia in the City of New York, The Trustees of Method and apparatus for dispensing a fluid substance. 5,004,124, Cl. 222-136.000.

Stefanovski, Miles: *See*—
Edelman, William, Constantinou, Dennis; Stefanovski, Miles, Jan, Yuh L., Fahlen, Theodore S., Hansen, Ronald L.; and Kramasz, Kenneth J., 5,005,180, Cl. 372-57.000.

Stegherr, Michael, to Siemens Aktiengesellschaft. CMOS-ECL converter. 5,004,939, Cl 307-475.000.

Steiner, Norm. Painted display assembly. 5,003,715, Cl. 40-442.000.

Stendel, Wilhelm *See*—
Weissmuller, Joachim; Tietjen, Klaus-Gunther; Stendel, Wilhelm, and Wachendorff-Neumann, Ulrike, 5,004,744, Cl 514-247.000

Stettner, Ernest R.; and Stoltman, Donald D., to General Motors Corporation. Solenoid actuated valve assembly. 5,004,162, Cl 239-585.000.

Steuck, Michael J.: *See*—
Pluskal, Malcolm G.; Wang, David, and Steuck, Michael J., 5,004,543, Cl. 210-490.000.

Stewart, Christopher O., and Suprise-Mansfield, Karen. Manicuring aid for infants. 5,003,997, Cl. 132-73.000.

Stich, Richard A. *See*—
Stocking, George E., Stich, Richard A.; Besore, John K., and Denham, Clarence W., 5,004,302, Cl. 312-214.000

Stig G. Carlqvist Motor Consultant, (C.M.C.) Aktiebolag: *See*—
Carlqvist, Stig G. 5,003,832, Cl. 74-51.000

Stillie, Donald G *See*—
Aiello, Richard E., Stillie, Donald G.; and Allgood, Christopher L., 5,004,434, Cl 439-636.000

Stinar, Robert P., Calvas, George T.; and McNamara, David A., to Ford Motor Company. Programmable key and improved lock assembly. 5,003,801, Cl 70-278.000.

Stinard, Philip S.: *See*—
Robertson, Donald S.; and Stinard, Philip S., 5,004,864, Cl 800-235.000

Stipkovits, Frank M. Gap bridging assembly for use with vertical blind assemblies 5,004,033, Cl 160-178.100.

Stirling, Thomas E., and Ackerman, John R., to Barrett, Haentjens & Co. Air stripping of liquids using high intensity turbulent mixer 5,004,484, Cl. 55-53.000.

Stirling, William. Agricultural bale sheathing apparatus and method. 5,003,754, Cl 53-459.000.

Stocker, Erwin E *See*—
Bemis, Steve; and Stocker, Erwin E., 5,004,513, Cl. 156-191.000

Stocking, George E.; Stich, Richard A.; Besore, John K.; and Denham, Clarence W., to General Electric Company. Shelf support system for split cantilever shelves. 5,004,302, Cl. 312-214.000.

Stokes, Ronald E.; Nowak, William J.; Attardi, Anthony A.; and Costanza, Daniel W., to Xerox Corporation. Frequency sweeping excitation of high frequency vibratory energy producing devices for electrophotographic imaging. 5,005,054, Cl. 355-273.000.

Stolka, Milan: *See*—
Badesha, Santokh S.; Stolka, Milan; Pai, Damodar M.; and Abkowitz, Martin A., 5,004,663, Cl. 430-59.000.

Holleman, Timothy W.; Doan, Phong D.; Brennen, Kenneth R.; and Swoyer, John M., 5,003,992, Cl. 128-785.000.

Symanski, James S., to Globe-Union Inc. Thin bipolar lead-acid battery with individual cell vent. 5,004,655, Cl. 429-82.000.

Systron Donner Corporation: *See*—
Hay, Wayne R., 5,004,963, Cl. 320-13.000.

Szabo, Istvan M.: *See*—
Jekkel nee Bokany, Antonia; Albrecht, Karoly; Ambrus, Gabor; Lang, Tibor; Szabo, Istvan M., Ilkoy, Eva; Konczol, Kalman; Moravcsik, Imre; Hantos, Gabor; Simonovits, Emilia; Lengyel nee Szemenyei, Zsuzsanna; Vida, Zsuzesanna; and Csajagi, Eva, 5,004,695, Cl. 435-253.100.

Szala, Lawrence E.: *See*—
Svec, Paul S.; Borom, Marcus P.; Szala, Lawrence E.; Brun, Milivoj K., Miller, Steven A.; and Mourer, David P., 5,004,629, Cl. 427-204.000.

T-Systems Corp.: *See*—
Allport, Davies, 5,003,726, Cl. 47-48.500.

Tacchi, Ernest J., to Aqua Pura Group. Apparatus and method for ozone production. 5,004,587, Cl. 422-186.190.

Tachi-S Co., Ltd.: *See*—
Inoue, Nobuhiro, 5,004,295, Cl. 297-191.000.
Ogasawara, Hiromitsu, 5,004,967, Cl. 318-568.100.

Tada, Kuniyuki; Minomiya, Eiichi; and Watanabe, Masatoshi, to Toray Industries, Inc. Process for conversion of ethylbenzene in C_8 aromatic hydrocarbon mixture. 5,004,855, Cl. 585-489.000.

Tadenuma, Masahiko; Miyagi, Tetsuhiro; and Miyazawa, Tadashi, to Akishima Chemical Industries Co., Ltd. Stabilized chlorine-containing resin composition. 5,004,776, Cl. 524-377.000.

Tadokoro, Michihiro: *See*—
Seya, Masatomo; Tadokoro, Michihiro; and Okada, Kazuo, 5,004,900, Cl. 250-201.500.

Taghikhani, Majid: *See*—
Marino, Joseph A.; Makhija, Surender K.; Taghikhani, Majid; and Puetz, Peter A., 5,004,979, Cl. 324-160.000.

Taguchi, Toshio; and Okita, Hajime, to Mitsubishi Jukogyo Kabushiki Kaisha. Continuous vacuum treatment system. 5,003,706, Cl. 34-92.000.

Tahara, Yoshiyuki: *See*—
Ogawa, Osamu; Kishi, Ikuo; Tahara, Yoshiyuki; and Sugita, Masanori, 5,004,756, Cl. 514-655.000.
Okamoto, Yasushi; Tahara, Yoshiyuki; and Mishima, Yoshio, 5,004,735, Cl. 514-134.000.

Takabatake, Masato: *See*—
Hashimoto, Toru; Takabatake, Masato; Chino, Masashi; and Takahashi, Akira, 5,004,981, Cl. 324-207.220.

Takabayashi, Naoki: *See*—
Koboshi, Shigeharu; Kobayashi, Kazuhiro; Goto, Nobutaka; Kurematsu, Masayuki; and Takabayashi, Naoki, 5,004,522, Cl. 159-47.003.

Takabayashi, Tsunehisa: *See*—
Fukushima, Toru; Takabayashi, Tsunehisa; and Ogai, Mikio, 5,005,179, Cl. 372-46.000.

Takada, Kazuhiko: *See*—
Ishikawa, Jun; and Takada, Kazuhiko, 5,004,207, Cl. 248-632.000

Takada, Yoshihiro: *See*—
Suzuki, Akio, Takada, Yoshihiro; Izumizaki, Masami; and Danzuka, Toshimitsu, 5,004,928, Cl. 250-559.000.

Takagi, Soya; Mori, Kazuhiko; Kawasaki, Minoru; and Kato, Shinji, to Toyota Jidosha Kabushiki Kaisha. Dispersion strengthened copper-base alloy for overlay. 5,004,581, Cl. 420-487.000.

Takahashi, Akira: *See*—
Hashimoto, Toru; Takabatake, Masato; Chino, Masashi; and Takahashi, Akira, 5,004,981, Cl. 324-207.220.

Takahashi, Hiroaki; Okada, Haruo; Matsumoto, Katsuya; and Umino, Masuo, to Toyo Soda Manufacturing Co., Ltd. Process for measuring stable-type glycated hemoglobin in a sample. 5,004,546, Cl. 210-635.000.

Takahashi, Hiroshi, to Nissan Motor Company, Limited. System and method for automatically controlling a vehicle speed to a desired cruising speed. 5,005,133, Cl. 364-426.040.

Takahashi, Hiroto; Karita, Seiichiro; and Sato, Koichi, to Canon Kabushiki Kaisha. Ink jet recording apparatus which supplies repellent agent to liquid discharge port surface and method thereof. 5,005,024, Cl. 346-1.100.

Takahashi, Kozo: *See*—
Gohda, Eiichi; Tsubouchi, Hirohito; Nakayama, Hiroyuki; Hirono, Shuichi; Takahashi, Kozo; Hashimoto, Shuji; and Daikuhara, Yasushi, 5,004,805, Cl. 530-399.000.

Takahashi, Mitsuru; Shuyama, Hideo; Miyano, Osamu; and Tsutsumi, Yukihiro, to Tosoh Corporation. Process for producing fluorine-containing aliphatic carboxylic acids. 5,004,567, Cl. 260-408.000.

Takahashi, Noriyuki: *See*—
Ogawa, Masahide; Sato, Teiji; Tanaka, Masanori; and Takahashi, Noriyuki, 5,004,716, Cl. 501-141.000.

Takahashi, Osamu: *See*—
Yoneyama, Hiroyuki; Takahashi, Osamu; Yoshida, Kazuaki, and Ishikawa, Takatoshi, 5,004,675, Cl. 430-377.000.

Takahashi, Toshimasa: *See*—
Fudono, Kanji; Ogawa, Hiroshi; Takahashi, Toshimasa; and Yamashita, Toshio, 5,003,786, Cl. 62-156.000.

Takahashi, Yasushi, and Yasuda, Hiroshi, to Fujitsu Limited. Method and apparatus for detecting alignment mark of semiconductor device. 5,004,925, Cl. 250-491.100.

Takai, Yasuhiro, to NEC Corporation. Semiconductor device having output buffer circuit controlled by output control signal. 5,005,156, Cl. 365-189.050.

Takaishi, Tadao: *See*—
Umezaki, Tomokazu; and Takaishi, Tadao, 5,003,959, Cl. 123-647.000.

Takamatsu, Akio: *See*—
Tamura, Tatsuya; and Takamatsu, Akio, 5,004,511, Cl. 156-89.000.

Takamiya, Bonnosuke: *See*—
Hatta, Katuhiro; Hiramatsu, Takeo; and Takamiya, Bonnosuke, 5,003,842, Cl. 74-867.000.

Takamuki, Yasuhiko: *See*—
Yamada, Taketoshi; Habu, Takeshi; and Takamuki, Yasuhiko, 5,004,669, Cl. 430-264.000.

Takano, Hirotaka: *See*—
Mori, Tatsuya, Ohsumi, Tadashi; Nakamura, Shigeo; Maeda, Kiyoto; Nishida, Sumio; and Takano, Hirotaka, 5,004,816, Cl. 549-462.000.

Takaoka, Akio; and Inomata, Hiroshi, to Shin-Etsu Chemical Co., Ltd. Fluorine-containing organosilicon compound. 5,004,824, Cl. 556-412.000.

Takara Co., Ltd.: *See*—
Satoh, Yasuta; and Moriyama, Yasuyuki, 5,003,714, Cl. 40-414.000.

Takasaki, Yoshimi; and Horikawa, Kazuo, to Fuji Photo Film Co., Ltd. Logarithmic amplifier, and image read-out apparatus using the same. 5,004,906, Cl. 250-214.00A.

Takasu, Yoshio: *See*—
Arahara, Kozo; Fukui, Tetsuro; Fukumoto, Hiroshi; Katayama, Masato; and Takasu, Yoshio, 5,004,667, Cl. 430-255.000.

Takata, Koji: *See*—
Yamada, Shinji; Kohno, Teruhisa; and Takata, Koji, 5,004,301, Cl. 303-115.000.

Takata, Naoya: *See*—
Sato, Tsuyoshi; Inaba, Masahito; and Takata, Naoya, 5,004,349, Cl. 356-402.000.

Takayama, Syuichi, Tsukaya, Takashi; Ueda, Yasuhiro; Hatta, Shinji; and Abe, Masashi, to Olympus Optical Co., Ltd. Hyperthermia apparatus. 5,003,991, Cl. 128-784.000.

Takdea, Osamu: *See*—
Fukushima, Nobuo; Sakai, Shinji; Takdea, Osamu; Takei, Masahiro; Suzuki, Yasutomo; Okino, Tadashi; and Jinnai, Shigeru, 5,005,088, Cl. 360-69.000.

Takeda Chemical Industries, Ltd.: *See*—
Horii, Satoshi, and Fukase, Hiroshi, 5,004,838, Cl. 568-347.000.

Takeda, Kazuhisa: *See*—
Kim, Soonih; Takeda, Kazuhisa; and Sasatani, Seiei, 5,004,612, Cl. 424-450.000.

Takeda, Toshio, to Aisin Seiki Kabushiki Kaisha. Internal combustion engine with a mechanical super-charger. 5,003,957, Cl. 123-564.000.

Takei, Masahiro: *See*—
Fukushima, Nobuo; Sakai, Shinji; Takdea, Osamu; Takei, Masahiro; Suzuki, Yasutomo; Okino, Tadashi; and Jinnai, Shigeru, 5,005,088, Cl. 360-69.000.

Takenaka, Sadao: *See*—
Aono, Yoshihito, Iwamatsu, Takanori; Minowa, Morihiko; Takenaka, Sadao; Daidoh, Yoshimasa; Nakamura, Hiroshi; and Fujino, Nobutsugu, 5,005,186, Cl. 375-82.000.

Takigawa, Doreen Y.: *See*—
Percec, Elena S.; and Takigawa, Doreen Y., 5,004,783, Cl. 525-77.000.

Takiguchi, Hideki: *See*—
Yagi, Toshihiko; Kumashiro, Kenji; and Takiguchi, Hideki, 5,004,680, Cl. 430-603.000.

Takimoto, Hiroyuki: *See*—
Otokawa, Mitsuhiro; and Takimoto, Hiroyuki, 5,004,965, Cl. 318-254.000.

Takizawa, Nobuyuki: *See*—
Iida, Shoji, Miyazaki, Kazuo; and Takizawa, Nobuyuki, 5,004,857, Cl. 585-507.000.

Talanker, Lev. Embroidery pantograph assembly. 5,003,895, Cl. 112-103.000.

Talish, Roger J., to Meditron Corporation. Medical device for ultrasonic treatment of living tissue and/or cells. 5,003,965, Cl. 128-24.0AA.

Tallentire, Alan; and Sinclair, Colin S., to DRG (UK) Limited. Barrier products. 5,004,645, Cl. 428-323.000.

Talley, Carol S.: *See*—
Norton, Paul R.; Moroz, Michael; and Talley, Carol S., 5,004,698, Cl. 437-3.000.

Tallier, Bernard; and Hagmann, Otto, to Fabriques de Tabac Reunies, S.A. Apparatus for trimming and compression of tobacco. 5,003,996, Cl. 131-84.200.

Tallman, Richard L., to International Superconductor Corp. Method of making superconductor wires by hot isostatic pressing after bending. 5,004,722, Cl. 505-1.000.

Tamura, Hiroshi: *See*—
Haraguchi, Hiroshi; Tamura, Hiroshi; Kodama, Katuhiko; and Kondo, Toshio, 5,003,955, Cl. 123-489.000.

Tamura, Mitsuhisa; Suzukamo, Gohu; and Hirose, Ken-ichi, to Sumitomo Chemical Company, Limited. Process for producing allylic alcohols. 5,004,843, Cl. 568-670.000.

Tamura, Tatsuya; and Takamatsu, Akio, to Petoca Ltd. Process for producing non-woven fabrics of carbon fibers. 5,004,511, Cl. 156-89.000.

Tamura, Yasuyuki; and Kaneko, Shuzo, to Canon Kabushiki Kaisha. Image forming method and transfer recording medium therefor. 5,005,028, Cl. 346-76.00R.

Tamura, Yukio; Kinoshita, Kiyoshi; Uwaji, Tetsuo; and Mizuno, Takashi, to Mitsubishi Jukogyo Kabushiki Kaisha. Plasticizing screw. 5,004,352, Cl. 366-343.000.

Tanahashi, Masaaki; Hagiwara, Hiroyuki; and Fujii, Hiroyuki, to Hitachi Metals Ltd. Take-up apparatus for amorphous metal ribbon. 5,004,172, Cl. 242-54.00R.

Tanaka, Hidehiko, to Mitsubishi Denki Kabushiki Kaisha. Discharge machining apparatus with liquid flow control. 5,004,530, Cl. 204-224.00M.

Tanaka, Hideo: *See*—
Fujita, Shigeru, Tanaka, Hideo; and Harada, Susumu, 5,005,116, Cl. 364-188.000.

Tanaka, Hiroshi: *See*—
Shimizu, Kunimasa; Shigyo, Masao; and Tanaka, Hiroshi, 5,004,917, Cl. 250-236.000.

Tanaka, Masanori: *See*—
Ogawa, Masahide; Sato, Teiji; Tanaka, Masanori; and Takahashi, Noriyuki, 5,004,716, Cl. 501-141.000.

Tanaka, Nobuhiro: *See*—
Tsubone, Akira; Tomiyoshi, Masanori; Yokomizo, Junichi; Tanaka, Nobuhiro; Moriguchi, Hideyuki; and Hirata, Eiji, 5,004,401, Cl. 414-786.000.

Tanaka, Sakae: *See*—
Motai, Noboru; Tanaka, Sakae; and Watanabe, Yoshiaki, 5,005,056, Cl. 357-2.000.

Tanaka, Yukio, to Eastman Kodak Company. Light-emitting diode with light-transmissive film. 5,005,058, Cl. 357-17.000.

Tandem Computers Incorporated: *See*—
Lenoski, Daniel E., 5,005,118, Cl. 364-200.000.

Tanigawa, Masayoshi: *See*—
Tomita, Masahiro; Hayashi, Satoshi; Oda, Shinro; Fujii, Akira; and Tanigawa, Masayoshi, 5,004,945, Cl. 310-328.000.

Tanzawa, Takihei: *See*—
Ueno, Yoshifusa; Tanzawa, Takihei; and Suzuki, Takayuki, 5,004,988, Cl. 331-116.00R.

Tappert, Charles C.: *See*—
Ellozy, Hamed A.; Jeanty, Henry H.; and Tappert, Charles C., 5,005,205, Cl. 382-3.000.

Taraci, Brian: *See*—
Taraci, Richard; Taraci, Brian; and Gorgenyi, Imre, 5,004,973, Cl. 324-158.00R.

Taraci, Richard; Taraci, Brian; and Gorgenyi, Imre, to Thermal Management, Inc. Method and apparatus for maintaining electrically operating device temperatures. 5,004,973, Cl. 324-158.00R.

Tarumi, Noriyoshi: *See*—
Tomono, Makoto; Tarumi, Noriyoshi; and Sato, Masayuki, 5,004,666, Cl. 430-110.000.

Tashima, Seiji: *See*—
Shibata, Masanori; Okimoto, Haruo; Akagi, Toshimichi; and Tashima, Seiji, 5,003,781, Cl. 60-600.000

Taureg, Herbert, to Viscodrive GmbH. Fluid friction coupling with closing slide. 5,004,085, Cl. 192-58.00B.

Taylor, Charles S.; and Hampton, Hilary J., to Advanced Cardiovascular Systems, Inc. Steerable dilation catheter. 5,003,989, Cl. 128-772.000.

Taylor, Joann: *See*—
Taylor, Sylvester R., III; and Taylor, Joann, 5,004,286, Cl. 296-24.100.

Taylor, John R., to Innovative Building Products, Inc. Glass-block panels with improved thermal conduction characteristics. 5,003,744, Cl. 52-308.000.

Taylor, Raymond F., Jr.: *See*—
Wolf, Charles B.; Dighe, Shyam V.; Martin, Paul E.; Taylor, Raymond F., Jr.; and Melilli, William J., 5,004,888, Cl. 219-121.520.

Taylor, Robert E.: *See*—
Hallam, Donald E.; Popper, Peter; Staunton, Harold F., Taylor, Robert E.; and Yngve, Paul W., 5,003,763, Cl. 57-297.000.

Taylor, Sylvester R., III; and Taylor, Joann. Transport vehicle protective shield. 5,004,286, Cl. 296-24.100.

Tayon, Jeffrey E.: *See*—
Carlson, Harold L.; DeWitt, Michael D.; Martel, Louis, Jr.; Kelley, Larry W.; and Tayon, Jeffrey E., 5,004,077, Cl. 188-2.00D.

Tazartes, Daniel A.; Mark, John G.; and Mathews, Anthony, to Litton Systems, Inc. Apparatus and method for correcting ring laser gyroscope phase errors at turnaround. 5,004,344, Cl. 356-350.000.

TCH Thermo-Consulting-Heidelberg GmbH: *See*—
Mucic, Vinko; Thieme, Kurt; and Engelmann, Jurgen, 5,004,043, Cl. 165-118.000.

TDK Corporation: *See*—
Okamura, Masatoshi; Namioka, Takashi; and Shiba, Haruo, 5,004,180, Cl. 242-198.000.

Teal, Chuck. Purse light assembly. 5,005,111, Cl. 362-156.000.

Technion Research and Development Foundation Ltd.: *See*—
Beyar, Mordechay; and Foux, Amnon, 5,004,454, Cl. 600-30.000.
Grunfeld, Hay; Lotan, Noah; and Sideman, Samuel, 5,004,547, Cl. 210-635.000.

Technological Safety Design, Inc.: *See*—
Sova, Phillip R., 5,003,906, Cl. 114-211.000.

Technology 21, Inc.: *See*—
Dunseath, W. J., Jr., 5,003,978, Cl. 128-640.000.

Tecres Spa: *See*—
Faccioli, Giovanni; De Bastiani, Basilio M.; Magnan, Bruno; and Soffiatti, Renzo, 5,004,501, Cl. 106-35.000.

Teetz, Christoph: *See*—
Gubon, Peter; Sudmanns, Hans; and Teetz, Christoph, 5,003,934, Cl. 123-52.0MV.

Tektronix, Inc.: *See*—
Falk, Timothy L.; and Rhoads, Geoffrey B., 5,005,145, Cl. 364-571.020.
Jordan, Dale A., 5,004,975, Cl. 324-121.00R
Widener, Glenn F., 5,004,933, Cl. 307-269.000.

Teledyne Brown Engineering: *See*—
Caulfield, H. John; Hester, Charles F.; Kinser, Jason M.; and Shamir, Joseph, 5,004,309, Cl. 350-3.680.

Teledyne Industries, Inc.: *See*—
Terrell, John; Kadis, Paul M.; Hiney, Leonard L.; and Pfaff, Susan E., 5,003,807, Cl. 72-351.000.

Teleflex Incorporated: *See*—
Pospisil, Joseph, 5,003,838, Cl. 74-502.400.

Teleki, Bela; Holden, Alan G.; and Chong, Leang H., to Johnson Matthey Public Limited Company. Low pass filter system for an electrical circuit. 5,004,991, Cl. 333-168.000.

Temple, Stephen: *See*—
Bartky, W. Scott; Paton, Anthony D.; Temple, Stephen; and Michaelis, A. John, 5,003,679, Cl. 29-25.350.

Tenaillon, Alain: *See*—
Botteau, Richard; Labayle, Denis; and Tenaillon, Alain, 5,003,657, Cl. 15-104.330.

Terada, Akio: *See*—
Yamamoto, Makoto; and Terada, Akio, 5,005,163, Cl. 369-44.360.

Terada, Nobuhiro; Shimizu, Masataka; and Matsuzawa, Soichiro, to NGK Insulators, Ltd. Method of producing a magnetic head core having track-width defining cut outs formed on opposite side of a magnetic gap. 5,003,688, Cl. 29-603.000.

Terada, Yukio: *See*—
Nakatani, Seiichi; Yuhaku, Satoru; Nishimura, Tsutomu; Terada, Yukio; and Baba, Yasuyuki, 5,004,640, Cl. 428-195.000.

Teradyne, Inc.: *See*—
Barnett, Roy, 5,004,426, Cl. 439-82.000.

Terai, Fumitaka; Yukawa, Kimio; Suyefuji, Mineo; Saito, Hiroki; and Yamaguchi, Shigeru, to Fuji Photo Film Co., Ltd. Coating method and apparatus. 5,004,628, Cl. 427-389.900.

Terai, Masao: *See*—
Saka, Kenji; Terai, Masao; and Yamamoto, Kanji, 5,003,966, Cl. 128-39.000.

Terauchi, Makoto; Ikeda, Chikako; and Aritomi, Mitsutoshi, to Mitsubishi Petrochemical Co., Ltd. Aromatic polythioetherimide. 5,004,800, Cl. 528-351.000.

Terbrusch, Rosemarie; and Spector, George. Trash can with tethered cover. 5,004,114, Cl. 220-296.000.

Terness, Peter; and Opelz, Gerhard, to Fresenius A. G. Immuno-suppressive material and process for preparing same. 5,004,604, Cl. 424-85.500.

Ternstrom, Ingela; and Eriksson, Mats, to Molnlycke AB. Disposable absorbent article. 5,004,465, Cl. 604-385.100.

Terrell, John; Kadis, Paul M., Hiney, Leonard L.; and Pfaff, Susan E., to Teledyne Industries, Inc. Press assembly and method of operation. 5,003,807, Cl. 72-351.000.

Terrot Strickmaschinen GmbH: *See*—
Leins, Eberhard; and Kunde, Klaus, 5,003,793, Cl. 66-9.00B

Terumo Kabushiki Kaisha: *See*—
Nogawa, Atsuhiko, 5,004,113, Cl. 215-358.000.

Testoff, Mary A.: *See*—
Schnur, Joel M.; Rudolph, Alan S.; and Testoff, Mary A., 5,004,566, Cl. 260-403.000.

Tetra Pak Holdings & Finance S.A.: *See*—
Reil, Wilhelm, 5,004,411, Cl. 425-117.000.

Texaco Inc: *See*—
Pasternak, Mordechai; Bartels, Craig R.; and Reale, John, Jr., 5,004,861, Cl. 585-818.000.

Texas Instruments Incorporated. *See*—
Andresen, Bernhard H., 5,004,936, Cl. 307-443.000.
Chen, Kueing-Long, 5,005,066, Cl. 357-43.000
Dent, Peter R.; and Bharya, Rajpal S., 5,005,150, Cl. 364-736.000.
Hariri, Farouk A., 5,004,519, Cl. 156-620.400.
Kleven, Lawrence P.; Agranat, Edward A.; Crisafulli, Jerry; Robinson, Hugh; Smith, David J., Wiseley, Thomas; Fortier, Richard C.; Johnson, Severne; and Menzin, Marvin, 5,004,954, Cl. 315-106.000.
Martin, Robert C., 5,005,173, Cl. 371-22.600.
Simpson, Richard D., 5,005,193, Cl. 377-33.000.
Sogge, Dale R.; O'Brien, Edward F.; and Czarn, David A., 5,004,876, Cl. 200-83.00P.
Sullivan, Harold W.; and McConnell, Pat M., 5,004,399, Cl. 414-729.000.

Textile Air Company, Inc.: *See*—
Wilson, Merlin C., 5,003,661, Cl. 15-301.000.

Tezuka, Kazunari; and Fujiki, Haruo, to Fuji Jukogyo Kabushiki Kaisha. Traction control system for a four-wheel drive motor vehicle. 5,004,064, Cl. 180-197.000.

Th. Goldschmidt AG: *See*—
Koerner, Gotz; and Schaefer, Dietmar, 5,004,559, Cl. 252-345.000.

Thanos, William N., Peterson, Bruce R., Moon, William G., Lindsay, Joshua; and Stone, Thomas R., to Quantum Corp. High performance, high capacity micro-winchester disk drive. 5,005,089, Cl. 360-77.080.

Theeten, Jean-Bernard: *See*—
Naillon, Martine; and Theeten, Jean-Bernard, 5,005,206, Cl. 382-56.000.

Theisen, Peter J.; Wycklendt, Daniel A., Juds, Mark A., and Moldovan, Peter K., to Eaton Corporation. Direct current switching apparatus. 5,004,874, Cl. 200-144.00R.

Thermal Management, Inc.: *See*—
Taraci, Richard; Taraci, Brian; and Gorgenyi, Imre, 5,004,973, Cl. 324-158.00R.

Thermodynetics, Inc.: *See*—
Jones, Brian C., 5,004,046, Cl. 165-156.000.

Thermos Company, Inc., The: *See*—
Hanagan, Joseph J., 5,003,960, Cl. 126-39.0BA

Theys, Robert A.: *See*—
Lee, Richard J.; Smith, Barbara A.; Theys, Robert G., Theys, Robert A.; and Murphy, Judy A., 5,004,920, Cl. 250-304.000

Theys, Robert G.: *See*—
Lee, Richard J., Smith, Barbara A.; Theys, Robert G., Theys, Robert A., and Murphy, Judy A., 5,004,920, Cl. 250-304.000.

Thieme, Kurt: *See*—
Mucic, Vinko; Thieme, Kurt; and Engelmann, Jurgen, 5,004,043, Cl. 165-118.000.

Thomas, John F., to Cargo Master Incorporated. Cargo truck body. 5,004,293, Cl. 296-166.000.

Thominet, Maurice; and Thominet, Rosemarie. Portable, collapsible cellular rack. 5,004,146, Cl. 229-120.310

Thominet, Rosemarie: *See*—
Thominet, Maurice; and Thominet, Rosemarie, 5,004,146, Cl. 229-120.310.

Thompson, Barry A., to Pich, Rene; Issaurat, Hubert, and Thompson, Barry A. Feeding livestock. 5,004,603, Cl. 424-81.000

Thompson, David R., to Pico Electronics Limited. Remote control. 5,005,187, Cl. 375-94.000.

Thompson, Douglas: *See*—
Wong, Kin Y., and Thompson, Douglas, 5,003,826, Cl. 73-828.000.

Thompson, Earl C. Demand type animal watering valve. 5,003,927, Cl. 119-72.500.

Thompson, Robert A., to General Electric Company. Method and system for monitoring shot peening. 5,003,805, Cl. 72-53.000

Thomson-Brandt Armements: *See*—
Bernard, Marc, 5,004,184, Cl. 244-3.220
Frehaut, Jean-Pierre; and Pineau, Jean-Pierre, 5,003,882, Cl. 102-387.000.
Joset, Gerard, 5,003,861, Cl. 89-1.550

Thomson CSF: *See*—
Elleaume, Philippe; and Prevost, Michel, 5,005,149, Cl. 364-728.010
Ikes, Jacques; Le Fur, Joel, and Nugues, Pierre, 5,004,952, Cl. 315-3.500

Thomson, Jody: *See*—
Hershenson, Susan, and Thomson, Jody, 5,004,605, Cl. 424-85.600

Thomson Tubes Electroniques. *See*—
Bergero, Jean-Pierre; and Couasnard, Claude, 5,004,990, Cl. 333-22.00R

Thorn Emi Flow Measurement Limited: *See*—
Jepson, Peter, and Tofield, Graham M., 5,003,810, Cl. 73-3.000

Thurston, Kurt W. Interlocking stacking plastic barricades. 5,003,912, Cl. 116-63.00P

Tibbitts, Gordon A., and Jones, Mark L., to Eastman Christensen Company. Drill bit with improved steerability. 5,004,057, Cl. 175-408.000.

Tiernan, Joan E. Treatment of concentrated industrial wastewaters originating from oil shale and the like by electrolysis polyurethane foam interaction. 5,004,531, Cl. 204-307.000.

Tietjen, Klaus-Gunther. *See*—
Weissmuller, Joachim; Tietjen, Klaus-Gunther; Stendel, Wilhelm; and Wachendorff-Neumann, Ulrike, 5,004,744, Cl. 514-247.000.

Timmins, Lawrence J.; and Krause, Duane K., to Chrysler Corporation. Rack for transporting vehicle center console assemblies. 5,004,102, Cl. 206-386.000.

Tipton, John P.: *See*—
Mixon, Larry C.; Snyder, George W.; Hill, Scott D.; Johnson, Gregory L.; Wlodarski, J. Frank; von Spakovsky, Alexis P., Emerson, John D., Cole, James M.; and Tipton, John P., 5,003,883, Cl. 102-476.000.

Tjassens, Hindrik: *See*—
Kluitmans, Johannes T. M.; and Tjassens, Hindrik, 5,005,178, Cl. 372-36.000.

TMC Corporation: *See*—
Holzl, Klaus, 5,004,261, Cl. 280-612.000.

Tobuse, Hiroaki; Murakami, Hidenobu; and Kamio, Masashi, to Mitsubishi Denki Kabushiki Kaisha. Electron beam direct printing apparatus. 5,005,138, Cl. 364-519.000.

Toda, Akitoshi: *See*—
Matsui, Hiroshi, and Toda, Akitoshi, 5,004,902, Cl. 250-201.800.

Toda, Manabu, to Sharp Kabushiki Kaisha. Cordless telephone apparatus. 5,005,198, Cl. 379-58.000.

Tofield, Graham M. *See*—
Jepson, Peter, and Tofield, Graham M., 5,003,810, Cl. 73-3.000

Toft, Malcolm P.: *See*—
Ashton, Michael J.; Bridge, Andrew W.; Chambers, Robert K., Dron, Donald I.; Fenton, Garry; Harris, Neil V., Lythgoe, David J.; McFarlane, Ian M.; Newton, Christopher G., Riddell, David; Smith, Christopher; Stuttle, Keith A. J.; and Toft, Malcolm P., 5,004,747, Cl. 514-309.000.

Tohzuka, Takashi; Yamamoto, Ikuo; and Misugi, Yoshihiko, to Daikin Industries Ltd. Fluorine-containing polyether and lubricant comprising the same. 5,004,554, Cl. 252-54.600.

Toji, Shigeo: *See*—
Suzuki, Noboru, Toji, Shigeo; and Uenaka, Yukio, 5,005,087, Cl. 358-227.000

Tojo, Tetsuo; Okada, Keiji; Nakahara, Takashi; and Kikuchi, Yoshiharu, to Mitsui Petrochemical Industries, Ltd. Vulcanizable rubber composition with triazine thiols. 5,004,787, Cl. 525-332.100.

Tokai Chemical Industries, Ltd.: *See*—
Kurimoto, Kazunori, 5,004,572, Cl. 264-46.600.

Tokico Ltd.: *See*—
Mizutani, Yoich, 5,004,265, Cl. 280-707.000.

Tokyo Electron Limited: *See*—
Imahashi, Issei, 5,004,924, Cl. 250-442.100.

Tom, Wilson. Multi-bolt door lock. 5,003,796, Cl. 70-107.000.

Tomida, Yoshinori: *See*—
Nishimura, Yukuo; Eguchi, Ken; Kawada, Haruki; Tomida, Yoshinori, Nakagiri, Takashi, Saito, Kenji, Kimura, Toshiaki, Matsuda, Hiroshi, Sakai, Kunihiro; and Miyazaki, Toshihiko, 5,004,671, Cl. 430-286.000.

Tomita, Masahiro, Hayashi, Satoshi; Oda, Shinro; Fujii, Akira; and Tanigawa, Masayoshi, to Nippondenso Co., Ltd. Piezoelectric type actuator. 5,004,945, Cl. 310-328.000.

Tomiyama, Akira: *See*—
Tomiyama, Tsuyoshi; Tomiyama, Akira; and Kubota, Koichi, 5,004,750, Cl. 514-382.000.

Tomiyama, Tsuyoshi; Tomiyama, Akira; and Kubota, Koichi, to Kotobuki Seiyaku Company Limited. Benzofuran and benzothiophene derivatives, of tetrazole and anti-hyperuricemia use thereof. 5,004,750, Cl. 514-382.000.

Tomiyoshi, Masanori: *See*—
Tsubone, Akira, Tomiyoshi, Masanori; Yokomizo, Junichi; Tanaka, Nobuhiro, Moriguchi, Hideyuki; and Hirata, Eiji, 5,004,401, Cl. 414-786.000.

Tomono, Makoto; Tarumi, Noriyoshi; and Sato, Masayuki, to Konica Corporation. Toner for use in developing electrostatic images. 5,004,666, Cl. 430-110.000.

Tomura, Yoshihiro, Maruhashi, Keiji; and Ozawa, Nobuyuki, to Kabushiki Kaisha Pilot. Device for advancing and retracting writing element in writing instrument. 5,004,364, Cl. 401-110.000.

Toray Industries, Inc.: *See*—
Tada, Kuniyuki, Minomiya, Eiichi; and Watanabe, Masatoshi, 5,004,855, Cl. 585-489.000

Toselli, Vittorio: *See*—
Zanardi, Angelo; Mei, Daniele; and Toselli, Vittorio, 5,004,412, Cl. 418-132.000

Toshiba Kikai Kabushiki Kaisha: *See*—
Fujita, Shigeru, Tanaka, Hideo; and Harada, Susumu, 5,005,116, Cl. 364-188.000

Toshiba Lighting & Technology Corporation: *See*—
Honda, Kazuo, Matsuura, Atsushi, and Sano, Hisanori, 5,004,951, Cl. 313-631.000.

Toshiba Silicone Co., Ltd.: *See*—
Nagaoka, Hisayuki, Zenbayashi, Michio, and Shimizu, Chiyuki, 5,004,793, Cl. 528-15.000.

Tosoh Corporation: *See*—
Takahashi, Mitsuru; Shuyama, Hideo; Miyano, Osamu, and Tsutsumi, Yukihiro, 5,004,567, Cl. 260-408.000.

Toyo Denso Kabushiki Kaisha: *See*—
Shibazaki, Toshiji; Okano, Masaru; Kishida, Naoto; Ozaki, Yoshihiro; and Iyama, Kunihiko, 5,004,996, Cl. 338-36.000.

Toyo Elizai Kabushiki Kaisha: *See*—
Uda, Masashi; and Oohira, Jun, 5,004,466, Cl. 604-385.200.

Toyo Soda Manufacturing Co., Ltd.: *See*—
Takahashi, Hiroaki, Okada, Haruo; Matsumoto, Katsuya; and Umino, Masuo, 5,004,546, Cl. 210-635.000.

Toyoda Gosei Co., Ltd.: *See*—
Inoue, Masaki, 5,003,684, Cl. 29-447.000.

Toyoshi, Naoki, Oka, Tateki; and Goto, Hiroshi, to Minolta Camera Kabushiki Kaisha. Developing apparatus with image quality control. 5,003,917, Cl. 118-653.000.

Toyota Jidosha Kabushiki Kaisha: *See*—
Imai, Hajime; Kito, Shozo, Harada, Shoichi; Yokoyama, Yoshinobu; Nakamura, Syuzi; Miyoshi, Shigetoshi; and Muramatsu, Tadao, 5,003,799, Cl. 70-247.000
Kato, Senji; and Oba, Hidehiro, 5,003,950, Cl. 123-422.000.
Takagi, Soya, Mori, Kazuhiko; Kawasaki, Minoru; and Kato, Shinji, 5,004,581, Cl. 420-487.000.

Tracey, Timothy E.: *See*—
Holroyd, Trevor J.; and Tracey, Timothy E., 5,004,985, Cl. 324-727.000.

Tracy, Darrel C. Live picture construction. 5,003,921, Cl. 119-5.000.

Trame, Charles E.; Karsten, Robert A., and Hobach, Michael W., to Everbrite, Inc. Changeable information scroll sign. 5,003,717, Cl. 40-518.000.

Trans-Action Marketing Corp.: *See*—
Boilen, Irving, 5,005,161, Cl. 368-295.000.

Traudt, Jon E. Pressure controlled fresh air supply ventilation system soil gas pressure as a reference, and method of use. 5,003,865, Cl. 98-1.500.

Triangle Brass Manufacturing Company: *See*—
Campbell, Andrew B., and Simon, Ira J., 5,004,277, Cl. 292-166.000.

Trident Medical Products, Inc.: *See*—
Bruhl, Daniel E., Jr., 5,004,333, Cl. 351-45.000.

Tripar Incorporated: *See*—
Kersey, Robert L., 5,003,995, Cl. 131-359.000.

Truett, Martha: *See*—
Kuo, George, Masiarz, Frank; Truett, Martha, and Valenzuela, Pablo, 5,004,804, Cl. 530-387.000.

Truth Incorporated: *See*—
Berner, John M.; and Roman, Thomas A., 5,004,961, Cl. 318-65.000.

TRW Inc.: *See*—
Wood, Ruey E., Jr., 5,004,367, Cl. 403-46.000.

Tsantrizos, Youla S.: *See*—
Fortin, J. Andre; Ogilvie, Kelvin K.; Tsantrizos, Youla S.; and Kope, Harry H., 5,004,754, Cl. 514-570.000.

Tsarapkin, Viktor V.: *See*—
Goikhman, Yakov A.; Krjukov, Georgy M.; Onotsky, Melis I.; Sorokin, Georgy M., Filatov, Alexei V.; Tsarapkin, Viktor V.; Yakimov, Vadim P.; Smirnov, Gennady A.; Nikiforov, Ivan I.; Burdukovsky, Alexandr I., Daibov, Sergei V.; and Kurdjukov, Alexandr S., 5,004,056, Cl. 175-293.000.

Tso, J. Yun, and Queen, Cary L., to Protein Design Labs, Inc. Cloning and expression of phosopholipase C genes. 5,004,692, Cl. 435-183.000.

Tsubone, Akira; Tomiyoshi, Masanori; Yokomizo, Junichi; Tanaka, Nobuhiro; Moriguchi, Hideyuki; and Hirata, Eiji, to Kao Corporation, and Seibu Electric and Machinery Co., Ltd. Layer palletizing method. 5,004,401, Cl. 414-786.000.

Tsubouchi, Hirohito: *See*—
Gohda, Eiichi; Tsubouchi, Hirohito; Nakayama, Hiroyuki; Hirono, Shuichi; Takahashi, Kozo; Hashimoto, Shuji; and Daikuhara, Yasushi, 5,004,805, Cl. 530-399.000.

Tsuchida, Hirofumi, to Olympus Optical Co., Ltd. Vari-focal lens system. 5,004,329, Cl. 350-427.000.

Tsuchimoto, Shuhei: *See*—
Yoshinouchi, Atsushi; Itoh, Masataka; and Tsuchimoto, Shuhei, 5,004,905, Cl. 250-208.100.

Tsuji, Kazunori: *See*—
Iura, Kazuo; Tsuji, Kazunori; and Saka, Kazuhito, 5,003,761, Cl. 57-58.520.

Tsuji, Masahiro; Kawauchi, Susumu; and Nakayama, Hiroshi, to Nippon Mining Co., Ltd. Method of manufacturing film carrier. 5,004,520, Cl. 156-630.000.

Tsujimoto, Hisanaga, to Kabushiki Kaisha Toshiba. Cassette loading apparatus with single switch control. 5,005,091, Cl. 360-96.500.

Tsujita, Akio: *See*—
Haruki, Shinichi; Furuya, Yhuzi; and Tsujita, Akio, 5,005,051, Cl. 355-221.000.

Tsukahara, Hiroyuki: *See*—
Kakinoki, Yoshikazu; Nakashima, Masato; Koezuka, Tetsuo; Hiraoka, Noriyuki; Tsukahara, Hiroyuki; Suto, Yoshinori; Oshima, Yoshitaka; and Hashinami, Shinji, 5,004,929, Cl. 250-561.000.

Tsukahara, Hitoshi: *See*—
Kato, Koichiro; Fukuhara, Hiroshige; Kamishima, Hiroyuki; and Tsukahara, Hitoshi, 5,005,021, Cl. 343-717.000.

Tsukamoto, Akihiro; and Kobayashi, Kenichi, to Casio Computer Co., Ltd. Pager with a display function. 5,005,013, Cl. 340-825.440.

Tsukamoto, Jack K. Golf ball retriever. 5,004,240, Cl. 273-162.00E.

Tsukaya, Takashi: *See*—
Takayama, Syuichi; Tsukaya, Takashi; Ueda, Yasuhiro; Hatta, Shinji; and Abe, Masashi, 5,003,991, Cl. 128-784.000.

Tsukimoto, Takayuki: *See*—
Katsoka, Kenichi; and Tsukimoto, Takayuki, 5,004,964, Cl. 318-128.000.

Tsuno, Katsushige; and Inoue, Masao, to Jeol Ltd. Differential phase contrast scanning transmission electron microscope. 5,004,918, Cl. 250-311.000.

Tsushima, Kazunori: *See*—
Otaka, Ken; Matsuo, Noritada; Tsushima, Kazunori, and Yano, Toshihiko, 5,004,753, Cl. 514-531.000

Tsutsumi, Yukihiro: *See*—
Takahashi, Mitsuru; Shuyama, Hideo; Miyano, Osamu, and Tsutsumi, Yukihiro, 5,004,567, Cl. 260-408.000.

Tucker, Donald L., to Raychem Corporation. Electrical connector. 5,004,432, Cl. 439-417.000.

Tulane University: *See*—
Cook, Stephen D., 5,004,476, Cl. 623-23.000.

Tullis, Barclay J.; and Kruger, James B., to Hewlett-Packard Company. Calibration target for surface analysis scanner systems. 5,004,340, Cl. 356-243.000.

Tung, Charles C., to Hewlett-Packard Company. Piece-wise print image enhancement for dot matrix printers. 5,005,139, Cl. 364-519.000.

Tungsram Reszvenytarsasag (Tungsram RT): *See*—
Kinczel, Peter; Balazs, Laszlo; and Sajo, Gabor, 5,004,948, Cl. 313-486.000.

Turigliatto, Richard S.: *See*—
Cadwallader, George W.; Highfill, Louis A.; Kurdys, Gregory D.; and Turigliatto, Richard S., 5,004,589, Cl. 423-315.000.

Turner, Keith. *See*—
Bradley, Michael W.; Harris, Norman; and Turner, Keith, 5,004,845, Cl. 568-885.000.

Ty Tan, Michael R.; and Wang, Shih-Yuan, to Hewlett-Packard Company. Low loss, low dispersion velocity-matched travelling wave modulator. 5,004,313, Cl. 350-96.140.

Tzelnick, Tzvi: *See*—
Shisgal, Ben Z.; and Tzelnick, Tzvi, 5,004,997, Cl. 340-436.000.

Ube Industries, Ltd.: *See*—
Kuriyama, Minoru, 5,004,038, Cl. 164-305.000.

Uchikawa, Fusaoki: *See*—
Kobayashi, Toshio; Uchikawa, Fusaoki; Nomura, Kenji; Morita, Masao; and Yokoyama, Shouichi, 5,004,720, Cl. 505-1.000

Uda, Masashi; and Oohira, Jun, to Toyo Elizai Kabushiki Kaisha. Elasticized unit and garment. 5,004,466, Cl. 604-385.200.

Udagawa, Tsunekazu, to Ishikawa Gasket Co., Ltd. Metal plate with a bead. 5,004,250, Cl. 277-236.000.

Udofot, Michael P. Light activated vehicle sensor with flashing light and pulsing sound alarm. 5,005,004, Cl. 340-600.000.

Ueda, Shinji, to Fuji Photo Film Co., Ltd. Method for processing a silver halide color photographic material. 5,004,677, Cl. 430-382.000.

Ueda, Tetsuya, to Mitsubishi Denki Kabushiki Kaisha. Semiconductor card which can be folded. 5,004,899, Cl. 235-492.000.

Ueda, Yasuhiro: *See*—
Takayama, Syuichi; Tsukaya, Takashi; Ueda, Yasuhiro; Hatta, Shinji; and Abe, Masashi, 5,003,991, Cl. 128-784.000.

Uemura, Hiroki: *See*—
Oono, Toshio; and Uemura, Hiroki, 5,004,078, Cl. 188-218.00A.

Uenaka, Yukio: *See*—
Suzuki, Noboru; Toji, Shigeo; and Uenaka, Yukio, 5,005,087, Cl. 358-227.000.

Ueno, Yoshifusa; Tanzawa, Takihei; and Suzuki, Takayuki, to Nihon Dempa Kogyo Co., Ltd. Quartz crystal oscillator with temperature-compensated frequency characteristics. 5,004,988, Cl. 331-116.00R.

UFI, Inc.: *See*—
Miksitz, Frank J., 5,003,920, Cl. 119-163.000.

Ul-Tie-Mate Products, Inc.: *See*—
Dean, Grant, 5,003,929, Cl. 119-120.000.

Ulyanitsky, Vladimir J.; Gavrilenko, Tamara P.; Nikolaev, Jury A.; and Buteev, Alexandr I. Arrangement for conveying powder to the barrel of a gas detonation apparatus. 5,004,021, Cl. 141-67.000.

Umbeck, Paul F., to Agracetus. Genetic engineering of cotton plants and lines. 5,004,863, Cl. 800-205.000.

Umehara, Keiichi; Hirose, Hisashi; and Kono, Kazuo, to Kabushiki Kaisha Tokai Rika Denki Seisakusho. Steering angle sensor apparatus. 5,004,915, Cl. 250-231.140.

Umezaki, Tomokazu; and Takaishi, Tadao, to Mitsubishi Denki Kabushiki Kaisha. Ignition coil unit for an internal combustion engine. 5,003,959, Cl. 123-647.000.

Umezawa, Norio: *See*—
Mitsugu, Teruyuki; and Umezawa, Norio, 5,003,836, Cl. 74-425.000.

Umino, Masuo: *See*—
Takahashi, Hiroaki; Okada, Haruo, Matsumoto, Katsuya; and Umino, Masuo, 5,004,546, Cl. 210-635.000

Underwood, James T. Fly deterrent apparatus. 5,003,721, Cl. 43-132.100

Vali, Victor, Chang, David B., and Brownrigg, Patrick C., to Hughes Aircraft Company Fiber-optic interferometric chemical sensor. 5,004,914, Cl. 250-227.270.
Van Doorne's Transmissie B.V. *See*—
Ide, Tohru, 5,004,450, Cl. 474-242.000.
Van Andel, Maarten A., Van Liempd, Johannes P. J. G., and Wijn, Josephus M., to U S. Philips Corporation Master disc and method of manufacturing a matrix. 5,004,660, Cl. 430-17.000.
Van Berkel, Cornelis H., Saeijs, Ronald W. J. J., and Niessen, Cornelius, to U.S. Philips Corporation. Silicon-compiler method and arrangement. 5,005,136, Cl. 364-490.000.
Van Blaircum, Bennie A., Harwood, Jon W.; and Kimmet, Mark S., to AP Parts Manufacturing Company. Stamp formed muffler with transverse baffle tube. 5,004,069, Cl. 181-282.000.
Vandarakis, Toni L.: *See*—
Montuoro, Lou D., Vandarakis, Toni L.; and Johnson, Richard L., 5,004,305, Cl. 312-214.000.
van den Berg, Noel J. M.: *See*—
Proksa, Roland; Roschmann, Peter; and van den Berg, Noel J. M., 5,004,983, Cl. 324-322.000.
Van Den Brink, Anthonie, to Eurotool B.V. Injection nozzle for use in an injection moulding device. 5,004,416, Cl. 425-564.000.
van den Burg, Johannes M. E., to Mijnhardt B.V. Flowmeter for gases. 5,003,828, Cl. 73-861.330.
Vanderbilt, Jeffrey J. *See*—
Devon, Thomas J.; Phillips, Gerald W.; Puckette, Thomas A., Stavinoha, Jerome L., and Vanderbilt, Jeffrey J., 5,004,823, Cl. 556-136.000.
Vanderlaan, Robert D., to Pneumo Abex Corporation. Direct drive valve force motor with gain shaping provision. 5,004,940, Cl. 310-36.000.
van der Lely, Ary; and Bom, Cornelis J. G., to C. van der Lely N.V. Devices for spreading granular and/or powdery material. 5,004,163, Cl. 239-661.000.
Van Ketel, Hendrik, to 501 Heerema Engineering Service B.V. Cranes. 5,004,108, Cl. 212-255.000.
Van Leeuwen, Petrus W. N. M.; and Roobeek, Cornelis F., to Shell Oil Company Process for the reduction of carbonyl compounds. 5,004,844, Cl. 568-880.000.
Van Liempd, Johannes P. J. G.: *See*—
Van Andel, Maarten A., Van Liempd, Johannes P. J. G.; and Wijn, Josephus M., 5,004,660, Cl. 430-17.000.

Varenchuk, Pavel A.. *See*—
Juschenko, Konstantin A., Varenchuk, Pavel A., Kovalev, Valentin D., Chvertko, Anatoly I., Privalov, Nikolai T.; and Kuzmenko, Vladimir G., 5,004,885, Cl. 219-73.200.
Varo, Inc.. *See*—
Hanson, Charles M.; Koester, Vaughn J.; and Fallstrom, Robert D., 5,005,213, Cl. 455-617.000.
Varvello, Angelo; Vignotto, Angelo; and Moretti, Roberto, to RIV-SKF Officine di Villar Perosa S.p.A. Device enabling the revolutionary speed to be measured between two parts in relative rotation such as the supports of a vehicle wheel. 5,004,358, Cl. 384-446.000.
Vasquez, Barbara: *See*—
Zdebel, Peter J., and Vasquez, Barbara, 5,004,703, Cl. 437-67.000.
Vassenaix, Michel; and Milcamps, Jacques, to CGR MeV. Device for the irradiation of a product on both faces. 5,004,926, Cl. 250-492.300.
Vaterlaus, Arthur, to Arva AG Outlet and flow control device for metallurgical vessels and process. 5,004,130, Cl. 222-590.000.
Vaughn, Walter L.: *See*—
Patton, Robert T.; Vaughn, Walter L.; and McKeand, Thomas J., Jr., 5,004,760, Cl. 521-149.000.
VDO Adolf Schindling AG: *See*—
Mayer, Klaus, 5,003,914, Cl. 116-332.000.
Vega, Julio J.: *See*—
Beaver, Phillip R.; DiGiacinto, Peter M.; Hutchinson, Donald O.; and Vega, Julio J., 5,004,847, Cl. 570-186.000.
Veignat, Norbert: *See*—
Oudet, Claude, Drey, Gilbert; and Veignat, Norbert, 5,003,686, Cl. 29-596.000.
Velke, James D.; and Wright, William R., to Lawn-Wright, Inc Sulky apparatus attachable to a self-propelled power mower. 5,004,251, Cl. 280-32.700.
Venture Innovations, Inc.: *See*—
House, Roy F., Wilkinson, Andree H.; and Cowan, Jack C., 5,004,553, Cl. 252-8.510.
Vereinigte Kesselwerke AG: *See*—
Huschauer, Helmuth, 5,003,931, Cl. 122-4.00D.
Verhulst, Antonius G. H.; Bruinink, Jacob; and Lenders, Emanuel J. W. M., to U.S. Philips Corporation. Method of manufacturing an improved electroscopic fluid display. 5,004,322, Cl. 350-320.000.
Vermeire, Dirk V. Hip prosthesis. 5,004,475, Cl. 623-23.000.
Vermeulen, Leon L.; Pauwels, Robert S.; De Smedt, Willy P.; and Vervloet, Ludovicus H., to Agfa-Gevaert, N.V. Dye image receiving material. 5,004,659, Cl. 430-14.000.
Vernerey, Philippe: *See*—
Dufournet, Francois; and Vernerey, Philippe, 5,004,135, Cl. 224-210.000.
Vervloet, Ludovicus H.: *See*—
Vermeulen, Leon L.; Pauwels, Robert S.; De Smedt, Willy P.; and Vervloet, Ludovicus H., 5,004,659, Cl. 430-14.000.
Vesely, Ivan; and Kreitmair, Xaver, to MAN Nutzfahrzeuge GmbH. Tool for fitting and removing brake shoe returns springs. 5,003,680, Cl. 29-227.000.
Vestuti, Emile. Tree grate system. 5,003,724, Cl. 47-25.000.
Vicari, Richard; Costanza, John R.; Lamonte, Ronald R.; and Miano, Ralph M., to Hoechst Celanese Corporation. Preparation of poly(arylate) using a non-solvent. 5,004,796, Cl. 528-179.000.
Vida, Zsuzesanna: *See*—
Jekkel nee Bokany, Antonia; Albrecht, Karoly; Ambrus, Gabor; Lang, Tibor; Szabo, Istvan M., Ilkoy, Eva; Konczol, Kalman; Moravesik, Imre; Hantos, Gabor, Simonovits, Emilia, Lengyel nee Szemenyei, Zsuzsanna; Vida, Zsuzesanna; and Csajagi, Eva, 5,004,695, Cl. 435-253.100.
Vidal, Henri; Muelas-Medrano, Santiago; and Segrestin, Pierre, to Vidal, Henri Facing system. 5,004,376, Cl. 405-284.000.
Viertel, Lothar; Kaiser, Peter; and Welter, Patrick, to Gebr. Happich GmbH Sun visor for motor vehicle having a slidable main body. 5,004,288, Cl. 296-97.110.
Vigil, Dennis M.: *See*—
Olson, Thomas E.; and Vigil, Dennis M., 5,003,918, Cl. 118-665.000.
Vignos, James H.: *See*—
Kalinoski, Richard W.; Chitty, Gordon W.; and Vignos, James H., 5,003,827, Cl. 73-861.240.

Whitehead, Jimmy. Cloth warmer. 5,004,894, Cl. 219-521.000.
Whitlock, Arthur D., and Spector, George. Electromotive fish attractor. 5,003,719, Cl. 43-17.500.
Whittington, Richard. *See*—
Altschuler, Martin D., and Whittington, Richard, 5,005,143, Cl. 364-554.000.
Wichelhaus, Juergen: *See*—
Emmerling, Winfried; Wichelhaus, Juergen, and Podola, Tore, 5,004,794, Cl. 528-52.000.
Wickramasinghe, Hemantha K.. *See*—
Martin, Yves, and Wickramasinghe, Hemantha K., 5,003,815, Cl. 73-105.000.
Widener, Glenn F., to Tektronix, Inc. Phase-selectable flip-flop. 5,004,933, Cl. 307-269.000.
Widmer, Hanspeter. *See*—
Kung, Roland, and Widmer, Hanspeter, 5,005,209, Cl. 455-32.000.
Wiencek, Norbert. *See*—
Petzold, Rainer; Fritz, Walter, and Wiencek, Norbert, 5,004,086, Cl. 192-85.00C.
Wiese, Michael. *See*—
Neumann, Andreas; and Wiese, Michael, 5,004,101, Cl. 206-343.000.
Wijn, Josephus M. *See*—
Van Andel, Maarten A.; Van Liempd, Johannes P. J. G.; and Wijn, Josephus M., 5,004,660, Cl. 430-17.000.
Wilde, Eugen. *See*—
Goessler, Gerhard; Wilde, Eugen; and Seeburger, Rolf, 5,004,892, Cl. 219-464.000.
Wilfong, Debra L. *See*—
Salaba, Timothy A., and Wilfong, Debra L., 5,004,351, Cl. 366-152.000.
Wilhelm Fette GmbH. *See*—
Hinzpeter, Juergen; and Gruedelbach, Hans-Dieter, 5,004,576, Cl. 264-40.500.
Wilhelm, Gary L.: *See*—
Lipscomb, Dennis E.; Wilhelm, Gary L.; Perna, Barbara G., and Guenthner, Waldemar G., 5,003,695, Cl. 30-193.000.
Wilken-Trenkamp, Ludger: *See*—
Stude, Rolf-Rudiger; and Wilken-Trenkamp, Ludger, 5,004,414, Cl. 425-185.000.

Wilkes, Lambert H.; Mehner, Martin; and Lalor, William F., to Cotton Incorporated. Method and apparatus for reorienting seed cotton on a ginning apparatus. 5,003,669, Cl. 19-49.000.
Wilkinson, Andree H.. *See*—
House, Roy F.; Wilkinson, Andree H., and Cowan, Jack C., 5,004,553, Cl. 252-8.510.
Wilkinson, Bruce S., to Rule Industries, Inc. Anchor. 5,003,910, Cl. 114-304.000.
William Prym-Werke GmbH. & Co. KG: *See*—
Nysten, Bernhard, 5,003,673, Cl. 24-662.000.
Williams, Farrell D.: *See*—
Stamp, Roger A.; and Williams, Farrell D., 5,003,646, Cl. 4-542.000.
Williams, James. Disposable shower liner. 5,003,647, Cl. 4-559.000.
Williams, Keith G. *See*—
Culbertson, Samuel W.; and Williams, Keith G., 5,004,403, Cl. 417-53.000.
Williams, Robert C.. *See*—
Hughes, Robert J.; and Williams, Robert C., 5,003,701, Cl. 33-409.000.
Willkens, Craig A.. *See*—
Hay, Robert A.; Willkens, Craig A.; and Arsenault, Normand P., 5,004,544, Cl. 210-490.000.
Wilson, David: *See*—
Chaney, Raymond J.; McMurtry, David R.; and Wilson, David, 5,004,982, Cl. 324-207.220.
Wilson, Ewert J. A., to Interstate Chemical, Inc. Blended gasolines. 5,004,850, Cl. 585-1.000.
Wilson, Geoffrey G.. *See*—
Chen, Shu-zi; and Wilson, Geoffrey G., 5,004,691, Cl. 435-172.300.
Wilson, Joseph E. Methods for rendering plastics thromboresistant and product. 5,004,461, Cl. 604-265.000.
Wilson, Merlin C., to Textile Air Company, Inc. Forced air apparatus for directing filtered air against a surface. 5,003,661, Cl. 15-301.000.
Wilson, Robert A. Control and limiting of oil spills from an ocean going tanker. 5,003,908, Cl. 114-229.000.
Wilson, William B.; DiPietro, Matthew; Neace, Richard K.; Dethier, Vincent B.; Hauss, Raymond G.; and Louk, James R., to Eastman Kodak Company. Processing apparatus. 5,005,036, Cl. 354-322.000.
Wilston, Arthur, to Structural Block Systems, Inc. Arcuate and curvilinear assemblies comprising tandemly arranged building blocks having degrees of rotation. 5,003,746, Cl. 52-589.000.
Windebank, Stephen R. *See*—
Utton, Donald B.; and Windebank, Stephen R., 5,004,354, Cl. 374-29.000.
Windrem, Ron. Automatic flag for rural mailbox. 5,004,148, Cl. 232-35.000.
Winfrey, Laura J.: *See*—
Hillman, Robert S.; Cobb, Michael E.; Allen, Jimmy D.; Gibbons, Ian, Ostoich, Vladimir E.; and Winfrey, Laura J., 5,004,923, Cl. 250-341.000.
Winnie, Philip D., to Westinghouse Electric Corp. Fastener for use at cryogenic temperatures, and tool therefor. 5,004,361, Cl. 411-366.000.
Winters, Mark A., to SRI International. Method to detect fungi and yeasts. 5,004,699, Cl. 435-7.310.
Winters, Robert C.. *See*—
Bernhardt, Everett A.; and Winters, Robert C., 5,004,879, Cl. 200-295.000.
Wirth, Gary J.; and Jambor, George F., to W. H. Brady Co. Lockout device for valves with lever handles. 5,003,797, Cl. 70-180.000.
Wiseley, Thomas: *See*—
Kleven, Lawrence P.; Agranat, Edward A.; Crisafulli, Jerry; Robinson, Hugh; Smith, David J.; Wiseley, Thomas; Fortier, Richard C.; Johnson, Severne; and Menzin, Marvin, 5,004,954, Cl. 315-106.000.
Wislinski, Martin; Bergquist, Roger; Schroeder, Manfred; Weir, Theodore, Monetti, Matthew; and Fung, Paul, to McNeil-PPC-Inc. Methods and apparatus for selective placement of fibrous material in formed fibrous articles. 5,004,579, Cl. 264-517.000.
Wlodarski, J. Frank: *See*—
Mixon, Larry C.; Snyder, George W.; Hill, Scott D.; Johnson, Gregory L.; Wlodarski, J. Frank; von Spakovsky, Alexis P.; Emerson, John D.; Cole, James M.; and Tipton, John P., 5,003,883, Cl. 102-476.000.
Woehrl, Alfons: *See*—
Spies, Hans; Woehrl, Alfons; and Spies, Martin, 5,005,085, Cl. 358-213.110.
Wojtowicz, John A.: *See*—
Wood, Richard B.; Mullins, Richard M.; and Wojtowicz, John A., 5,004,549, Cl. 210-699.000.
Woldvedt, Alan H.. *See*—
Dickie, Gerald M.; Liles, Steve L.; and Woldvedt, Alan H., 5,004,372, Cl. 405-63.000.
Wolf, Charles B.; Dighe, Shyam V.; Martin, Paul E.; Taylor, Raymond F., Jr.; and Melilli, William J., to Westinghouse Electric Corp. Plasma torch with extended life electrodes. 5,004,888, Cl. 219-121.520.
Wolff, Erich: *See*—
Meckl, Heinz, Klotzer, Sieghart; Wolff, Erich; and Haseler, Helmut, 5,004,676, Cl. 430-398.000.
Won, John. Sound and/or light generating device for skateboards. 5,004,256, Cl. 280-87.042.
Wong, Dorothy Y. Automobile mat and securing clip. 5,003,664, Cl. 16-6.000.
Wong, John J.; and Lui, Paul S., to Macronix, Inc. Computer game cartridge security circuit. 5,004,232, Cl. 273-435.000.
Wong, Kin Y.; and Thompson, Douglas, to Boeing Company, The. Apparatus for supporting a long cable for tension testing. 5,003,826, Cl. 73-828.000.
Wong, Marvin G.. *See*—
Altendorf, John M.; and Wong, Marvin G., 5,005,070, Cl. 357-74.000.
Wood, Richard B.; Mullins, Richard M.; and Wojtowicz, John A., to Olin Corporation. Method for inhibiting scale formation using calcium hypochlorite compositions. 5,004,549, Cl. 210-699.000.
Wood, Ruey E., Jr., to TRW Inc. Turnbuckle assembly. 5,004,367, Cl. 403-46.000.
Wood, Thomas H., to AT&T Bell Laboratories. Interference suppression in optical communication systems. 5,005,212, Cl. 455-606.000.
Woodward, Adrian M. *See*—
Lyons, Nicholas; Baxter, William R. S.; Woodward, Adrian M.; and Clarke, Roger W., 5,004,542, Cl. 210-356.000.

Fuller, Timothy J.; Marchessault, Robert H.; and Bluhm, Terry L., 5,004,664, Cl. 430-106.600.
Law, Kock-Yee; and Bailey, F. Courtney, 5,004,661, Cl. 430-59.000.
Sardano, Peter A.; and Kazmierczak, Irvin J., 5,004,218, Cl. 271-35.000.
Stokes, Ronald E.; Nowak, William J.; Attardi, Anthony A.; and Costanza, Daniel W., 5,005,054, Cl. 355-273.000.
Yacoub, Naseem: *See*—
Landa, Benzion; Hochman, Haim; and Yacoub, Naseem, 5,004,165, Cl. 241-21.000.
Yada, Akira; and Matsumoto, Shusaku, to Dai-Ichi Kogyo Seiyaku Co., Ltd. Process for continuously preparing acrylic polymer gel. 5,004,761, Cl. 522-3.000.
Yagawa, Hiroshi, to AMP Incorporated. Optical fiber cable-stripping device. 5,003,846, Cl. 81-9.420.
Yagawara, Shinji; Manaka, Junji; and Ohta, Wasaburo, to Ricoh Company, Ltd. Gas detecting device. 5,003,812, Cl. 73-31.060.
Yagi, Masanori; DiViesti, Anthony M.; Regnier, Kent E.; Yamada, Shoji E.; and Walse, Alan S., to Molex Incorporated. Metal latch for SIMM socket. 5,004,429, Cl. 439-326.000.
Yagi, Toshihiko; Kumashiro, Kenji; and Takiguchi, Hideki, to Konica Corporation. High-speed and well-preservable silver halide photographic light-sensitive material. 5,004,680, Cl. 430-603.000.
Yagihara, Morio: *See*—
Okutsu, Eiichi; Hirano, Mitsunori; and Yagihara, Morio, 5,004,670, Cl. 430-265.000.
Yahata, Makoto; and Nishida, Fumihiko, to Dainippon Screen Mfg. Co., Ltd. Automatic masking device. 5,005,044, Cl. 355-40.000.
Yakimov, Vadim P.: *See*—
Goikhman, Yakov A.; Krjukov, Georgy M.; Onotsky, Melis I.; Sorokin, Georgy M.; Filatov, Alexei V.; Tsarapkin, Viktor V.; Yakimov, Vadim P.; Smirnov, Gennady A.; Nikiforov, Ivan I.; Burdukovsky, Alexandr I.; Daibov, Sergei V.; and Kurdjukov, Alexandr S., 5,004,056, Cl. 175-293.000.
Yakuwa, Masahiko; Itoh, Tomofumi; and Igarashi, Hisashi, to Honda Giken Kogyo Kabushiki Kaisha. Fail-safe device for temperature sensors. 5,003,954, Cl. 123-479.000.
Yalpani, Manssur; and Abdel-Malik, Magdy M., to Domtar Inc. Aminoalkyl-derivatives of hydroxyalkyl-celluloses. 5,004,808, Cl. 536-56.000.

Yamada, Kaneo: *See—*
Hayashi, Shigeru; and Yamada, Kaneo, 5,004,609, Cl. 424-94.300.

Yamada, Koji: *See—*
Yasuzawa, Toru; Nakanishi, Satoshi; Murakata, Chikara; Kase, Hiroshi; Sano, Hiroshi; and Yamada, Koji, 5,004,833, Cl. 536-18.200.

Yamada, Noriyuki: *See—*
Matsumoto, Yukihiro; Yoshihara, Kenji; Kajiura, Tetsuya, Niizato, Tomonori; and Yamada, Noriyuki, 5,003,937, Cl. 123-90.120

Yamada, Shinji; Kohno, Teruhisa, and Takata, Koji, to Sumitomo Electric Industries, Ltd. Modulator for use in an anti-lock brake control system. 5,004,301, Cl. 303-115.000.

Yamada, Shoji E.: *See—*
Yagi, Masanori; DiViesti, Anthony M.; Regnier, Kent E., Yamada, Shoji E., and Walse, Alan S., 5,004,429, Cl. 439-326.000.

Yamada, Taketoshi; Habu, Takeshi; and Takamuki, Yasuhiko, to Konica Corporation. Light-sensitive silver halide photographic material. 5,004,669, Cl. 430-264.000.

Yamaguchi, Shigeru: *See—*
Terai, Fumitaka; Yukawa, Kimio; Suyefuji, Mineo; Saito, Hiroki; and Yamaguchi, Shigeru, 5,004,628, Cl. 427-389.900.

Yamaguchi, Tadamasa. *See—*
Sakaguchi, Shuichi; Yamaguchi, Tadamasa; and Yamashita, Itaru, 5,004,884, Cl. 219-73.000.

Yamaguchi, Takeshi: *See—*
Sakamoto, Noriaki; Maeda, Shigemi; Yamanaka, Toshihiro; Deguchi, Toshihisa; Horie, Nobuyuki; Yamaguchi, Takeshi, and Kojima, Kunio, 5,005,164, Cl. 369-48.000.

Yamaguchi, Yoh-Ichi: *See—*
Kobayashi, Masato; Yamaguchi, Yoh-Ichi; Sugawara, Minoru, and Yamashiro, Kazuhide, 5,005,075, Cl. 378-35.000.

Yamaha Corporation: *See—*
Furukawa, Kazunari, 5,004,066, Cl. 181-160.000.
Makino, Toru, 5,004,521, Cl. 156-645.000.

Yamaha Hatsudoki Kabushiki Kaisha. *See—*
Yoshida, Takeo; and Kishida, Hajime, 5,004,154, Cl. 239-96.000.

Yamakawa, Tsutomu; and Kobayashi, Hiroaki, to Kabushiki Kaisha Toshiba. Method and system for controlling gain and offset in radiation measurement apparatus. 5,004,904, Cl. 250-207.000.

Yamamoto, Ikuo: *See—*
Tohzuka, Takashi; Yamamoto, Ikuo; and Misugi, Yoshihiko, 5,004,554, Cl. 252-54.600.

Yamamoto, Kanji. *See—*
Saka, Kenji; Terai, Masao; and Yamamoto, Kanji, 5,003,966, Cl. 128-39.000.

Yamamoto, Kazuo, to Nippon Seiko Kabushiki Kaisha. Mechanism for positional adjustment of anchor for webbing in passive seat belt system for vehicle. 5,004,268, Cl. 280-804.000.

Yamamoto, Kazuo *See—*
Kitamura, Koichi, Mimura, Hidenori; Yamamoto, Kazuo; and Ohta, Yasumitsu, 5,004,903, Cl. 250-208.100.

Yamamoto, Makoto; and Terada, Akio, to Nakamichi Corp. Level shift circuit of optical disc apparatus. 5,005,163, Cl. 369-44.360.

Yamamoto, Tatsuo: *See—*
Miyake, Teruyoshi; and Yamamoto, Tatsuo, 5,003,638, Cl. 2-167.000.

Yamamoto, Tetsushi; Niwano, Masaru; and Nakagawa, Etsuo, to Chisso Corporation. Apparatus for stabilization treatment of ferromagnetic metal powder. 5,003,919, Cl. 118-716.000.

Yamamoto, Yohzoh; Ishiwata, Shuichi; Yokoyama, Kenji; and Hasegawa, Kimio, to Mitsui Petrochemical Industries, Ltd., and NEC Environment Engineering, Ltd. Composition for vibration damper, process for manufacture thereof, and vibration damper. 5,004,764, Cl. 523-400.000.

Yamanaka, Toshihiro; Maeda, Shigemi; and Horie, Nobuyuki, to Sharp Kabushiki Kaisha. Method for managing information on a storage media without losing information due to effects. 5,005,165, Cl. 369-58.000.

Yamanaka, Toshihiro: *See—*
Sakamoto, Noriaki; Maeda, Shigemi; Yamanaka, Toshihiro; Deguchi, Toshihisa; Horie, Nobuyuki, Yamaguchi, Takeshi; and Kojima, Kunio, 5,005,164, Cl. 369-48.000

Yamasaki, Komei, and Funaki, Keisuke, to Idemitsu Kosan Co., Ltd. Resin laminates and a process for production thereof. 5,004,649, Cl. 428-461.000.

Yamashiro, Kazuhide: *See—*
Kobayashi, Masato; Yamaguchi, Yoh-Ichi; Sugawara, Minoru; and Yamashiro, Kazuhide, 5,005,075, Cl. 378-35.000

Yamashita, Itaru: *See—*
Sakaguchi, Shuichi; Yamaguchi, Tadamasa; and Yamashita, Itaru, 5,004,884, Cl. 219-73.000.

Yamashita, Masami *See—*
Oshima, Hisaichi; and Yamashita, Masami, 5,005,027, Cl. 346-76.0PH.

Yamashita, Toshio: *See—*
Fudono, Kanji; Ogawa, Hiroshi; Takahashi, Toshimasa; and Yamashita, Toshio, 5,003,786, Cl. 62-156.000.

Yamauchi, Hiroto: *See—*
Amano, Tetsuya, Mita, Seuchi; Izumita, Morishi, Doi, Nobukazu; Kaneko, Mamoru; Yamauchi, Hiroto; and Kasai, Susumu, 5,005,184, Cl. 375-14.000.

Yamazaki, Etsuo; Iehisa, Nobuaki; and Suzuki, Kazuhiro, to Fanuc Ltd. Laser power controlling method. 5,004,889, Cl. 219-121.610

Yamazaki, Toshio. Automobile side door extendable and retractable bump protector. 5,004,281, Cl. 293-118.000

Yan, Tsoung Y., to Mobil Oil Corp. Pseudocumene and mesitylene production and coproduction thereof with xylene. 5,004,854, Cl. 585-489.000

Yanagida, Jun: *See—*
Oohinata, Osamu, and Yanagida, Jun, 5,003,660, Cl. 15-244.100

Yanagisawa, Kiyoshi *See—*
Sase, Toshitsugu, Matsuda, Michiaki; Yanagisawa, Kiyoshi, and Maeda, Mitsuru, 5,004,068, Cl. 181-276.000.

Yang, Nan L.. *See—*
Broussard, Jerry A., Auerbach, Andrew B., Yang, Nan L.; Paul, James L.; Zheng, Yong C., and Zhang, Chong L., 5,004,798, Cl. 528-230.000

Yang, Wen C. Stem having a fixing device. 5,003,839, Cl. 74-551.100.

Yano, Tadashi, and Hamada, Kenichi, to Mitsubishi Jukogyo Kabushiki Kaisha. Printing apparatus inker with end dams. 5,003,877, Cl. 101-363.000.

Yano, Toshihiko: *See—*
Otaka, Ken; Matsuo, Noritada, Tsushima, Kazunori, and Yano, Toshihiko, 5,004,753, Cl. 514-531.000.

Yarita, Ikuo. *See—*
Kenmochi, Kazuhito; Yarita, Ikuo; Fukuhara, Akihiko, Komatu, Tomio, and Kishida, Akira, 5,003,804, Cl. 72-39.000

Yasuda, Hiroshi: *See—*
Takahashi, Yasushi; and Yasuda, Hiroshi, 5,004,925, Cl. 250-491.100.

Yasui, Hideaki. *See—*
Kozaki, Tetsuji, Ishikawa, Hiroshi; Yasui, Hideaki; Shimamoto, Mamoru, Hibino, Katsuhiko; and Suzuki, Motoshi, 5,004,264, Cl. 280-707.000

Yasuzawa, Toru; Nakanishi, Satoshi; Murakata, Chikara; Kase, Hiroshi, Sano, Hiroshi; and Yamada, Koji, to Kyowa Hakko Kogyo Co., Ltd. KS-501 derivatives. 5,004,833, Cl. 536-18.200.

Yazaki Corporation. *See—*
Misaki, Takashi, and Aoki, Hitoshi, 5,005,010, Cl. 340-705.000

Yeh, Felix W. H. *See—*
Chen, Hai C., and Yeh, Felix W. H., 5,004,076, Cl. 187-130.000

Yeh, Kuo-Huei. Structure of multi-function frame members. 5,003,741, Cl. 52-280.000

Yeo, Jong K., Kim, Chung S.; Lee, Dong J.; and Jang, Sung H., to Lucky, Ltd. Thermosetting polyimide resin composition. 5,004,774, Cl. 524-262.000

Yin, Simon, to Square D Company. Vacuum interrupter. 5,004,877, Cl. 200-144.00B.

Yngve, Paul W.: *See—*
Hallam, Donald E.; Popper, Peter; Staunton, Harold F.; Taylor, Robert E., and Yngve, Paul W., 5,003,763, Cl. 57-297.000

Yokoe, Masaaki, Kurono, Yoshikazu; and Hayashi, Koji, to Brother Kogyo Kabushiki Kaisha. Sewing system. 5,003,897, Cl. 112-121.120.

Yokomizo, Junichi *See—*
Tsubone, Akira, Tomiyoshi, Masanori; Yokomizo, Junichi, Tanaka, Nobuhiro, Moriguchi, Hideyuki, and Hirata, Eiji, 5,004,401, Cl. 414-786.000.

Yokoyama, Kenichi: *See—*
Sato, Kiyoshi; Yoshikawa, Hirokazu; Ikenari, Shigeru; and Yokoyama, Kenichi, 5,004,656, Cl. 429-162.000.

Yokoyama, Kenji. *See—*
Yamamoto, Yohzoh; Ishiwata, Shuichi; Yokoyama, Kenji; and Hasegawa, Kimio, 5,004,764, Cl. 523-400.000

Yokoyama, Shouichi: *See—*
Kobayashi, Toshio, Uchikawa, Fusaoki, Nomura, Kenji; Morita, Masao, and Yokoyama, Shouichi, 5,004,720, Cl. 505-1.000.

Yokoyama, Yoshinobu. *See—*
Imai, Hajime; Kito, Shozo; Harada, Shoichi; Yokoyama, Yoshinobu, Nakamura, Syuzi, Miyoshi, Shigetoshi, and Muramatsu, Tadao, 5,003,799, Cl. 70-247.000.

Yokoyama, Yoshio. *See—*
Fushiya, Fusao, Yokoyama, Yoshio; and Hara, Akihito, 5,004,140, Cl. 227-8.000.

Yoneda, Tetsuya, and Sato, Shin, to Sharp Kabushiki Kaisha. Battery. 5,004,657, Cl. 429-193.000

Yoneyama, Hiroyuki, Takahashi, Osamu; Yoshida, Kazuaki; and Ishikawa, Takatoshi, to Fuji Photo Film Co., Ltd. Method for processing a silver halide photosensitive material for color photography. 5,004,675, Cl. 430-377.000

Yoneyama, Syuichi, Obana, Yoshinori; and Fujisawa, Eiichi, to Nissan Motor Co., Ltd. Ignition coil mounting structure for engine. 5,003,958, Cl. 123-635.000.

Yoshida, Kazuaki: *See—*
Yoneyama, Hiroyuki, Takahashi, Osamu; Yoshida, Kazuaki; and Ishikawa, Takatoshi, 5,004,675, Cl. 430-377.000

Yoshida, Takeo; and Kishida, Hajime, to Yamaha Hatsudoki Kabushiki Kaisha. High pressure fuel injection device for engine. 5,004,154, Cl. 239-96.000

Yoshida, Tutomu; and Iida, Shigeharu, to Daikin Industries Ltd. Process for preparing di(fluoroalkyl containing group-substituted alkyl) phosphate salt. 5,004,825, Cl. 558-131.000.

Yoshihara, Kenji *See—*
Matsumoto, Yukihiro; Yoshihara, Kenji; Kajiura, Tetsuya, Niizato, Tomonori, and Yamada, Noriyuki, 5,003,937, Cl. 123-90.120

Yoshikawa, Hirokazu. *See—*
Sato, Kiyoshi, Yoshikawa, Hirokazu; Ikenari, Shigeru; and Yokoyama, Kenichi, 5,004,656, Cl. 429-162.000

Yoshimoto, Kyosuke, and Shimoda, Kyouji, to Mitsubishi Denki Kabushiki Kaisha. Current mirror amplifier for use in an optical data medium driving apparatus and servo-circuit. 5,004,901, Cl. 250-201.500

Yoshino, Masato, to Sumitomo Electric Industries, Ltd. Antilock brake control device. 5,005,132, Cl. 364-426.020.

Yoshino Seiki Inc. *See—*
Yoshino, Yousuke, 5,004,382, Cl. 408-60.000.

Yoshino, Yoshimi; Ao, Kenichi, Izawa, Ichiro; and Arasuna, Toshikazu, to Nippondenso Co., Ltd. Device for detecting magnetism. 5,005,064, Cl. 357-27.000.

Yoshino, Yousuke, to Yoshino Seiki Inc. Mist-spouting type drilling device. 5,004,382, Cl. 408-60.000

Yoshinouchi, Atsushi; Itoh, Masataka; and Tsuchimoto, Shuhei, to Sharp Kabushiki Kaisha. Contact type image sensor with a fiber array coated in part with an absorber. 5,004,905, Cl. 250-208.100.

Yoshioka, Hiroshi: *See—*
Sato, Hiroshi, Hirose, Kenichi; Nagai, Koichi; Yoshioka, Hiroshi; and Nagaoka, Yoshihiko, 5,004,846, Cl. 568-940.000.

Yoshioka, Takeo; and Minagawa, Tadao, to Mitsubishi Denki K.K. Method for controlling gas in halogen gas laser and device therefor. 5,005,181, Cl. 372-59.000.

Young, Alfred; and Church, Fred E., to Design Tool, Inc. Fastener feeding and driving apparatus. 5,004,141, Cl. 227-112.000.

Young, Daniel E., to United Steel Products Co. Slope and skew hanger. 5,004,369, Cl. 403-232.100.

Young, Robert N., Zamboni, Robert; and Gauthier, Jacques Y., to Merck Frosst Canada, Inc. Pyridyl styrene dialkanoic acids as anti-leukotriene agents. 5,004,743, Cl. 514-227.800.

Young, Rosa *See—*
Ovshinsky, Stanford R.; and Young, Rosa, 5,004,725, Cl. 505-1.000.

Youngs, Janene. Self-adherent foam wrapping material. 5,004,642, Cl. 428-222.000

Yu, Chyang J.: *See—*
Bardhan, Pronob; and Yu, Chyang J., 5,004,713, Cl. 501-134.000

Yu Li Enterprise Co. Ltd.: *See—*
Weng, Kuo-Liang; and Weng, Kuo-Liang, 5,005,007, Cl. 340-650.000.

Yu, Meng W., Su, Shihuai; Chen, Yue Z.; Zheng, Ticheng; Ji, Kebin; Ling, Shou R.; Lin, Jian C., Deng, Jianhui; and Zhang, Kunwu, to PanZhiHua Iron & Steel Co. Process for manufacturing high strength railroad rails. 5,004,510, Cl. 148-146.000.

Yuhaku, Satoru: *See—*
Nakatani, Seiichi; Yuhaku, Satoru; Nishimura, Tsutomu; Terada, Yukio; and Baba, Yasuyuki, 5,004,640, Cl. 428-195.000.

Yuhasz, Stephen J., to Lutron Electronics Co., Inc. Wireless power control system with auxiliary local control. 5,005,211, Cl. 455-603.000

Yukawa, Kimio: *See—*
Terai, Fumitaka; Yukawa, Kimio, Suyefuji, Mineo; Saito, Hiroki; and Yamaguchi, Shigeru, 5,004,628, Cl. 427-389.900.

Yula, Joseph J. *See—*
Koblitz, Francis F.; O'Shea, Thomas M.; Stoner, Beverly A.; and Yula, Joseph J., 5,004,869, Cl. 174-84.00C.

Yum, Su I.: *See—*
Osborne, James L., Nelson, Melinda; Enscore, David J.; Yum, Su I.; and Gale, Robert M., 5,004,610, Cl. 424-448.000.

Yuuhaku, Satoru: *See—*
Hakotani, Yasuhiko; Nakatani, Seiichi; Yuuhaku, Satoru; Nishimura, Tsutomu, and Ishida, Toru, 5,004,715, Cl. 501-136.000.

Yuzuriha, Yoshiki *See—*
Iwamoto, Akio; and Yuzuriha, Yoshiki, 5,003,956, Cl. 123-494.000.

Zaghloul, Amir I.; and Sorbello, Robert M., to Communications Satellite Corporation. Electromagnetically coupled printed-circuit antennas having patches or slots capacitively coupled to feedlines. 5,005,019, Cl. 343-700.0MS.

Zahnradfabrik Friedrichshafen AG: *See—*
Petzold, Rainer, Fritz, Walter; and Wiencek, Norbert, 5,004,086, Cl. 192-85.00C.

Zambon S p A.: *See—*
Castaldi, Graziano; and Giordano, Claudio, 5,004,832, Cl. 562-490.000.

Zamboni, Robert: *See—*
Young, Robert N.; Zamboni, Robert; and Gauthier, Jacques Y., 5,004,743, Cl. 514-227.800.

Zanardi, Angelo; Mei, Daniele; and Toselli, Vittorio, to Sauer-Sundstrand S.p.A. Gear machine for use as a pump or motor. 5,004,412, Cl. 418-132.000.

Zdebel, Peter J.; and Vasquez, Barbara, to Motorola. Multiple trench semiconductor structure method. 5,004,703, Cl. 437-67.000

Zdepski, Joel W.; and Koslov, Joshua L., to General Electric Company. Video signal compander adaptively responsive to predictions of the video signal processed. 5,005,082, Cl. 358-174.000.

Zebco Corporation: *See—*
Councilman, Richard R., 5,004,182, Cl. 242-232.000.

Zecher, Wilfried; El-Sayed, Aziz; Haese, Wilfried; Kohler, Burkhard, and Meyer, Rolf-Volker, to Bayer Aktuengesellschaft. Aliphatic-aromatic polyamide-imides. 5,004,795, Cl. 528-73.000.

Zelko, William E.: *See—*
McKee, Michael J.; Miknis, William D.; Pawlikowski, Joseph M.; and Zelko, William E., 5,004,887, Cl. 219-85.160.

Zellweger Telecommunications AG: *See—*
Kung, Roland; and Widmer, Hanspeter, 5,005,209, Cl. 455-32.000

Zenbayashi, Michio: *See—*
Nagaoka, Hisayuki; Zenbayashi, Michio; and Shimizu, Chiyuki, 5,004,793, Cl. 528-15.000.

Zetachron, Inc.: *See—*
Snipes, Wallace C., 5,004,601, Cl. 424-78.000.

Zhang, Chong L.: *See—*
Broussard, Jerry A., Auerbach, Andrew B.; Yang, Nan L., Paul, James L.; Zheng, Yong C., and Zhang, Chong L., 5,004,798, Cl. 528-230.000.

Zhang, Kunwu: *See—*
Yu, Meng W.; Su, Shihuai; Chen, Yue Z.; Zheng, Ticheng, Ji, Kebin; Ling, Shou R.; Lin, Jian C., Deng, Jianhui; and Zhang, Kunwu, 5,004,510, Cl. 148-146.000

Zheng, Ticheng: *See—*
Yu, Meng W.; Su, Shihuai; Chen, Yue Z.; Zheng, Ticheng; Ji, Kebin; Ling, Shou R., Lin, Jian C.; Deng, Jianhui; and Zhang, Kunwu, 5,004,510, Cl. 148-146.000.

Zheng, Yong C.: *See—*
Broussard, Jerry A.; Auerbach, Andrew B.; Yang, Nan L., Paul, James L.; Zheng, Yong C.; and Zhang, Chong L., 5,004,798, Cl. 528-230.000.

Ziegenfuss, James N., Jr. Floating lounge chair. 5,004,296, Cl. 297-194.000.

Zimmer: *See—*
Atkinson, Robert W., 5,004,468, Cl. 606-132.000

Zlobinsky, Yury, to Savant Instruments. Cell preservation system. 5,003,787, Cl. 62-185.000.

Zocchi, Germaine: *See—*
Julemont, Michel; Zocchi, Germaine; Mineo, Nunzio; and Fonsny, Pierre, 5,004,556, Cl. 252-99.000.

Zodrow, Rudolf, to ETI-TEC Maschinenbau GmbH. Labelling machine for objects such as bottles or the like. 5,004,518, Cl. 156-568.000.

Zoller-Kipper GmbH: *See—*
Naab, Jakob, 5,004,392, Cl. 414-21.000.

Zweifel, Martin R. Method and plant for burning special waste. 5,003,893, Cl. 110-346.000.

Zweig, Andrew M.: *See—*
Harnish, Daniel F.; Pickens, Donald; and Zweig, Andrew M., 5,004,790, Cl. 526-242.000.

Zweigart, Gerhard: *See—*
Bauer, Theodor; and Zweigart, Gerhard, 5,004,291, Cl. 296-116.000.

Zyskind, John L.: *See—*
Desurvire, Emmanuel; Giles, Clinton R.; Simpson, Jay R.; and Zyskind, John L., 5,005,175, Cl. 372-6.000.

501 Heerema Engineering Service B.V.: *See—*
Van Ketel, Hendrik, 5,004,108, Cl. 212-255.000.

LIST OF REISSUE PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 2ND DAY OF APRIL, 1991

NOTE —Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice)

Alcofuels, Inc : *See—*
Badger, Stephen L., Re 33,562, Cl 44-438.000

AMCA International Corporation: *See—*
Heckelsberg, Robert E., Re 33,563, Cl 52-404.000

Badger, Stephen L., to Alcofuels, Inc. Fuel composition Re 33,562, Cl 44-438.000.

Ballard Medical Products *See—*
Ford, George W , Jr , Re 33,564, Cl. 222-209.000

Beck, Lee R *See—*
Stolle, Ralph J , and Beck, Lee R , Re 33,565, Cl 424-87.000

Ford, George W , Jr , to Ballard Medical Products Foam dispensing device Re 33,564, Cl 222-209.000

Heckelsberg, Robert E , to AMCA International Corporation Metal panel roofing structure Re 33,563, Cl 52-404.000

Stolle, Ralph J , and Beck, Lee R., to Stolle Research and Development Corporation Prevention and treatment of rheumatioid arthritis Re 33,565, Cl 424-87.000

Stolle Research and Development Corporation *See—*
Stolle, Ralph J , and Beck, Lee R , Re 33,565, Cl 424-87.000

LIST OF REEXAMINATION PATENTEES

TO WHOM

CERTIFICATES WERE ISSUED

a Porta, Reudi *See—*
Bjerknes, Anders, and a Porta, Reudi, B1 4,198,094, Cl 297-306.000

Anchor Hocking Corp *See—*
Ochs, Charles S., B1 4,392,580, Cl 215-332.000

Bart, Philip D Doll which rises from prone to standing position B1 4,349,987, 4-2-91, Cl 446-355.000

Bjerknes, Anders, and a Porta, Reudi Working chair B1 4,198,094, 4-2-91, Cl 297-306.000

Cleveland Machine Controls, Inc *See—*
Griebeler, Elmer L , B1 4,459,526, Cl 318-576.000

Gall, John C , to Sears, Roebuck and Co. Material mixer B1 4,235,553, 4-2-91, Cl 366-208.000

Griebeler, Elmer L , to Cleveland Machine Controls, Inc Multi apertured lens shock wave probe B1 4,459,526, 4-2-91, Cl 318-576.000

Houston, Reagan, to Salem Industries Regenerative incinerator systems for waste gases B1 3,870,474, 4-2-91, Cl 422-171.000

Ochs, Charles S , to Anchor Hocking Corp Closure cap B1 4,392,580, 4-2-91, Cl 215-332.000

Salem Industries *See—*
Houston, Reagan, B1 3,870,474, Cl 422-171.000

Sears, Roebuck and Co *See—*
Gall, John C , B1 4,235,553, Cl 366-208.000

LIST OF DESIGN PATENTEES

Abe, Yoshinori *See—*
Nishida, Mitsuhiro; Fujii, Kozaburo, Kondoh, Nobuyuki, and Abe, Yoshinori, 315,912, Cl. D15-7.000

Abrams, Robert C *See—*
Weder, Donald E., Weder, Erwin H., Weder, Wanda M , Craig, Franklin J , Donnelly, Wilma M , Bolk, Phyllis J., Bergstrand, John W , and Abrams, Robert C , 315,878, Cl D11-164.000
Weder, Donald E., Weder, Erwin H , Weder, Wanda M , Craig, Franklin J , Donnelly, Wilma M , Bolk, Phyllis J., Bergstrand, John W , and Abrams, Robert C , 315,879, Cl D11-164.000
Weder, Donald E , Weder, Erwin H , Weder, Wanda M , Craig, Franklin J , Donnelly, Wilma M , Bolk, Phyllis J., Bergstrand, John W , and Abrams, Robert C , 315,880, Cl D11-164.000

Altmann, Walter F *See—*
Tollefson, R M , Armstrong, Dane A , LeMonds, David A , Wakefield, Douglas J , Altmann, Walter F , and LaFond, Marcel L , 315,892, Cl D12-315.000

American Safety Flight Systems, Inc *See—*
Molzan, Albert R., 315,971, Cl D29-6.000

American Standard Inc *See—*
Enthoven, Axel, 315,844, Cl D6-574.000

Antonious, Anthony J Iron golf club head 315,939, 4-2-91, Cl D21-220.000.

Armstrong, Dane A *See—*
Tollefson, R M , Armstrong, Dane A , LeMonds, David A , Wakefield, Douglas J., Altmann, Walter F , and LaFond, Marcel L , 315,892, Cl D12-315.000

Atlantic Richfield Company *See—*
Frost, John S , 315,965, Cl. D26-67.000.

Avia Group International, Inc *See—*
Backus, Peter; and Feller, Craig, 315,824, Cl D2-314.000

Backus, Peter; and Feller, Craig, to Avia Group International, Inc Shoe upper 315,824, 4-2-91, Cl. D2-314.000

Baker, Mac L'Dean, to Mobility Options Research Foundation Vertical supporter for child or the like 315,884, 4-2-91, Cl D12-128.000

Bally, Alexander *See—*
Castel, John C , and Bally, Alexander, 315,958, Cl D24-41.000

Beaudoin, Gaetan, and Cimon, Jacques, to Micro-Contact Inc Automatic cattle feeder 315,973, 4-2-91, Cl D30-122.000

Berggren, Ib H , to Interlego AG Toy car 315,931, 4-2-91, Cl D21-128.000

Berggren, Ib H., to Interlego AG Toy car 315,932, 4-2-91, Cl D21-128.000

Bergstrand, John W *See—*
Weder, Donald E , Weder, Erwin H , Weder, Wanda M , Craig, Franklin J , Donnelly, Wilma M , Bolk, Phyllis J , Bergstrand, John W , and Abrams, Robert C , 315,878, Cl D11-164.000
Weder, Donald E , Weder, Erwin H , Weder, Wanda M , Craig, Franklin J , Donnelly, Wilma M , Bolk, Phyllis J , Bergstrand, John W , and Abrams, Robert C , 315,879, Cl D11-164.000
Weder, Donald E , Weder, Erwin H , Weder, Wanda M , Craig, Franklin J , Donnelly, Wilma M , Bolk, Phyllis J , Bergstrand, John W , and Abrams, Robert C , 315,880, Cl D11-164.000

Berland, Maxine L Denture container 315,954, 4-2-91, Cl. D24-10.000

Berninger, Mark, and Schuette, Michael, to Life Technologies, Inc Reaction tank for electrophoresis apparatus. 315,951, 4-2-91, Cl D24-8.000

Berninger, Mark, and Schuette, Michael, to Life Technologies, Inc Horizontal gel electrophoresis unit 315,952, 4-2-91, Cl D24-8.000

Bernon, Daniel J Protective pad for a car seat. 315,837, 4-2-91, Cl D6-368.000

Best, James J , and Sweeney, Margaret C., to International Business Machines Corporation Portable file 315,924, 4-2-91, Cl D19-75.000

Best, Jerrina F Coffin 315,977, 4-2-91, Cl. D99-1.000

Better Sleep Manufacturing Co *See—*
Emery, William W , 315,840, Cl D6-525.000

Bilangi, Dona Handle grip for a baby bottle 315,959, 4-2-91, Cl D24-48.000

Bixler, Cynthia C , to CinTom, Inc Closure for a beverage can. 315,872, 4-2-91, Cl D9-446.000

Bobbitt, Earl W *See—*
Roope, Larry G , and Bobbitt, Earl W , 315,841, Cl. D6-528.000.

Bolk, Phyllis J *See—*
Weder, Donald E., Weder, Erwin H ; Weder, Wanda M , Craig, Franklin J , Donnelly, Wilma M.; Bolk, Phyllis J.; Bergstrand, John W., and Abrams, Robert C , 315,878, Cl. D11-164.000.
Weder, Donald E , Weder, Erwin H , Weder, Wanda M , Craig, Franklin J ; Donnelly, Wilma M , Bolk, Phyllis J., Bergstrand, John W., and Abrams, Robert C , 315,879, Cl. D11-164.000.
Weder, Donald E., Weder, Erwin H., Weder, Wanda M ; Craig, Franklin J , Donnelly, Wilma M , Bolk, Phyllis J.; Bergstrand, John W , and Abrams, Robert C., 315,880, Cl. D11-164.000.

Bomatic, Inc *See—*
Hestehave, Borge; and Hestehave, Kjeld, 315,867, Cl. D9-341.000.

Bostik, Inc *See—*
Nusse, Oktavio K., and Krause, Wolf-Dieter, 315,852, Cl. D8-30.000

Brace, Thomas J *See—*
Olson, Brennan J , Brace, Thomas J , and Frigard, Charles R., 315,941, Cl D21-226.000.

Bransky, Jeffrey D *See—*
Perdue, Thomas E , Jr ; and Bransky, Jeffrey D., 315,870, Cl. D9-420.000

Brazis, William E., to Rubbermaid Incorporated Toilet bowl brush handle 315,833, 4-2-91, Cl D4-138.000

Brown, Michael, to Northern Telecom Limited Keypad. 315,896, 4-2-91, Cl D14-100.000

Brunner, Donald A Tray for holding pepperoni slices. 315,849, 4-2-91, Cl D7-672.000

Bulgari, Paolo, to Partecipazione Bulgari S.p.A. Brooch. 315,875, 4-2-91, Cl. D11-43.000

Burst, Hermann, and Kruschhausen, Heinz-Arno, to Dr. Ing. h.c.F. Porsch AG Side view mirror 315,889, 4-2-91, Cl. D12-187.000.

Bush, Thomas J Bi-plane rocking toy 315,929, 4-2-91, Cl. D21-68.000.

Cahill, Basil, and McCaffrey, Jack. Pool rack triangle. 315,942, 4-2-91, Cl D21-232.000

Campbell, Jack F , to GSW Inc. Pump housing. 315,911, 4-2-91, Cl. D15-7.000

Caroma Industries Limited. *See—*
Thompson, Bruce R , 315,948, Cl D23-313.000.

Carroll, Francis G Bracket 315,859, 4-2-91, Cl. D8-357.000.

Casablanca Fan Company, Inc *See—*
Hollbrook, Richard M , 315,946, Cl D23-377.000.
Hollbrook, Richard M., 315,947, Cl. D23-377.000.

Castel, John C.; and Bally, Alexander, to Physio Technology, Inc. Physiological stimulator. 315,958, 4-2-91, Cl. D24-41.000

Channell, William H All-weather covering for cable television equipment. 315,906, 4-2-91, Cl. D14-239.000

Chen, Jen F Yarn feeder 315,914, 4-2-91, Cl. D15-72.000.

Cheng, Thomas. Telephone set with transparent outer surface and neon-light tube surrounding the base 315,904, 4-2-91, Cl. D14-150.000.

Cheng, Willis, to Woods Far East, Inc Heavy duty, remotely controlled timer switch. 315,893, 4-2-91, Cl. D13-165.000.

Cimon, Jacques *See—*
Beaudoin, Gaetan; and Cimon, Jacques, 315,973, Cl. D30-122.000.

CinTom, Inc.: *See—*
Bixler, Cynthia C., 315,872, Cl. D9-446.000.

Clark, Larry M , and Magdaleno, Janell E , to L.A. Gear, Inc. Element of a shoe upper. 315,828, 4-2-91, Cl D2-314.000.

Claytor, Richard N.; and Torti, Russell G , to Fresnel Technologies, Inc. Wide angle fresnel lens array for infrared motion detector system. 315,966, 4-2-91, Cl. D26-122.000.

Collette, Wayne N., to Continental PET Technologies, Inc. Container body for liquids or the like. 315,869, 4-2-91, Cl. D9-392.000.

Collins, Frederick E.: *See—*
Wilson, Jerry L.; Schneider, Jon; and Collins, Frederick E., 315,934, Cl D21-191.000.
Wilson, Jerry L.; Schneider, Jon; and Collins, Frederick E., 315,935, Cl. D21-191.000
Wilson, Jerry L.; Schneider, Jon; and Collins, Frederick E., 315,936, Cl. D21-191.000.

Conair Corporation *See—*
Rizzuto, Leandro P.; Lindsey, Frank; and Leung, Anthony, 315,967, Cl. D28-35.000.
Rizzuto, Leandro P.; Lindsey, Frank; and Leung, Anthony, 315,968, Cl D28-35.000.

Continental PET Technologies, Inc.: *See—*
Collette, Wayne N., 315,869, Cl D9-392.000.

Covington, Melvin R. Water purifying canteen. 315,829, 4-2-91, Cl. D3-30.100.

Wehmeyer, Stephen D., to Quaker Oats Company, The. Roller skate 315,940, 4-2-91, Cl. D21-226.000
Westland, Donald. *See*—
Hassel, H. Charles, and Westland, Donald, 315,921, Cl. D18-22.000
Whitebread, David, to M Y Sports & Games Ltd. Package 315,871, 4-2-91, Cl. D9-415.000
Wilson, Jerry L., Schneider, Jon; and Collins, Frederick E., to Wilson, Jerry L. Resistance strap for an exercise machine. 315,934, 4-2-91, Cl. D21-191.000
Wilson, Jerry L., Schneider, Jon; and Collins, Frederick E., to Wilson, Jerry L. Resistance strap for exercise machine. 315,935, 4-2-91, Cl. D21-191.000
Wilson, Jerry L., Schneider, Jon, and Collins, Frederick E., to Wilson, Jerry L. Resistance strap for an exercise machine. 315,936, 4-2-91, Cl. D21-191.000
Wong, Allen, Soren, Leonid; and Lindeman, Phillip E., to Motorola Inc. Dial top-housing for telephone handset or similar article. 315,907, 4-2-91, Cl. D14-247.000
Wood, Herbert E. Wheelchair propulsion unit 315,886, 4-2-91, Cl. D12-133.000
Woods Far East, Inc.. *See*—
Cheng, Willis, 315,893, Cl. D13-165.000
Wu, J. T. Pepper mill 315,850, 4-2-91, Cl. D7-679.000
Wu, J. T. Mill. 315,851, 4-2-91, Cl. D7-679.000.
Yamauchi, Shigeki. *See*—
Fushiya, Fusao, and Yamauchi, Shigeki, 315,855, Cl. D8-68.000
Zaborowski, Thaddeus, and MacLeod, Alan; to Schawbel Corporation, The. Handle for a soldering iron. 315,853, 4-2-91, Cl. D8-30.000
Ziaylek, Michael P. *See*—
Ziaylek, Theodore, Jr.; and Ziaylek, Michael P., 315,945, Cl. D23-244.000
Ziaylek, Theodore, Jr., and Ziaylek, Michael P. Dump valve for attachment to fire engine tankers. 315,945, 4-2-91, Cl. D23-244.000.

LIST OF PLANT PATENTEES

Bennett, Cecilia L. D., deceased (by O'Brien, Susan M., executor), to O'Brien, Susan. Miniature rose plant named 'Mother's Love' 7,484, 4-2-91, Cl. 9.000
O'Brien, Susan. *See*—
Bennett, Cecilia L. D., deceased, 7,484, Cl. 9.000
O'Brien, Susan M., executor. *See*—
Bennett, Cecilia L. D., deceased, 7,484, Cl. 9.000
VandenBerg, Cornelis P., to Yoder Brothers, Inc. Chrysanthemum plant named Topacio. 7,487, 4-2-91, Cl. 76.000
VandenBerg, Cornelis P., to Yoder Brothers, Inc. Chrysanthemum plant named Naples. 7,488, 4-2-91, Cl. 77.000
VandenBerg, Cornelis P., to Yoder Brothers, Inc. Chrysanthemum plant named Pasion. 7,489, 4-2-91, Cl. 80.000
van Riet, Joseph E. J. Lily plant named White Sheen. 7,486, 4-2-91, Cl. 68.000
Wimmers, Robert L. Bosc pear—Wimmers cultivar. 7,485, 4-2-91, Cl. 36.000.
Yoder Brothers, Inc.: *See*—
VandenBerg, Cornelis P., 7,487, Cl. 76.000
VandenBerg, Cornelis P., 7,488, Cl. 77.000
VandenBerg, Cornelis P., 7,489, Cl. 80.000

LIST OF STATUTORY INVENTION REGISTRATIONS

APPLICANTS TO WHOM

STATUTORY INVENTION REGISTRATIONS WERE ISSUED ON THE 2ND DAY OF APRIL, 1991

Baggett, Franklin E., and Cage, W. Franklin, to United States of America, Energy. Wedge assembly for electrical transformer component spacing. H906, 4-2-91, Cl. 403-409.100.
Cage, W. Franklin. *See*—
Baggett, Franklin E., and Cage, W. Franklin, H906, Cl. 403-409.100.
Danby, Gordon T.; and Jackson, John W., to United States of America, Energy. Method of correcting eddy current magnetic fields in particle accelerator vacuum chambers. H909, 4-2-91, Cl. 328-233.000
Dawson, John W., to United States of America, Energy. Method and system for improved resolution of a compensated calorimeter detector. H908, 4-2-91, Cl. 250-336.100.
General Electric Company. *See*—
Weinstein, Barry, H903, Cl. 60-757.000.
Hindenach, Laurence J., to United States of America, Air Force. Adaptive two dimensional shading for batch synthetic aperture radar using phased array antenna. H910, 4-2-91, Cl. 342-25.000.
Jackson, John W. *See*—
Danby, Gordon T.; and Jackson, John W., H909, Cl. 328-233.000
Mitsubishi Oil Co., Ltd.. *See*—
Tate, Kazuhito, Tsuchimoto, Koji, and Yanagida, Kazuhiro, H907, Cl. 423-448.000
Rottenberg, Mark M., to United States of America, Army. Fin assembly. H905, 4-2-91, Cl. 244-3.280
Rousseau, David G., to United States of America, Navy. Air cooled helmet. H902, 4-2-91, Cl. 2-414.000
Schmidlin, Albertus E., to United States of America, Army. Safe secure survivable door locking assembly for an overpack container. H904, 4-2-91, Cl. 206-3.000
Tate, Kazuhito, Tsuchimoto, Koji, and Yanagida, Kazuhiro, to Mitsubishi Oil Co., Ltd. Process for producing conductive graphite fiber. H907, 4-2-91, Cl. 423-448.000.
Tsuchimoto, Koji. *See*—
Tate, Kazuhito, Tsuchimoto, Koji, and Yanagida, Kazuhiro, H907, Cl. 423-448.000
United States of America
Air Force: *See*—
Hindenach, Laurence J., H910, Cl. 342-25.000.
Army. *See*—
Rottenberg, Mark M., H905, Cl. 244-3.280.
Schmidlin, Albertus E., H904, Cl. 206-3.000.
Energy: *See*—
Baggett, Franklin E.; and Cage, W. Franklin, H906, Cl. 403-409.100
Danby, Gordon T., and Jackson, John W., H909, Cl. 328-233.000.
Dawson, John W., H908, Cl. 250-336.100
Navy: *See*—
Rousseau, David G., H902, Cl. 2-414.000
Weinstein, Barry, to General Electric Company. Cool tip combustor. H903, 4-2-91, Cl. 60-757.000
Yanagida, Kazuhiro. *See*—
Tate, Kazuhito, Tsuchimoto, Koji, and Yanagida, Kazuhiro, H907, Cl. 423-448.000

CLASSIFICATION OF PATENTS

ISSUED APRIL 2, 1991

NOTE.—First number, class; second number, subclass; third number, patent number

CLASS 2

2 1 A 5,003,630
6 5,003,631
5,003,632
9 5,003,633
46 5,003,634
69 5,003,635
145 5,003,636
160 5,003,637
167 5,003,638
187 5,003,639
199 5,003,640

CLASS 4

253 5,003,641
287 5,003,642
313 5,003,643
324 5,003,644
325 5,004,462
448 5,003,645
542 5,003,646
559 5,003,647
661 5,003,648

CLASS 5

8 5,003,649
9 1 5,003,650

PATENT AND TRADEMARK OFFICE NOTICES

Patent Cooperation Treaty (PCT) Information

For information concerning the PCT member countries see the notice appearing in the *Official Gazette* at 1120 O.G. 54 on Nov. 27, 1990.

For use of the European Patent Office as an International Searching Authority for international applications filed in the United States Receiving Office, see the notice appearing in the *Official Gazette* at 1022 O.G. 52 on Sept. 28, 1982.

For use of the European Patent Office as an International Preliminary Examining Authority for international applications filed in the United States Receiving Office, see the notices appearing in the *Official Gazette* at 1080 O.G. 2 on July 7, 1987 and at 1091 O.G. 2 on June 7, 1988. There is no longer a limit on the number of such international applications accepted for international preliminary examination by the European Patent Office, see the notice appearing at 1116 O.G. 32, on July 17,1990.

The search fee of the European Patent Office was changed due to a difference in the amount of the fee in German Marks and the exchange rate of the U.S. dollar in relation to the German Mark as of Jan. 3, 1991, and was announced in the *Official Gazette* at 1122 O.G. 564 on Jan 1, 1991.

International fees were changed on March 1, 1991 due to a difference in the exchange rate of the U.S. dollar in relation to the Swiss Franc and were announced in the *Official Gazette* at 1122 O.G. 629 on Jan. 22, 1991.

Certain domestic PCT fees and charges for International Search and Preliminary Examination have been changed effective Apr. 17, 1989 and were announced in the *Official Gazette* at 1100 O.G. 24 on Mar. 7, 1989.

The current schedule of PCT fees (in U.S. dollars) is as follows:

Transmittal fee	170.00
Search Fee	
U.S. Patent and Trademark Office (USPTO) as International Searching Authority (ISA)	
—No corresponding prior U.S. national application filed	550.00
—Corresponding prior U.S. national application filed	380.00
Supplemental search fee, per additional invention	150.00
European Patent Office as ISA	1492.00
Preliminary examination fee	
USPTO as International Preliminary Examining Authority (IPEA)	
—Search fee paid to USPTO as ISA	400.00
—Additional examination fee, per additional invention	130.00
ISA not the USPTO	600.00
Additional examination fee, per additional invention	200.00
International fees	
Basic fee	559.00
Basic Supplemental fee (for each page over 30)	11.00
Designation fee per country or region for the first 10 national or regional offices	135.00
Designation fee for 11th and subsequent designations	No Charge
Handling fee	171.00

U.S. National Stage fees	Small Entity	Regular
USPTO was IPEA	165.00	330.00
USPTO was ISA but not IPEA	185.00	370.00
USPTO was neither ISA nor IPEA	250.00	500.00
USPTO was IPEA and all claims presented satisfied provisions of PCT Article 33(2)-(4)	25.00	50.00
For each independent claim in excess of 3	18.00	36.00
For each claim in excess of 20	6.00	12.00
For each application containing a multiple dependent claim	60.00	120.00
Surcharge for filing national fee or oath or declaration after the time limit applicable under PCT Article 22 or 39(1)	60.00	120.00
Processing fee for filing English translation after the time limit applicable under PCT Article 22 or 39(1)	30.00	30.00

Dec. 21, 1990

HARRY F. MANBECK, Jr.
Assistant Secretary and Commissioner of Patents and Trademarks

---

Notice of Maintenance Fees Payable

Title 37, Code of Federal Regulations, Section 1.362(d), effective Nov. 1, 1984, provides that maintenance fees may be paid without surcharge for a six-month period beginning 3, 7, and 11 years after the date of issue of patents based on application filed on or after Dec. 12, 1980. An additional six-month grace period is provided by 35 U.S.C. 41(b) and 37 CFR 1.362(e) for payment of the maintenance fee with the surcharge set forth in 37 CFR 1.20(k) or (l), as amended effective Apr. 17, 1989. If the maintenance fee is not paid in a patent requiring such payment the patent will expire on the 4th, 8th or 12th anniversary of the patent.

Attention is drawn to the patents which were issued on April 5, 1988 for which maintenance fees due at 3 years and six months may now be paid. The patents have patent numbers within the following ranges:

Utility Patents 4,734,938 through 4,736,465
Reissue Patents based on the above identified patents

Attention is drawn to the patents which were issued on April 3, 1984, for which maintenance fees due at 7 years and six months may now be paid. The patents have patent numbers within the following ranges:

Utility Patents 4,439,871 through 4,441,210
Reissue Patents based on the above identified patents

No maintenance fees are required for design or plant patents.

Payments of maintenance fees in patents should be directed to "Commissioner of Patents and Trademarks, Box M. Fee, Washington, D.C. 20231."

The current amounts of the maintenance fees due at 3 years and six months and seven years and six months are set forth in 37 CFR 1.20(e), and (f), as amended Nov. 5, 1990, which are reproduced below.

37 CFR § 1.20 Post-issuance fees and surcharges.

"(e) For maintaining an original or reissue patent, except a design or plant patent, based on an application filed on or after after Dec. 12, 1980 and before Aug. 27, 1982, in force beyond 4 years, the fee is due by three years and six months after the original grant $245.00

"(f) For maintaining an original or reissue patent, except a design or plant patent, based on an application filed on or after Dec. 12, 1980 and before Aug. 27, 1982, in force beyond 8 years, the fee is due by seven years and six months after the original grant ..... $495.00"

"(h) For maintaining an original or reissue patent except a design or plant patent, based on an application filed on or after Aug. 27,1982, in force beyond 4 years, the fee is due by three years and six months after the original grant:

By a small entity (§1.9(f)) $415.00
By other than a small entity $850.00

"(i) For maintaining an original or reissue patent, except a design or plant patent, based on an application filed on or after Aug. 27, 1982, in force beyond 8 years, the fee is due by seven years and six months after the original grant:

By a small entity (§1.9(f)) $835.00
By other than a small entity ..... $1670.00"

The amounts of the surcharges for paying the maintenance fee during the grace period or after the expiration of the patent are set forth in 37 CFR 1.20(k) and (l), which are reproduced below.

"(k) Surcharge for paying a maintenance fee during the 6-month grace period following the expiration of three years and six months, seven years and six months, and eleven years and six months after the date of the original grant of a patent based on an application filed on or after Dec. 12, 1980 and before Aug. 27,1982 ..... $120.00"

"(l) Surcharge for paying a maintenance fee during the 6-month grace period following the expiration of three years and six months, seven years and six months, and eleven years and six months after the date of the original grant of a patent based on an application filed on or after Aug. 27, 1982:

By a small entity (§1.9(f)) $60.00
By other than a small entity ..... $120.00"

(m) Surcharge for accepting a maintenance fee after expiration of a patent for non-timely payment of a maintenance fee where the delay is shown to the satisfaction of the Commissioner to have been unavoidable ..... $550.00"

Notice of Expiration of Patents Due to Failure to Pay Maintenance Fees

35 U.S.C. 41 and 37 CFR 1.362(g) provide that if the required maintenance fee and any applicable surcharge are not paid in a patent requiring such payment, the patent will expire at the end of the 4th, 8th, or 12th anniversary of the grant of the patent depending on the first maintenance fee which was not paid.

According to the records of the Office, the patents listed below have expired due to failure to pay the required maintenance fee and any applicable surcharge.

PATENTS WHICH EXPIRED JANUARY 27, 1991 DUE TO FAILURE TO PAY MAINTENANCE FEES

NOTIFICATION OF ACCEPTANCE OF DELAYED PAYMENT OF MAINTENANCE FEE
(35 U.S.C. 41(c); 37 CFR 1.378)

The patent(s) listed below are considered as not having expired but are subject to the conditions set forth in 35 U.S.C. 41(c)(2), in view of the Petition to Accept Late Payment of the maintenance fees which has been GRANTED BY THE COMMISSIONER OF PATENTS AND TRADEMARKS, as provided for under 35 U.S.C. 41(c)(1) and 37 CFR 1.378

REISSUE APPLICATIONS FILED

Notice under 37 CFR 1.11(b) The reissue applications listed below are open to inspection by the general public in the indicated Examining Groups and copies may be obtained by paying the fee therefor (37 CFR 1.21(b))

4,282,111, Re. S. N. 07/655,222, Filed Feb. 12, 1991, Cl. 422. HYDROQUINONE AS AN OXYGEN SCAVENGER IN AN AQUEOUS MEDIUM, S.J. Ciuffi, Owner of Record. *Inventor*. Attorney or Agent: Steven D. Boyd, Ex. Gp. 189

4,630,538, Re. S. N. 07/661,008, Filed Feb. 26, 1991, Cl. 101/045, PORTABLE LABEL MAKER, Larry A. Cushman, Owner of Record. *Inventor*. Attorney or Agent: William D. Blackman, Ex. Gp. 337

4,678,476, Re. S. N. 07/658,720, Filed Feb. 19, 1991, Cl. 8/639, MIXTURES OF BLUE MONO-AZO DISPERSE DYESTUFFS AND THEIR USE FOR DYEING POLYESTER, Horst Tappe, et al., Owner of Record: *Cassella Aktiengesellschaft, Frankfurt (Main) Fechenheim, Germany*. Attorney or Agent: Maria P. Tungol, Ex. Gp. 115

4,784,575, Re. S. N. 07/660,459, Filed Feb. 26, 1991, Cl. 416/226, COUNTERROTATING AIRCRAFT PROPULSOR BLADES, Joey L. Nelson, et al. Owner of Record: *General Electric Company, New York, N.Y.* Attorney or Agent: Charles L. Moore, Ex. Gp.: 341

4,788,180, Re. S. N. 07/619,055, Filed Nov. 28, 1990, Cl. 514/26, PHARMACEUTICAL COMPOSITIONS, Maurice Bloch, Owner of Record: *Inventor*. Attorney or Agent: Alan E. Schiavelli, Ex. Gp. 183

4,805,390, Re. S. N. 07/658,063, Filed Feb. 20, 1991, Cl. 56/300, MODULAR SICKLE BAR SELECTIONS, David S. Majkrzak, Owner of Record: *Crary Company, Fargo, N. Dak.*, Attorney or Agent: Nicholas E. Westman, Ex. Gp. 356

4,865,460, Re. S. N. 07/658,262, Filed Feb. 20, 1991, Cl. 366/337, STATIC MIXING DEVICE, Juergen Friedrich, Owner of Record: *Kudo Corp., Hazelton, Pa.*, Attorney or Agent: Steven B. Pokotilow, Ex. Gp.: 242

4,875,254, Re. S. N. 07/660,728, Filed Feb. 25, 1991, Cl. 452/157, METHOD AND APPARATUS FOR AUTOMATICALLY

CUTTING FOOD PRODUCTS TO PREDETERMINED WEIGHT OR SHAPE, Norman A. Rudy, et al., Owner of Record *Frigoscania Food Processing Systems A.B. Helsingborg, Sweden*, Attorney or Agent: Oliver D. Olson, Ex. Gp. 323

4,913,116, Re. S.N. 07/660,853, Filed Feb. 26, 1991, Cl. 123-425, IGNITION TIMING CONTROL APPARATUS FOR AN INTERNAL COMBUSTION ENGINE, Kozo Katogi, et al., Owner of Record *Hitachi, Ltd. Tokyo Japan*, Attorney or Agent: Donald R. Antonelli, Ex. Gp. 342

4,962,568, Re. S.N. 07/661,336, Filed Feb. 25, 1991, Cl. 83-177, METHOD AND APPARATUS FOR AUTOMATICALLY CUTTING FOOD PRODUCTS TO PREDETERMINED WEIGHT OR SHAPE, Norman A. Rudy, et al., Owner of Record *Frigoscania Food Processing Systems A.B. Helsingborg, Sweden*, Attorney or Agent: Oliver D. Olson, Ex. Gp. 324

REQUESTS FOR REEXAMINATION FILED

Notice under 37 CFR 1.11(c): The requests for reexamination listed below are open to inspection by the general public in the indicated Examining Groups. Copies of the requests and related papers may be obtained by paying the fee therefor established in the Rules (37 CFR 1.19(a)).

In the event correspondence to the patent owner is not received, this notice will be considered to be constructive notice to the patent owner and reexamination will proceed (37 CFR 1.248(a)(5) and 1.525(b)).

4,604,319, Reexam. No. 90/002,288, Requested Mar. 12, 1991, Cl. 428/290, THERMOPLASTIC INTERLEAFED RESIN MATRIX COMPOSITES WITH IMPROVED IMPACT STRENGTH AND TOUGHNESS, Robert E. Evans, et al., Owner of Record: *American Cyanamid Comp. Stamford, Conn.*, Attorney or Agent: Steven H. Flynn, Stamford, Conn., Ex. Gp. 154, Requester: Owner

Patent Examiner's Action Survey

As part of the quality reinforcement efforts of the Patent and Trademark Office, the Office will be sending out a survey sheet with each Examiner's Office Action mailed for about 4 weeks selected from the period March-May, 1991.

The survey is intended to determine whether Office actions are perceived to be clear and complete on certain specific items. The results of the survey will be used in the development of Office training programs. Follow-up surveys are intended to be conducted in the future to determine the effectiveness of the training and any trends in performance.

The survey sheet is brief and easy to complete and will not require identification of the respondent or of the particular application involved. The survey sheet may be completed at the time of response to the Office action. Cooperation in completing the survey sheet is requested.

Feb. 28, 1991 JAMES E. DENNY
Assistant Commissioner for Patents designate

Removal From Register

Pursuant to the provisions of 37 CFR §10.11(b), a letter was directed on November 30, 1990 to Freeman Crampton, Caller #10003, Toledo, Ohio 43699 the last post office address furnished by him to the Office of Enrollment and Discipline. No reply was recieved within the period of forty-five (45) days therein set.

Accordingly, his name is being removed from the Register of Attorneys and Agents.

March 11, 1991 CAMERON WEIFFENBACH, *Director*
Office of Enrollment and Discipline

Errata

"All reference to Patent No. 4,993,020 to Emil D. Hopner of Los Gatos, Calif. for 'INTEGRATED COMMUNICATIONS SYSTEM' appearing in the Official Gazette of Feb. 12, 1991 should be deleted since no patent was granted."

"All reference to Patent No. 4,993,904 to Rolf Baur of Germany for 'AUTOMATED ARCHIVING AND RETRIEVAL FOR COMPUTER TAPE CASSETTES' appearing in the Official Gazette of Feb. 19, 1991 should be deleted since no patent was granted."

"All reference to Patent No. 4,993,633 to Robert R. Mellette of Jamestown, Colo. for 'HIGH VOLUME LOW PRESSURE AIR SPRAY GUN' appearing in the Official Gazette of Feb. 19, 1991 should be deleted since no patent was granted."

"All reference to Patent No. 4,998,481 to Erwin Grimm et al. of Mainz, Federal Republic Germany for 'RETURNING SYSTEM FOR RAILBOUND TRANSPORT CARTS WITHOUT INTERNAL DRIVE' appearing in the Official Gazette of Mar. 12, 1991 should be deleted since no patent was granted."

NOTICE OF PETITION FOR REINSTATEMENT

Robert L. Slater, Jr. of 11 Broadway, New York, N.Y., whose registration number was 18,104, and who, in a Decision disbarring him in 1985 for a period of seven (7) year, is authorized to seek reinstatement after two years of disbarment, has filed a petition for reinstatement. Granting of reinstatement is subject to, *inter alia*, establishing to the satisfaction of the Director of Enrollment and Discipline that granting the petition is not contrary to the public interest, and that the suspended or excluded practitioner has complied with the provisions of 37 CFR § 10.158 during his period of suspension or exclusion. 37 CFR §10.160. Accordingly, information bearing upon the good moral character and repute of Robert L. Slater, Jr. is material to his eligibility for reinstatement. Any information tending to affect the eligibility of Robert L. Slater, Jr. on moral, ethical or other grounds should be furnished to the Director in a written communication addressed to the Commissioner of Patents and Trademarks, Box OED, Washington, D.C. 20231 on or before May 24, 1991.

Oct. 29, 1990 CAMERON WEIFFENBACH, *Director*
Office of Enrollment and Discipline

Reclassification Alert Report

This is a summary of classification changes which became effective by issuance of Classification Orders from January through March 1991. Information includes:

- subclasses established or abolished
- subclass title, indent, or position change
- classes where existing subclass definitions have changed

This Reclassification Alert Report may appear from time to time in the Official Gazette and is intended to provide an interim notice of classification and changes pending publication of the Manual of Classification and revisions thereto.

March 5, 1991 WILLIAM S. LAWSON
Administrator for Documentation

SPECIAL BOXES FOR MAIL

Special PTO mail box numbers should be used to allow forwarding of particular types of mail to the appropriate areas as quickly as possible. Such mail is forwarded directly to the appropriate area without being opened. Only the specified type of document should be placed in an envelope addressed to one of these boxes. If any documents other than the specified type identified for each box are addressed to that box, they will be delayed in reaching the appropriate area for which they are intended.

The following special boxes should be used only for their specified purpose. Address mail as follows:

Box _____
Commissioner of Patents and Trademarks
Washington, D.C. 20231

Box 3	Mail for the Office of personnel for NEC
Box 4	Mail for the Assistant Commissioner for External Affairs and the Office of Legislation and International Affairs
Box 5	"No Fee" mail related to trademarks
Box 6	Mail for the Office of Procurement
Box 7	Reissue applications for patents involved in litigation and subsequently filed related papers
Box 8	All papers for the Office of the Solicitor *except* communications relating to *pending litigation*; papers relating to pending litigation shall be mailed only to Office of the Solicitor, P.O. Box 15667, Arlington, Va. 22215
Box 9	Coupon orders for U.S. patent and trademark copies
Box 10	Orders for certified copies of patent and trademark applications
Box 11	Electronic Ordering Service (EOS)
Box 12	Contributions to the Examiner Education Program
Box 13	Mail for the Employee and Labor Relations Division
Box 14	Invoices directed to the Office of Finance
Box 15	Mail for the Advisory Commission on Patent Law Reform
Box 17[1]	Vacancy Announcement Applications
Box AF	Expedited procedure for processing amendments and other responses after final rejection
Box Assignment	All assignment documents except those filed with new applications
Box EEO	Mail for the Office of Equal Employment Programs
Box FWC	Requests for File Wrapper Continuation Applications (under 37 CFR 1.62)
Box Interference	Communications relating to interferences and applications and patents involved in interference
Box Issue Fee	All Communications following the receipt of a PTOL-85, "Notice of Allowance and Issue Fee Due" and prior to the issuance of a patent should be addressed to Box Issue Fee, unless advised to the contrary. Assignments should be submitted in a separate envelope and not be sent to Box Issue Fee
Box ITU	All intent to use documents, excluding the initial application and amendments to allege use
Box M. Fee	Correspondence related to a patent that is subject to the payment of a maintenance fee
Box Non-Fee Amendment	Non-fee amendments to patent applications. (Use Box AF for responses after final rejection)
Box OED	Mail for the Office of Enrollment and Discipline
Box PATENT APPLICATION	New patent application and associated papers and fees
Box TRADEMARK	New trademark application and associated papers and APPLICATION fees
Box Pat. Ext.	Applications for patent term extension
Box PCT	Mail related to applications filed under the Patent Cooperation Treaty
Box Reexam	Requests for Reexamination for *original* request papers *only*
Box Sequence	Submission of diskette for biotechnical application
Box SN	For fee and petitions under 37 CFR 1.182 to obtain date received and/or serial number for patent applications *prior* to the Office's standard notification (return postcard or the official "Filing Receipt," "Notice to File Missing Parts," or "Notice of Incomplete Application")

Reference Collections of U.S. Patents Available for Public Use in Patent Depository Libraries

The following libraries, designated as Patent Depository Libraries (PDLs), receive current issues of U.S. Patents and maintain collections of earlier issued patents. The scope of these collections varies from library to library, ranging from patents of only recent years to all or most of the patents issued since 1790.

These patent collections, which are organized in patent number sequence, are available for use by the public free of charge. Each of the PDLs, in addition, offers supplemental reference publications of the U.S. Patent Classification System, including the *Manual of Classification, Index to the U.S. Patent Classification, Classification Definitions*, and provides technical staff assistance in their use to aid the public in gaining effective access to information contained in patents. CASSIS (Classification And Search Support Information System), which provides direct, on-line access to Patent and Trademark Office data, is available at all PDLs. Facilities for making paper copies of patents from either microfilm or paper collections are generally provided for a fee.

Since there are variations in the scope of patent collections among the PDLs and in their hours of service to the public, anyone contemplating use of the patents at a particular library is urged to contact that library in advance, about its collection and hours in order to avert possible inconvenience.

Expiration of patents. The patents within the range of numbers indicated below expire during March 1991 except those which may have had their terms curtailed by disclaimer under the provisions of 35 U.S.C. 253. Other patents, issued after the dates of the range of numbers indicated below, may have expired before the full term of 17 years for the same reasons, or have lapsed under the provisions of 35 U.S.C. 151.

Patents	Numbers 3,795,014 to 3,800,328 inclusive
Plant Patents	3,501 to 3,534 inclusive

REEXAMINATIONS

APRIL 9, 1991

B1 4,464,223 (1447th)

PLASMA REACTOR APPARATUS AND METHOD

Georges J. Gorin, Pinole, Calif., assignor to Tegal Corp., Novato, Calif.

Reexamination Request Nos. 90/001,809, Jul. 14, 1989 and 90/001,674, Dec. 20, 1988.

Reexamination Certificate for Patent No. 4,464,223, issued Aug. 7, 1984, Ser. No. 538,593, Oct. 3, 1983.

Int. Cl.[5] H01L *21/312*; B44C *1/22*; C03C *15/00*; C23F *1/02*

U.S. Cl. 156—643

AS A RESULT OF REEXAMINATION, IT HAS BEEN DETERMINED THAT

The patentability of claims 8–11 is confirmed

Claim 3 is cancelled

Claims 1, 2 and 4–7 are determined to be patentable as amended

New claims 12–15 are added and determined to be patentable

1 A reactor apparatus including a reaction volume into which reactants are injected and from which reaction products are exhausted, and in which said reactants are acted upon by electric fields to form a plasma thereof, said apparatus comprising

first, second, and third electrodes,

said first electrode coupled to electrical ground,

said second electrode selectively coupled to a high frequency source of AC power, [and]

said third electrode selectively coupled to a low frequency source of AC power, *and*

wherein one of said electrodes is adapted for holding a workpiece.

REISSUES

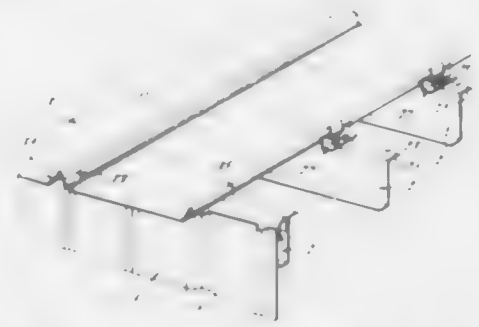
APRIL 9, 1991

Matter enclosed in heavy brackets [ ] appears in the original patent but forms no part of this reissue specification; matter printed in italics indicates additions made by reissue

Re. 33,566

ROOFING STRUCTURE

Robert E. Heckelsberg, Germantown, Tenn., assignor to AMCA International Corporation, Hanover, N.H.



Original No. 4,296,581, dated Oct. 27, 1981, Ser. No. 62,300, Jul. 31, 1979. Application for reissue Jan. 25, 1982, Ser. No. 342,162

The portion of the term of this patent subsequent to Mar. 18, 1997, has been disclaimed.

Int. Cl.[5] E04D *1/34*

U.S. Cl. 52—520

3 Claims

2 [2 A paneling construction as defined in claim 1] *In a paneling construction adapted to be installed by attachment to spaced parallel structural supporting elements such as the roof purlins of buildings, said construction comprising a plurality of elongated panels laid over and transversely to such supporting elements with the side edges of the panels abutting, said panels having generally planar mid-portions lying close to the supporting elements and having upstanding seaming flanges on said side edges folded over and crimped together to provide a mechanical interlock, each of said panels having supporting portions for said seaming flanges, said supporting portions extending angularly upwardly away from each other and from the mid-portion of the panel whereby the supporting portions of adjacent panels define a tunnel-like area and clip means securing the panels to the structural supporting elements, each clip means including a base member, attaching means rigidly securing said base members and clip means to a structural supporting element in the tunnel-like area defined by the supporting portions of adjacent panels, said construction being characterized by*

A. A rim portion incorporated in an intermediate part of each of the supporting portions of each panel, said rim portions lying substantially in a common plane and extending inwardly toward one another from and substantially perpendicularly to the seaming flanges,

B. The base member of each of said clip means having an upstanding column with a top portion closely underlying and supporting said rim portions of the adjacent panels,

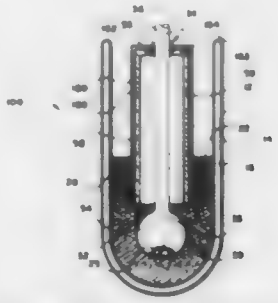
C. A holding portion secured to the base member of each clip means and preventing outward movement of the holding portion, said holding portions projecting upwardly from the base member between, and being folded over and crimped together with, the seaming flanges of the adjacent panels to prevent relative movement therebetween, whereby said holding portion and the top portion of the base member co-act with the seaming flanges and with said attaching means to prevent movement of the seaming flanges and of the supporting portions of the panels toward and away from the structural supporting elements and also to hold the holding portion against movement toward the base member, and wherein the column of the base member comprises a flat upstanding column web having a slot therein extending lengthwise thereof, the holding portion comprising a sheet metal member having a holding web lying beside and projecting upwardly above said column web, a part of said holding web at its lower end being slidably interengaged with the upper edge of said slot to prevent upward movement of said holding web, and a resiliently deflectable portion carried by said holding web yieldably slidably engaging the lower edge of said slot

* * * * *

The questions raised in reexamination request No. 90/000,345, filed 03/18/83, have been considered and the results thereof are reflected in this reissue patent which constitutes the reexamination certificate required by 35 U.S.C. 307 as provided in 37 CFR 1.570(e)

Re. 33,567

TEMPERATURE CONTROLLING APPARATUS FOR USE WITH PORE VOLUME AND SURFACE AREA ANALYZERS



Graham R. Killip, Doraville; Ronnie W. Camp, Duluth, and Clyde Orr, Jr., Dunwoody, all of Ga., assignors to Micromeritics Instrument Corporation, Norcross, Ga.

Original No. 4,693,124, dated Sep. 15, 1987, Ser. No. 833,079, Feb. 25, 1986. Application for reissue Oct. 21, 1988, Ser. No. 260,590

Int. Cl.[5] G01N *1/28*, B01L *7/00*, F25D *3/10*

U.S. Cl. 73—863.11

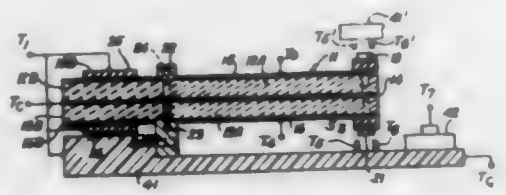
47 Claims

1. A method of cooling a sample contained in a vessel, comprising the steps of

immersing said vessel in a container of volatile cooling liquid with a portion of said vessel extending above the surface of said liquid, and

conducting said liquid *through a wick* from a location at or below the surface of said liquid in said container along said vessel to a predetermined point along the length of said vessel, said point being above the surface of said liquid, regardless of changes in the level of the surface of said liquid, *said wick maintaining a lower than ambient temperature at the surface of said vessel along the entire length of said wick.*

Re. 33,568



PIEZOELECTRIC CERAMIC SWITCHING DEVICES AND SYSTEMS AND METHODS OF MAKING THE SAME

John D. Harsden, Jr., Schenectady, and William P. Korsrumpf, Albany, both of N.Y., assignors to General Electric Company, Fort Wayne, Ind.

Original No. 4,678,957, dated Jul. 7, 1987, Ser. No. 879,495, Jun. 24, 1986. Division of Ser. No. 685,109, Dec. 21, 1984, Pat. No. 4,670,682. Application for reissue Jun. 1, 1989, Ser. No. 360,228

Int. Cl.' H01L 41/08

U.S. Cl. 310—332 24 Claims

11. Electrical switching apparatus comprising

(a) at least one piezoelectric ceramic bender-type switching device having a movable piezoceramic bender member, said bender member having at least two planar piezoceramic plate elements secured in opposed parallel relationship sandwich fashion on opposite sides of at least one central conductive surface and having respective outer conductive surfaces that are insulated from each other and the central conductive surface by the respective intervening piezoceramic plate element thicknesses,

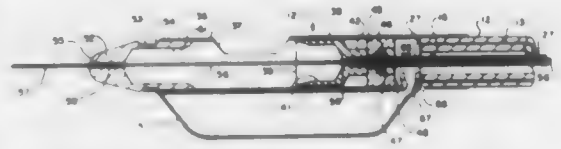
(b) the piezoceramic plate elements further including polarized and unpolarized portions when conducting the switching operation with at least one set of coacting electrical switch contacts being opened and closed by the polarized portions thereof,

(c) clamping means securing the piezoceramic plate elements together and mechanically supporting the unpolarized portions thereof in a cantilever manner for opening and closing the set of coacting the electrical contacts, and

(d) selectively operable electric excitation circuit means connected to the piezoelectric ceramic bender-type switching device for selectively and respectively actuating the polarized portions of each piezoceramic plate element thereof with a direct current energizing potential which is applied in the same direction employed to produce initial polarization in the polarized portions of the respective plate elements,

(e) the electric excitation circuit means being connected in circuit relationship across the respective ones of the piezoceramic plate elements of the piezoelectric ceramic bender-type switching device for selectively closing or opening the set of coacting electrical switch contacts to control electric current being supplied through a load by the opening and closing of the switch.

Re. 33,569



SINGLE LUMEN ATHERECTOMY CATHETER DEVICE

Hanson S. Gifford, III, Palo Alto, and John B. Simpson, Woodside, both of Calif., assignors to Devices for Vascular Intervention, Inc., Redwood City, Calif.

Original No. 4,669,469, dated Jun. 2, 1987, Ser. No. 834,950, Feb. 28, 1986. Application for reissue May 19, 1989, Ser. No. 354,166

Int. Cl.' A61B 17/32

U.S. Cl. 606—159 16 Claims

8. A device comprising:

flexible guiding means having a lumen extending from a proximal end to a distal end thereof;

a housing mounted on the distal end of the flexible guiding means, said housing having a cutout therein;

flexible drive means extending through the lumen of the flexible guiding means and into the housing;

a work performing device secured to the flexible drive means;

inflatable means carried by the housing;

means coupling the inflatable means to the lumen; and

means for establishing fluid-tight sealing between the lumen and the interior of the housing, said means allowing the passage of the drive means therethrough.

7,490

MACADAMIA NAMED "HIDDEN VALLEY A4"

Henry F. D. Bell; Margaret A. Bell, and David J. D. Bell, all of Box 6, Beerwah, Queensland 4519, Australia

Filed Apr. 26, 1989, Ser. No. 344,279

Claims priority, application Australia, Apr. 26, 1988, 88/001

Int. Cl.' A01H 5/00

U.S. Cl. Plt.—30 1 Claim

1 A new and distinct hybrid *Macadamia integrifolia* · *tetraphylla* named Hidden Valley A4 substantially as shown and described

---

7,491

ARTHUR CHERIMOYA TREE

Arthur J. Daou, A. Daou Bldg., Edde Road, Byblos, Jbail, Lebanon, and Suzanna Daou, 5 Marine Ave., Westport, Conn. 06880

Filed Jul. 27, 1989, Ser. No. 385,561

Int. Cl.' A01H 5/00

U.S. Cl. Plt.—33 1 Claim

1 The new variety of *Annona cherimola* substantially as shown and described herein, being distinguished for its ability to produce fruit of exceptional flavor with an unusually small number of seeds. The tree of this variety also being notable for its relative hardiness and resistance to extremes of heat and cold, and not susceptible to the Mediterranean Fruit Fly

---

7,492

FLOWERING CRAB APPLE TREE 'SINAI FIRE'

John L. Fiala, Medina, Ohio, assignor to J. Frank Schmidt & Son Co., Boring, Oreg.

Filed May 12, 1989, Ser. No. 351,870

Int. Cl.' A01H 5/00

U.S. Cl. Plt.—34 1 Claim

1 A new and distinct variety of flowering crab apple tree substantially as herein shown and described, characterized particularly as to novelty by its weeping branches, glossy green leaves, white flowers and red fruit and high resistance to apple scab

7,493

GAZANIA PLANT CALLED *GAZANIA RIGENS* 'MOORPARK ORANGE'

Janet N. Egger, Ventura, and Stephen H. Beimel, Agoura, both of Calif., assignors to Mitsuwa Nursery, Inc., Moorpark, Calif.

Filed Apr. 12, 1989, Ser. No. 337,072

Int. Cl.' A01H 5/00

U.S. Cl. Plt.—68 1 Claim

1 A new and distinct cultivar of Gazania as described and illustrated, particularly characterized by its floriferous shows deep orange flowers, green foliage, vigorous growth, and trailing habit

---

7,494

GERANIUM PLANT NAMED BRENESO

Siegfried Klemm, Stuttgart, Fed. Rep. of Germany, assignor to Klemm & Sohn, Fed. Rep. of Germany

Filed May 24, 1989, Ser. No. 356,127

Int. Cl.' A01H 5/00

U.S. Cl. Plt.—68 1 Claim

1 The new and distinctive Geranium cultivar substantially as herein shown and described, particularly distinguished by its low growth habit and the very large size of its roseine purple florets mostly grouped to provide very large umbel formed clusters

---

7,495

PYRETHRUM PLANE NAMED ARIZONA

Robert G. McDaniel, Tucson, Ariz., assignor to Arizona Technology Development Corporation, Tucson, Ariz.

Filed Mar. 31, 1989, Ser. No. 332,611

Int. Cl.' A01H 5/00

U.S. Cl. Plt.—74 1 Claim

1 A new and distinct cultiar of *Chrysanthemum cinerariaefolium* plant known by the cultivar name Arizona, and particularly characterized as to uniqueness as described and illustrated herein by the combined characteristics of high pyrethrin content, environmental stress tolerance, uniform flower stalk extension and substantially erect growth

REMOVABLE EYEGLASS SHADE VISOR APPARATUS

Terence L. Koethe, 1021 Oakwood Dr., Keller, Tex. 76248

Filed Nov. 28, 1989, Ser. No. 442,250

Int. Cl.[5] A61F 9/04

U.S. Cl. 2—13 18 Claims

1 Shade visor apparatus removably securable to a pair of eyeglasses having a front frame section operatively supporting a pair of lenses, said front frame section having a front side, a rear side, and a top side edge portion with outer corner portions to which inner ends of a pair of temple bar members are pivotally secured, said shade visor apparatus comprising:

a visor member having a lower side surface, a front edge portion, a rear edge portion, a pair of opposite end portions, and a pair of support tab portions projecting downwardly from said lower side surface adjacent said opposite end portions, and

elastomeric loop means secured to said support tab portions and projecting outwardly therefrom, said elastomeric loop means being operative to be placed over the outer ends of the temple bar members, moved inwardly along the temple bar members, and then stretched around said outer corner portions of said front frame section to removably support said visor member on said front frame section in a position wherein said rear edge portion of said visor member extends generally across said top side edge portion of said front frame section, said front edge portion of said visor member is disposed forwardly of said front frame section, and said support tab portions are pressed against said top side edge portion of said front frame section.

PROTECTIVE ARTICLE OF CLOTHING

Carl J. McIlquham, W5836 Highway 64, Bryant, Wis. 54418

Filed Nov. 9, 1989, Ser. No. 435,094

Int. Cl.[5] A41D 17/02

U.S. Cl. 2—22 9 Claims

1 A protective article of clothing for a leg, comprising:

a sheet of fabric adapted to encircle the leg, said sheet of fabric having a top portion and an opposite bottom portion,

a circumferential flap located on the sheet of fabric between said top and bottom portions;

means adjacent said bottom portion of said sheet of fabric for drawing said sheet of fabric around the leg;

means adjacent said top portion of said sheet of fabric for maintaining said sheet of fabric on the leg; and

an absorbent strip attached circumferentially on said sheet of fabric between said top and bottom portions, said absorbant strip for receiving an insect repellent and being positioned below said flap so that said flap is positioned outward of said absorbant strip

5,005,216

SELF-VENTILATING PROTECTIVE GARMENT

William A. Blackburn, Cary, N.C., and Michael P. Sosnowich, Decatur, Ala., assignors to Abandaco, Inc., Decatur, Ala.

Filed Jul. 30, 1990, Ser. No. 559,681

Int. Cl.[5] A62B 17/00, A41D 13/00

U.S. Cl. 2—79 7 Claims

1 An air ventilated protective garment for an operator working in a hazardous environment, comprising

(a) an outer impermeable protective layer having portions covering the torso, the arms to the wrists and the legs to the ankles and having an interior surface, an exterior surface and a neck area,

(b) securing means including elastic band means formed around the respective neck area, wrist and ankle portions and additional drawstring means around the neck area,

(c) a hood piece having an inner hood skirt received within said layer interior surface and within said neck area and an outer hood skirt received over said layer exterior surface and over said neck area, said drawstring means being operative to secure said layer in the neck area between said inner and outer hood skirts,

(d) an external air source assembly including a source of pressurized air and a flexible hose connecting the interior of said hood piece to said air source enabling pressurized external air to be fed to an operator wearing said garment,

(e) an inner arm skirt secured within each said arm portion of said garment formed of impermeable fabric and having an upper end periphery secured to said layer interior surface at a position intermediate the length of the said arm portion and extending to the outer extremity thereof,

(f) a glove shaped hand cover secured to and forming an extension of each said inner arm skirt and formed of an air pervious fabric,

(g) an inner leg skirt formed of impermeable fabric secured within each said leg portion of said garment and having an upper end periphery secured to said layer interior surface at a position intermediate the length of said leg portion and extending to the outer extremity thereof, and

(h) a boot shaped street shoe cover secured to and forming an extension of each said inner leg skirt, each said street shoe cover having at least a selected portion thereof formed of an air permeable fabric such that when the operator dons work boots over said street shoe covers and fits said work gloves into said arm portions around said inner arm skirts and said work boots into said leg portions around said inner leg skirts, a predetermined volume of said pressurized air is expelled through those selected portions of street shoe covers formed of said air permeable fabric at a predetermined rate to ventilate said garment and prevent ballooning thereof

NURSING BIB

Barbara J. Bern, Washington Ave., Lawrence, N.Y. 11559, and Janet Y. Anderson, 205 Root Ave., Central Islip, both of N.Y. 11722

Filed Mar. 15, 1990, Ser. No. 493,643
Int. Cl.[5] A41D *1/20, 1/22*
U.S. Cl. 2—104 **5 Claims**

1. A protective garment for use by a wearer while holding an infant comprising a shortened rear panel extending down to the waist of the wearer and wrapped around one side of said wearer and covering one shoulder, a front panel extending down substantially below the waist of said wearer, said front panel being joined to said rear panel along a common vertical edge on the other side of said wearer, said front panel extending sufficiently, laterally, to wrap around said other side and front of said wearer and terminating at the front of said wearer with a flap overlapping said rear panel covering said one shoulder, short fluffy sleeve means formed at the outer edges of the shoulders of said garment raised to provide comfortable support and resting places for the head of said infant when being held and to prevent the head of the infant from rolling off a shoulder of said wearer, said flap and the overlapped rear panel being provided with press type connections for holding the flap in place.

GARMENT

Daniel Ganz, Rockville Centre, N.Y., assignor to Ganz Manufacturing Co., Inc., Rockville Centre, N.Y.

Filed Oct. 5, 1989, Ser. No. 417,508
Int. Cl.[5] A41B *1/00, 1/02, 1/08,* **A41D** *27/08*
U.S. Cl. 2—69 **19 Claims**

1 A garment comprising

a body having a front part and a back part,

said body having an outer surface;

said surface having at least one aperture,

said body having a first part, said first part being capable of being drawn through said aperture said front part including a two-dimensional design, and said first part being capable of being drawn through said aperture forming a three-dimensional member which also forms a three-dimensional part of said two-dimensional design so a combined two-dimensional—three-dimensional composite design is formed when said first part is drawn through said aperture

PROTECTION HELMET

Daniele Gaiatto, Vigevano; Gianni Mengazzato, and Michelle Villis, both of Vicenza, all of Italy, assignors to Brancale S.R.L., Vigevano, Italy

Filed Jul. 17, 1989, Ser. No. 382,472
Claims priority, application Italy, Jul. 21, 1988, 85618 A/88
Int. Cl.[5] A42B *3/02*
U.S. Cl. 2—421 **8 Claims**

1 A protection helmet for a user which comprises crown

(1), a plurality of belts (2), said belts being blocked from moving with respect to the crown at least at one location, said belts being fixed one to the other, means for fixing said belts with respect to the crown whereby said helmet is held firmly on the head of the user, said means comprising buckles (3), at least one slit for the entry and one slit for the exit of each belt in each

buckle, each of said buckles being inserted in a slit (6) formed along the entire thickness of the helmet at at least one location, said slit (6) having a width at least equal to the thickness of the buckle with the belt wound thereon, at least one recess (7) formed on the external surface of said crown, said recess having a shape corresponding to the shape of the buckle, whereby said buckle with the belt may pass through said slit

MOTORCYCLE HELMET WIND VISOR ADJUSTMENT DEVICE

Lee S. Chen, No. 343, Chung Chen Rd., Yung Kang Hsiang, Tainan Hsien, Taiwan

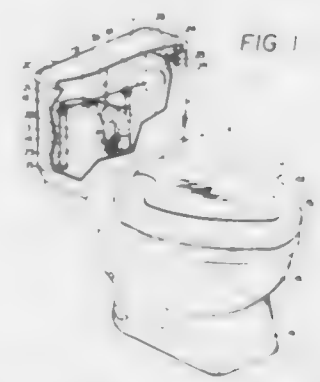
Filed Aug. 28, 1989, Ser. No. 399,245
Int. Cl.[5] A61F *9/06*
U.S. Cl. 2—424 **1 Claim**

1 A motorcycle helmet wind visor adjustment device for a motorcycle helmet comprising:

(a) a wind visor (2) with respective visor rings (21) on each distal end thereof, each said visor ring (21) having a friction track (211) on an outer surface thereof, each said visor ring (21) also having an annular seat (212) on an inner circumference thereof;

(b) a slip ring (5) which has an annular protrusion (52) thereon for rotatably engaging said annular seat (212), said slip ring (5) also having a friction piece (53) thereon for frictionally engaging with said friction track (211), said slip ring (5) having inner walls (51) on a radially inner circumference thereof seperated by two diametrically opposite securement slots (511);

(c) a U-shaped bracket (4) having a center portion with a hole therethrough and two side portions, said side portions each having a respective catch (41) on an outer surface thereof for engagement with said annular protrusion (52), said two side portions being flexible so as to be engageable with said securement slots (511), said U-shaped bracket (4) being securable by a bolt (14) at said center portion thereof to said motorcycle helmet, a fixing post (42) protruding from said center portion away from said side portions for engaging with a fixing hole (15) on said motorcycle helmet so as to prevent rotation of said U-shaped bracket (4),



(d) a cover plate (3) for covering said visor ring (21), slip ring (5), and said U-shaped bracket (4), said cover plate (3) having an annular wall (32) on an inner surface thereof which is frictionally engageable with an inner surface of each side portion said U-shaped bracket (4), said cover plate (3) having a plurality of evenly spaced fixing stubs (31) protruding from said inner surface thereof, said motorcycle helmet having a plurality of engagement holes (11) corresponding to said fixing stubs (31), said fixing stubs (31) fitting through said engagement holes (11) and fixably engaging with a plurality of receptacles (13), and said visor ring (21) being fixable at a wide range of angles about said slip ring (5)

TOILET ASSEMBLY

Jae K. Sim, 619 S. Orange Dr., Los Angeles, Calif. 90036

Filed Jun. 21, 1990, Ser. No. 541,741
Int. Cl.[5] E03D *9/05*
U.S. Cl. 4—216 **8 Claims**

1 A ventilating toilet assembly comprising

a toilet stool having a toilet bowl, including a back wall, a flush ring disposed at the upper end of said toilet bowl, a plurality of openings communicating with said flush ring for allowing flush water to be flushed into the toilet bowl from the flush ring, a seat ring disposed on said flush ring, a toilet seat cover disposed on the peripheral inside edge of said seat ring, and a siphon conduit connected to and communicating with the toilet bowl for discharging waste product directly from the toilet bowl to a sewer discharge line,

a ventilation conduit disposed adjacent to the back wall portion of said toilet stool for ventilating objectionable odor from the toilet bowl, said ventilation conduit extending annularly around said siphon conduit at a point where they communicate with said sewer discharge line, said ventilation conduit containing a fan disposed in the lower portion thereof,

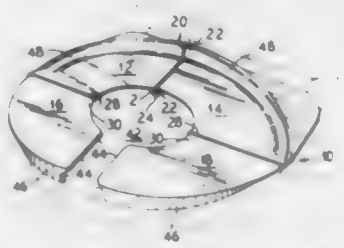
a toilet tank for containing flush water, said toilet tank having a water intake valve and an opening leading to said bowl,

a motion sensor disposed on the front exterior of said toilet holding tank facing said stool, said sensor being free of interference from the opening and closing of the toilet seat cover,

a multifunctional tube having an inverted U-shaped configuration with one leg of the U being disposed in said opening in said toilet tank, which leg serves as a first gas exhaust tube connected to said flush ring, a horizontal flapper tube

extending laterally of said one leg and having a flapper valve seated thereon,

a second leg of said U being connected to said ventilation conduit, and serving as a second gas exhaust tube,



a movable ball valve disposed to move between a first position in said flapper tube adjacent said flapper valve to a second position in said first gas exhaust tube for allowing exhaust gas to flow from the flush ring to the ventilation conduit in said first position or flush water to flow from the toilet holding tank via flapper tube to the toilet bowl in said second position, whereby with the toilet seat cover open, while the user sits on the seat ring, the motion senser is actuated to operate the fan and the objectionable odor is ventilated, and in turn when the user stands and flushes the toilet assembly, the motion senser is deactivated and simultaneously, the flush water discharges the waste product and associated objectionable odor directly to the sewer discharge line.

FOLDABLE TOILET SEAT

Mark H. Greenwood, Arlington Heights, Ill., assignor to Children On The Go, Inc., Wheeling, Ill.

Filed Apr. 13, 1990, Ser. No. 509,028
Int. Cl.[5] A47K *13/14*
U.S. Cl. 4—235 20 Claims

15 A foldable toilet seat adapted to fit over a conventional toilet seat comprising:

a pair of rear sections having upper and lower surfaces and forward edges, said rear sections having contiguous edges defining a substantially longitudinal center of the seat,

a pair of front sections having upper and lower surfaces and rear edges contiguous with the forward edges of the rear sections to define a substantially transverse center of the seat and having confronting inner edges spaced apart to form a gap therebetween,

connecting means on the lower surfaces of the front and rear sections joining the contiguous edges of the rear sections and joining the forward edges of the rear sections with the corresponding rear edges of the front sections;

a flange extending downwardly from the lower surface of each front section to engage the conventional toilet seat; and

a raised portion extending upwardly from the upper surface of each rear section and having a hollow interior that receives the flange from the corresponding front section when the sections are folded;

whereby the front sections are foldable against the rear sections along the transverse center of the seat and the rear sections, with the front sections folded therein, are foldable along the longitudinal center of the seat so that the front and rear sections are substantially parallel when folded.

TOILET BOWL SILENCER DISH

William M. Carmichael, 555 Fillmore Ave. #603, Cape Canaveral, Fla. 32920

Filed Dec. 15, 1989, Ser. No. 451,439
Int. Cl.[5] E03D *9/00*
U.S. Cl. 4—300.3 14 Claims

1 A urine splash guard accessary for a male user of a conventional flush toilet having a bowl containing a normal water level therein and including an inner and outer surface and an upper rim, said accessary comprising:

a first arcuate disc of rigid material having a generally concave front surface and a generally convex rear surface and further including at least one fin integral with and extending rearwardly from said rear surface at a top portion thereof,

at least one hanger member integral with said rear surface of said disc at said top portion thereof and positioned above said at least one fin,

a length of twine secured at one end to said at least one hanger member,

a counterbalance secured to the other end of said twine; and

said disc adapted to be positioned within the toilet bowl above the normal water level therein with its front surface facing toward the center of the bowl and with said at least one fin engaging the inner surface of the bowl below the rim thereof, wherein said twine is draped over the rim of the bowl with said counterbalance freely hanging alongside the outer surface thereof thereby maintaining said disc in position, whereby a male user of the toilet can direct a stream of urine at said concave front surface of said disc to reduce any splash or noise normally generated thereby

DUAL FLUSH VALVE FOR WATER CLOSETS

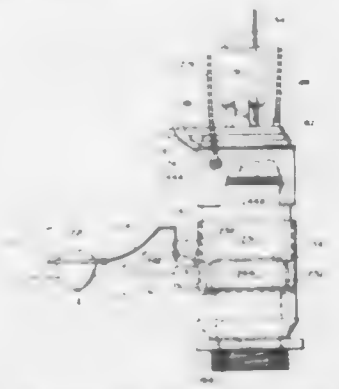
John P. Pasquin, P.O. Box 25664, West Valley City, Utah 84125

Continuation-in-part of Ser. No. 326,366, Mar. 21, 1989, abandoned. This application Oct. 10, 1989, Ser. No. 418,858
Int. Cl.[5] E03D *1/14*
U.S. Cl. 4—326 14 Claims

1. A flush valve assembly for use in the water storage reservoir of a toilet having water outlet, said flush valve comprising:

a first valve means positioned within said storage reservoir and above said water outlet, for closing said water outlet, said first valve means being associated with said water outlet for closing said water outlet;

said first valve means comprising;



an open-sided first upright tubular conduit, defining a first interior channel, mounted within said storage reservoir to communicate with said water outlet, and

a first plug, pivotedly mounted to a first support member mounted within said storage reservoir, said first plug being dimensioned to be inserted into an open end of said first tubular conduit thereby closing said first conduit

a second valve means positioned within said storage reservoir and above said water outlet, said second valve means being associated with said water outlet for closing said water outlet, said second valve means comprising,

an open-ended, upright, solid-walled second tubular conduit, defining an second interior channel, mounted fixedly on said storage reservoir, said second conduit defining at least one aperture in a sidewall thereof communicating with said second channel, said second channel communicating with said water outlet, and

an open-ended, upright, solid-walled third conduit defining a third channel therein, mounted on said first con

duit, said third conduit being displaceably and slidably mounted coaxially within said second conduit,

wherein a first displacement of said third conduit communicates said aperture with said water outlet and a second displacement of said third conduit seals said aperture from communicating with said water outlet,

a respective actuation means mounted on said first valve means and said second valve means, for individually opening said first valve means and said second valve means,

wherein upon said first valve means being opened by said actuation means said first valve means is adapted to discharge a first quantity of water from said storage reservoir, and said second valve means, upon being opened by said actuation means, is adapted to discharge a second quantity of water from said storage reservoir, said first quantity of water being measurably smaller than said second quantity of water

FLUSHING MECHANISM WITH LOW WATER CONSUMPTION

Peter A. Basile, Lawrenceville; Ashvani K. Madan, Ocean; Fred E. Snyder, Princeton Junction, all of N.J., and Harold M. Stillman, Scarsdale, N.Y., assignors to American Standard Inc., New York, N.Y.

Division of Ser. No. 440,363, Nov. 30, 1989. This application May 11, 1990, Ser. No. 522,010
Int. Cl.[5] E03D *3/10*
U.S. Cl. 4—354 14 Claims

1 A flushing mechanism for flushing a bowl with liquid comprising a containment vessel adapted to hold a predetermined amount of liquid, inlet means on said containment vessel for receiving said liquid under a predetermined pressure, outlet means on said containment vessel coupleable to said bowl for permitting said liquid when in said containment vessel to be released into said bowl, piston means displaceable in said containment vessel for forcing said liquid out of said containment vessel through said outlet means, biasing means for biasing said piston means against the force exerted by said liquid sealing means for releaseably sealing said outlet means, actuation means for releasing said sealing means to open said outlet means to permit said liquid in said containment vessel to be forced out of said containment vessel and into said bowl under the force of said piston means, said sealing means including a flush valve displaceable between a first position where said

outlet means is closed to liquid in said containment vessel and a second position where said outlet means is open to liquid in said containment vessel, and pressure sensing means for determining when said liquid in said containment vessel has been substantially expelled and for closing said flush valve in response thereto

COMPOSTING TOILET WITH RESPRAY OF LIQUID WASTES

Allen E. White, Millerton, Pa., assignor to Clivus Multrum, Inc., Lawrence, Mass.

Filed Mar. 8, 1989, Ser. No. 320,521
Int. Cl.[5] A47K *11/02*
U.S. Cl. 4—449 16 Claims

1 A composting toilet for the treatment of liquid and solid wastes and conversion thereof into biologically acceptable, disposable products, comprising

a housing including means for the reception of liquid and solid wastes, said housing having top, bottom and side walls for retaining said wastes therewithin,

means dividing said housing into a major portion in which said liquid and solid wastes are received, and a relatively minor portion substantially free of solid wastes, said portions being arranged in substantial juxtaposition within said housing,

means for permitting ingress and egress of air into and from said housing, said ingress and egress means being located remote from each other, said means extending within said

housing from a location near said ingress means, to a location in said minor portion of said housing.

means for collecting liquid waste accumulating within said housing, and

means for projecting said liquid waste within said housing into said minor portion of said housing and into the flow of air moving through said minor portion toward egress from said housing, so that portions of said liquid waste projected into said minor portion are entrained with or evaporate into said air and pass from said housing with said air

FLOW CONTROLLING

Seymour Mermelstein, Newton, Mass., assignor to Swimex Systems, Inc., Warren, R.I.

Continuation-in-part of Ser. No. 4,232, Jul. 1, 1987, which is a continuation of Ser. No. 774,541, Oct. 9, 1985, abandoned. This application Oct. 8, 1987, Ser. No. 106,550

Int. Cl.[4] E04H *4/12*

U.S. Cl. 4—488 **12 Claims**

1 A swim-in place pool comprising

a ducted tank for containing fluid, said tank having first and second ends,

channel defining means in said ducted tank for defining upper and lower channels in said tank for allowing fluid flow in upper and lower opposed directions,

and drive means at said first end extending across the entire width of said ducted tank in fluid communication with said upper and lower channels for propelling said fluid through said lower channel then through said second end into said upper channel for producing a current flow along a length direction of said ducted tank in said upper channel that is substantially uniform in velocity across substantially the entire width of said ducted tank,

said drive means comprising a vaned wheel having a plurality of vanes each vane extending across substantially the entire width of said tank and fully immersed in the fluid contained in said ducted tank,

said ducted tank including shrouding and ducting coacting with said vaned wheel for form a vane pump propelling a stream of fluid toward said lower channel, said stream including an escape plume which has an upward component and is captured by a tapered inlet portion of said ducting leading into said lower channel, said lower channel being connected for fluid flow to said upper channel by a transition channel at said second end having an opening that ejects a stream of water across the top of the tank of substantially uniform lengthwise velocity across the width of the tank with negligible turbulence at sufficient velocity to enable a swimmer to swim in place naturally.

SWIMMING POOL ROPE ANCHOR METHOD AND DEVICE

Italo A. Bertoni, 305 Edinborough Street, Windsor, Ontario, Canada (N8X 3C3)

Filed Jan. 5, 1990, Ser. No. 461,256

Int. Cl.[4] E04H *4/00*

U.S. Cl. 4—505 **5 Claims**

2 A rope anchor device for swimming pools having a wall and a liner, comprising in combination

(a) a base plate having at least two stems integral with and projecting rearwardly from said base plate substantially perpendicular thereto,

(i) said stems being spaced apart by a predetermined dimension and having a length such that free ends of said stems project through two holes in said swimming pool wall,

(ii) at least two bores in said base plate opening interiorly of said pool when said stems are projected through said wall, one of said bores extending into one of said stems and another of said bores extending into another of said stems,

(b) engaging means for interengaging free ends of said stems with a back of said wall to secure said base plate on said wall,

(c) an anchor plate having eye means for receiving a swimming pool rope hook and at least two openings through said anchor plate, said anchor plate openings being spaced apart by said predetermined dimension and having a predetermined geometry relative to said eye means so that when said anchor plate is secured to said base plate, said eye means will have a predetermined final orientation, and

(d) means for securing said anchor plate to said plate with said liner clamped firmly therebetween and with said eyelet means at said predetermined orientation, said securing means comprising at least two threaded fasteners engageable with said anchor plate and threadably engageable with said bores so that when said fasteners are tightened, said anchor plate is firmly and fixedly mounted on said wall to resist turning moments of said anchor plate and with said liner clamped firmly between said anchor plate and said base plate, clamping forces are distributed over a surface area between said fasteners, said liner being easily replaced by removing said fasteners without having access to the backside of said pool wall.

MEANS FOR POSITIONING BEDFAST PATIENTS

Robert Lonardo, Treasure Island, Fla., assignor to Robert Lonardo, Trustee of the Robert Lonardo Living Trust Agreement, Treasure Island, Fla.

Continuation of Ser. No. 202,532, Jun. 6, 1988, Pat. No. 4,872,226. This application Sep. 27, 1989, Ser. No. 413,230

The portion of the term of this patent subsequent to Oct. 10, 2006, has been disclaimed.

Int. Cl.[4] A61G *7/10*

U.S. Cl. 5—61 **3 Claims**

1 A bedfast patient positioning device, comprising

a substantially rectangular pad means adapted to extend over a patient's bed underneath a bedfast patient, said pad means having opposite parallel sides, and upper and lower surfaces,

a pair of separate continuous straps secured to the bottom surface of said pad means and extending transversely across the width of said pad means and extending outwardly from said opposite parallel sides thereof, and terminating in straight elongated end portions,

said pair of continuous straps being spaced apart and one each thereof being adapted to be substantially aligned with a patient's shoulder and hip areas, respectively,

a pair of gripping loops secured to said pair of straps substantially adjacent the opposite parallel sides of said pad means inwardly from the end portions of said straps, said straps extending outwardly beyond said gripping loops and fastening means positioned on each strap outwardly from said gripping loops, said fastening means adapted to selectively secure said straps to the bed so as to maintain the patient in a selected position

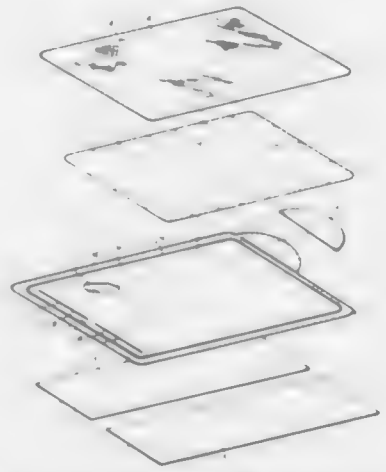
TWO-PERSON SLEEPING BAG FORMED BY TWO SINGLE SLEEPING BAGS

Wen-Chen Huang, No. 58, Lane 242, Hu Lin St., Taipei, Taiwan

Filed Jan. 1, 1989, Ser. No. 359,964
Int. Cl.' A47G 9/08
U.S. Cl. 5—413 1 Claim

1 A sleeping bag comprising a flexible casing (2) that includes an outer panel (27) and an inner panel (26), each panel having two longitudinal side edges a longitudinal centerline defined therebetween, and two transverse end edges, each panel being generally rectangular except that each panel has an integral pillow case extension at one end thereof offset to one side of the panel longitudinal centerline; said panel and associated extensions being secured together around their peripheral edges to form a hollow sealed casing and integral pillow case, said panels being stitched together along the panel longitudinal centerline; said outer panel (27) being formed of a moisture-impervious cloth material, said inner panel (26) having a first zipper opening (at 23) extending transversely across the associated pillow case extension, said inner panel having a second zippered opening (at 28) extending transversely thereacross at the end thereof remote from the first zippered opening;



a pillow (6) insertable through the first zippered opening to occupy the hollow space defined by the pillow case extensions;

an elongated generally rectangular pad (5) formed of a soft cushion material insertable through the second zippered opening to form a cushion underneath the body of a person lying within the sleeping bag,

a generally rectangular liner panel (4) having longitudinal and transverse dimensions slightly less than the corresponding dimensions of said flexible casing (2),

a first inner zipper means (25) extending around substantially the entire periphery of said flexible casing along the surface thereof defined by said inner panel (26), said first zipper means being inset from the edges of the case so that the extreme outer edge area of the case is located outwardly beyond said inner zipper means including a first portion thereof inset inwardly from the first zippered opening (23), and a second portion thereof spaced outwardly beyond the second zippered opening (28),

a second zipper means (41) extending along the peripheral edges of said liner panel (4), said second zipper means

being adapted to mate with said first zipper means (25) whereby said liner panel can be releasably attached to the flexible case at the panel peripheral edges

a generally rectangular mattress (3) having a plan dimension slightly less than the space circumscribed by the first and second zipper means, whereby said mattress can be inserted into the space between the liner panel and the flexible casing,

and a third outer zipper means (24) extending only along the two longitudinal slide edges of said casing and the end edge of said casing remote from the pillow case extensions,

said flexible casing being foldable on its longitudinal centerline so that portions of said third zipper means mate together, whereby said third zipper means can be closed to form a bag seal along the entire folded bag edge except for the edge area thereof defined by the pillow case

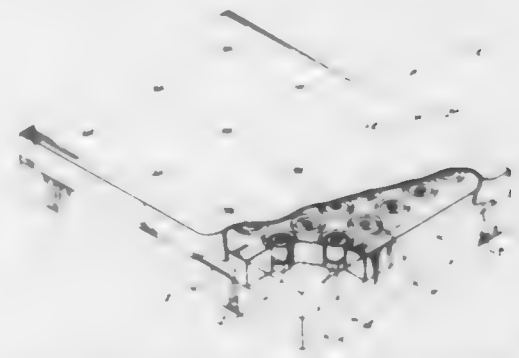
WATER BED MATTRESS

E. Thomas Freet, Alta Loma, Calif., assignor to Nature Sleep Corporation, Rancho Cucamonga, Calif.

Filed Aug. 29, 1990, Ser. No. 575,190
Int. Cl.' A47C 27/10
U.S. Cl. 5—451 18 Claims



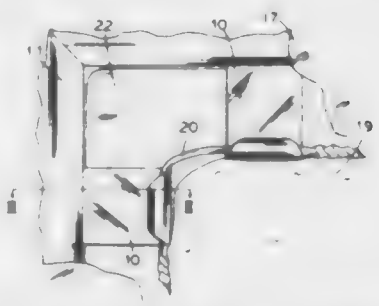
1 A water bed mattress construction comprising,

a compressible sheet for providing a level of cushion-like sleeping support;

an array comprised of a plurality of cutout areas extending vertically into the depth of the compressible sheet and spaced apart laterally and longitudinally across the surface area of the compressible sheet, and

a separate water cushion removably disposed within each cutout, each water cushion comprising a flexible water impervious enclosure with a hollow interior and a means for admitting water to the interior of the enclosure and sealing the water from the outside,

the mattress thereby providing an array of separate and independent areas of water support combined with a



compressible means of cushion-like support surrounding each of the water support areas to absorb and accommodate volumetric expansion of the individual areas of water support when different degrees of downward pressure are applied randomly across the surface area of the mattress.

BED SHEET SECURING SYSTEM FOR WATERBEDS

Debra Clark, Oro Station, Box 2, Unit 1, Ontario, Canada (L0L 2E8)

Filed Aug. 22, 1990, Ser. No. 570,873
Int. Cl.' A47G 9/04
U.S. Cl. 5—451 10 Claims

1 A bed sheet securing system for a waterbed having a waterbed mattress disposed within a bed frame, comprising

a plurality of bracket members mounted on said bed frame, said bracket members having a flat, generally horizontal, surface portion located adjacent to a top surface of said mattress and a hook-shaped free end extending outwards from said bed frame,

a bed sheet member having a plurality of resilient loop shaped edge portions operative to engage with said bracket members on said bed frame for retaining said bed sheet member in a mounted position over said mattress whereby the peripheral edge portions of the bed sheet are located generally above the mattress

PATIENT SUPPORT APPARATUS

John H. Vrzalik, San Antonio, Tex., assignor to Kinetics Concepts, Inc., San Antonio, Tex.

Continuation of Ser. No. 124,382, Nov. 20, 1987, abandoned, which is a continuation of Ser. No. 784,875, Oct. 4, 1985, abandoned, which is a continuation-in-part of Ser. No. 683,153, Dec. 17, 1984, abandoned. This application Sep. 29, 1988, Ser. No. 251,948

Int. Cl.[5] A61G 7/00

U.S. Cl. 5—453 39 Claims

1. A patient support apparatus for supporting a patient thereon comprising

a source of gas,

a plurality of sets of air bags for supporting a patient thereon, each of said sets of air bags being mounted to a bed frame,

a plurality of sets of gas manifolds, each manifold of said sets of gas manifolds communicating separately with said gas source and with the interior of the air bags of one set of said sets of air bags;

an air control box between said gas source and said gas manifolds, and

a plate pivotally mounted to said air control box having a plurality of openings therethrough, each of the openings being connectible to a gas supply hose for directing a flow of gas from said air control box to one of said gas manifolds, said plate being selectively pivotable to open the openings to the atmosphere, allowing the gas to escape from said air bags, collapsing said air bags and causing the patient to be supported by a rigid portion of bed frame

DRAINABLE CUSHION AND FURNITURE SEATING

Donna M. Difloe, 1225 Lake Charles Dr., Roswell, Ga. 30075

Continuation of Ser. No. 258,736, Oct. 17, 1988, Pat. No. 4,914,772. This application Jan. 18, 1990, Ser. No. 466,760

The portion of the term of this patent subsequent to Apr. 10, 2007, has been disclaimed.

Int. Cl.[5] A47C 27/12; A47G 9/00

U.S. Cl. 5—461 2 Claims

1. A cushion which drains liquid and dries through its bottom, comprising:

(a) an inner core of drainable filling material comprising non-resinated synthetic fibers; and

(b) an outer covering surrounding said inner core, said outer covering comprising

(i) a top portion comprising air and water permeable fabric material and

(ii) a bottom portion of a material having a plurality of openings larger in size than any opening of said top portion for promoting air circulation and draining of liquid from said cushion

FOAMED SEAT CUSHION

William J. Kennedy, Manchester, N.H.; Peter E. Leach, Royal Oak, Mich., and Larry N. Grogan, Greer, S.C., assignors to Velcro Industries B.V., Amsterdam, Netherlands

Filed Feb. 6, 1990, Ser. No. 475,687

Int. Cl.[5] A47C 27/14

U.S. Cl. 5—481 8 Claims

1. An article of manufacture for use in forming a foamed seat cushion with a foamed-in loop fastener tape, said article comprising an elongated tape having a fastener surface containing either hook or loop fastening elements on one surface and a flexible plastic V-shaped support for said tape, said support having a pointed ridge over which the center portion of said tape is placed with the fastening surface facing said support, said support also having sealing means for holding the lateral edges of the tape and means for securing said support to the surface of a mold

SEAT REMOVAL TOOL FOR AIRPLANE PASSENGER SEATS

Benjamin Yip, Seattle, Wash., assignor to The Boeing Company, Seattle, Wash.

Filed Sep. 18, 1987, Ser. No. 98,575

Int. Cl.[5] B66F 15/00

U.S. Cl. 7—166 8 Claims

1. A tool used in removing airplane passenger seats and the like from a seat track, which comprises:

(a) a tool body having:

(1) an elongated handle portion adapted to be gripped by a user's hand; and

(2) an elongated blade portion extending longitudinally from said handle portion and having an upturned tip at its distal end, said blade portion having an L-shaped hole near its distal end; and

(b) a cylinder plug means for positioning said blade portion in said seat track, said cylindrical plug means being adapted to fit in said seat track, said cylindrical plug means pivotally supporting said blade portion near its distal end by a single pivot pin connected to said cylindrical plug means, said pivot pin being received by said L-shaped hole in said blade portion and having a slip fit in said L-shaped hole, whereby said pivot pin moves from the forward portion of said L-shaped hole to the rear portion of said L-shaped hole as a user pushes down on said handle portion

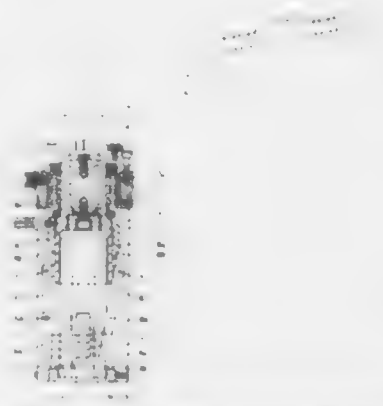
DEVICE FOR CLEANING CYLINDRICAL OBJECTS, SUCH AS BOLTS

Yutaka Muraguchi, Fukuoka, Japan, assignor to Hoko Sangyo Co., Ltd., Fukuoka, Japan



PCT No. PCT/JP89/00090, § 371 Date Sep. 25, 1989, § 102(e) Date Sep. 25, 1989, PCT Pub. No. WO89/07019, PCT Pub. Date Aug. 10, 1989

PCT Filed Jan. 30, 1989, Ser. No. 423,471

Claims priority, application Japan, Feb. 5, 1988, 63-26206; Sep. 6, 1988, 63-224155

Int. Cl.[5] A46B 13/02, B08B 9/02

U.S. Cl. 15—88 6 Claims

1. A device for cleaning a cylindrical object comprising

a sleeve having an open end,

a rotor means rotatably mounted in said sleeve for rotation about a rotary axis, said rotor means being coaxial with said sleeve, said object being placed in said sleeve,

drive means on said sleeve for rotatably driving said rotor means,

a plurality of arms each having end portions and an intermediate portion intermediate said end portions, a brush on one of said end portions and a first engageable surface on the other of said end portions,

pivot means on said intermediate portion pivotably mounting each of said arms on said rotor for pivotal movement about an axis generally perpendicular to said rotary axis, and

adjustable holding means on said rotor means having a second engageable surface engaging said first engageable surfaces of said arms to limit the pivotal movement of said arms in one pivotal direction to a limited pivotal position which determines the largest distance of each brush from said rotary axis, said adjustable holding means being adjustably mounted on said rotor means for adjustable axial movement such that different adjusted positions of said adjustable holding means varies said limited pivotal position of said arms, whereby said adjustable holding means is thereby operable to vary the largest distance of each brush from said rotary axis so that varying diameter objects are cleanable by said brushes

PIPE COATING REMOVAL SYSTEM

R. Dennis Dooley, Carrollton; Daryl W. Morris, Tina; Dana L. Scott, and Jimmy A. Watts, both of Carrollton, all of Mo., assignors to Atlantic Richfield Company, Los Angeles, Calif.

Filed Oct. 12, 1989, Ser. No. 420,446

Int. Cl.[5] B08B 9/02

U.S. Cl. 15—104.04 9 Claims

1. A tool for removing coatings from generally cylindrical pipe and the like comprising

a pair of opposed body members hinged to each other for movement between open and closed positions,

a plurality of scraper blades mounted on respective ones of said body members, each of said scraper blades having a cutting edge engageable with the outer circumference of a section of pipe for effecting removal of a coating on said pipe in response to movement of said tool longitudinally along said pipe;

support means for said scraper blades,

retaining means for retaining each of said scraper blades in a position wherein said cutting edges are at least directly adjacent an outer surface of said pipe for effecting removal of said coating during movement of said tool relative to said pipe, said retaining means comprising cooperable threaded member and retaining nut means, said threaded member being supported on said body member for projection through slot means formed in said scraper blade whereby the position of said scraper blade relative to said body member and said pipe section may be adjusted by adjusting the position of said nut on said threaded member; and

means for securing said body members in a closed and locked position so that said tool may be moved along said pipe to remove coating material therefrom

REPLACEABLE TOOTH BRUSH WITH TONGUE SCALER

Lin Yen-Hui, No. 6, Lane 55, Tao Yuan Road, Changhua, Taiwan

Filed Sep. 18, 1989, Ser. No. 409,610

Int. Cl.[5] A47L 13/12

U.S. Cl. 15—111 1 Claim

1. A toothbrush comprising

(a) a brush handle and an integrally formed brush head at one end of the handle, the brush head and brush handle extending along a common longitudinal axis,

(b) the brush head including a longitudinal receiving trough formed therein, a pair of inwardly directed longitudinal guide tracks on opposite sides of the trough and a pair of longitudinally spaced notches formed in a front end and a rear end of the head,

(c) a bristle holder for supporting a plurality of bristles, the bristle holder being detachable engageable within the receiving trough and including a pair of longitudinally spaced projections formed in a front end and a rear end of the holder, the projections being engageable within the pair of notches of the brush head, a longitudinal slide

groove formed in the bristle holder and a plurality of positioning dowels extending outwardly from the bristle holder on opposite sides of the slide groove.

(d) a head cover including a stopper formed at a front end, a slide rib extending longitudinally along a bottom surface of the cover, a plurality of positioning recesses formed on opposite sides of the ribs for engagement by the positioning dowels, and a pair of longitudinal tracks formed on opposite sides of the cover for slidable engagement within the guide tracks of the brush head

(e) an elongate tongue scaler including a tenon formed at one end and a handle means formed at another end thereof, and

(f) a handle cover including a plurality of dowels for securing the handle cover to the handle so as to define a longitudinal space therebetween for slidably receiving the tongue scaler therein, the handle cover including a longitudinal groove having one end terminating in a stop wall, the tenon being slidably engageable within the longitudinal groove to permit the tongue scaler to be disposed between a retracted position within the handle and an extended position of use wherein the tenon engages the stop wall to prevent detachment of the scaler from the handle

HYGIENIC TOOTHBRUSH

Kin-Shue Hsieh, 4F., No. 30, Chung Hsin North St., San Chung City, Taipei, Taiwan

Filed Mar. 29, 1990, Ser. No. 501,458

Int. Cl.' A46B *15/00*

U.S. Cl. 15—167.1 5 Claims

5. A disposable toothbrush as defined in claim 1 wherein the width and thickness of said strip gradually reduces from said first bent portion to the point at which said strip is joined to said intermediate portion so that said strip can be readily broken off at said point.

5,005,248

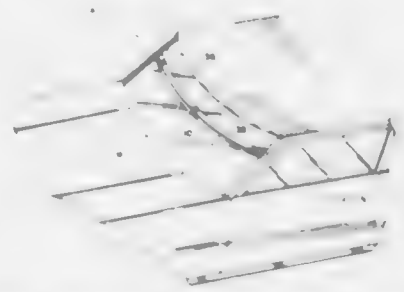
WINDSHIELD WASHER AND WIPER

George D. Bonar, G.P.O. Box 2064, New York, N.Y. 10116

Filed Jul. 18, 1988, Ser. No. 220,249

Int. Cl.' A47L *1/02*

U.S. Cl. 15—250.04 8 Claims



1. A windshield wiper for a motor vehicle windshield where the wiper moves up and down the surface of a windshield to remove rain, snow and other matter from the windshield, comprising:

a windshield wiper extending horizontally across a windshield,

said windshield wiper having a first blade side and a second blade side for contacting the surface of the windshield and removing rain, snow and other matter,

said first blade side being concaved to collect rain, snow and other matter in front of said wiper on a downward movement cleaning the windshield surface,

said second blade side being concaved and slanted from

midway of said wiper toward each end of said wiper to direct rain, snow and other matter to the side edges of the windshield without spilling said rain, snow and other matter on to the cleaned surface of the windshield on the upward movement of the wiper cleaning the windshield surface,

said wiper being stretched across the surface of the windshield for close contact with the windshield, and,

means to reciprocate said windshield wiper up and down the windshield to remove rain, snow and other matter

---

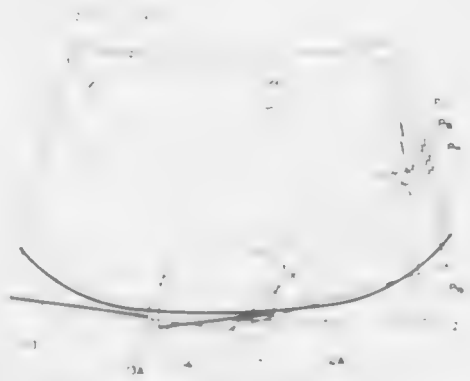
VEHICLE WINDSHIELD WIPER



Kazunori Nishizawa, Kosai; Mitsutaka Abe, Aichi; Hiroshi Matsumoto, Hamamatsu, and Shinji Imamura, Kosai, all of Japan, assignors to Asmo Co., Ltd., Kosai, Japan

Filed Mar. 13, 1989, Ser. No. 322,509

Claims priority, application Japan, Apr. 1, 1988, 63-81918

Int. Cl.' A47L *1/02*

U.S. Cl. 15—250.27 4 Claims

1. A vehicle windshield wiper comprising

a driving rod which is reciprocated by crank-coupling with a wiper motor,

a double arm lever reciprocally swung with a pivot shaft by the driving rod,

a driving-side wiper blade which is swung by fixing in the pivot shaft,

a driving-side lever which is fixedly secured in the pivot shaft,

a coupling rod rotatably coupled with the driving-side lever, and

a driven-side lever which is swung by reciprocation of the coupling rod and swings the driven-side wiper blade,

whereby the driving-side lever of said double arm lever can be swung by an angle beyond a straight line connecting a center of the pivot shaft of said double arm lever and a connecting point between the driven-side lever and the coupling rod, where the driven-side lever comes to a maximum angle position on an open side thereof, wherein the driven-side wiper blade is reversely swung and minutely returns in the maximum angle position on the open side when the driving-side lever is located above and below the straight line, and the driven-side wiper blade returns after the driving-side wiper blade

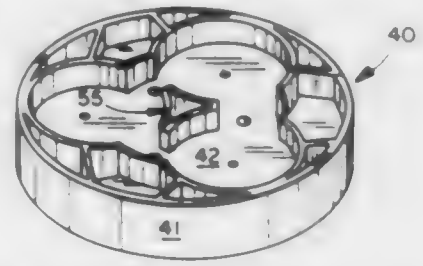
ADAPTER FOR MOUNTING VACUUM MOTOR



Rick McLeod, Lake in the Hills, and Gary E. Palmer, Roselle, both of Ill., assignors to Hako Minuteman, Inc., Addison, Ill.

Filed Oct. 20, 1989, Ser. No. 424,382

Int. Cl.' A47L *9/22*

U.S. Cl. 15—327.1 9 Claims

1. In combination with a canister, a power head coupled to said canister and adapted to generate a vacuum therein comprising, a housing adapted to receive a first vacuum motor of a first axial dimension or a second vacuum motor of a larger axial dimension than said first axial dimension, said housing including a vertical peripheral wall at least partially defining a vacuum chamber and a transverse bottom wall having first and second surfaces, one of said first and second vacuum motors, and a mounting adapter for securing said one motor within said housing, said mounting adapter comprising a vertical outer wall having first and second peripheral edges and adapted to be received within said vertical peripheral wall of said vacuum chamber, a transverse wall integrally formed with said outer wall and spaced at unequal distances from the respective edges thereof, first and second upright intermediate support wall means integrally formed respectively with said first and second surfaces of said transverse wall and extending generally per-

pendicular thereto, each intermediate support wall means cooperating with said transverse wall to define a receptacle for one of said motors, whereby when said adapter is in one position it defines a receptacle having an axial dimension for receiving said first vacuum motor and when said adapter is inverted, it defines a receptacle having an axial dimension for receiving said second vacuum motor

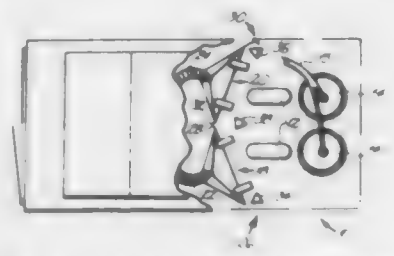
SURFACE CLEANING APPARATUS

John A. Noelle, 408 45th St. W., and Thomas J. Noelle, 1724 81st St., NW., both of Bradenton, Fla. 34209

Filed Oct. 12, 1989, Ser. No. 420,581



Int. Cl.' E01H *1/08*

U.S. Cl. 15—346 6 Claims

1. An improved debris directing and suction arrangement for use with vehicle mounted surface cleaning apparatus of the

type which dispenses a liquid on the surface to be cleaned comprising,

at least a first elongated air nozzle having means for mounting said air nozzle to said vehicle such that a first end portion be disposed at one side of the vehicle and extending to a second end to be disposed towards the center of the vehicle and rearwardly with respect to said first end portion;

said first air nozzle first end portion having a horizontally curved arc configuration,

said first air nozzle having outlet means for directing an air stream generally radially inward of said arc configuration,

a first suction head having means for mounting said head to said vehicle and spaced from said first end portion of said first air nozzle and disposed adjacent to said arc, whereby air emitted from said nozzle will blow debris towards said suction head

HANDLE GRIP

Paul J. Uffindell, Morrow, Ohio, assignor to 'Totes', Incorporated, Loveland, Ohio

Filed Sep. 12, 1989, Ser. No. 405,900
Int. Cl.[5] A63B *71/00, 49/00*
U.S. Cl. 16—111 R 2 Claims

1. A grip for a handle of a hand held implement comprising

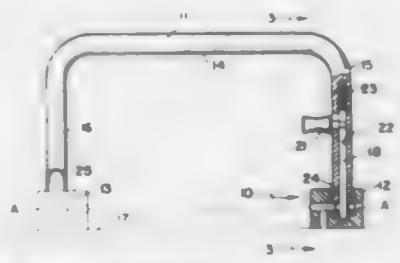
a thin walled stretchable tubular member having a longitudinal axis and an inside diameter, said member being stretchable radially of said longitudinal axis in response to exposure to a vacuum which allows for insertion of said handle into said member, and said member being sized and configured to contract into a tight friction fit with said handle,

a boot formed integral with said tubular member at one end thereof, said boot being adapted to receive therein, said handle's free end, said boot closing said one end, and

an outwardly flaring generally cup-shaped flange formed integral with said tubular member at an open end of said tubular member, said flange having a greatest diameter at least twice the inside diameter of said tubular member, said flange being sized and configured so that its outer periphery can be provided with a stable cuff, that stable cuff being stretchable over a collar on a vacuum chamber without significantly stretching said tubular member during installation of said grip on said handle, said cup-shaped flange comprising

an annular floor joined integral with said tubular member, said floor extending generally radially outward of said tubular member relative to said longitudinal axis and having a width, and

an annular rim joined integral with said floor at a shoulder, said rim initially extending beyond the open end of said tubular member substantially parallel to the longitudinal axis of the tubular member, said cup-shaped flange being structured so as to be invertable at its shoulder, said rim forming the stable cuff relative to said tubular member when said flange is inverted so as to space said cuff from said tubular member in order to form an annular gap having a width about equal to the width of said annular floor



---

HANDLE SYSTEM

Rodney H. Paré, West Warwick; Peter D. Tata, and Anthony R. Marrocco, both of Johnston, all of R.I., assignors to Square Head, Inc., Exeter, N.H.

Filed Jun. 11, 1990, Ser. No. 536,167
Int. Cl.[5] E05B *7/00*
U.S. Cl. 16—115 9 Claims

1 Handle system, comprising

(a) a handle of generally U-shaped configuration having an elongated main body and a leg extending at a right angle thereto at each end,

(b) two base elements adapted to be mounted in spaced relationship on a vertical surface and hingedly connected to free ends of the said legs, so that the handle can swing from an operative position to a storage position about a horizontal axis passing through both base elements and parallel to said surface,

(c) a plunger slidably mounted within at least one leg and adapted to slide from a forward position in a recess in a base element 15 to a rearward position removed from the recess, and

(d) an actuator for moving the plunger from the forward position to the rearward position.

5,005,256

STRUCTURE OF HINGE

Yeong-An Jang, 2F., No. 207, Sec. 2, Chang Chiang Rd., Pan Chia, Taipei Hsien, Taiwan

Filed Sep. 28, 1990, Ser. No. 589,570
Int. Cl.[5] E05D *5/00*
U.S. Cl. 16—384 1 Claim

1 A hinge for connecting two wooden members together permitting one to swing about the other, comprising a first part pivoted to a second part, said first part having two rectangular strips, each strip extending from its periphery in a first direction substantially perpendicular to a plane defining its back surface and located adjacent to an opposite end of its pivot axis about which said second part is pivoted, a plurality of pointed teeth also extending in said first direction from the periphery on three sides thereof, a plurality of pyramidal projections extending in a second direction transverse to said first direction around the periphery of the three sides thereof, a plurality of notches around the edges of the three sides thereof, a plurality of sleeves spaced axially from each other along said pivot axis; said second part having two rectangular strips, each strip extending from its periphery in a third direction substantially perpendicular to a plane defining its back surface and located adjacent to an opposite end of its pivot axis about which said first part is pivoted, a plurality of pointed teeth also extending in said third direction from the periphery on three sides thereof, a plurality of pyramidal projections extending in a

fourth direction transverse to said third direction around the periphery of the three sides thereof, a plurality of notches around the edges of the three sides thereof, a plurality of sleeves spaced axially from each other along said pivot axis, wherein the sleeves of said first part are alternately engaged in between the sleeves of said second part and connected thereto in series by a fastening rod coupled at one end with a rivet

MEAT HOOK

Ronald F. Bailey, Omaha, Nebr., assignor to Rare Research, Omaha, Nebr.

Filed Aug. 4, 1989, Ser. No. 389,789
Int. Cl.[5] B65G *7/12*
U.S. Cl. 452—185 23 Claims

1. A meat hook comprising

an elongated, rigid, curved cylinder having a first pointed, meat piercing end and a second handle engaging end,

a handle rigidly secured to the handle engaging end of the curved cylinder; the handle having a main axis, a first end, a second end, a relatively narrow front side portion and a relatively narrow rear side portion with relatively wide opposing side portions; the handle being sized to extend substantially the width of the user's palm for grasping between the palm and the fingers of the user's hand;

the curved cylinder being formed to extend from the front side portion of the handle in a common plane with the main axis and parallel to planes of the wide opposing side portions of the handle in close proximity to the first end of the handle at an angle approximately 90 degrees from the front side portion of the handle; the curved cylinder being formed to extend from the handle a sufficient distance to clear the user's fingers before curving to form the meat piercing end, said meat piercing end being in the common plane and extending approximately parallel to the plane of the front side portion of the handle, and being in spaced relation therefrom

METHOD AND APPARATUS FOR EVISCERATING SCALLOPS

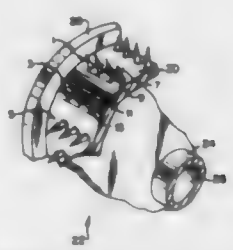
Edgar E. Griffis, 70 S. Banana River Dr., Merritt Island, Fla. 32952

Continuation-in-part of Ser. No. 222,137, Jul. 21, 1988, Pat. No. 4,947,519. This application May 15, 1990, Ser. No. 523,782
Int. Cl.[5] A22C *29/00*
U.S. Cl. 452—18 18 Claims

1 A method of mechanically eviscerating the viscera from the meat of a shucked scallop, comprising the steps of

introducing a plurality of scallops at a controlled rate into a series of longitudinally aligned inclined channels, each channel being formed between a first roller and a second plurality of rollers, wherein said first rollers in adjacent channels are longitudinally aligned,

moving the scallops from side to side down along the channels while rotating the rollers to rotate the scallop about their axis while progressively pinching and successively removing the viscera, and then cleaning the viscera therefrom, and



rotating the first rollers at a rotational speed different than that of the second rollers.

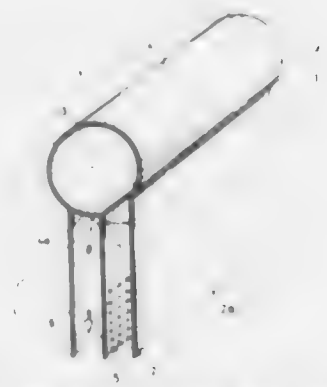
DEVICE FOR PNEUMATICALLY FEEDING FIBER MATERIAL TO A CHUTE OR THE LIKE



Akiva Plato, Duesseldorf Wittlaer, and Werner Lasenga, Duelmen, both of Fed. Rep. of Germany, assignors to Hergeth Hollingsworth GmbH, Duelmen, Fed. Rep. of Germany

Filed Feb. 13, 1990, Ser. No. 479,124
Claims priority, application Fed. Rep. of Germany, Feb. 14, 1989, 3904317
Int. Cl.[5] D01G 15/44
U.S. Cl. 19—105 6 Claims

1. Apparatus for pneumatically feeding fiber through a conduit to a processing machine comprising:

an upper chute connected to and receiving fiber from said conduit, said upper chute comprising a tube of substantially circular cross section; and

a sequential lower chute, said lower chute at its entrance from said upper chute having a width less than the diameter of said upper chute,

wherein the flow of fiber through said conduit moves through said upper chute such that fiber flows in a substantially straight line through said upper chute and allows fibers to drop into said lower chute

COMBER WITH ELECTRIC MOTOR DRIVEN INTERMITTENT FEED ROLLER

Walter Ackeret, Seuzach, Switzerland, assignor to Rieter Machine Works, Ltd., Winterthur, Switzerland

Filed Sep. 13, 1989, Ser. No. 406,781
Claims priority, application Switzerland, Sep. 21, 1988, 03505/88
Int. Cl.[5] D01G 19/08
U.S. Cl. 19—234 21 Claims

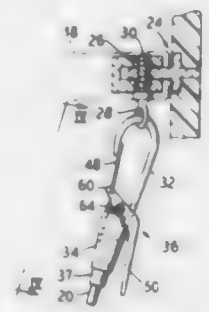
1 A comber comprising

at least one combing head including an oscillating nipper unit and a rotatable feed roller for advancing a lap to be combed;

an electric motor for intermittently rotating said feed roller, and

a control unit for energizing said motor with drive pulses in synchronism with the movements of said nipper unit.

5,005,263



EYEGLASS SUPPORT

Robert D. Barrett, 10261 Canterbury St., Westchester, Ill. 60154

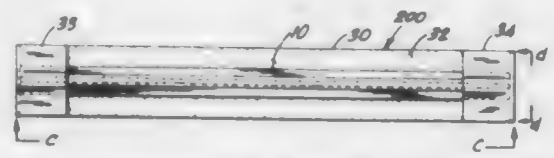
Filed Oct. 24, 1989, Ser. No. 426,305
Int. Cl.[5] A44B 21/00
U.S. Cl. 24—3 C 5 Claims

1. A selectively actuable clip of the type including a body portion, a stationary portion extending from said body portion, and a selectively movable, resilient closure member between said body portion and said engaging portion, said clip further including a lever means pivotally attached to said body portion and comprising the following:

contact arm means for selective engagement with said closure member,

control arm means, rigidly attached to, and disposed at a predetermined angle to, said contact arm means, for engagement by a user to move said closure means, and

pivot pin means, disposed between said contact arm means and said control arm means, for pivotably attaching said lever means to said body portion



---

5,005,264

FASTENER FOR CLOSING FLEXIBLE BAGS AND THE LIKE

Stanley Breen, 24 Downing St., Norwood, Mass. 02062

Continuation of Ser. No. 323,428, Mar. 14, 1989, abandoned. This application Aug. 22, 1990, Ser. No. 570,975
Int. Cl.[5] B65D 77/18
U.S. Cl. 24—30.5 R 10 Claims

1 An improved fastener for closing the open end of a flexible container comprising the combination of

a piece of tape having a pressure-sensitive adhering surface on a first side,

a strip of deformable material, wherein the length of the strip of deformable material is greater than the length of the piece of tape,

means for attaching the strip of deformable material to the pressure-sensitive adhering surface of the piece of tape wherein the width of the strip of deformable material is less than the width of the piece of tape thereby leaving an exposed portion of the pressure-sensitive adhering surface, wherein the strip of deformable material is deformed around the neck of the container and the pressure-sensitive adhering surface is pressed against itself at the exposed portion in order to close the container

5,005,265

TWO-PIECE STUD ASSEMBLY

John Muller, Englewood, Tenn., assignor to Lavidson Textron Inc., Dover, N.H.

Continuation of Ser. No. 221,886, Jul. 20, 1988, abandoned. This application Dec. 28, 1989, Ser. No. 458,334
Int. Cl.[5] A44B 1/04
U.S. Cl. 24—453 5 Claims

1 A two-piece, self-locking stud assembly comprising a male segment including a base portion, a rigid stem extending therefrom and having an outer surface and a distal end, and a plurality of equally spaced deflectable fingers, each having an inboard end connected to the distal end of said rigid stem and an axis extending downwardly therefrom at a predetermined angle with respect to said rigid stem toward said base portion, and a female segment including a base portion having an opening formed therethrough, a flange formed on one side of said base portion around said opening, a frustoconical surface formed in said flange adjacent said opening, and a cylindrical

surface formed in said flange adjacent said frustoconical surface, said deflectable fingers movable so as to approach said outer surface of said rigid stem while passing through said opening and thereafter returning back to said predetermined angle to become abutted against and locked on said frustoconical surface

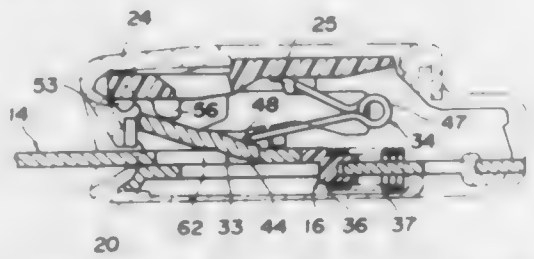
---

5,005,266

SELF-CLOSING CARABINER

Christian Fister, Lyons, and Yves Grasset, Caluire, both of France, assignors to Alpcan SA, Lyons, France

Filed Sep. 28, 1989, Ser. No. 413,686
Claims priority, application France, Sep. 28, 1988, 88 12924
Int. Cl.[5] A44B 13/02; B66C 1/36
U.S. Cl. 24—601.5 6 Claims



1 A carabiner comprising a body in the general shape of a C, a gate, means for pivotally mounting the gate on one end of the body, biasing means for holding the gate in a closed position, means for holding the gate in an open position against the action of the biasing means and for allowing the gate to pivot toward its closed position following the introduction into the body of an element to be hooked, wherein the means for holding the gate in the open position comprises a tongue, means for pivotally mounting one end of the tongue on the body for pivoting around an axis parallel to the axis of pivoting of the gate, and the tongue having a part cooperating with the free end of the gate to hold the gate in the open position

5,005,267

BUCKLE ASSEMBLY FOR SEAT BELT

Mutsumi Sugimoto, Hamamatsu, Japan, assignor to Katsuyama Kinzoku Kogyo Kabushiki Kaisha, Japan

Filed Sep. 27, 1989, Ser. No. 413,539
Claims priority, application Japan, Sep. 28, 1988, 63-243795; Aug. 25, 1989, 1-217504
Int. Cl.⁵ A44B 11/26
U.S. Cl. 24—637 22 Claims

1 A buckle assembly for a seat belt comprising

a base having a horizontal plate and side plates formed integrally with both longitudinal side portions of said horizontal plate and extending substantially normal thereto,

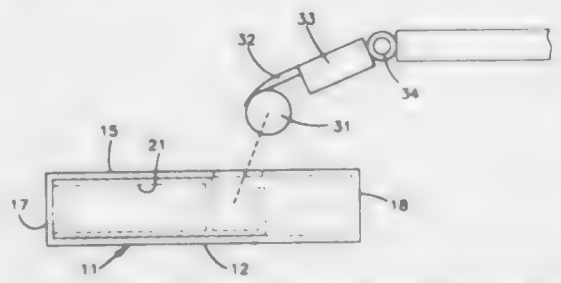
latch means engageable with said side plates and supported thereby so as to be swingable between a latch locking position and a latch releasing position,

a push button pivotally mounted on said side plates of the base,

spring means engageable with said latch means for always urging said latch means towards the locking position thereof, said spring means having a double torsional spring structure comprising double torsional portions, a central lock spring portion formed between said double torsional portions and engageable with said latch means to urge said latch means to the locking position thereof, and cantilever portions formed outside said double torsional portions and carried by said push button so as to urge said push button towards an original position thereof,

tongue means insertable into a tongue insertion space formed between said horizontal plate and said side plates of the base and releasably engageable with said latch means,

a lower cover for covering said base from a lower side thereof, and



an upper cover for covering said base from an upper side thereof and engaged with said lower cover.

5,005,268

WATCH BAND OR BRACELET CLOSURE

György Hartmann, östra Förstads Gatan 7A, 21131 Malmö, Sweden

Filed Dec. 11, 1989, Ser. No. 448,524
Int. Cl.⁵ A44B 11/25
U.S. Cl. 24—652 6 Claims

1. A closure for connecting a first and a second free end of a band as might be used as a strap on a wrist watch, said closure comprising:

a box element adapted for attachment to said first band end, said box element comprising an outer box having a bottom wall, two side walls, an end wall distal said first band end, and a top wall having a first cutout creating an opening therein, the width of said first cutout varies along the length thereof to provide a wide portion thereof proximal said first band end and a narrow portion thereof distal said first band end, said top wall having a top surface, said box element further comprising a slide element slidably contained within said outer box, said slide element comprising a slide top wall and a receiving well, said slide top wall having a top surface, and

a bar element adapted for attachment to said second band end, said bar element comprising a bar appropriately sized to engage and fit into said receiving well within said outer box by passing through said wide portion of said first cutout therein and to be slidably retained by said outer box after said bar is moved in a direction away from said first band end to a retained position wherein said bar is retained by slidable contact with those portions of said top wall adjacent to and delimiting said cutout at said narrow portion thereof, said bar element further comprising a tab extension connecting said bar to a band-end body adapted for attachment to said second band end, said tab extension having a top surface

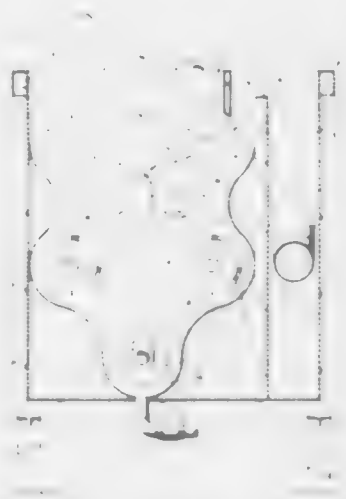
wherein said moving of said bar to said retained position causes, by means of the engagement of said bar with said receiving well, movement of said slide element in the same direction, thereby to expose a portion of said slide top wall through said first cutout to present a clean and finished appearance of the closure when so closed, and wherein a pivoting motion of said bar element about said bar moves said band-end body portion of said bar element into a position wherein said band-end body prevents translational motion of said bar element that would be sufficient to effect the release of said bar from said outer box, by securement of said box element end wall between said bar and said band-end body, the closure then securely holds said free ends together.

5,005,269

RESILIENT SPRING CLIP SHOULDER STRAP LOOP

Nathan A. Hirsch, Monsey, N.Y., assignor to Albest Metal Stamping Corporation, Brooklyn, N.Y.

Continuation of Ser. No. 734,156, May 15, 1985, Pat. No. 4,935,997. This application Apr. 24, 1990, Ser. No. 513,822
The portion of the term of this patent subsequent to Jun. 26, 2007, has been disclaimed.
Int. Cl.⁵ A44B 11/00
U.S. Cl. 24—668 7 Claims



1 A spring clip closure member for resilient clamping onto a button type projection, said closure member comprising a generally inverted U-shaped resilient wire loop having a bight portion for depending suspension from a support band, and pair of opposing leg portions each terminating in inwardly directed feet portions formed with downwardly directed finger portions, said feet portions being resiliently separable and normally spring biased toward each other to engage the button type projection, encasement means including a closed pocket for receiving and enveloping said downwardly directed finger portions and being dimensioned to permit resilient lateral movement of said finger portions, side channels defining passageways through which said feet portions extend as they separate, and stop walls integral with said closed pocket for limiting the lateral movement of said finger portions, wherein said encasement means is developed from an elongated substantially planar sheet of rigid material having a transverse axis and being symmetrically folded about said transverse axis, said encasement means including contoured opposing wall shaving undercut shoulders at lateral corners thereof, U-shaped planar extensions, and flange portions along the undercut shoulders, said flange portions abutting against each other and in their abutting relationship defining said side channels.

5,005,270

CONTINUOUS CARPET WASHING AND PILE MODIFICATION METHOD AND APPARATUS

Billy M. Childers, Calhoun, Ga., assignor to Multitex Corporation of America, Calhoun, Ga.

Filed Feb. 9, 1990, Ser. No. 477,552
Int. Cl.⁵ D06G 1/00
U.S. Cl. 26—25 16 Claims

1 An apparatus for washing and mechanically treating a continuous travelling web having a backing surface and a pile surface, said apparatus comprising

a processing tank receivable of a processing liquid,

guide means directing said web through said tank in a first direction in a substantially U-shaped path with the pile surface directed outward,

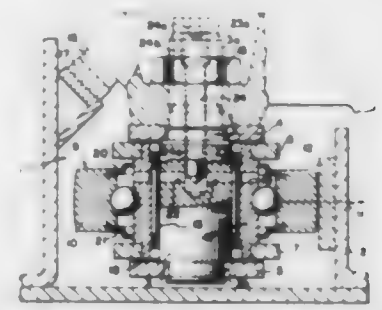
means within said tank for manipulating said pile surface of said web,

processing liquid inlet means located adjacent the exit point of said web from said tank,

processing liquid outlet means located adjacent the entrance point of said web into said tank,

filtering and recirculating means for said processing liquid,

said processing tank having an interior wall that is contoured relative to said manipulating means,



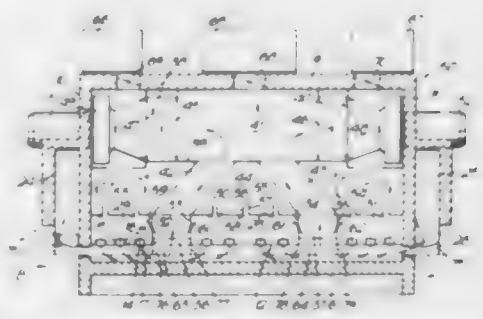
whereby circulation of said processing liquid is maintained in an agitated and substantially counter current flow to the direction of travel of said web.

5,005,271

CONVEYOR CHAIN FOR MACHINES FOR TENSIONING LENGTHS OF MATERIAL

Harry Gressens, Benningen/Neckar, Fed. Rep. of Germany, assignor to Bruckner Trockentechnik GmbH & Co. KG, Fed. Rep. of Germany

Continuation of Ser. No. 165,236, Mar. 7, 1988, abandoned. This application Oct. 12, 1989, Ser. No. 423,490
Claims priority, application Fed. Rep. of Germany, Apr. 16, 1987, 3713063
Int. Cl.⁵ D06C 3/02
U.S. Cl. 26—89 6 Claims



1 A conveyor chain joint construction for a web tensioning machine, said construction comprising a joint bolt having an axis, a joint sleeve, first bearing means journalling said joint sleeve on said joint bolt for rotation about said axis, a first pair of fishplates respectively mounted on said joint sleeve at opposite ends thereof, a roller, second bearing means journalling said roller on said joint sleeve between the fishplates of said first pair thereof and for rotation about said axis, a second pair of fishplates respectively mounted on said joint bolt adjacent opposite ends of said joint sleeve and straddling said first pair of fishplates, a support member for supporting web tensioning means, and means removably mounting said support member on said joint bolt in such position that one fishplate of said second pair thereof is sandwiched between said support member and said joint sleeve, said one fishplate having an aperture therein through which said joint bolt extends, said aperture being sufficiently larger in size than said joint bolt as to provide an unoccupied annular space encircling said joint bolt, thereby facilitating removal of said one fishplate to provide access to said first and second bearing means.

5,005,272

PROCESS IN SETTING A WEB, AND A HEAT SETTING PLANT FOR SETTING WEBS

Severin Severinsen, N-1087, Oslo 10, Norway

Filed Feb. 16, 1990, Ser. No. 481,141
Claims priority, application Norway, Feb. 24, 1989, 890790
Int. Cl.⁵ F26B 13/10
U.S. Cl. 26—106 17 Claims

1 In a method in setting a web, e.g. a wire sieve or a felt, in a heating and setting plant, in which said web is passed through

an air box in which air at a desired temperature is blown towards the web, the improvement comprising the steps of:

placing the web in said air box;

heating the air in said air box to a desired starting temperature;

redirecting the air at the same time to recirculate in the box without excessive flow towards the web;

redirecting the air, upon reaching said starting temperature, to be blown towards the web while said web is running;

redirecting the air for recirculation;

heating said air to a next temperature level;

redirecting the air to be blown, upon reaching said next level of temperature, towards the running web; and

repeating the above steps until the web is set

RAG RUG LOOM

Jackie F. Packham, 6905 Wisconsin Ave., La Mesa, Calif. 92041

Filed Aug. 10, 1989, Ser. No. 392,306

Int. Cl.' D03D 29/00

U.S. Cl. 28—149 8 Claims

1. A rag rug loom comprising

a frame having a pair of laterally spaced longitudinal side members, and a pair of laterally spaced transverse end members that are connected to the respective opposite ends of said longitudinal side members;

a first transverse platen positioned adjacent one of said pair of laterally spaced transverse end members and having means for tightening said first transverse platen into rigid surface contact with said one of said pair of said laterally spaced transverse end members,

a second transverse platen positioned adjacent an other one of said pair of laterally spaced transverse end members and having means for tightening said second transverse platen into rigid surface contact with said other one of said pair of said laterally spaced transverse end member; and

a first and second pair of foldable legs extending downwards from the ends of the transverse end members

MOUNTING DEVICE WITH TRANSFER MEANS FOR ADVANCING TUBULAR SLEEVES BETWEEN DIFFERENT WORK STATIONS

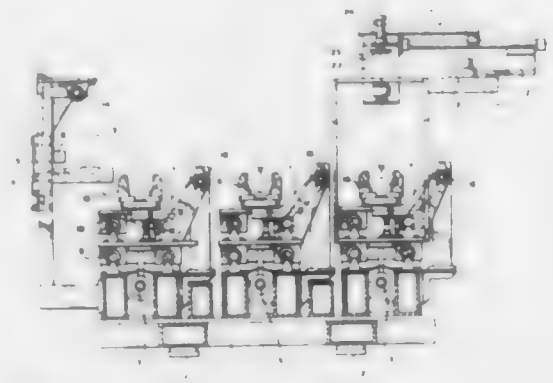
Hans Tinell, Hasenbergstrasse 36, 6312 Steinhausen, Sweden

PCT No. PCT/SE88/00031, § 371 Date Sep. 5, 1989, § 102(e) Date Sep. 5, 1989, PCT Pub. No. WO88/07494, PCT Pub. Date Oct. 6, 1988

PCT Filed Feb. 1, 1988, Ser. No. 399,460

Claims priority, application Sweden, Apr. 3, 1987, 8701396

Int. Cl.' B23P 23/00



U.S. Cl. 29—33 P 8 Claims

1. An apparatus for the arrangement and preparation of cores intended for use as reel cores inpapermaking, essentially comprised of

one or more stations with tools for executing a number of working operations, wherein the stations are disposed in a side-by-side relationship; and

said stations have openable and closable grippers for the retention of that core which is to be prepared in each respective station, under the execution of one or more working operations therein, and

said stations have arms located at each end of the core, wherein said openable and closable grippers are disposed on the one free end of an arm, and with said arm being pivotal about a shaft at the opposite end from said grippers, and

said arms being interconnected for the simultaneous pivoting about the shaft for he transfer of a core, being held substantially non-rotatable by means of the grippers, from an initial station to a subsequent station, in which the open grippers of he subsequent station are arranged to close about the core and thereby grasp and fixedly hold the core in an orientationally controlled position, before the grippers at the preceding station are opened for release of said core

APPARATUS FOR ACCURATELY ASSEMBLING LARGE SCALE MACHINE PARTS

Marshall J. Rouse, Charlotte, N.C., assignor to Westinghouse Electric Corp., Pittsburgh, Pa.

Filed Jan. 5, 1990, Ser. No. 461,575

Int. Cl.' B23P 19/04

U.S. Cl. 29—244 14 Claims

1. Apparatus for lifting an object with a hoist and applying torque to an object using a socket, comprising

hoist ring means for connecting the apparatus to the hoist means for lifting,

housing means affixed to said hoist ring means,

drive means for attaching a means for applying the socket torque,

socket retainer means for releasably connecting said housing means and said drive means,

counterbalance means for resiliently connecting said socket retainer means and said housing means,

support means for supporting the object, and

a body portion connecting said drive means and said support means, said body portion adapted to engage a portion of the object

whereby, said counterbalance means reduces the force due to the weight of the object when the object is lifted to the position from which it will be torqued, and whereby the torque applied to said drive means is transferred through said body portion to the object

AUTOMATED ASSEMBLY ARRANGEMENT FOR VEHICLE BODY AND METHOD OF ASSEMBLY

Satoshi Uemura, Tokyo; Susumu Kawada, Kamakura; Yoshitada Sekine, Yokohama, and Tatsuo Miyauchi, Utsunomiya, all of Japan, assignors to Nissan Motor Co., Ltd., Yokohama, Japan

Filed Dec. 9, 1988, Ser. No. 282,190

Claims priority, application Japan, Dec. 10, 1987, 62-313023

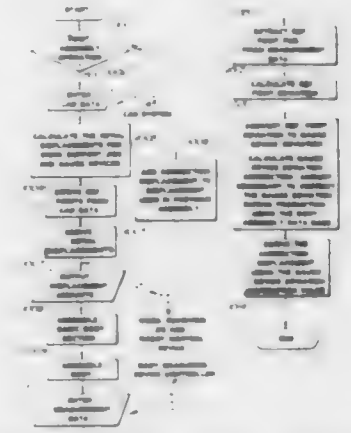
Int. Cl.' B23P 21/00

U.S. Cl. 29—407 4 Claims

1. An arrangement wherein a work piece is to be connected with a given degree of precision to a structure, comprising

a first assembly stage;

a second assembly stage which is separate and spaced from said first assembly stage;



means for determining a position in which said work piece should be disposed relative to said structure using pre-recorded data which relates to the design of said structure, said first stage including

(a) work support means, controlled by an inference type processing means, for supporting and moving said work piece into the determined position relative to said structure, and

(b) means for fixing said work piece to said structure,

means for determining a correct position for each of a plurality of reference points defined on said work piece, using pre-recorded structure design data,

shuttle conveyor means for moving the structure out of said first assembly stage into said second assembly stage,

said second stage including measuring means for determining a measured position of said plurality of reference points,

means for determining the deviation between each said measured position and a corresponding one of said correct reference point positions using said pre-recorded data;

a memory bank containing said pre-recorded data and said inference means, wherein said inference means is used in combination with said pre-recorded data to determine correction values for correcting the operation of said work support means in said first stage so as to reduce the magnitude of said deviations detected in said second stage

---

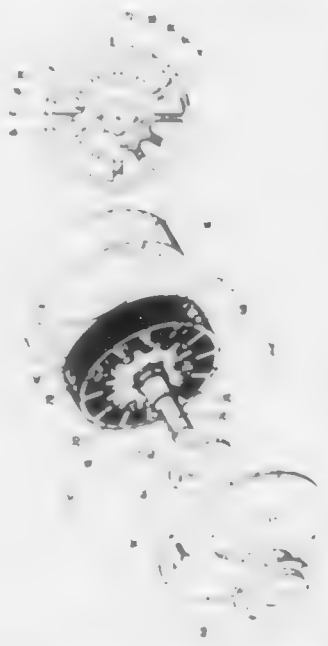
COLLET INSERTION AND REMOVAL DEVICE AND METHOD
Mark S. Koolker, Minnetonka, Minn., assignor to Turning, Inc., St. Paul, Minn.
Filed May 18, 1990, Ser. No. 525,868
Int. Cl.[5] B23P 19/00
U.S. Cl. 29—426.5 8 Claims

7. A method of inserting a collet into a lathe collet chuck, the collet including a plurality of fingers separated by slots, using a collet wrench device having a handle portion and a plurality of blades attached to the handle portion, the blades shaped and arranged to engage the slots within the collet, the method comprising
inserting the blades into the slots within the collet,
positioning the collet to be secured within the lathe collet chuck,
turning the collet wrench device until the collet is secured within the lathe collet chuck, and
removing the blades from the slots of the collet

5,005,280
METHOD OF MANFACTURING A FOLDABLE LADDER STRUCTURE
Claude R. Wallick, Jr., and Thomas J. Schmitt, both of Louisville, Ky., assignors to Emerson Electric Co., St. Louis, Mo.
Continuation of Ser. No. 294,398, Jan. 9, 1989, which is a division of Ser. No. 3,613, Jan. 15, 1987, Pat. No. 4,834,216.
This application Nov. 15, 1989, Ser. No. 436,965
Int. Cl.[5] B29C 67/22
U.S. Cl. 29—434 7 Claims



1. A method of forming opposed ladder sections for foldable ladder structure, said sections to be jointably hinged below the top platform of said ladder structure, comprising the steps of
forming each of said sections to include a portion of said top platform and a portion of a hinge therebelow with the hinge portion of each of said sections being formed to be in lateral offset relation to the hinge portion of the other section and with at least one section including formed spaced steps therein by supplying a controlled quantity of expansible plastic compound in unexpanded form solely along a partially confined first mold part of a mold pair, said first mold part of said pair having a preselected shape in accordance with the ladder section to be formed, said first mold part of said mold pair and only said expansible compound being confined with an opposing second and mating mold part of said pair of preselected shape to provide a completely confined mold cavity of fixed shape in accordance with the ladder section to be formed,
expanding said compound in the formation of each ladder section to the limits of complete confinement of said mold cavity of fixed shape formed by said mating pair of mold parts for each ladder section,
releasing each of said mating mold parts forming each of the finished ladder sections from mold confinement after said expanded plastic compound has set,
assembling said sections with the offset hinge portion of one ladder section dovetailing with the offset hinge portion of the other section and with the top platform portion of each section being aligned to form a top platform when in ladder open position,
connecting said dovetailing hinge portions of each section together for pivotal movement of said ladder sections about said connected hinge portions to ladder open and ladder closed positions, and
linking said opposed ladder sections with said connected dovetailing hinge portions with pivotal link arms below said hinges to allow said hinge portions connected ladder sections to be moved with respect to each other between a limited ladder open and a ladder closed position

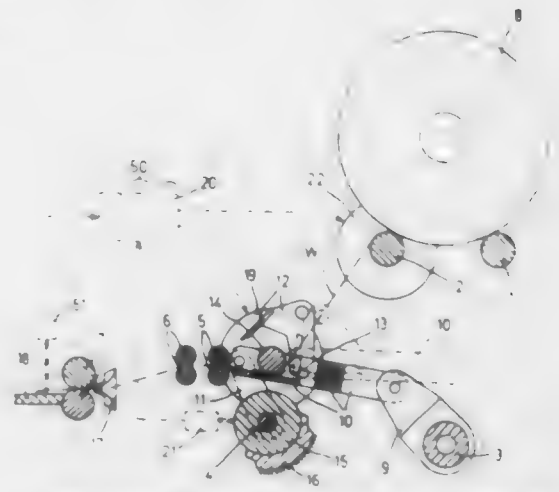
5,005,281
METHOD OF MAKING ROTOR AND STATOR POLE ASSEMBLIES BY STAMPING MAGNETIC PLATE
William Burns, Oakville, Canada, assignor to Dynamics Systems International Inc., Concord, Canada
Filed Aug. 20, 1990, Ser. No. 569,427
Int. Cl.[5] H02K 15/02, B21D 31/02
U.S. Cl. 29—596 8 Claims

1. A method of making a stator pole assembly and a cooperating rotor pole assembly for an electric motor or generator, comprising
producing a predetermined number of complementary rotor and stator pole assembly laminations by repeating the following steps
A providing a plate of magnetic material,
B stamping the plate thereby defining an outer peripheral edge corresponding in shape to an outer peripheral surface of an annular stator yoke,
C stamping the plate thereby defining a central aperture centered about a center point of the plate,
D stamping the plate thereby defining a multiplicity of apertures of predetermined identical shape equally-spaced circumferentially and at a common radial distance from the center point of the plate, the predetermined shape being selected such that the multiplicity of apertures define internal edge surfaces in the plate corresponding in shape to radially inner surfaces of the stator yoke and to radially outer surfaces of a central hub of the rotor pole assembly and define a multiplicity of identical radial webs equally-spaced circumferentially, and
E stamping the multiplicity of webs thereby producing a cut through each web with a common predetermined radius of curvature relative to the center point of the plate such that the plate is divided into a stator pole assembly lamination with radially-inward projections corresponding in shape to stator poles and a rotor pole assembly lamination with radially-outward projections corresponding in shape to rotor poles,
mounting the stator pole assembly laminations registered and in side-by-side relationship on a support structure thereby forming the stator pole assembly,



mounting the rotor pole assembly laminations registered and in side-by-side relationship on a support shaft extending through the central apertures of the rotor pole assembly laminations thereby forming the rotor pole assembly,
mounting the support shaft for rotation relative to the support structure with the rotor pole assembly positioned centrally within and substantially coplanar with the stator pole assembly

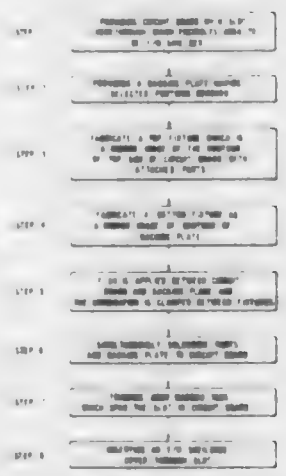
METHOD OF MAKING AN ELECTRONIC MEMORY CARD
René Rose, Bretonneux, France, assignor to Schlumberger Industries, Montrouge, France
Filed May 24, 1989, Ser. No. 356,357
Claims priority, application France, May 25, 1988, 88 06921
Int. Cl.[5] H01R 43/00
U.S. Cl. 29—827 11 Claims



1. A method of making an electronic memory card comprising an electronic module mounted on a card body, the method comprising the steps of
(a) providing a lead-frame having an inside and outside face defining various conductor elements at least some of which form external electrical contact tabs for the card,
(b) affixing at least one strip of electrically insulating reinforcement material on at least one of said two faces of said lead-frame in such a manner that said strip covers neither external tabs disposed on said outside face of said lead-frame nor connection zones disposed on said inside face of said lead-frame;

(c) affixing a semiconductor chip on said inside face of the lead-frame and electrically connecting the terminals of

said chip to said connection zones, thereby obtaining said electronic module, and
(d) affixing the electronic module on the body of said card

5,005,283
METHOD OF MANUFACTURING AN E/M SHIELDED RF CIRCUIT BOARD
Charles C. Deyo, Rockledge; Thomas R. Wolters, Satellite Beach, and Robert H. Oas, Melbourne, all of Fla., assignors to Rockwell International Corporation, El Segundo, Calif.
Filed Sep. 19, 1990, Ser. No. 585,338
Int. Cl.[5] H05K 3/00
U.S. Cl. 29—829 3 Claims

1. A method for manufacturing a circuit board comprising the steps of
(a) providing a printed circuit board having a top side with a plurality of parts thereon, and a bottom side having a slot therein, said slot encircling a predetermined portion of said circuit board;
(b) fabricating a backing plate with variable thickness in accordance with a predetermined thermal characteristic of said circuit board,
(c) providing a top fixture which is a mirror image of the contour of the top side of the circuit board,
(d) providing a bottom fixture which is a mirror image of the contour of the backing plate;

(e) applying flux between the circuit board and the backing plate and clamping the combination between the top fixture and the bottom fixture.
(f) simultaneously soldering the parts and the backing plate to the circuit board,
(g) trimming away a plurality of tabs which span the slot in the circuit board.
(h) inserting a metallic shield cover through the slot in the circuit board

METHOD OF ASSEMBLING TERMINALS WITH MODULAR PLUG

Eugene R. Cocco, Glendale, and Bobby W. Rothman, Phoenix, both of Ariz., assignors to AT&T Bell Laboratories, Murray Hill, N.J.

Division of Ser. No. 273,301, Nov. 18, 1988, Pat. No. 4,950,176.
This application Jun. 6, 1990, Ser. No. 533,975
Int. Cl.[5] H01R 43/16
U.S. Cl. 29—884 4 Claims

1 A method of assembling electrically conductive flat blade-like terminals to a dielectric housing of a plug to terminate conductors of a cordage, each terminal having a body portion with an internal contact portion and an external contact portion extending from said body portion, the external contact portion being disposed asymmetrically between ends of said body portion, said method including the steps of

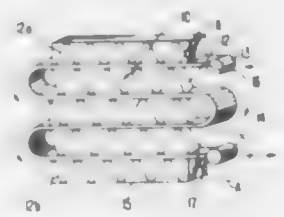
advancing a plurality of repetitively configured strips of material along a path to move a leading portion of each into a nest wherein the leading portion is supported along a leading edge and two adjoining faces thereof,

separating the leading portion from the next successive repetitively configured portion of each strip to form a plurality of terminals each having a trailing edge opposite the leading edge while covering the nest to complete the support of each terminal across its trailing edge,

supporting a dielectric housing to align a plurality of terminal-receiving slots of the housing with the terminals, the housing including a plurality of partitions which extend from an inner surface of a well to which the slots open to an outer surface of the plug and which extend from a free end of the plug to ends of the external contact portions of the terminals;

engaging a reference edge surface of the body portion of each terminal between the external contact portion and the trailing edge with one of a plurality of insertion rams,

causing the insertion rams to move the terminals partially into the housing between partitions and between partitions and sidewalls of the housing to cause side edge barbs of each terminal to become embedded in the plastic material of the housing; and



subsequently reengaging the reference edge surfaces of the terminals with a common ram and causing the ram to seat fully the terminals within the housing to cause the internal contact portions to engage electrically the cordage conductors and to cause strain relief facilities of the plug to engage the conductors and a jacket of the cordage

METHOD OF PRODUCING AN ALUMINUM HEAT EXCHANGER

Yutaka Ishii, Isesaki, Japan, assignor to Sanden Corporation, Isesaki, Japan

Continuation of Ser. No. 830,200, Feb. 18, 1986, abandoned.
This application Sep. 28, 1987, Ser. No. 102,250
Claims priority, application Japan, Feb. 15, 1985, 60-26486
Int. Cl.[5] B23P 15/26
U.S. Cl. 29—890.043 7 Claims

1 A method of producing an aluminum heat exchanger having a heat exchanger core with inlet and outlet openings and inlet and outlet pipes connected thereto, wherein both the heat exchanger core and the inlet and outlet pipes are made of an aluminum material, comprising brazing the heat exchanger core to the inlet and outlet pipes with a coated unitary brazing filler metal element comprising a rod of brazing filler metal consisting essentially of an aluminum-silicon alloy containing about 4.5 to 13.0% (by weight) silicon, said rod having a zinc-containing coating thereon, to form a brazed connection, said brazing causing said zinc to diffuse into the surface of the brazed connection and into the heat exchanger core adjacent to the brazed connection to form a diffused zinc layer

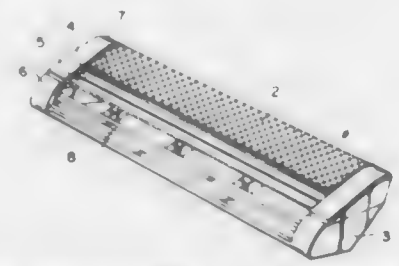
MOLD EXTRACTOR

Thomas L. Purcell, 8737 E. Hubbell St., Scottsdale, Ariz. 85257

Filed May 1, 1989, Ser. No. 345,288
Int. Cl.[5] B26B 3/08
U.S. Cl. 30—1 1 Claim



1. A mold extractor comprising:
a hammer member;
a chisel end portion;
A chisel shaft member for applying an impact force from said hammer member to said chisel end portion; said chisel end portion comprising a first straight knife edge means for separating a mold and a second straight knife edge means for cutting a mold, said first straight knife edge means and said second straight knife edge means forming a tee-shaped tip portion in a common plane, said tee-shaped tip portion being located at an end of said chisel shaft member and having a width substantially equal to a width of said chisel shaft member, said first straight knife edge means having a tapered portion with a narrow portion at an end of said tee-shaped tip portion for facilitating entry of said first straight knife edge means inside of said mold and for exposing said second knife edge means for cutting said mold, said tapered portion having a wider portion substantially equal to the width of said chisel shaft member,
claw means for removing a container lid, said claw means being mounted on said chisel shaft member in a direction to apply a force opposite in direction to a force exerted by said first and second knife edge means, said claw means having a first portion extending outwardly from a surface of said shaft member spaced from said second straight knife edge means said claw means being located on the same side of said chisel shaft member as said second straight knife edge means said claw means having an inwardly sloped portion extending from said first portion to said second straight knife edge means and being a continuation of said tapered portion of said first straight knife edge means to facilitate cutting of said mold, and wherein said hammer member comprises sliding hammer means coaxial with said chisel shaft member for applying a force to said chisel end portion in a first direction and for applying a force to said claw means in a second direction opposite side first direction

PROCESS FOR MAKING A HYDROPHILIC COATING ON A FORMED PART AND SAFETY RAZOR MADE USING THIS PROCESS

Helmut Ritter, Wuppertal, Fed. Rep. of Germany, assignor to Wilkinson Sword GmbH, Solingen, Fed. Rep. of Germany

Filed May 5, 1988, Ser. No. 190,628
Claims priority, application Fed. Rep. of Germany, May 6, 1987, 3714971; Apr. 27, 1988, 3814135
Int. Cl.[5] B26B 21/44
U.S. Cl. 30—41 15 Claims

1 A razor blade unit comprising a blade platform for at least one razor blade, a surface for slidably engaging the skin of a user, and a coating on the surface for increasing the slidability of the surface, wherein said coating comprises a water-soluble polymer or copolymer of poly-N-vinylpyrrolidone, at least one radically polymerizable vinyl monomer and a photoinitiator

---

5,005,288
RAZOR

Peter J. Wilk, 185 W. End Ave., New York, N.Y. 10023

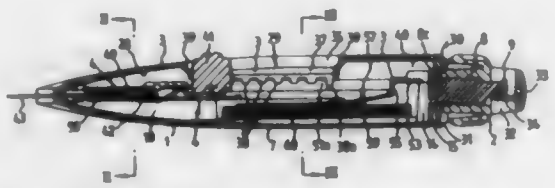
Filed Mar. 8, 1990, Ser. No. 490,921
Int. Cl.[5] B26B 19/38
U.S. Cl. 30—36 20 Claims

1. A razor comprising:
a body member;
an elongate handle attached to said body member;
a blade mounted to said body member, said blade having an exposed edge and a width perpendicular to said edge
cleaning means slidably secured to said body member for slidingly engaging said blade along said exposed edge, and
actuator means operatively connected to said cleaning means for enabling an operator to shift said cleaning means parallel to said edge, said cleaning means including an elongate strip extending essentially permanently from in front of said edge across said width of said blade

5,005,289
DEVICE FOR THE CUTTING OF PLATES OF SOFT MATERIAL

Richard Vogele, Berauastrasse 367, CH-4353 Leibstadt, Switzerland

Filed Mar. 30, 1990, Ser. No. 502,508
Claims priority, application Switzerland, Apr. 5, 1989, 01263/89
Int. Cl.[5] B26D 7/10
U.S. Cl. 30—140 10 Claims



1 Transportation device for the cutting of plates of soft material with the aid of a cutting member and a base plate, the base plate having lateral guides in which a press-on cutting rule is movable up and down and guided parallel to an end of the base plate, characterized in that the lateral guides (2) are provided with electrically conducting outer lay-on strips (5), which are electrically insulated and connected to a current source, and the cutting member consisting of an electrically heatable wire (6) which is held in a frame-saw type bow (7,8), said cutting member being completely separable from said base plate and said lateral side (2), so that said heatable wire can only be heated when said cutting member is pressed by hand upon said outer lay-on strips, and said cutting member further being completely separable from said lay-on strips (5)

UTILITY KNIVES

Richard Gilbert, Dronfield, Great Britain, assignor to The Stanley Works Limited, Bracknell, England

PCT No. PCT/GB88/00342, § 371 Date Jan. 8, 1990, § 102(e) Date Jan. 8, 1990, PCT Pub. No. WO88/08775, PCT Pub. Date Nov. 17, 1988
PCT Filed Apr. 29, 1988, Ser. No. 435,377
Claims priority, application United Kingdom, May 8, 1987, 8710980
Int. Cl.[5] B25F *3/00*; B26B *1/00, 5/00, 1/04*
U.S. Cl. 30—162 9 Claims

1. A utility knife with
a handle comprising two elongate part shells which assemble about a longitudinal parting line;
forward wedge structure at said parting line and at a forward location of said handle;
means operable to cause one of said part shells to move longitudinally relative to the other part shell whereby component parts of said wedge structure move relatively and cause the said part shells to adopt relative transverse movement to grip or release a blade in a position protruding from a forward end of said handle;
said means operable to cause relative longitudinal movement comprising a threaded shank extending rearwardly from one part shell; a rear wall on the other part shell said rear wall being configured to provide an open slot aperture through which said shank passes and from which it may be removed transversely; and a turnable nut on said threaded shank whereby (a) relative longitudinal movement of the part shells may be achieved by turning the nut on the shank to bear upon the said rear wall, and (b) suitable positioning of the nut allows transverse threaded removal.

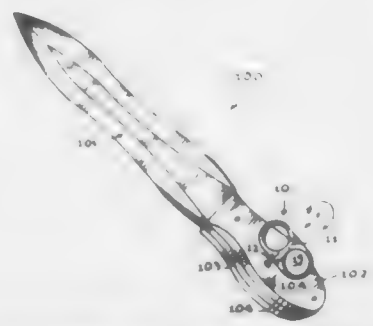
LIVESTOCK DEHORNER

Wayland F. Moore, Box 665, and Glynard Moore, Box 586, both of Matador, Tex. 79224

Filed Nov. 21, 1989, Ser. No. 439,773
Int. Cl.[5] B26B *13/00*
U.S. Cl. 30—244 17 Claims

1. An apparatus for removing horns comprising:
a first cutting blade, said first cutting blade having a first, convexly curved, non-planar leading edge; and
a second cutting blade having a second leading edge, said first and second cutting blades pivotally secured to each other;
wherein a horn to be removed is received between said first, convexly curved, non-planar leading edge of said first



cutting blade and said second leading edge of said second cutting blade

---

5,005,292
SWIVEL GRIP ARRANGEMENT FOR KNIVES

Gerald L. Jones, 2130 Deanville Rd., Richmond, Va. 23235

Continuation-in-part of Ser. No. 310,579, Mar. 23, 1989, Pat. No. 4,920,648. This application Apr. 25, 1990, Ser. No. 514,451
Int. Cl.[5] B26B *27/00, 29/00, 13/00*
U.S. Cl. 30—298 6 Claims

1. A swivel grip arrangement in combination with a knife including a knife blade having a blade stem and a knife handle having hand grip members disposed on opposite sides of the blade stem wherein the arrangement comprises:
a finger grip unit including a finger grip member having a plurality of finger holes;
an axle unit comprising an elongated axle member operatively engaged with said finger grip member; and,
an axle capturing ,unit comprising a detachable capture member which is easily detachable by hand and which radially projects from, and is secured to, the periphery of the elongated axle member; wherein, the finger grip unit is disposed on one side of the knife handle; the axle member projects through at least one of the hand grip members on said one side of the knife handle; and, the detachable capture member is disposed on the opposite side of said at least one handle grip member; whereby the finger grip member is capable of at least rotary movement relative to said knife; and, wherein the detachable capture member permits the swivel grip arrangement to be selectively engaged with the knife handle.

TWISTING PASTA FORK

Paul A. Di Amico, 500 E. Palm Canyon, Palm Springs, Calif. 92264

Filed Oct. 30, 1989, Ser. No. 428,908
Int. Cl.[5] A47J *43/28, 43/04*
U.S. Cl. 30—322 1 Claim

1. An eating utensil for gathering food such as pasta comprising
a stationary hollow sleeve having a closed end and an open end leading into a central bore,
a movable fork element having an elongated shaft insertably disposed within said sleeve bore in slideable and rotational relationship,
a plurality of elongated tines carried on said fork element in fixed spaced-apart relationship for collection of pasta thereon;
resilient means operably carried in said sleeve bore between said sleeve closed end and said shaft normally urging said shaft out of said sleeve,
latch member releasably coupled between said shaft and sleeve securing said shaft to said sleeve against said resilient means in one shaft position and unsecuring said shaft from securement with said sleeve in a second shaft position,
said latch means includes a spiral groove about said shaft slideably receiving a ball carried on said sleeve partially disposed within said spiral groove,
said latch means further includes means cooperating between said shaft and said sleeve for releasing said shaft for movement between said first and said second positions,
said latch means further includes an annular groove at the end of said spiral groove adjacent said fork element, and
a limit stop provided on said shaft end to said annular groove to stop said ball in order to secure said shaft in said first position

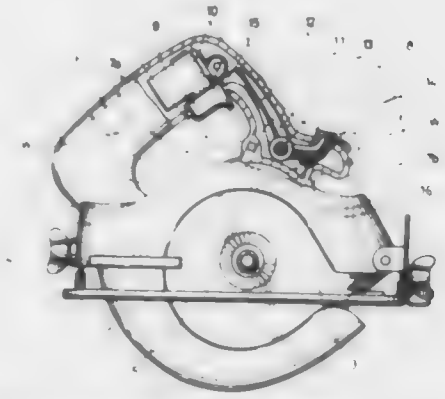
SKIMMER/SEPARATOR LADLE

Leo B. Roberts, and Emma F. Roberts, both of 1507 Cerulean, Creve Coeur, Mo. 63146

Continuation-in-part of Ser. No. 538,336, Oct. 3, 1983, Pat. No. Des. 308,151. This application Nov. 30, 1989, Ser. No. 443,185
Int. Cl.[5] A47J *43/28*
U.S. Cl. 30—324 5 Claims

1. In a skimmer/separator ladle comprising
a handle;
a bowl having a spout section at one end thereof and a container section at the other end thereof, the improvement consisting of: a separator gate removably mounted in said bowl between said spout and said container section and means for removably mounting said gate on said bowl, said gate defining a passage with the bottom of said bowl for liquids from the container section to said spout section, said mounting means comprising at least one track in said bowl in which said gate is received, said at least one



track being semicircular, the gate including semicircular sides that mate with said semi-circular track

5,005,295
PORTABLE POWER DRIVEN TOOL

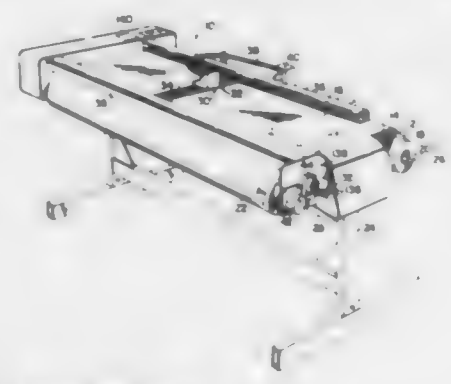
Fusao Fushiya, Anjo, Japan, assignor to Makita Electric Works, Ltd., Anjo, Japan

Filed May 14, 1990, Ser. No. 522,824
Claims priority, application Japan, May 17, 1989, 1-123073
Int. Cl.[5] B27G *19/02*
U.S. Cl. 30—390 6 Claims

1. A portable power driven tool comprising
a body having a motor therein,
a handle including a first grip portion adapted to be grasped by an operator in one hand and a second grip portion adapted to be grasped by the operator in another hand and disposed at a position different from said first grip portion,
a switch provided in a circuit connecting said motor with a power source, said switch being operably by the operator at said first grip portion so as to be turned on or off for starting or stopping said motor; and
prevention means operable by the operator at said second grip portion for preventing said motor from being started by said switch, said switch including a switch body and an operating member mounted on said first grip portion and movable between a first position to turn said switch body on and a second position to turn the same off and wherein said prevention means includes lock means which can selectively prevent said operating member from moving to said first position from said second position, said first grip portion and said second grip portion being integrally formed in said handle.

said handle including a cavity therein extending from said first grip portion to said second grip portion, and

said lock means including a lever pivotally mounted on said handle within said cavity, a lock member mounted on one end of said lever and movable between a lock position for engagement with said operating member positioned at said second position, and a non-lock position to permit movement of said operating member to said first position from said second position, and a pusher mounted on the other end of said lever and extending outwardly from said second grip portion of said handle, said pusher being operably by the operator, and a spring forcing said lever to maintain the position of said lock member at said lock position,



whereby said lock member can be moved to said non lock position from said lock position when said handle is grasped by the operator at said second grip portion and said pusher is pushed.

5,005,296

PLOTTER AND INK PRESSURIZING PUMP

Heinz J. Gerber, West Hartford, Conn., assignor to Gerber Garment Technology, Inc., West Tolland, Conn.

Filed Sep. 15, 1989, Ser. No. 407,958
Int. Cl.[5] G01D 15/16; F04B 19/04
U.S. Cl. 33—18.1 10 Claims

10 A plotter comprising.

means providing a support surface for supporting a portion of a web of sheet material,

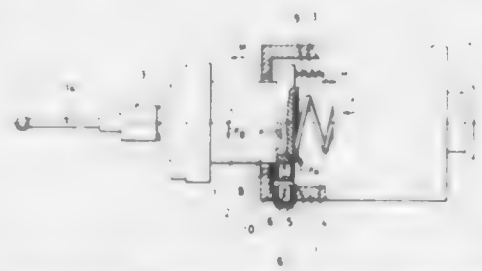
a pen mechanism moveable relative to said support surface, said pen mechanism having a pen for drawing on the portion of a web of sheet material supported by said support surface and also having an ink reservoir for containing ink used by said pen,

a web advancing means for moving a web of sheet material over said support surface to bring fresh portions of said web to said support surface for drawing thereon by said pen,

a pump for supplying pressurized air to said pen mechanism to pressurize the ink in said ink reservoir used by said pen,

drive means for driving said web advancing means and said pump in unison so that said pump is operated only when said web is moved over said support surface by said web advancing means,

said pump when operated supplying pressurized air at such a rate that, as a result of its being driven in unison with said web advancing means, so long as ink remains in said pen said pump keeps the air in said ink reservoir pressurized above a predetermined value of pressure, and said pen when empty of ink allowing air to flow therethrough at such a rate that said pump, as a result of its being driven in unison with said web advancing means, does not keep said ink reservoir pressurized at a pressure above said predetermined value, and



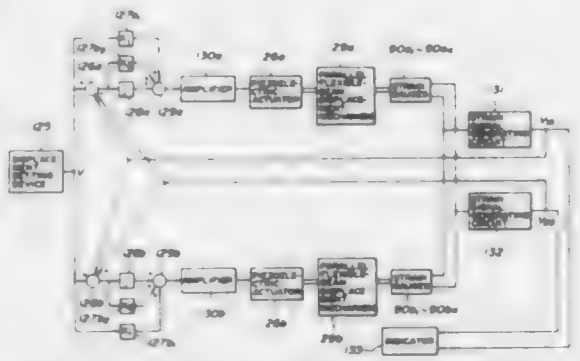
a pressure sensitive switch responsive to the pressure of the air in said ink reservoir for providing a signal when said pressure falls below said predetermined value

5,005,297

PROBE HEAD OF THE SWITCHING TYPE

Hans-Peter Achnelt, Oberkochen, and Michael Wirth, Aalen, both of Fed. Rep. of Germany, assignors to Carl-Zeiss-Stiftung, Heidenheim/Brenz, Oberkochen, Fed. Rep. of Germany

Filed Dec. 15, 1989, Ser. No. 451,229
Claims priority, application Fed. Rep. of Germany, Dec. 22, 1988, 3843125
Int. Cl.[5] G01B 7/03
U.S. Cl. 33—559 12 Claims



1 A probe head of the switching type, wherein a housing has a self-centering bearing for a movable part which is adapted to carry a work-contacting probe element, whereby the movable part and a probe element carried thereby present at said bearing a given gravitational weight (F_g), and wherein the movable part is held in a defined null position in said bearing by resilient loading means acting in the direction (F_f) toward said bearing, whereby for probe-head orientation in which the direction (F_f) of resilient loading is other than gravitationally vertical, said gravitational weight (F_g) establishes a force component (F_f) which acts perpendicular to the direction of resilient loading, and spaced non-contacting but magnetically reacting elements carried by the housing and by the movable part, said magnetically reacting elements being positioned to react perpendicular to the direction (F_f) of resilient loading and with a compensating magnetic-reaction force (F_a) in opposition to said force component (F_f)

5,005,298

DISPLACEMENT CONTROLLER FOR FINE POSITIONING DEVICE

Kiyoshi Nagasawa, Ibaragi; Kozo Ono, Toride; Kojiro Ogata, Ishioka; Ken Murayama, Ibaragi, and Yoshihiro Hoshino, Tsuchiura, all of Japan, assignors to Hitachi Construction Machinery Co., Ltd., Tokyo, Japan

Filed Sep. 14, 1988, Ser. No. 244,102
Claims priority, application Japan, Sep. 9, 1986, 61-210616; Sep. 9, 1986, 61-210618; Sep. 9, 1986, 61-210619; Nov. 4, 1986, 61-262437; Nov. 29, 1986, 61-283061; Nov. 29, 1986, 61-283062; Nov. 29, 1986, 61-283063; Mar. 31, 1987, 62-76269; Mar. 31, 1987, 62-76270
Int. Cl.[5] G01B 7/00
U.S. Cl. 33—573 7 Claims

1 A controller for a fine positioning device constructed of two planar structural units connected symmetrically and equipped individually with planar flexible beams arranged in an opposing relation between two rigid members and actuators for applying forces between the two rigid members, each of the planar structural units being a parallel planar structural unit in which the planar flexible beams are arranged parallel to each other, said controller comprising

(a) displacement detection means comprising translational displacement detection means and angular displacement detection means, said translational displacement detection means comprising plural strain gauges arranged at predetermined positions on one of said planar flexible beams in one of said structural units and plural strain gauges arranged at predetermined positions on one of said planar flexible beams in the other planar structural unit, and said angular displacement means comprising plural strain gauges arranged at predetermined positions on the other planar flexible beam in said one planar structural unit and plural strain gauges arranged at predetermined positions on the other planar flexible beam in the other planar structural unit,

(b) displacement setting means for setting a target translational displacement for the fine positioning device and outputting a value corresponding to the target displacement,

(c) means for determining the degree of each translational displacement by both the plural strain gauges of said translational displacement detection means, and

(d) control means for controlling voltages to be applied to the respective actuators in such a way that the degree of a translational displacement is coincided with the value output from the displacement setting means and the degree of an angular displacement is controlled at "0".

SHOCK ABSORBING OUTSOLE FOR FOOTWEAR

Ian H. Whatley, 926 Cleveland St., Apt. F-101, Greeville, S.C. 29601

Filed Feb. 12, 1990, Ser. No. 478,476
Int. Cl.[5] A43B 13/00
U.S. Cl. 36—25 R 16 Claims

1 An outsole for an item of footwear, comprising

a lower surface of said outsole having a central portion and a peripheral portion,

a plurality of resilient shock absorbing strike plates extending from and disposed about said peripheral portion to define a central concavity disposed below said central portion, each said strike plate having an inwardly sloped wall adjacent said central concavity, said sloped wall being disposed at an obtuse angle to said central portion, and

an elastic membrane depending from said lower surface connecting a plurality of said strike plates and extending through said central concavity, said membrane having a stiffness less than that of one of the strike plates to which it is connected

SKI BOOT

Michel Mabboux, Seynod, France, assignor to Salomon S. A., Annecy Cedex, France

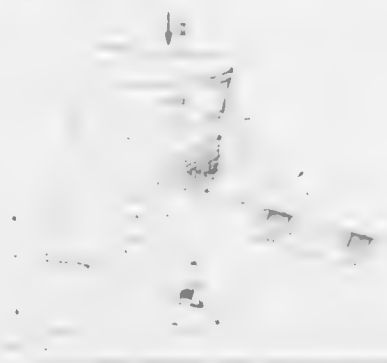
Filed Mar. 22, 1990, Ser. No. 497,320
Claims priority, application France, Mar. 23, 1989, 89 04200
Int. Cl.[5] A43B 5/04
U.S. Cl. 36—117 17 Claims

1. Alpine ski boot comprising

(a) a shell base (8) fitted with a walking sole (9) and surmounted by a shaft (10);

(b) a rigid inner sole (11, 11') movable vertically in relation to a bottom (12) of said shell base (8),

(c) a device (13, 13') for transmission of pressures exerted by



a foot from an interior to an exterior of said boot (1) onto a top (7) of a ski (2), said device comprising said inner sole (11, 11') hinged by only one of two ends (15, 16) of said inner sole to said bottom (12) of said shell base (8), and a support element (17) movable in substantially vertical translational motion and mounted at an approximate midpoint of a length of said walking sole (9), said support element cooperating with a bottom of said inner sole (11, 11') and extending from said inner sole to said exterior of said boot, through an opening (17') in said bottom of said shell base, in order to cooperate with a support area located on said top (7) of said ski (2)

5,005,302

SYSTEM FOR HOLDING A FOOT IN A SKI BOOT

Horst Bischof, Graz, and Wolfgang Skerbinjek, Baernbach, both of Austria, assignors to Koflach Sport Gesellschaft mbH & Co. KG, Voecklabruck, Austria

Filed Dec. 2, 1988, Ser. No. 279,067
Claims priority, application Austria, Dec. 3, 1987, 3194/87
Int. Cl.' A43B 5/04
U.S. Cl. 36—119 7 Claims

1 A system for securely and comfortably holding a foot in a boot when the boot is closed, particularly in the heel and instep regions, comprising

a shell covering at least the instep region of the foot

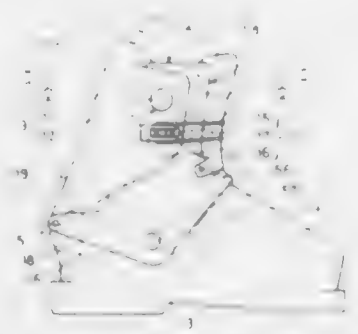
a cuff part tiltably attached to said shell having a generally curved shape,

a sole attached to said shell,

a projection part located between the heel region of the foot on one side and said shell and said cuff part on the other side,

tension means for drawing said projection part towards the heel region of the foot when the boot is closed while simultaneously exerting minimal pressure on the instep region of the foot wherein said tension means includes a first free end extending forward from the heel area of the boot across the front of said cuff part and a second free end extending forward from the heel area of the boot along the side of said shell,

closing flap means at the front of said cuff part to which the first free end of said tension means is movably attached for selecting and controlling the forces to be applied to said cuff part and for regulating the movement of the first free end during closing of said cuff part, and



adjustment means fixed to said shell at a point spaced forward of the heel region along the length of the boot in the direction of the toe region wherein said second free end is attached to said adjustment means for selectably changing the force applied by said tension means to said projection part by altering the length of said tension means without significantly affecting the forces applied to said cuff part by said closing flap means

ALPINE SKI BOOT

Laurent Bonaventure, Annecy; Jean-Marie Begey, Bonne; Claude Perrissoud, Saint-Jorioz, and Serge Lagier, Rumilly, all of France, assignors to Salomon S.A., Annecy Cedex, France

Filed Dec. 8, 1989, Ser. No. 447,815
Claims priority, application France, Dec. 9, 1988, 88 16507
Int. Cl.' A43B 5/04
U.S. Cl. 36—120 46 Claims

1 A ski boot comprising a shell base, an upper journalled at least partially on said shell base, and a means for fastening and tightening said upper on said lower leg, said ski boot having an open position and a closed position, said upper comprising

(a) a central part defining a sleeve journalled with respect to said shell base about a first axis, said sleeve comprising extensions extending towards the rear from said first journal axis, said sleeve further comprising an upper part defining a front opening and a rear opening defined by two lateral walls of said sleeve

(b) a rear spoiler journalled about a second axis positioned rearwardly of said first axis, said second axis extending through said extensions of said sleeve, said rear spoiler being adapted to close said rear opening of said sleeve, and

(c) a front cuff moveable with respect to a forward area of said sleeve when in said open position, and being adapted to close said front opening of said sleeve

wherein said rear spoiler and said front cuff are moveable with respect to said central part in said open position, and said rear spoiler and said front cuff are moveable with said central part about said first axis in said closed position

REPLACEABLE WEAR ELEMENT

Terry L. Briscoe, Portland, and Paul C. Sprunger, Dundee, both of Oreg., assignors to ESCO Corporation, Portland, Oreg.

Filed Feb. 12, 1990, Ser. No. 478,359
Int. Cl.' E02F 9/28
U.S. Cl. 37—141 R 10 Claims

8 An assembly of wear elements for installation on the wearable part of a structure engageable with abrasive material comprising

a relatively elongated base element adapted to be secured to said wearable part and a relatively elongated wear element releasably, reversibly mounted on said base element along the longitudinal centerlines thereof,

each of said base and wear elements having first and second pairs of longitudinally spaced-apart dovetail surfaces with the surfaces in each pair being spaced symmetrically about the centerline thereof,

one of said base and wear elements having third and fourth pairs of longitudinally spaced-apart dovetail surfaces with the surfaces in each pair being spaced symmetrically about the centerline thereof, the dovetail surfaces of said third and fourth pairs being interlaced with the dovetail surfaces of said first and second pairs,

the dovetail surfaces of the first and second pairs extending at a predetermined angle with said one element centerline and the dovetail surfaces of said third and fourth pairs extending at the reverse of said predetermined angle whereby the first and second pairs of surfaces of the other of said elements can mate with either the first and second pairs of surfaces of said one element or, when reversed end-for-end, with the third and fourth pairs of surfaces of said one element

MAGNETICALLY OPERATED DISPLAY DEVICE

David L. Turney, Plano, Tex., and Morris Nelson, Great Neck, N.Y., assignors to Guiton Industries, Inc., Plano, Tex.

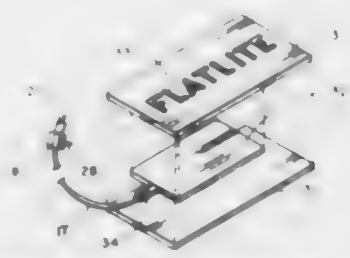
Filed Oct. 20, 1989, Ser. No. 424,891
Int. Cl.' G09F 9/30
U.S. Cl. 40—449 20 Claims

1 An electromagnetically operated display device comprising

a frame,

a display unit, including a relatively thin substantially planar disc element having opposite faces with contrasting appearance, said disc element being mounted on said frame for rotation about a rotational axis generally in the plane of said disc element, and a permanent magnet mounted on said element to rotate therewith and defining a magnetic axis between the poles thereof, said magnetic axis being transverse with respect to said rotational axis and substantially co-planar with respect to said disc element,

a pair of magnetic pole pieces fixed in relation to said frame, said pole pieces being located adjacent opposite edges of said disc element when said disc element is displaying either of said opposite faces, said pole pieces being on opposite sides of said rotational axis and arranged relative to the locus of said permanent magnet such that when said pole pieces are oppositely magnetized in a first polarity, said disc element rotates from a first position to a second position, and when said pole pieces are oppositely magnetized in the opposite polarity, said disc element rotates from the second position to the first position, and



said permanent magnet having opposite poles which are asymmetrical and differ one from the other in magnetic flux distribution characteristics, the attractive and repulsive interaction of said respective permanent magnet poles with said pole pieces being unequal.

ILLUMINATED VEHICLE SIGN

William G. Kinstler, 2 Buckingham Ct., Rockledge, Fla. 32955

Filed Jun. 21, 1989, Ser. No. 369,692
Int. Cl.' G09F 21/04
U.S. Cl. 40—591 7 Claims

1 An illuminated vehicle sign comprising

a flexible electroluminescent panel having a front planar surface which directly generates illumination when excited by an alternating current and a rear opaque surface,

a thin, flat, flexible opaque shield having predetermined cutout areas to form designs therein attached over said flexible electroluminescent panel planar surface so that the flexible electroluminescent panel and attached flexible opaque shield form a flexible sign panel having portions of said electroluminescent panel visible through said opaque shield whereby indicia and graphic designs may be defined with visible electroluminescent light,

magnetic means attached to said rear opaque surface for removably attaching said electroluminescent panel to a vehicle body,

circuit means including a pair of conductors attached to said electroluminescent panel for applying an alternating current thereto and a DC to AC converter for converting said vehicle direct current to alternating current, and

coupling means for removably connecting said pair of conductors of said circuit means between a vehicle battery circuit and to said DC to AC converter, said coupling means including a cigarette lighter plug attached to said circuit means conductors whereby said cigarette lighter plug can be attached or removed to connect or disconnect the vehicle power to said electroluminescent panel, whereby an illuminated vehicle sign can be quickly attached and removed from the side of the vehicle

CARTRIDGE MONITORING AND DISPLAY SYSTEM FOR A FIREARM

John N. Horne, 2274-B 47th St., and Michael A. Wolf, 3195 Arizona, both of Los Alamos, N. Mex. 87544

Filed Dec. 29, 1989, Ser. No. 458,582
Int. Cl.' F41A 9/62
U.S. Cl. 42—1.02 11 Claims

1 In a semiautomatic or automatic firearm having a slide

means which slides relative to a frame upon firing of the firearm, and wherein said firearm is loaded by magazine means inserted into said frame of said firearm and from which cartridges are fed into the firearm, a cartridge monitoring and display system comprising,

slide switch means affixed to said frame, said slide switch means including a cam means engaged by said slide means upon sliding of said slide means relative to said frame, said slide switch means being operable to produce a slide signal upon sliding of said slide means relative to said frame;

magazine switch means affixed to said frame, said magazine switch means being operable to generate a magazine signal upon insertion and withdrawal of a magazine from said firearm,

a programmed control circuit operable to receive said slide and magazine signals,

a visual display unit affixed to said frame and driven by said control circuit, and

wherein said programmed control circuit operates to receive said slide and magazine signals, and to produce on said visual display unit a visual display of the number of cartridges contained in the firearm

TILT INDICATOR FOR FIREARM SCOPES

William K. Parks, P.O. Box 134, Lipan, Tex. 76462

Filed Dec. 22, 1989, Ser. No. 455,622
Int. Cl.' F41G 1/38
U.S. Cl. 42—101 13 Claims

1 An improved firearm scope for coupling to a firearm in axial alignment with the firearm barrel, which is subjected to shocks when said firearm is discharged, comprising

a tubular scope barrel;

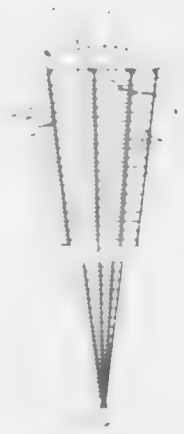
an objective lens assembly coupled to one end of said tubular scope barrel for receiving a target image,

an erector lens assembly disposed within said tubular scope barrel for processing said target image;

an ocular lens assembly coupled to the opposite end of said tubular scope barrel for viewing said target image,

a reticle visible through said ocular lens for defining an aiming point in said target image;

wherein accuracy of said firearm is optimized when said firearm scope and firearm barrel are held substantially vertically, and



an electrically actuated indicator for providing an illuminated visual display indicating tilt of said firearm scope and barrel from vertical, which is visible through said ocular lens assembly when electrically illuminated, which is physically stationary relative to said reticle, and which does move relative to said reticle in response to shock when said firearm is discharged

5,005,309

INSTRUMENTED DRIFT FISH AGGREGATING DEVICE AND METHOD

John D. Hall, 2255 Ygnacio Valley Rd., Ste M-1, Walnut Creek, Calif. 94598

Filed Aug. 25, 1989, Ser. No. 398,778
Int. Cl.' A01K 91/00
U.S. Cl. 43—4 22 Claims

1 A drift fish aggregating device comprising

buoy means adapted for flotation on the surface of water, said buoy means being non-tethered and having a first or beam dimension normally parallel with the surface of the water,

a plurality of ballast suspension lines, each line connected at one end to said buoy means in the vicinity of the periphery of the buoy and extending downwardly therefrom, the length of said suspension lines defining a draft dimension, the beam to draft ratio being so configured as to create a very stable drifting device,

fish attraction means secured to said ballast lines,

a ballast weight secured to the other ends of said suspension lines and hanging below said buoy means, and

means mounted to said buoy means to facilitate location of said drift fish aggregating device

---

FLOATING TIP-UP FISHING RIG

John R. Rinehart, Milton, Wis., assignor to American Institute of Taxidermy, Inc., Janesville, Wis.

Filed May 1, 1990, Ser. No. 517,024
Int. Cl.' A01K 97/12
U.S. Cl. 43—17 12 Claims

1 A floating tip-up fishing rig comprising

a float body,

a flagpole;

spring means mounted atop said body near one end thereof and connected to the bottom portion of said flagpole, urging it to an upright position,

a tube disposed vertically through said float body centrally thereof, and extending below the body;

a fishline having its inner end connected to said tube and having a portion coiled about the tube above the bottom thereof and immediately below said body;

a cotter pin having an eye end, on open flared end, and an elongated closed portion between said ends,

string means extending from a central portion of said flagpole down into said tube, connecting said flagpole to the eye end of said cotter pin;

said tube having a vertical slit therein extending upwardly from its lower end up to near the bottom of the coiled portion of the fishline,

whereby said fishline may be pulled through said slit from the coiled portion of the fishline to extend into said tube and be set in to the closed portion of said cotter pin

SELF-COLORING FISHING LURES

Jack W. Dawson, 625 Wendy Way, Paradise, Calif. 95969, and Norbert M. Perrault, P.O. Box 176, Tehama, Calif. 96090

Filed Jan. 29, 1990, Ser. No. 471,974
Int. Cl.' A01K 85/00
U.S. Cl. 43—42.32 6 Claims

1 A fishing lure having a lure body made by moldable structural materials and composition for self-coloring when wet, comprising,

a fishhook having an eye at one end, and a shank extending from said eye to a pointed hook of said fishhook,

said lure body structured of a core material attached to said shank, said core material extending from adjacent said eye along said shank and terminating prior to reaching said pointed hook, said core material being a flexible fast colored material which retains its coloring when wet,

said lure body further structured of a covering material generally covering said core material, said covering material fabricated of soft pliable and resilient expanded open cell plastic, said covering material attached to said fishhook shank adjacent said eye, said covering material extending from adjacent said eye along said shank to generally cover said core material and then terminate prior to reaching said pointed hook, said covering material further being sufficiently thin-walled to become translucent upon submergence in water through expansion of said open cells absorbing the water, the translucence of the wet said covering material providing means allowing said core material to become visible through said covering material whereby the color of at least a portion of said lure body appears to change

DISPOSABLE MOUSE TRAP

Richard E. Lutes, P.O. Box 144, Tiskilwa, Ill. 61368

Filed Aug. 6, 1990, Ser. No. 563,297
Int. Cl.' H01M 23/18
U.S. Cl. 43—61 5 Claims

1 A disposable mouse trap comprising

a cylindrical compartment having two open ends,

an end cap coupled to one of the open ends of the cylindrical compartment closing said end,

a pin having a head positioned through the cylindrical compartment adjacent its closed end, the head of the pin being outside the cylindrical compartment,

bait attached to the end of the pin within the cylindrical compartment,

a lever arm having a semi-circular groove at one end suitable for engaging the pin, the other end having a semi-circular configuration suitable for closing the other open end of the cylindrical compartment when the lever arm is activated,

a pair of spring holding tabs coupled adjacent to the open end of the cylindrical compartment and, positioned parallel to each other, each tab having an aperture therein,

a spring having two ends, said spring being positioned between said spring holding tabs,

a pair of lever arm tabs coupled to the underside of the lever arm adjacent the semi-circular end thereof, the tabs being parallel to each other and, each tab having an aperture therethrough,

a spring holding pin coupling the spring to the spring holding tabs, and the lever arm tabs, the pin passing through the apertures of the spring holding tabs and the lever arm tabs, wherein one end of the spring abuts the underside of the lever arm and the other end of the spring abuts the cylindrical compartment so that when a mouse activates the pin, the lever arm is disengaged from the pin and the spring snaps the lever arm from a semi-horizontal position to a vertical position sealing the open end of the cylinder

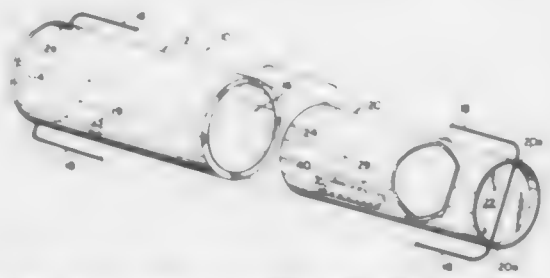
ANIMAL TRAP

Chester A. Lindros, Jr., 335 Woodruff Ave., Avenel, N.J. 07001



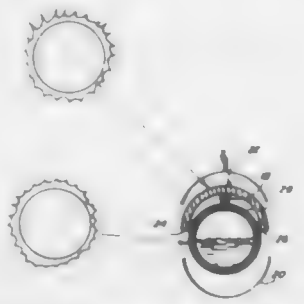
Continuation-in-part of Ser. No. 359,639, May 30, 1989, Pat. No. 4,949,499. This application May 4, 1990, Ser. No. 519,427
The portion of the term of this patent subsequent to Aug. 21, 2007, has been disclaimed.
Int. Cl.' A01M 23/02
U.S. Cl. 43—61 6 Claims

1 An animal trap, comprising

(a) an outer housing having a closed end and an open end;

(b) an inner housing having a closed end and an open end mounted within and movable relative to said outer housing to define a trapping area within said inner and outer housings,

(c) at least one trap opening in said inner housing for an animal to enter said trapping area,
(d) means for moving said inner housing into said outer housing to close off said trap opening to trap an animal in said trapping area;
(e) means for guiding said inner housing into said outer housing; and



(f) bait means disposed in contact with said guiding means for holding said trap opening in an open position so that when an animal in said trapping area eats said bait means, said moving means moves said inner housing into said outer housing to close off said trap opening to trap an animal in said trapping area.

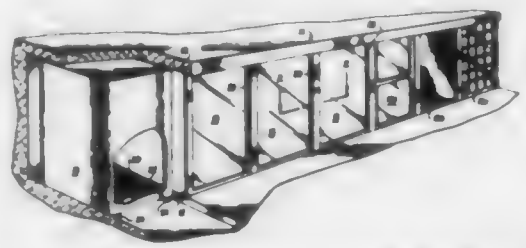
SAP COLLECTING DEVICE

Jean-Marie Chabot, St. Damien, Canada, assignor to IPL, Inc., St-Damien, Canada

Filed Nov. 13, 1989, Ser. No. 434,216
Int. Cl.[5] A01G 23/10; F24J 3/02
U.S. Cl. 47—50 6 Claims

1. A device for use in conducting sap collected from maple trees to a sap-processing unit, particularly during sunny days, comprising:
a tubular member in which sap is contained and conveyed to the sap-processing unit; and
means mounted exteriorly on said tubular member for preventing high angled sun rays to be absorbed in said tubular member but allowing low angled sun rays to be absorbed in part of said tubular member for defreezing sap contained in frozen state in said tubular member



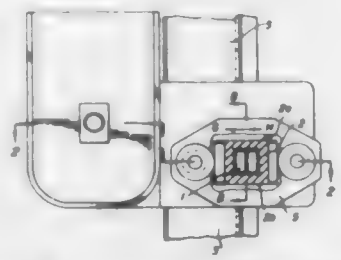
---

5,005,315
MULTI-PANEL SLIDING CLOSURE UNIT

Arthur J. Jackson, Jr., 6310 Barrister Place, Alexandria, Va. 22307

Filed May 11, 1990, Ser. No. 522,031
Int. Cl.[5] E05D 15/26
U.S. Cl. 49—127 13 Claims

1. A multi-panel sliding closure unit comprising:
an upper track extending across the top of a rectangular opening in a wall;
a lower track vertically under said upper track and similarly extending across the bottom of said rectangular opening in a wall;
a storage module at one end of said opening and means mounting said storage unit for lateral movement in relation to said upper and lower tracks,
a plurality of closure panels mounted for sliding movement along said upper and lower tracks, each closure panel having vertical side edges that are positioned to be in edge-to-edge alignment when said closures panels are slid out between said upper and lower tracks,



a plurality of storage positions in said storage module for serially receiving said closure panels as they are slid onto said storage module from said tracks,
a plurality of separate removable jamb posts positionable between facing vertical side edges of adjacent closure panels, said jamb posts being of a length to interfit between said upper and lower tracks and having a cross-sectional shape for interfitting with the vertical side edges of adjacent closure panels

---

5,005,316
PANE HOLDER MOUNTING SYSTEM FOR A WINDOW LIFT

Lothar Horalvius, Ehringhausen, Fed. Rep. of Germany, assignor to Kuster & Co., Ehringshausen, Fed. Rep. of Germany

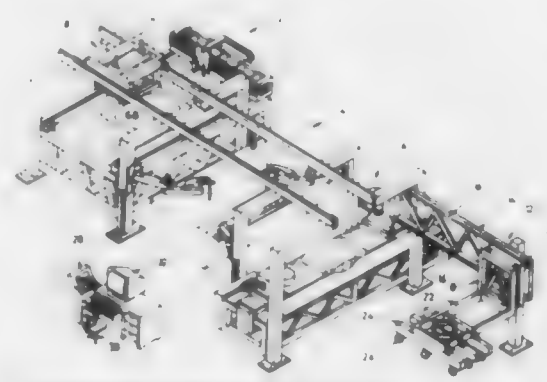
Filed Feb. 6, 1990, Ser. No. 474,397
Claims priority, application Fed. Rep. of Germany, Feb. 7, 1989, 3903556
Int. Cl.[5] E05F 11/38
U.S. Cl. 49—348 6 Claims

1 A window lift mechanism comprising:
a slide block for lifting a window, said block slidingly engaging a guide rail;
a mounting pin for a window pane holder attached to said slide block;
a bushing interposed between said window pane holder and said mounting pin, said bushing including rounded outer edge portions which engage similarly rounded inner surface portions of a slot located in said window pane holder, the combination of said rounded inner and outer surface and edge portions allowing limited tilting to occur between said window pane holder and said bushing with respect to the axis of said mounting pin.

5,005,317
BOTTOM WIPER SEAL FOR A RETRACTABLE CAR WINDOW

Guy Saint-Louis Augustin, Montargis, and Henri Guillon, Vaux sur Seine, both of France, assignors to Hutchinson, Paris, France

Filed Jun. 28, 1989, Ser. No. 372,876
Claims priority, application France, Jun. 29, 1988, 88 08728
Int. Cl.[5] E06B 7/16
U.S. Cl. 49—495 9 Claims



1 In a bottom wiper seal for a moving glass which comprises a stub or clamp for securing the bottom wiper seal on the frame of a door and a first sealing lip which cooperates with the moving glass carried by the stub or clamp, the first sealing lip being covered on portions liable to come into contact with the glass by means of a relatively flexible covering of flock, the improvement which comprises a second lip connected to the stub or clamp which is offset downwards relative to the first sealing lip and which is shaped and disposed so as to contact the moving glass only when the glass is fully extended, the second lip bearing sufficiently against the moving glass to provide a satisfactory seal and the second lip having a coating on its operative portion which facilitates sliding and the second lip is connected to the stub via a zone of greater elasticity than the second lip

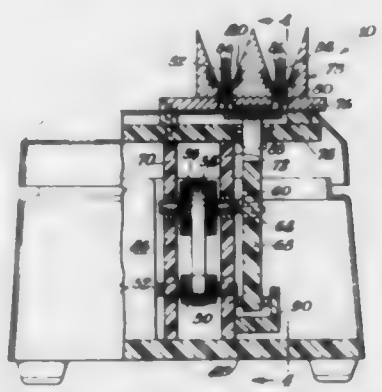
METHOD AND APPARATUS FOR CUTTING GLASS BLANKS

Aaron Shafir, Tel Aviv, Israel, assignor to O/Y Kyro A/B, Tamglass Corp., Tampere, Finland

Filed Jun. 30, 1988, Ser. No. 213,406
Int. Cl.[5] C03B 33/02
U.S. Cl. 51—5 C 13 Claims



1 Apparatus for cutting glass blanks according to a particular contour, comprising
a scoring machine including a separate drive therefor for scoring the contour on the glass blank,
a breaking machine for severing the scored contour from the glass blank,
a grinding machine including a table for supporting the glass blank, two grinding heads on opposite sides of said table, and a motor for driving each of said grinding heads, for smoothing the edges of the severed blank;
a conveyor for conveying the glass blank to each of the above machines for performing their respective scoring, severing and grinding operations thereon,
and a control system for controlling said scoring machine including its separate drive according to a digital scoring file, for controlling said breaking machine according to a digital breaking file, and for controlling said grinding machine including said two grinding head motors according to a digital grinding file

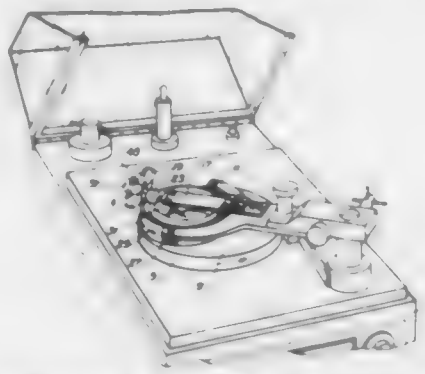
KNIFE SHARPENER

Daniel D. Friel, Greenville, Del., assignor to Edgecraft Corporation, Wilmington, Del.

Continuation-in-part of Ser. No. 304,323, Jan. 31, 1989, Pat. No. 4,897,965, which is a continuation-in-part of Ser. No. 917,601, Oct. 6, 1986, Pat. No. 4,807,399, which is a continuation-in-part of Ser. No. 588,794, Mar. 12, 1984, Pat. No. 4,627,194, and Ser. No. 855,147, Apr. 23, 1986, Pat. No. 4,716,689, which is a continuation-in-part of Ser. No. 588,795, Mar. 12, 1984, abandoned. This application Aug. 22, 1989, Ser. No. 396,974
Int. Cl.[5] B24B 3/54, 1/00
U.S. Cl. 51—58 14 Claims

1 A knife sharpening apparatus comprising a housing, a honing section in said housing, a sharpening member in said honing section, said sharpening member having a flat outer face with abrasive particles mounted thereon, guide means in said honing section at a non-parallel and non-perpendicular angle to said flat outer face for disposing the face of a knife against said guide means with the cutting edge facet of the knife against said sharpening member parallel to said flat outer face, drive means for orbitally driving said sharpening member, and said drive means imparting an orbital motion to each of said particles of no greater than ‖ inch effective diameter and an orbital velocity of no greater than 1500 feet/minute.

5,005,320
METHOD AND APPARATUS FOR TAPERING AN END OF AN ELONGATED OBJECT



Robert J. Furmanak, Wilmington, Del., assignor to E. I. Du Pont de Nemours and Company, Wilmington, Del.

Filed Mar. 30, 1990, Ser. No. 502,010
Int. Cl.[5] B24B 19/00, 5/00
U.S. Cl. 51—131.1 2 Claims

1. A conveniently demountable apparatus, for use in conjunction with a standard polishing machine, for tapering an end of an optical fiber comprising:
a. a holder assembly means for holding said optical fiber,
b. a translatable ball bearing friction mounted and centered

on the longitudinal axis of said holder assembly means, said bearing being translatable along the length of said holder assembly means,

c a ring having a substantially flat bottom surface, said flat bottom surface being disposed to ride on the rotating polishing surface of said polishing machine, and a top surface having a groove thereon upon which said ball bearing rotates, said groove comprising a pair of angled

surfaces which are disposed in a V-shape so that as said bearing rotates thereon, the paths of said surfaces' contact points on said ball bearing are substantially circular with the radius of one being substantially an integer multiple of the other, and

d means for guiding said holder assembly means and said ring during a tapering operation so that said ring and said holder means are allowed to rotate but not translate

This application May 17, 1989, Ser. No. 353,694

Int. Cl.' E04B 7/02

U.S. Cl. 52—90 2 Claims

1 In a roof assembly for a building wherein the building is provided with a new roof top surface spatially disposed and supported by roof support spacers above an existing corrugated roof and deck attached to supporting joints, the improvement comprising

spacer means for supporting the roof support spacers thereon, the spacer means connectable to a joist supporting the existing deck, the existing roof is provided with a hole alignable with the joist, the spacer means comprising

a spacer member having a hole therethrough, the spacer member dimensioned for receipt in one of the corrugations of the corrugated roof, and

a support channel having a base and a pair of downwardly extending channel legs, the channel legs received through the hole in the existing roof and supported above the underlying joists, and

connector means for interconnecting the spacer means and the joist, the connector means comprising

a J-bolt having a threaded upper end an a lower J-end, the threaded upper end positionable through the hole in the spacer member such that the J-end engages one side of the joist, and

tinner-man nut means positionable about the upper end of the J-bolt for engaging the joist and stabilizing the J-end in the joist

POSITION ADJUSTMENT LEG FOR PARTITION PANEL ASSEMBLY

Raymond P. Dull, Spring Lake; Bernard R. Lavas, and William D. Baxter, both of Muskegon, all of Mich., assignors to The Shaw-Walker Company, Muskegon, Mich.

Division of Ser. No. 275,718, Nov. 23, 1988, abandoned. This application Apr. 9, 1990, Ser. No. 505,991

Int. Cl.' E04B 2/82

U.S. Cl. 52—126.4 2 Claims

1 A leg for supporting an open office partition panel and a base assembly for such a panel, said leg including

end and side walls forming an upstanding structure of generally U-shaped horizontal cross-section,

laterally-extending feet formed at the bottom of said side walls,

laterally-extending brackets formed at the top of said side walls,

the bottom of said end wall bent to extend horizontally between said side walls to form a bottom wall,

said end wall projecting substantially above said side walls,

ledges formed on said end wall, and means to receive a threaded glide formed at the bottom of the walls

5,005,326

STRUCTURE VIBRATION PROOFING OR SUPPRESSING SYSTEM WITH DIFFERENTIAL DOUBLE LEVER MECHANISM

Shinji Ishimaru, 11-17, Hanaguri 4, Sohka-shi, Saitama-ken; Takahiro Niiya, 872, Hazama 2-chome, Funabashi-shi, Chiba-ken, and Kazuko Ishimaru, 11-17, Hanaguri 4, Sohka-shi, Saitama-ken, all of Japan

Filed Jan. 25, 1990, Ser. No. 470,206
Claims priority, application Japan, Feb. 15, 1989, 1-35781
Int. Cl.' E04B 1/98, E04H 9/02
U.S. Cl. 52—167 R 8 Claims

1 A vibration proofing/suppressing system comprising

a first rigid member extending and translatable in a first direction,

a second rigid member extending parallel to said first rigid member and translatable in the first direction relative to said first member,

a third member interposed between said first and second rigid member,

a fifth member interposed between said first and second rigid members,

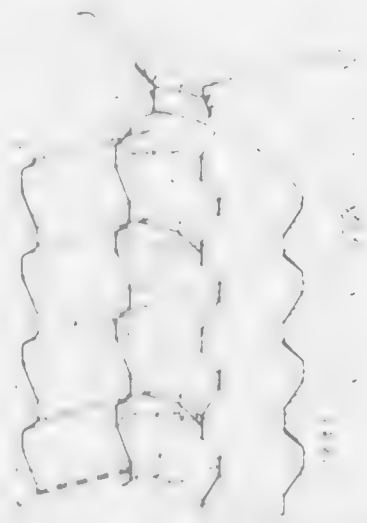
guide means interposed between said first, third and fifth members and said second, third and fifth members for guiding translation of said third and fifth members along the direction of relative movement between said first and second members,

at lest one first lever means for connecting said first member to said fifth member, said one first lever means being pivotally connected to a first point on said third member such that said one first lever means is movable around the first point,

at least one second lever means having a slightly different lever ratio than said one first lever means for connecting said second rigid member to said fifth member, said one second lever means being pivotally connected to a second point on said third member such that said one second lever means is movable around the second point

5,005,327

CONTAINER, PARTICULARLY A SILO CONTAINER



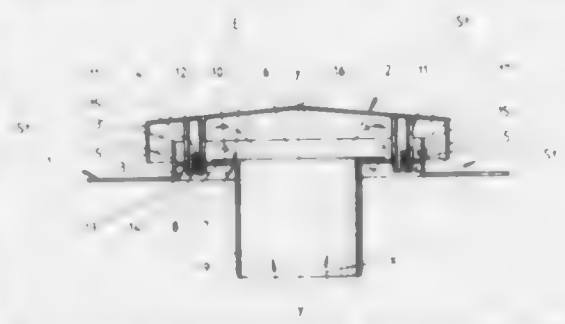
Markus Becker, Habichtsteiner Weg 20, D-3501 Habichtswald-/Ehlen, Fed. Rep. of Germany

Filed Oct. 30, 1989, Ser. No. 428,887
Claims priority, application Fed. Rep. of Germany, Nov. 4, 1988, 3837475
Int. Cl.' E04H 7/00
U.S. Cl. 52—192 15 Claims

1 A container, particularly a silo container, comprising

a plurality of wall parts having a vertical height and having horizontal crimps extending therethrough substantially throughout the vertical height, wherein at least two of said wall parts form a region with a joint,

at least one vertically standing support element connecting said at least two wall parts with each other at the joint



said at least one vertically standing support element formed as a metal support plate and having legs with crimps matching the crimps of said wall parts within the region of the joint for positively receiving the wall parts

5,005,328

ROOFING VENT COVER WITH PLUG DETENT CONNECTION

Johannes Holtgreve, Schwelm, Fed. Rep. of Germany, assignor to Johannes Klöber, Ennepetal, Fed. Rep. of Germany

Filed Sep. 15, 1989, Ser. No. 408,121
Claims priority, application Fed. Rep. of Germany, Oct. 21, 1988, 8813239[U]
Int. Cl.' E04B 7/00
U.S. Cl. 52—199 8 Claims

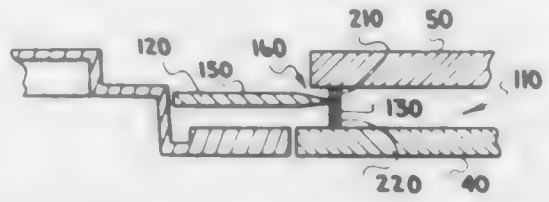
1 A roofing vent cover having the shape of a dormer, the vent cover comprising

a tubular section provided on a lower side of the vent cover, said tubular section having a periphery at an upper end of the tubular section,

an arm assembly having a plurality of arms extending from said periphery radially outward of said tubular section,

a cap-shaped hood located on an upper side of the vent cover and spaced-apart from said arm assembly to leave free air passage channels between said hook and said arm assembly,

plug-detent connection means for securing said hood to said arm assembly, said plug-detent connection means being disposed between said hood and said arm assembly, there being an insertion opening provided in an inner space of the hood between elements of the plug detent connection means for receiving said tubular section, and



wherein said arms form a wall of a roof cover plate transverse to an axis of said tubular section, the transverse wall including a web which forms a part of said plug-detent connection means to enable engaging the plug-detent connection means extending from the hood into the transverse wall of the roof cover plate which forms the web

5,005,329

WINDOW SEAL FOR OPTICAL SCANNER

Theodore H. Schorr, Eugene, Oreg., assignor to Spectra-Physics, Inc., San Jose, Calif.

Filed Feb. 17, 1989, Ser. No. 312,696
Int. Cl.' G06K 7/10
U.S. Cl. 52—204 12 Claims

1 A window assembly for an optical scanner comprising

a first window,

a second window spaced apart from said first window and substantially parallel thereto forming a substantially transparent gap between said first window and said second window,

said first window having a first surface and a second surface,

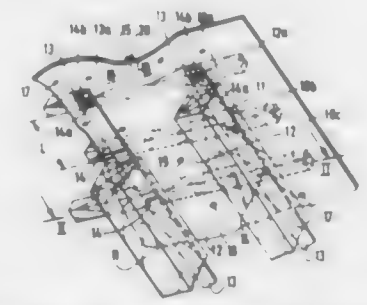
said second window having a third surface and a fourth surface,

said second surface and said third surface adjacent said gap,

a seal rim,

said seal rim comprising a rim member and a seal member attached to said outer rim member,

said rim member comprising a tapered region,



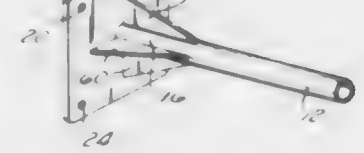
said seal member having at least one downwardly depending flange in unbonded contact with said second surface and at least one upwardly depending flange in unbonded contact with said third surface

5,005,330

ASSEMBLY OF BATTENS PARTICULARLY FOR THE COVERING OF SLOPING ROOFS

Serge Todisco, Le Bourget, France, assignor to Societe Moderne d Batiment Industriel, Le Bourget, France

Filed Aug. 21, 1989, Ser. No. 396,358
Claims priority, application France, May 26, 1989, 89 06904
Int. Cl.' E04D 12/00
U.S. Cl. 52—303 4 Claims



1 An assembly of battens which enables them to be stored and rapidly put in place, at the desired spacing, on elements constituting a receiving surface for the subsequent mounting of covering elements, and consisting of a series of parallel and regularly spaced battens attached to a continuous sheet formed from a flexible material, the battens being moreover mutually joined together by parallel, thin, flexible strips that are resistant and substantially inextensible, arranged transversely with respect to the axis of said battens and fixed at their intersection therewith, the continuous sheet having a good tear-off and tear resistance and being inserted between the battens and the resistant parallel strips the spacing of which substantially corresponds to the spacing of the above said elements constituting a receiving surface, and the continuous sheet being held in place by stapling said strips onto the battens at their intersection therewith, wherein the length of the flexible sheet between two adjacent resistant parallel strips is greater than the length of the battens separating these two adjacent strips whereby the flexible sheet when laid, forms a trough or gutter for collection and drawing off any water falling thereon, and wherein the continuous flexible sheet includes perforations allowing air ventilation through the flexible sheet and which are disposed in regions of the sheet that are separate from the areas of said trough or gutter

5,005,331

CONCRETE DOWEL PLACEMENT SLEEVES

Ronald D. Shaw, 1988 Pelican; Leory E. Shaw, 2861 Tobago, both of Costa Mesa, 92626; Lee A. Shaw, 1924 Irvine Ave., Newport Beach, Calif. 92660, and

Continuation of Ser. No. 263,556, Oct. 27, 1988, abandoned. This application Apr. 10, 1990, Ser. No. 508,080
Int. Cl.' E04B 1/62
U.S. Cl. 52—396 5 Claims

1 A concrete dowel placement apparatus comprising

a dowel receiving sheath comprising a generally tubular body having an outer surface, an open proximal end, a closed distal end and a hollow interior compartment extending axially therein,

a generally rectangular flange extending perpendicularly about said open proximal end of said sheath, said flange being formed to extend completely about said open proximal end and having an inner surface and a generally flat outer surface, wherein said outer surface of said flange is held in abutting contact with a flat surface of a concrete form to prevent seepage of concrete into said hollow interior compartment of said sheath, and

at least one stength imparting gusset extending between a proximal portion of said outer surface of said sheath and said inner surface of said flange

5,005,332

LOUVRE PANNELLING SYSTEM

Johannes A. H. Brugman, Rotterdam, Netherlands, assignor to Hunter Douglas International N.V., Curacao, Netherlands

Filed Aug. 28, 1989, Ser. No. 399,741
Claims priority, application United Kingdom, Sep. 1, 1988, 8820734
Int. Cl.' E06B 7/08, F24F 13/08
U.S. Cl. 52—473 10 Claims

1 A louvre panelling system comprising,

(a) a plurality of elongate louvres, each louvre comprising a louvre body having first and second substantially parallel sides joined by a central portion and disposed at an angle

to said central portion, and first and second U-shaped rearwardly directed beads extending along said first and second parallel sides, respectively, each said bead having a free edge; and

(b) at least two brackets, each bracket comprising a bracket body portion securable to a support structure, and first and second laterally extending bead holding portions,

wherein at least said first laterally extending bead holding portion comprises a front projection and a rear projection defining therebetween a recess, and wherein the first bead of a louvre is engageable behind the front projection of said first bead holding portion and engages the rear projection of the first bead holding portion with its free edge in said recess, and the second bead of a louvre is engageable with the second bead holding portion

PANEL-FRAMING ASSEMBLY AND ASSEMBLY METHOD THEREFOR

Donald E. Ott, 17754 W. Spring Lake Rd., Spring Lake, Mich. 49456

Filed Mar. 9, 1990, Ser. No. 491,082
Int. Cl.[5] E04B 9/00
U.S. Cl. 52—476 11 Claims

1 An assembly for framing a panel, the assembly comprising and being assembled from

(a) a frame member having a wall defining an opening,

(b) a clip having a securing portion inserted into the opening and coacting with the wall to secure the clip to the frame member after the securing portion has been inserted into the opening, the clip having a flanged portion confronting the wall, but in spaced relation to the wall after the clip has been secured to the frame member, and

(c) a retaining strip having an inner leg and an outer leg which is generally normal to the inner leg, the inner leg being inserted between the flanged portion and the wall and being insertable therebetween after the clip is secured to the frame member, the inner leg coacting with the flanged portion to secure the retaining strip to the frame member by means of the clip, the outer leg being adapted to retain a panel seated against the flanged portion by engaging a portion of one face of the panel, along one edge of the panel, to prevent lateral movement of the edge in one direction relative to the frame member.

Patent Not Issued For This Number

5,005,335

STRETCH WRAPPING ROBOTIC PALLETIZER

Ray A. Yourgalite, Hoopeston, Ill.; Malcolm Moore, Green Bay, Wis.; Neal C. Chamberlain, Hoopeston, Ill.; Kenneth F. Becicka, Alvin, Ill.; Samuel J. Hilgeman, Hoopeston, Ill., and Kevin D. Moore, Potomac, Ill., assignors to FMC Corporation, Chicago, Ill.

Continuation of Ser. No. 167,950, Mar. 14, 1988, abandoned. This application Dec. 5, 1989, Ser. No. 445,934
The portion of the term of this patent subsequent to Feb. 26, 2008, has been disclaimed.
Int. Cl.[5] B65B 11/04
U.S. Cl. 53—399 10 Claims

10 A method of unitizing a stack of articles including the steps of

feeding ann empty pallet means to a turntable, said turntable stabilized at a fixed location,

picking up a number of articles to be stacked from a stationary conveyor,

transferring said articles to said pallet means,

repeating said pick up and transferring steps for a predetermined number of pick ups and transfers to form a layer of articles,

rotating said turntable after a layer of articles has been formed,

feeding film from a film storage roll to said rotating turntable as said turntable rotates to wrap said layer of articles before further articles are transferred to said pallet means,

repeating the step of repeating said pick up and transferring steps for a predetermined number of pick ups and transfers to form a layer of articles, the step of rotating said turntable after a layer of articles has been formed, and the step of feeding film from a film storage roll to said rotating turntable as said turntable rotates to wrap said layer of articles until a unitized stack of articles is formed on said turntable,

cutting said film after at least one rotation of said turntable

---

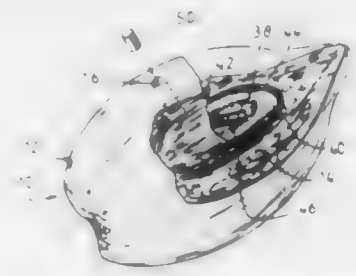
5,005,336

METHOD OF MAKING A HAWAIIAN NUTTY GRAM MAILING RECEPTACLE

Melvin R. Bloom, Box 1231, Pahoa, Hi. 96778-1231

Filed Aug. 17, 1990, Ser. No. 568,972
Int. Cl.[5] B65B 7/28; B65D 73/00
U.S. Cl. 53—401 8 Claims

1. A method of making a mailing receptacle from a coconut, comprising the steps of:



(a) making a hole in the coconut so that access to the inner compartment of the coconut can be obtained,

(b) draining out the milk of the coconut by way of the hole so that the inner compartment of the coconut becomes dry,

(c) filling the coconut with a preserving solution by way of the hole so that the coconut will be preserved,

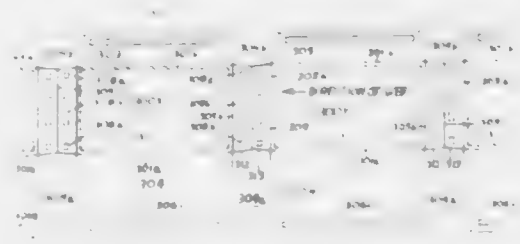
(d) waiting a predetermined period of time so that the preserving solution has preserved the coconut,

(e) emptying the coconut of the preserving solution by way of the hole so that the preserving operation is completed,

(f) letting the coconut dry so that items can be put into it by way of the hole

(g) inserting items to be mailed into the hole until the items drop into the inner compartment of the coconut, and

(h) sealing the hole in the coconut so that the mailing receptacle is now ready for transit



---

5,005,337

ENVELOPE MAILER

Alvin J. Kluth, 2247 Oakhill Dr., Green Bay, Wis. 54313

Filed Jan. 16, 1990, Ser. No. 464,924
Int. Cl.[5] B65B 11/48
U.S. Cl. 53—460 17 Claims

1 A method of producing a continuous series of envelopes folded around discrete envelope contents, comprising the steps of:

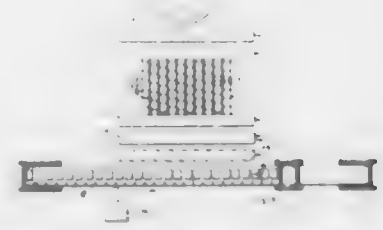
(a) providing a continuous paper web running in a longitudinal direction and having a plurality of envelope shapes with first and second envelope flaps on the sides of the continuous paper web transverse to the direction of the web,

(b) placing the envelope contents at preselected positions on the envelope shapes on the continuous paper web,

(c) severing the continuous paper web between the envelope shapes to form a continuous series of individual envelopes further having leading and trailing envelope flaps,

blowing the trailing envelope flap in the direction of the continuous paper web using compressed air to assist in folding the trailing envelope flap

(e) folding the trailing envelope flap in the direction of the continuous paper web and folding the leading envelope flap in the opposite direction of the continuous paper web such that the continuous series of individual envelopes is moved only in the longitudinal direction without stopping the individual envelopes, and



(f) folding and sealing the first and second envelope flaps to the leading and trailing envelope flaps to cover the envelope contents.

METHOD OF POSITIONING PRODUCTS ON A TAPE COMPRISING COMPARTMENTS AS WELL AS AN APPARATUS FOR IMPLEMENTING THE METHOD

Pieter Kemkers; Johannes H. M. Van Roosmalen, and Bernardus G. J. L. Venema, all of Eindhoven, Netherlands, assignors to U.S. Philips Corporation, New York, N.Y.

Continuation-in-part of Ser. No. 309,636, Feb. 9, 1989, abandoned. This application Jan. 19, 1990, Ser. No. 467,626
Claims priority, application Netherlands, Dec. 21, 1988, 8803122
Int. Cl.[5] B65B 15/04, 57/10
U.S. Cl. 53—494 15 Claims

1 A method of positioning products on a tape having a plurality of product locations, the products being aligned, tested in a row in a measuring station, the tape being transported in a given direction and an uninterrupted series of approved products being positioned onto empty tape locations following occupied locations of the tape, said method comprising:

advancing the tape a number of positions depending on the number of tape locations already occupied and the number of approved products to be placed

discharging only the faulty products, and

placing the approved products onto the tape, filling the vacant positions in the measuring station

5,005,339

COIN ROLL BOXING APPARATUS

Ross Capawana, Las Vegas, Nev.

Filed Feb. 13, 1990, Ser. No. 479,768
Int. Cl.[5] B65B 57/20
U.S. Cl. 53—500 9 Claims

1 In a coin roll boxing apparatus in which cylindrical coin rolls are fed from a supply hopper to an orienting feeder that discharges the coin roll through a discharge chute, wherein the improvement comprises

(a) a conveyer belt system receiving the coin rolls from the discharge chute,

(b) a manifold positioned to receive coin rolls from the conveyer belt system, and

(c) a manifold bypass means including slidable panels movable into position to cover the manifold upon the manifold being filled with coin rolls.

whereby excess coin rolls are permitted to pass over the manifold for return to the orienting feeder for re-entry into the conveyer belt system

CROP PROCESSOR

E. Cordell Lundahl, Providence, and Laurel H. Jensen, Hyrum, both of Utah, assignors to Ezra C. Lundahl, Inc., Logan, Utah

Filed Feb. 13, 1990, Ser. No. 479,321
Int. Cl.[5] A01D *34/53, 34/54, 43/10, 55/00*
U.S. Cl. 56—10.2 **29 Claims**

1 A crop processor comprising
a support frame coupled to a prime mover,
a drive system for said processor connected to and powered from said prime mover,
at least two conveyor augers on a common axis, each including a helical flange thereon, each conveyor auger supported in cantilever fashion on said support frame at opposite ends thereof, each of said conveyor augers being less than half the width of the processor, the helical flange of each conveyor auger wound to move the material toward the center of the processor,
conveyor auger housings cooperating with said conveyor augers to move the material,
at least two cutting augers on a common axis,
support means for each of said cutting augers at the ends and at the center of the processor,
each of said cutting augers having a helical flange thereabout with the flange from the outside turned in the same direction as the conveyor flange for at least a portion of the length of the conveyor auger and a continuation reversely turned flange for the remaining length of the cutting auger to the center of the processor,
each of said flanges including a plurality of first means for mounting cutting teeth thereon,
a plurality of cutting teeth;
second means for mounting each of said cutting teeth to a single one of said first mounting means on said flanges,
a front cover means pivotally attached to said support means,
a rear cover means
a baffle means attached to and extending from said conveyor auger housing enlarging the volume for conveying the cut crop
a center discharge area to discharge cut crop to the rear of said processor,
means for selecting and maintaining the height of the cutting augers above the ground, and
whereby the crop is cut by the cutting augers and fed by the conveying augers to the center area for discharge

28 A crop processor comprising
an auger having flighting therearound
support means for said auger,
drive means for rotating said auger,
teeth for attachment to said flighting on said auger, and
means for attaching said teeth to said flighting, each of said teeth including a metal base plate of essentially horse shoe shape, having a circular portion and converging side portion, a hole toward the circular end of said base plate for attaching to said auger flighting, said base plate having bevels on a major portion of a first flat surface, the base plate being bent in the direction of said first flat surface, and the second flat surface of the base plate being hard surfaced only on the converging side portion

STIRLING ENGINE
Yutaka Momose, Anjo; Tetsumi Watanabe, Okazaki, and Akira Yamaguro, Chiryu, all of Japan, assignors to Aisin Seiki Kabushiki Kaisha, Kariya, Japan
Filed Sep. 28, 1989, Ser. No. 413,741
Claims priority, application Japan, Sep. 29, 1988, 63-242415
Int. Cl.' F02G 1/04
U.S. Cl. 60—517 8 Claims

1 A Stirling engine, comprising
an expansion chamber defined in an expansion cylinder by an expansion piston
a compression chamber defined in a compression cylinder by a compression piston and communicating with the expansion chamber via a heater, a regenerator, and a cooler,
a combustion chamber in proximity to said expansion and compression cylinders,
a burner located within said combustion chamber, said burner having a substantially annular shape defining an inner circumferential surface and at least one outer surface,
said heater being circularly disposed in the center of said combustion chamber and radially interiorly of said inner circumferential surface of said burner,
an air supply means delivering air to said burner
a fuel supply means delivering fuel to said burner,
said burner including a plurality of fuel delivery holes receiving fuel from said fuel supply means, and a plurality of air supply holes receiving air from said air supply means,
at least one of said pluralities of holes extending from said inner circumferential surface of said burner to an outer surface of said burner

5,005,350
TANDEM MASTER CYLINDER
Hans-Dieter Reinartz, Frankfurt am Main; Helmut Steffes, Hattersheim; Holger Von Hayn, Bad Vilbel, and Thomas Meier, Frankfurt am Main, all of Fed. Rep. of Germany, assignors to Alfred Teves GmbH, Frankfurt, Fed. Rep. of Germany
Filed Oct. 12, 1989, Ser. No. 420,181
Claims priority, application Fed. Rep. of Germany, Oct. 18, 1988, 3835394
Int. Cl.' B60T 11/20
U.S. Cl. 60—562 7 Claims

1 A tandem master cylinder comprising
a housing having an axial bore which is closed at one end and open at the opposite end, said open end of said axial bore adapted for connection to a vacuum brake booster,
a pressure element positioned in said axial bore in said housing at said open end of said axial bore and adapted to respond to forces exerted by a vacuum brake booster,
a floating piston movable along said axial bore in said housing and having a valve which closes upon movement of said floating piston toward said closed end of said axial bore and opens upon movement of said floating piston toward said open end of said axial bore,
a push-rod piston movable along said axial bore in said housing in response to responses of said pressure element to forces exerted by a vacuum brake booster and having a valve which closes upon movement of said push-rod piston toward said closed end of said axial bore and opens upon movement of said push-rod piston toward said open end of said axial bore, said valve in said push-rod piston including
(a) a valve bore extending along said axial bore in said housing and having an open end facing said floating piston,
(b) a closure member rigidly connected to said floating piston and movable along said valve bore toward said open end of said valve bore as said floating piston moves toward said closed end of said axial bore in said housing, and
(c) a valve seat positioned in said valve bore at a point which permits movement of said closure member over a distance within said valve bore which is at least as great as the maximum stroke of said floating piston
a first spring positioned between said floating piston and said closed end of said axial bore in said housing and urging said floating piston away from said closed end of said axial bore,
a second spring positioned between said floating piston and said push-rod piston urging separation of said floating piston and said push-rod piston,
and means for supplying a pressure medium to said floating piston and said push-rod piston to conduct pressure medium to a chamber in said axial bore in said housing between said floating piston and said closed end of said axial bore when said valve in said floating piston is open and to a chamber in said axial bore in said housing between said floating piston and said push-rod piston when said valve in said push-rod piston is open

5,005,351
POWER PLANT CONDENSER CONTROL SYSTEM
David H. Archer, Ross Township, Allegheny County, Pa., assignor to Westinghouse Electric Corp., Pittsburgh, Pa.
Filed Feb. 26, 1990, Ser. No. 484,750
Int. Cl.' F01K 13/02
U.S. Cl. 60—686 18 Claims

1 A method for controlling the operation of a steam condenser in a power plant which includes a steam turbine having a steam outlet, the condenser having a steam flow path including a steam inlet connected to receive turbine exhaust steam from the turbine steam outlet, a condensate outlet and a heat exchange region located between the steam inlet and the condensate outlet, a cooling water flow path having a cooling water inlet, a cooling water outlet and heat exchange means for

conducting cooling water through the heat exchange region from the cooling water inlet to the cooling water outlet, and a non-condensible product removal path having a product inlet communicating with the heat exchange region and a product outlet located outside of the heat exchange region, said method comprising

measuring parameters representative of fluid flows at the steam inlet, the condensate outlet, the cooling water inlet and the cooling water outlet, and determining, on the basis of the measured parameters, the fluid flow rates at those inlets and outlets;

providing a computer model of the condenser in its normal operating condition, supplying the model with representations of the fluid flow rates at the steam inlet and the cooling water outlet, as determined by said determining step, and producing, in the model, indications of the flow rate at the condensate outlet and the cooling water outlet when the condenser is in its normal operating condition

comparing the indications from said producing step with the flow rate at one of the condensate outlet and the cooling water outlet, as determined by said determining step, and

generating, on the basis of the result of said comparing step, an indication of differences between the compared indications and flow rate.

5,005,352

CLEARANCE CONTROL METHOD FOR GAS TURBINE ENGINE

Fred M. Schwarz; Clifton J. Crawley, Jr., both of Glastonbury; Anthony F. Rausco, Middletown, and Ken R. Lagueux, Berlin, all of Conn., assignors to United Technologies Corporation, Hartford, Conn.

Filed Jun. 23, 1989, Ser. No. 372,398

The portion of the term of this patent subsequent to Apr. 9, 2007, has been disclaimed.

Int. Cl.[5] F02C [illegible]/18

U.S. Cl. 60—39.02 5 Claims

1 A method for modulating a cooling flow of air to a gas turbine engine operating within a power range, comprising the steps of

determining a desired minimum clearance between a plurality of rotating blade tips within the gas turbine engine and a surrounding annular shroud

establishing a cooling air flow rate schedule responsive to engine power within the power range, including the steps of

(a) establishing a first cooling air flow rate corresponding to a maximum, steady state, engine power level within the power range, the first cooling air flow being sufficient to result in the blade tip to shroud clearance being equal to the determined minimum clearance;

(b) determining, for each of a plurality of other engine power levels within the operating range, the magnitude of a corresponding transient clearance decrease resulting from a step change in engine power from the other engine power level to the maximum power level, and

(c) establishing, responsive to the determined transient clearance displacement, a plurality of corresponding air flow rates for the plurality of other engine steady state power levels

5,005,353

ACTIVE CONTROL OF UNSTEADY MOTION PHENOMENA IN TURBOMACHINERY

Elizabeth Acton, Cambridge; Alexander M. Cargill, Derby; Colin F. Ross, and Graham P. Eatwell, both of Cambridge, all of England, assignors to Rolls-Royce plc, London, England

Division of Ser. No. 187,169, Apr. 28, 1988, Pat. No. 4,967,550, which is a continuation-in-part of Ser. No. 36,770, Apr. 9, 1987, abandoned. This application Apr. 20, 1990, Ser. No. 511,726

Claims priority, application United Kingdom, Apr. 28, 1986, 8610297; Apr. 28, 1987, 8710071

Int. Cl.[5] F02C [illegible]/05; F04D [illegible]/02

U.S. Cl. 60—39.281 16 Claims

1 In a turbomachine a control system for actively controlling the dynamics of at least one mode of at least one unsteady motion phenomenon associated with the blading of said turbomachine, said control system having a control bandwidth which is at least partly coextensive with the bandwidth of said unsteady motion phenomenon and comprising

(a) an array of sensors located in said turbomachine in predetermined relationship to said unsteady motion phenomenon for continuously producing from each of said sensors sensor signals related to said unsteady motion phenomenon,

(b) signal processing means connected to receive said sensor signals from each of said sensors and having at least one channel for continuously processing said sensor signals and continuously outputting control signals, and

(c) actuator means located in said turbomachine in predetermined relationship to said unsteady motion phenomenon said actuator means being adapted to be continuously driven by said control signals,

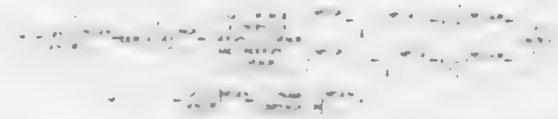
wherein said signal processing means comprises

(i) means for summing sensor signals from each of said sensors in predetermined combinations thereof and weighing said sums to obtain signals representing at least one independent measure of said at least one mode in said at least one channel, and

(ii) means for modifying said signals representing said at least one independent measure in said at least one channel to obtain said control signals in controlled phase and amplitude relationship to said at least one mode, said actuator means thereby producing outputs effective to change said dynamics of said at least one mode so as to minimize the physical effects of said dynamics on said turbomachine,

said turbomachine being a turbocompressor, said at least one unsteady motion phenomenon being unsteady fluid flow in said turbocompressor with at least some of said array of sensors being disposed to detect the unsteady fluid flow and produce said sensor signals

5,005,354



FUEL CONTROL HAVING RESET OF PROPELLER OVERSPEED AND UNDERSPEED GOVERNORS

Roy W. Schneider, Ellington, Conn., assignor to United Technologies Corporation, Hartford, Conn.

Filed Apr. 11, 1989, Ser. No. 336,274

Int. Cl.[5] F02C [illegible]/28

U.S. Cl. 60—39.281 11 Claims

1 Apparatus for controlling a gas generator engine having a propeller associated therewith, comprising

engine acceleration means, for providing an engine acceleration signal indicative of an increasing or decreasing rate of change of engine speed,

underspeed reset means, for comparing said engine acceleration signal to a reference underspeed signal to determine a presence of an underspeed reset condition, and for providing in response to the presence of said underspeed reset condition an underspeed reset signal indicative of a desired propeller speed and having a desired propeller speed value lower than a desired propeller speed value in the absence of said underspeed reset condition,

overspeed reset means, for comparing said engine acceleration signal to a reference overspeed signal to determine a presence of an overspeed reset condition, and for providing in response to the presence of said overspeed reset condition an overspeed reset signal indicative of a desired propeller speed and having a desired propeller speed value higher than a desired propeller speed value in the absence of said overspeed reset condition.

5,005,355

METHOD OF SUPPRESSING FORMATION OF CONTRAILS AND SOLUTION THEREFOR

Surjit Singh, Williamsville, N.Y., assignor to Sciper, Inc., Williamsville, N.Y.

Filed Aug. 24, 1988, Ser. No. 235,670

The portion of the term of this patent subsequent to Aug. 30, 2005, has been disclaimed.

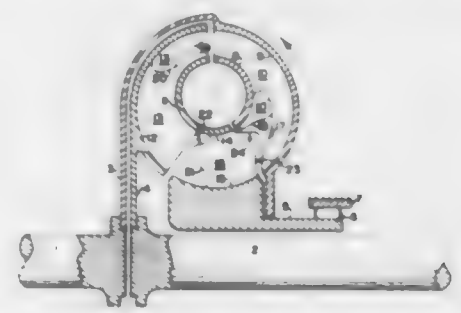
Int. Cl.[5] F02K 3/04; C09K 3/18; B01D [illegible]/02

U.S. Cl. 60—204 31 Claims

1 A method of suppressing the formation of contrails from water vapor in the hot exhaust gases of an engine operating in cold temperatures comprising the steps of providing at least one alcohol which is a combined nucleating agent and freezing point depressant, and injecting said alcohol into said hot exhaust gases of said engine for reducing ice particles formed from said water vapor to a size below a humanly visible range.

5,005,356

TORQUE CONVERTER UTILIZING STREAMWISE VORTICITY



Walter S. Saunders, 307 Thornhill Rd., Baltimore, Md. 21212

Filed May 27, 1987, Ser. No. 54,582

Int. Cl.[5] F16D 33/00

U.S. Cl. 60—330 34 Claims

1 A torque converter comprising an impeller and a turbine said impeller comprising means adapted to generate streamwise vortices, and said turbine comprising means adapted to

reverse the direction of rotation of said vortices to efficiently transfer torque therebetween.

5,005,357

OSCILLATING FORCE TURBINE

Manuel F. Fox, 508 10th St., Edwards AFB, Calif. 93523

Filed Jul. 9, 1990, Ser. No. 550,011

Int. Cl.[5] F02B 9/08

U.S. Cl. 60—398 4 Claims

1 An apparatus for extracting energy from water waves along a shoreline, comprising

a cylindrical stack, vertically aligned, said stack having an upper end open and immersed in air, a lower end open and immersed in water

an air turbine disposed within said stack, the axis of said turbine being concentric with the axis of said stack, said turbine including

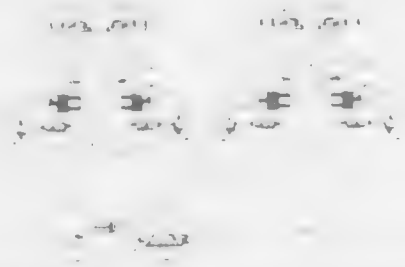
a hub rotatably mounted within said stack, the axis of said hub being concentric with the axis of said stack,

a plurality of essentially planar blades rotatably fixed to said hub, the axis of relative rotation between said hub and said blade being perpendicular to the axis of said turbine,

each of said essentially planar blades being divided into a greater area on a first side of the axis of relative rotation between said blade and said hub and a lesser area on a second side of the axis of relative rotation between said blade and said hub, and

means for limiting the rotation of said blades relative to said hub, and

means for transferring energy from the turbine whereby the energy of waves on the water surface causes air within the stack to flow over the turbine, the flow of air over said



turbine causes it to revolve in a single sense regardless of the direction of the flow of air, and wave energy is transferred through said turbine.

5,005,358

HYDRAULIC DRIVE SYSTEM FOR CRAWLER-MOUNTED CONSTRUCTION VEHICLE

Toichi Hirata, Ushiku; Hideaki Tanaka, Tsuchiura; Genroku Sugiyama, Inashiki, and Yusuke Kajita, Tsuchiura, all of Japan, assignors to Hitachi Construction Machinery Co., Ltd., Tokyo, Japan

Filed May 10, 1989, Ser. No. 349,851
Claims priority, application Japan, May 12, 1988, 63-113435
Int. Cl.[5] F16D 31/02
U.S. Cl. 60—426 5 Claims

1. A hydraulic drive system for a crawler-mounted construction vehicle comprising

a hydraulic pump (1),

a plurality of hydraulic actuators including first and second traveling hydraulic motors (2, 3) driven by a hydraulic fluid discharged by said hydraulic pump,

a plurality of flow control valve means including first and second flow control valve means (15, 16, 35, 36) for respectively controlling the flow rates of said hydraulic fluid supplied from said hydraulic pump to said first and second traveling hydraulic motors,

pump controlling means (11) for effecting control during the driving of said first and second traveling motors in such a manner that the discharge pressure of said hydraulic pump becomes higher by a fixed value than the higher one of load pressures of said traveling motors, and

first and second pressure balance valve means (17, 18, 37, 38) for respectively controlling the rates of flow through said flow control valve means during the driving of said first and second traveling motors in such a manner that the load pressures of said traveling motors do not affect the rates of flow through said first and second flow control valve means,

wherein said first and second pressure balance valve means (17, 18, 37, 38) are respectively provided with valve control means (62, 63, 66, 67) which do not cause the associated pressure balance valve means to be actuated until the differential pressure between the load pressure generated in said first traveling motor (2) and the load pressure generated in said second traveling motor (3) reaches a predetermined value (ΔP_0), and causes said pressure balance valve means to be actuated when said differential pressure exceeds said predetermined value.

5,005,359

AIR SUPPLY CONTROL SYSTEMS FOR TURBOCHARGED INTERNAL COMBUSTION ENGINES

Seiji Tashima; Haruo Okimoto; Toshimichi Akagi, and Yasushi Niwa, all of Hiroshima, Japan, assignors to Mazda Motor Corporation, Hiroshima, Japan

Filed Mar. 17, 1989, Ser. No. 324,670
Claims priority, application Japan, Mar. 19, 1988, 63-66790; Jan. 20, 1989, 1-12677
Int. Cl.[5] F02B 37/12
U.S. Cl. 60—600 15 Claims

1. An air supply control system for an internal combustion engine comprising

a plurality of superchargers including at least a first supercharger and a second supercharger which comprises a turbosupercharger having a turbine disposed in one of separated exhaust passages connected with the engine and a blower connected through a shaft with the turbine and disposed in one of separated intake passages connected with the engine,

a selectively operated exhaust cutoff valve for opening and closing the separated exhaust passage in which the turbine of said second supercharger is disposed,

a selectively operated intake air cutoff valve for opening and closing the separated intake passage in which the blower of said second supercharger is disposed,

a selectively operated intake air relief valve for opening and closing a relief passage which is provided in the separated intake passage in which the blower of said second supercharger is disposed for detouring the blower of said second supercharger,

engine operation detecting means for detecting operating conditions of the engine to produce a detection output,

cutoff valve control means operative, in response to the detecting output from said engine operation detecting means, to close both said exhaust cutoff valve and said intake air cutoff valve so that said first supercharger works for supercharging the engine and said second supercharger is restrained from supercharging the engine when intake air mass flow fed to the engine is relatively small, and to open both said exhaust cutoff valve and said intake air cutoff valve so that both of said first and second superchargers work simultaneously for supercharging the engine when the intake air mass flow fed to the engine is relatively large, and

relief valve control means operative, in response to the detection output from said engine operation detecting means, to close said intake air relief valve at a time point earlier than another time point at which said exhaust cutoff valve is fully opened.

5,005,360

SOLAR ENERGY SYSTEM FOR GENERATING ELECTRICITY

J. A. McMurtry, 1350 N. 26th St., Mesa, Ariz. 85213

Filed Feb. 22, 1990, Ser. No. 483,458
Int. Cl.[5] F03G 6/06
U.S. Cl. 60—659 12 Claims

1. A system for generating electricity, comprising

(a) heat storage means comprising

(i) an enclosed primary chamber lined with heat sink material and including an opening shaped and dimensioned to permit a concentrated beam of sunlight to pass therethrough into said chamber while maintaining a pressure in said primary chamber in excess of ambient air pressure,

(ii) at least one enclosed secondary chamber smaller than and connected to said primary chamber and shaped and dimensioned to permit heat to flow from said primary chamber outwardly into said secondary chamber,

(b) means for collecting and concentrating solar energy including

(i) a frame,

(ii) a series of vertically stacked arcuate light-converging mirrors each mounted on said frame for sequentially reflecting and progressively increasing the concentration of sunlight by cascading in a zig-zag fashion sunlight through said series of mirrors to produce a beam of sunlight,

(iii) means operatively associated with said frame and said mirrors for rotating said frame and adjusting the position of said series of mirrors and said frame such that

at least one of said series of mirrors tracks the sun across a selected arc in the sky and continues to receive and concentrate sunlight, while said sun is in said arc, and

said beam of sunlight produced by said series of mirrors is continually directed through said opening into said storage means,

(c) a turbine powered by fluid in the gaseous state and including a fluid input and a fluid output,

(d) an electrical generator connected to and powered by said turbine,

(e) a closed, heat powered circulating system for circulating a fluid between said turbine and said heat storage means said circulating system including

(i) fluid cooling means for liquefying fluid flowing in the gaseous state out of said exhaust of said turbine,

(ii) heat conductive container means in said secondary chamber of said storage means for conductively transmitting heat from within said storage means through said container means to a fluid in a liquid state in said container means to increase the temperature of the fluid and cause the fluid to assume a gaseous state and increase the pressure in said container means,

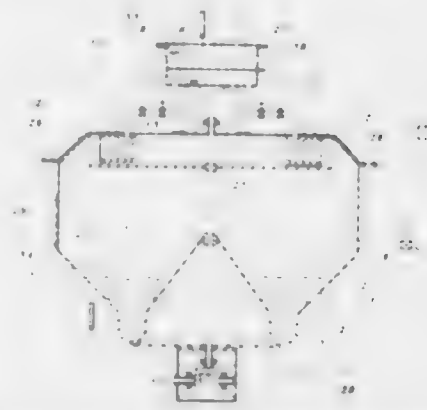
(iii) a first conduit interconnecting said container means and said turbine to deliver heated fluid under pressure and in a gaseous state from said container means to said turbine to power said turbine,

(iv) a second conduit interconnecting said exhaust of said turbine and said cooling means to carry fluid leaving said turbine in a gaseous state to said cooling means,

(v) a third conduit interconnecting said cooling means and said storage means to carry fluid in a liquid form from said cooling means to said container means to absorb heat to take on a gaseous state and travel through said first conduit to said turbine to power said turbine,

the power for causing fluid to circulate through said closed circulating system being supplied by the heating and expansion of said fluid occurring in said container means,

(f) valve means in at least one of said first, second and third conduit for controlling the flow of fluid through said circulating system, and,



(g) control means in said storage means for controlling the flow of heat from said primary chamber to said secondary chamber.

5,005,361

ION REPULSION TURBINE

Richard C. Phillips, 313 E. Haven Dr., Birmingham, Ala. 35215

Filed Mar. 22, 1988, Ser. No. 171,808
Int. Cl.[5] F01K 25/00
U.S. Cl. 60—671 1 Claim

1. An ion turbine comprising means for generating an ionized gas, a plurality of uniquely designed ion repulsion discharge chambers which accelerate the ions of the ionized gas at an extremely high velocity through the use of strategically located electrostatic fields, said ion repulsion discharge chambers being situated along the inner perimeter of a set of turbine blades within a turbine, a condenser connected to the outlet of the turbine and a pump connected to the outlet of the condenser returning the condensed gas back to the means for generating the ionized gas.

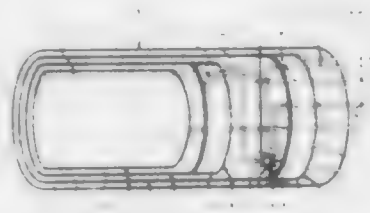
5,005,362

CRYOGENIC STORAGE CONTAINER

William R. Weltmer, Jr., Murray Hill, and Walter H. Whitlock, Peapack, both of N.J., assignors to The BOC Group, Inc., Murray Hill, N.J.

Filed Mar. 20, 1990, Ser. No. 497,156
Int. Cl.[5] F17C 1/00
U.S. Cl. 62—45.1 6 Claims

1. In a cryogen storage container for storing a liquid cryogen formed of one of hydrogen, helium, and neon wherein the cryogenic storage container comprises a pressure vessel for containing the liquid cryogen, a vacuum vessel having an outer wall surrounding and spaced from the pressure vessel for subjecting the space between the outer wall and the pressure vessel to a vacuum, a pair of inlet and vent lines penetrating the vacuum vessel and in communication with the pressure vessel for filling the pressure vessel with the liquid cryogen and for venting boil-off vapor from the liquid cryogen, respectively



an intermediate heat shield spaced between the outer wall of the vacuum vessel and the pressure vessel for intercepting heat that would otherwise be transferred from the vacuum vessel to the pressure vessel, a set of first and second layers of insulating material located between the intermediate heat shield and the outer wall of the vacuum vessel and the pressure vessel, respectively, and a liquid nitrogen container, formed of a heat conductive material, located in thermal contact with the intermediate heat shield, and containing liquid nitrogen to absorb the heat intercepted by the intermediate heat shield through vaporization of the liquid nitrogen, wherein the improvement comprises

a sub-intermediate heat shield interposed between the second insulation layer and the pressure vessel for intercepting heat that would otherwise be transferred from the intermediate heat shield to the pressure vessel,

a third insulation layer located between the sub-intermediate heat shield and the pressure vessel

intermediate heat absorption means in thermal contact with the sub-intermediate heat shield and containing a coolant for absorbing the heat intercepted by the sub-intermediate heat shield by undergoing a phase change, the coolant having a phase transition temperature, at which the phase change occurs, below the boiling temperature of liquid nitrogen, and

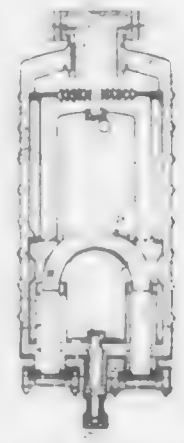
recovery means connected to the intermediate heat absorption means for recovering the coolant after having undergone the phase change for regeneration of the coolant

5,005,363

CRYOGENIC SORPTION PUMP

Marxen P. Larin, prospekt Nauki, 29 kv. 78, Leningrad, U.S.S.R.

PCT No. PCT/SU88/00228, § 371 Date Aug. 16, 1989, § 102(e) Date Aug. 16, 1989, PCT Pub. No. WO89/05917, PCT Pub. Date Jun. 29, 1989



PCT Filed Nov. 14, 1988, Ser. No. 408,505

Claims priority, application U.S.S.R., Dec. 17, 1987, 4344470/29

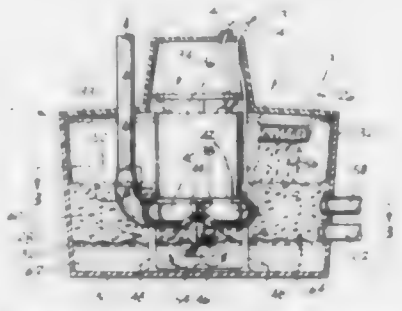
Int. Cl.[5] B01D 8/00

U.S. Cl. 62—55.5 5 Claims

1 A cryogenic sorption pump comprising a housing complete with a cover, a bottom, and an inlet nozzle arranged on the cover, a vessel for cryogenic agent accommodated within the housing, an adsorbent, a first gas-permeable screen located on the inner side of the housing, a heat bridge connected to said inlet nozzle, a vacuum conductor arranged within the space of the cryogenic agent vessel and having one end taken out of the housing through the bottom, and pipes to fill in cryogenic agent and remove cryogenic agent vapours, wherein the improvement comprises the vessel for cryogenic agent comprising upper and lower shells installed in the central part of the pump one over the other and interconnected by a circular element, the upper shell comprising a cover, and the lower shell comprising a bottom, a heat conductor for said cryogenic agent vessel and attached to the circular element and encompassing the upper shell to form an interspace between the upper shell and the heat conductor, a second gas-permeable screen attached to the circular element and in the interspace between the upper shell and the heat conductor, the adsorbent being located between the heat conductor and the second gas-permeable screen, and a heat conductor for said vacuum conductor and attached thereto and installed within the cryogenic agent vessel shells along their entire length, with the

other end of the vacuum conductor being taken out of the housing through the bottom

5,005,364



APPARATUS FOR AND METHOD OF MAKING AND DELIVERING SLUSH ICE

William R. Nelson, 1549 N.W. 49th Street, Seattle, Wash. 98107

Filed Feb. 7, 1990, Ser. No. 476,516

Int. Cl.[5] F25C 1/00

U.S. Cl. 62—76 28 Claims

1 An apparatus for producing and delivering slush ice comprising

a main housing having a floor and substantially cylindrical sidewalls, said housing including a water inlet and an ice inlet,

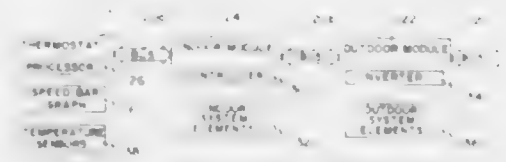
a pump having a delivery outlet and an inlet substantially centered axially within said housing and spaced a predetermined distance from said floor,

a delivery conduit having a first end operably connected to said delivery outlet and a second end remote therefrom

a rotating agitator member having an axis of rotation substantially centered co-axially within said housing such that said agitator swirls ice and water in said housing substantially around said pump inlet, said ice floating in an upper layer substantially above a lower layer of water which is substantially devoid of ice, and

said pump drawing ice and water from said upper layer through said inlet and delivering a mixture of ice and water in the form of slush ice through said delivery outlet

5,005,365



THERMOSTAT SPEED BAR GRAPH FOR VARIABLE SPEED TEMPERATURE CONTROL SYSTEM

Gregory A. Lynch, Murfreesboro, Tenn., assignor to Inter-City Products Corporation (USA), Lavergne, Tenn.

Filed Dec. 2, 1988, Ser. No. 278,789

Int. Cl.[5] F25B 49/00

U.S. Cl. 62—126 18 Claims

1 A variable speed temperature control system having a thermostat for selecting a desired ambient temperature to be maintained by said variable speed temperature control system, said system having a predetermined available capacity, said system comprising

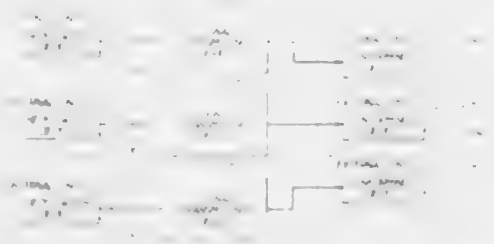
a prime mover to maintaining the desired temperature, said prime mover adapted to continuously operate at an operating speed within a predetermined speed range whereby the utilized capacity of said temperature control system is a function of the operating speed of said prime mover and the available capacity of said system

means for determining the operating speed of said prime mover of said temperature control system to maintain a selected ambient temperature, said speed determining means calculating a utilization ratio as a function of the determined operating speed of said prime mover and the available capacity of said temperature control system,

display means, coupled to said speed determining means, for graphically displaying said determined operating speed

5,005,366

AIR CONDITIONING SYSTEM



Yoshinori Murashige, Shizuoka, Japan, assignor to Kabushiki Kaisha Toshiba, Kanagawa, Japan

Filed Mar. 29, 1990, Ser. No. 502,168

Claims priority, application Japan, Mar. 29, 1989, 1-74966

Int. Cl.[5] G01M 1/10

U.S. Cl. 62—126 12 Claims

1 An air conditioning apparatus comprising external refrigerating circuit unit means for executing a refrigerating cycle operation,

fluid path control valve means, provided in the external refrigerating circuit unit means, for controlling the path of a fluid, the fluid path control valve means producing an audible sound when energized

internal air conditioning unit means associated with the external refrigerating circuit unit means for generating a flow of conditioned air, and

corresponding relationship check means for outputting an operation command signal to intermittently energize the fluid path control valve means thereby intermittently producing the audible sound from the fluid path control valve means

5,005,367

AUTOMATIC COOLANT SPRAYER FOR THE CAR INTERIOR

Feng-Lin Hwang, No. 21, Pa Te Rd., Chi Tu District, Keelung City, Taiwan

Filed May 23, 1990, Ser. No. 527,403

Int. Cl.[5] B60H 1/32

U.S. Cl. 62—133 5 Claims

1 An automatic coolant sprayer for use in a car interior, the car having a trunk compartment, comprising

(a) a container having, at a bottom edge thereof, ears for enabling installation, a containing chamber for accommodating a jet can, and in an upper part thereof, a cone-shaped, appropriately upslant degreed jet gate and a starting chamber

(b) a jet can having a top mounted valve connected to an arc driven plate, said jet can being loaded with a mixture of coolant liquid and jet-actuating air

(c) a starting gear arranged on a starting chamber bottom floor of said container and having a motor with an output shaft connected with a main gear allowing start-up of a reducing gear set to deliver a reducing speed turning a follower having a connected driving arm to force said valve's driven plate to be pressed down, thereby spraying said coolant out of an orifice

(d) a PC board having an IC time control circuit having a power source, a delay circuit and a shifter, and having connection via a power lead to a micro-switch fixed behind the knob of a car door, the shifter commanding conduction between the circuit and micro-switch, the micro-switch leading conduction to the power source of the circuit, which via a delay circuit will start motor operation, the IC time control circuit controlling stoppage of the motor operation

(e) a heat insulating layer provided on bottom, peripheral and top walls of said containing chamber

wherein said sprayer is installed on a top plate of said trunk compartment behind a rear seat and wherein said sprayer is able to spray out the coolant automatically

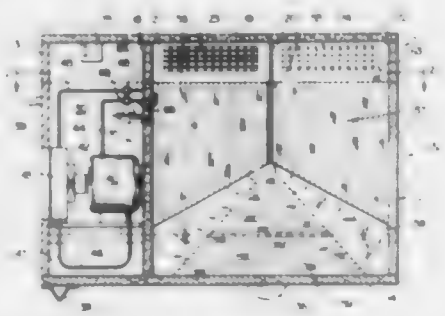
5,005,368

COOLNESS STORAGE AIR CONDITIONER APPLIANCE

Calvin D. MacCracken, Englewood, N.J., and Brian M. Silvetti, Tomkins Cove, N.Y., assignors to Calmac Manufacturing Corporation, Englewood, N.J.

Filed Feb. 7, 1990, Ser. No. 476,257

Int. Cl.[5] F25C 1/00



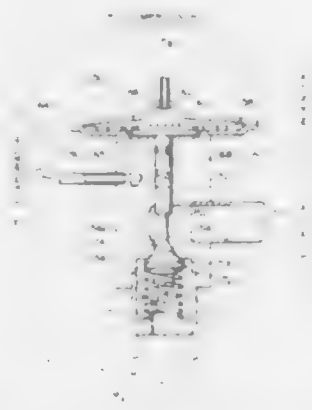
U.S. Cl. 62—139 13 Claims

1 A coolness storage air conditioner appliance for cooling an interior air space comprising

(a) a box-like thermally insulated housing of narrow lateral width relative to its height and longitudinal length and including a vertical bulkhead dividing the housing into upper inlet and outlet manifolds

(b) a plurality of thermally conductive closely spaced wall members defining water chambers and air passageways in the housing.

(c) the water chambers being adapted to contain water in heat transfer contact with the associated wall members,
(d) evaporator conduit means adapted to be in heat transfer contact with water in the associated water chambers,
(e) circulating means for moving air through said passage ways from and into said interior air space, and

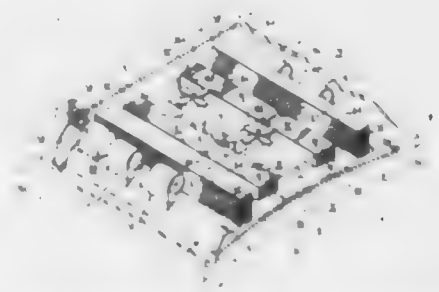


(f) compressor-condenser refrigeration means of a limited refrigerating capacity permitting heat discharge directly into said interior air space and adapted to circulate a refrigerant through said conduit means,
(g) whereby water in said chambers can be frozen during protracted charges cycles and melted during brief cooling cycles to cool said interior air space

5,005,369
REFRIGERANT PURIFICATION WITH AUTOMATIC AIR PURGE
Kenneth W. Manz, Paulding, Ohio, assignor to Kent-Moore Corporation, Warren, Mich.
Continuation-in-part of Ser. No. 405,236, Sep. 11, 1989, abandoned. This application Jan. 11, 1990, Ser. No. 463,449
Int. Cl.' F25B 43/04
U.S. Cl. 62—195 18 Claims

1 In a refrigerant handling system that includes a refrigerant storage container having separate liquid, vapor and purge ports and means releasably connected to said container for feeding liquid refrigerant to said vapor port so as to capture air in said container over said refrigerant, said refrigerant being characterized by a liquid/vapor saturation pressure that varies as a function of refrigerant temperature, means coupled to said purge port for purging air captured in said container comprising
means positioned externally of said container and coupled to said liquid feeding means for heat transfer contact with liquid refrigerant passing through feeding means to said container and responsive to temperature of liquid refrigerant in said feeding means as a measure of saturation pressure thereof
means coupled to said temperature responsive means and to said container for determining a pressure differential of air in said container over said saturation pressure, which varies as a function of quantity of air captured in said container, and
means coupled to said container purge port for venting air in said container when said pressure differential exceeds a preselected threshold

5,005,370
THERMAL EXPANSION VALVE
Hazime Tanaka, Yokohama; Teiichi Okamoto, Kawasaki; Kenji Yoshiga, Funabashi, and Kazuhiko Watanabe, Sagamihara, all of Japan, assignors to Fuji Koki Mfg. Co. Ltd., Tokyo, Japan
Filed Dec. 19, 1989, Ser. No. 452,426
Claims priority, application Japan, Dec. 19, 1988, 63-318549
Int. Cl.' F25B 41/00
U.S. Cl. 62—211 8 Claims



1 A thermostatic expansion valve to be used in a refrigerating system having a compressor, a condenser, an evaporator, and an expansion means, and using a refrigerant for heat exchange comprising
a valve housing having a refrigerant pathway in which a valve seat is formed and a diaphragm chamber in which a diaphragm is housed,
a valve body arranged in said valve housing so as to be movable between a closure position where it is in contact with said valve seat and an open position where it is separated from said valve seat, and connected with one side surface of said diaphragm so as to be movable between the closure position and the open position in accordance with a displacement of said diaphragm
biasing means, provided in said valve housing, for biasing said valve body toward the closure position,
auxiliary pressure applying means for applying a pressure of the refrigerant, sensed at a downstream side of said valve seat, on the side surface of said diaphragm
principal pressure applying means, having a thermal bulb which contains an actuator vapor and is located at an outlet of said evaporator, for applying a pressure of the actuator vapor in response to temperature at the outlet of said evaporator, on another side surface of said diaphragm, and
valve-body biasing pressure means, provided on said valve body, for biasing said valve body from the closure position toward the open position by the pressure of the refrigerant sensed at an upstream side of said valve seat in the refrigerant pathway of said valve housing,
wherein a degree of valve opening is defined by a different between a first force applied on one side surface of said diaphragm and a second force applied on the other side surface thereof
wherein the first force is a sum of the pressure of the refrigerant sensed at the downstream side of said valve seat and applied on one side surface by said auxiliary pressure applying means, and a biasing force, applied on one side surface by said biasing means by said valve body,
wherein the second force is a sum of the pressure of the actuator vapor, contained in the thermal bulb and applied on the other side surface of said diaphragm by said principal pressure applying means and the pressure of the refrigerant sensed at the upstream side of said valve seat in the refrigerant pathway of said valve housing and applied on the other side surface of said diaphragm by said valve body biasing pressure means, and
wherein a parameter for said first force and a parameter for said second force are so selected that the second force becomes higher than the first force so that the refrigerant can be supplied at a flow rate over a predetermined value to said evaporator even when a value of a degree of superheat is lower than a value of a degree of pre-set static superheat in a case where a difference in the pressure of the refrigerant on said valve body between the upstream side of said valve seat and the downstream side thereof is larger than a pressure difference which is used as a base for setting the degree of static superheat of said thermostatic expansion valve

5,005,371
ADSORPTION THERMAL STORAGE APPARATUS AND ADSORPTION THERMAL STORAGE SYSTEM INCLUDING THE SAME
Yasuo Yonezawa, Nara; Toshiya Ohnishi, Sakai; Shin'ichi Okumura, Ohtsu; Akiyoshi Sakai, Toyonaka; Hiroki Nakano; Masao Matsushita, both of Neyagawa; Atsushi Morikawa, and Motoshi Yoshihara, both of Yawata, all of Japan, assignors to Nishiyodo Air Conditioner Co., Ltd., Osaka, Japan
Filed May 18, 1990, Ser. No. 525,745
Claims priority, application Japan, Sep. 4, 1989, 1-228853
Int. Cl.' F25B 27/00
U.S. Cl. 62—238.6 16 Claims

1 An adsorption thermal storage apparatus formed of an evacuated vessel which comprises therein a refrigerant, and an adsorbent heating or cooling section and a refrigerant condensing or evaporating section located in communication with each other, said adsorbent heating or cooling section including an adsorbent material and first heat transfer means supporting thereon the adsorbent and having heat transfer surfaces for heating or cooling the adsorbent therethrough, said first heat transfer means being adapted to be connected to a heat source for heating the adsorbent, and an exothermic heat source and utilization means on a utilization side,
said refrigerant condensing or evaporating section including second heat transfer means holding refrigerant liquid and having heat transfer surfaces for condensing or evaporating the refrigerant therethrough,
said second heat transfer means being adapted to be connected to a cold source for condensing the refrigerant, and an endothermic heat source and the utilization means on the utilization side,
which apparatus is constructed so that thermal energy is stored by heating the adsorbent through the first heat transfer means to cause desorption of the refrigerant in gaseous state and condensing the gaseous refrigerant through the second heat transfer means whereas cold is generated by latent heat of evaporation of the refrigerant liquid through the second heat transfer means and heat is generated by heat of adsorption of the desorbed adsorbent through the first heat transfer means, and said cold and heat may be utilized singly or simultaneously

5,005,372
AIR CONDITIONER UNIT FOR MOUNTING ON OR IN THE ROOF OF A VEHICLE
Donald D. King, Chanhassen, Minn., assignor to Thermo King Corporation, Minneapolis, Minn.
Filed Apr. 27, 1990, Ser. No. 515,970
Int. Cl.' B60H 1/32
U.S. Cl. 62—244 5 Claims

1 An air conditioner unit mounted on or within the roof of a vehicle, with the vehicle having a front and back, first and second sides, and a longitudinal axis which extends between the front and back, comprising
a plurality of refrigeration components, including first and second condenser sections and first and second evaporator sections,
and a frame for supporting said refrigeration components,
said frame having an outer periphery which includes first and second longitudinal ends, and a longitudinal axis between the first and second longitudinal ends which is parallel with the longitudinal axis of the vehicle,
said outer periphery of the frame further including first and second side edges which are adjacent the first and second sides, respectively, of the vehicle,
said frame including an intermediate section which defines a substantially flat upwardly facing intermediate support surface which extends between the first and second ends of the frame, in inwardly spaced relation from the first and second edges of the frame,
said intermediate support surface supporting said first and second condenser sections,
said intermediate section further including first and second upturned side portions which extend between the first and second longitudinal ends of the frame,
first and second upstanding walls on said intermediate section disposed adjacent to the first and second longitudinal ends of the frame, which cooperate with the upturned side portions of the intermediate section to define a condenser plenum,
said frame further defining first and second substantially flat upwardly facing lateral support surfaces respectively adjacent to the first and second side edges of the frame,
said first and second lateral support surfaces respectively supporting said first and second evaporator sections,
a major portion of the outer periphery of said frame being devoid of upstanding wall portions, including the entire first and second edges of the frame, and portions of the first and second longitudinal ends of the frame

5,005,373

ROOF UNIT FOR EVAPORATIVE COOLER

Mark East, 6615 Bergquist Ave., West Hills, Calif. 91304

Filed Nov. 16, 1989, Ser. No. 437,116
Int. Cl.[5] F25D 23/12
U.S. Cl. 62—259.1 8 Claims

1 An insulative roof unit comprising, in combination

(a) an evaporative cooler, said cooler including an underlying frame for engaging said roof,

(b) a tower-like enclosure element, said element being arranged to surround said cooler and including means capable of removably receiving vertical panels,

(c) said enclosure element including a base, a plurality of upright columns and a spire, said spire being supported by said columns and said means capable of removably receiving vertical panels including (i) an upwardly-directed flange adjacent the periphery of said base, (ii) a downwardly-directed flange adjacent the periphery of said spire, and (iii) said columns including vertical edge flanges whereby said flanges form channels for removably capturing the top and bottom edges of vertical side panels,

(d) said base surrounding said underlying frame and said column surrounding said body of said cooler, and

(e) said enclosure element is formed of material of lesser thermal conductivity than said cooler.

5,005,374

THERMAL WRAPS

Michael L. Spitler, Phoenix, Ariz., assignor to Chillynex Corporation, Tempe, Ariz.

Filed Apr. 27, 1990, Ser. No. 515,226
Int. Cl.[5] F25D 23/12
U.S. Cl. 62—259.3 20 Claims

1 A thermal wrap comprising

(a)

a flexible band having

an outer layer formed of thermal insulating material,

an inner layer formed of non-insulating material,

a pair of opposite ends,

a pair of opposite edges extending longitudinally between said opposite ends,

fastening means for securing said opposite ends to one another to form an annulus, and

a cavity formed between said inner layer and said outer layer, and

(b) a flexible cold pack carried within said cavity, said cold pack containing deionized water and a chemical freezing agent.

16 A thermal jacket for chilling a product stored within a container, said jacket comprising

(a)

a flexible band for encircling said container, said band including

an outer layer for facing away from said container, said outer layer being formed of thermal insulating material,

an inner layer for contacting said container, said inner layer being formed of non-insulating material,

a top edge,

a bottom edge,

a cavity formed between said inner layer and said outer layer, and

(b) a flexible cold pack carried within said cavity.

5,005,375

REFRIGERATION EQUIPMENT SERVICE APPARATUS WITH QUICK-DISCONNECT COUPLINGS

Kenneth W. Manz, Paulding, Ohio, and Richard Parks, Horton, Mich., assignors to Kent-Moore Corporation, Warren, Mich.

Filed Apr. 6, 1989, Ser. No. 334,178
Int. Cl.[5] F25B 45/00
U.S. Cl. 62—292 24 Claims

1 A system for servicing refrigeration equipment having at least one service fitting of first predetermined configuration, said system comprising

a plurality of separate devices for performing differing service operations on refrigerant within equipment under service, each of said devices including at least one service fitting of second predetermined configuration, and

a manifold separate from said devices and including first refrigerant conduit means having a first end coupling for releasable connection to said service fitting of first predetermined contour, second refrigerant conduit means having a second end coupling for selective alternate releasable connection to each of said service fittings of second predetermined contour, each of said first and second couplings including means for automatically sealing the associated said conduit means upon disconnection from the associated fitting, and means interconnecting said first and second conduit means to form a sealed refrigerant flow path between equipment under service through said service fitting, said first conduit means and said second conduit means to a refrigerant service device connected to said second end coupling,

such that sequential service operations may be performed on equipment under service by connecting said first conduit means and end coupling to the equipment service fitting, and connecting said second conduit means and end coupling to each of said devices in turn and operating said devices while said second end coupling is connected thereto to perform an associated service operation on the equipment.

5,005,376

REFRIGERANT INJECTION INTO OIL FOR SOUND REDUCTION

Howard H. Fraser, Jr., Lafayette, and Jacob A. Bayyouk, Clay, both of N.Y., assignors to Carrier Corporation, Syracuse, N.Y.

Division of Ser. No. 902,853, Sep. 2, 1986, Pat. No. 4,907,414.
This application Nov. 30, 1987, Ser. No. 126,530
Int. Cl.[5] F25D 19/00
U.S. Cl. 62—296 4 Claims

1 Refrigerant injection apparatus for foam generation in a low side hermetic compressor having an oil sump comprising

muffler means having header structure for delivering compressed refrigerant to said muffler means and a discharge line for conveying compressed refrigerant from said muffler means,

diverting means connected to said muffler means for diverting a small portion of said compressed refrigerant delivered to said muffler means including orifice means discharging said diverted refrigerant beneath the surface of said oil sump to generate foam.

5,005,377

SCRAP FREEZING TUNNEL

Miroslav Tucek, 142 Woodside Avenue, Apt. 203, Cambridge, Ontario, Canada (N1S 4A9), and

Filed Nov. 29, 1989, Ser. No. 442,636
Int. Cl.[5] F25D 17/02
U.S. Cl. 62—374 15 Claims

1 Apparatus for freezing scrap, comprising

means defining a tunnel having a central longitudinal axis,

means defining a scrap inlet communicating with the interior of the tunnel for delivery of scrap into a receiving end portion of the tunnel,

means defining a scrap outlet communicating with the interior of the tunnel for discharge of scrap from a discharge end portion of the tunnel,

means supporting the tunnel for rotation about its central longitudinal axis and inclined downwardly from the tunnel receiving end portion to the tunnel discharge end portion,

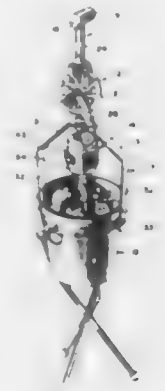
means for rotating the tunnel to cause movement of scrap from the tunnel receiving end portion to the tunnel discharge end portion,

means for delivering volatile cryogenic material into the interior of the tunnel,

means closing the tunnel sufficiently that spent cryogenic material in a gaseous state accumulates in the tunnel,

means defining an exhaust outlet communicating with the interior of the tunnel for discharge of the spent gaseous cryogenic material,

temperature sensing means for sensing and indicating the temperature of the spent gaseous cryogenic material,



variable flow generating means for producing a discharge flow of the spent gaseous cryogenic material from the interior of the tunnel through the exhaust outlet and for permitting the rate of flow to be varied in response to the indicated temperature.

5,005,378

LIQUID CHILLING APPARATUS

Charles J. Ottenheimer, 1128 Ala Napunani, Suite 1105, Honolulu, Hi. 96818

Filed Apr. 10, 1990, Ser. No. 507,602
Int. Cl.[5] F25D 25/00
U.S. Cl. 62—378 11 Claims

1 A liquid chilling apparatus for supporting and rotating a bottle in a bucket containing a chilling medium that is at a temperature lower than that of the bottle contents, comprising

(a) a bridge adapted to be mounted on the bucket,

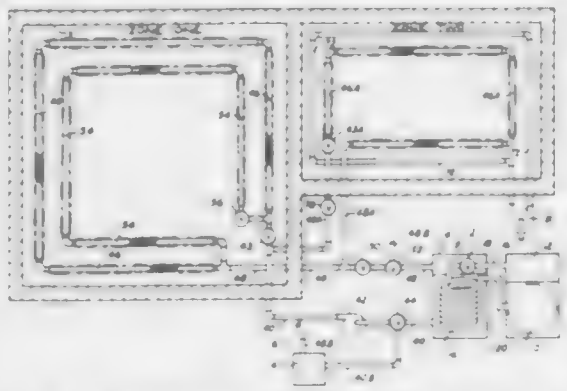
(b) a drive mechanism mounted on the bridge, the drive mechanism having a drive shaft projecting through the bridge, and

(c) a bottle gripping device coupled to the drive shaft beneath the bridge and adapted to be clamped on the neck of a bottle to support the bottle in the chilling medium for rotation by the drive mechanism,

the bottle gripping device comprising a cylindrical tube housing a bottle neck receiving chamber having at its lower end an elastomeric compressible lining therein,

the cylindrical tube being open at its bottom end and having a hinged wall portion extending upwardly from the open end,

the hinged wall portion being swingable into a position to provide a lateral access opening into the chamber, and



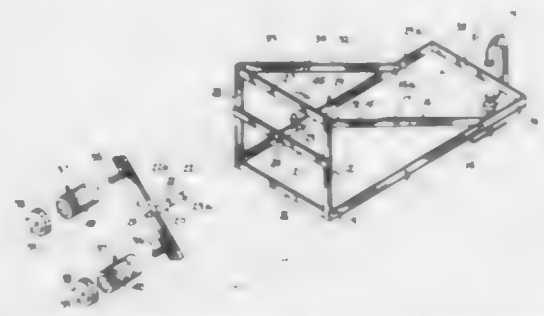
latch means for securing the hinged wall portion in chamber closed position with the lining compressed about the bottle neck.

5,005,379

AIR CONDITIONING SYSTEM

Michael E. Brown, 650 Horizons East - Apt. 101, Boynton Beach, Fla. 33435

Filed Jul. 5, 1989, Ser. No. 375,825
Int. Cl.[5] F25D 17/02
U.S. Cl. 62—434 11 Claims



1 An air conditioning system for removing heat from a room, said system having a length of spiral wall pipe for being located in a room, means for mounting said length of spiral wall pipe around the upper periphery of a room permitting upward air flow therearound, said spiral wall having a plurality of internal and external spiral grooves extending along the length of the pipe, a chiller tank for containing a coolant, means for regulating the temperature of said coolant, said spiral wall pipe having an inlet end, said inlet end being connected to said chiller tank as an inlet, said spiral wall pipe having an outlet end, said outlet end being connected to said chiller tank to return a coolant to said chiller tank, pump means connected to said spiral wall pipe for pumping a coolant through said spiral wall pipe to remove heat from a room.

5,005,380

DUAL SPINDLE YARN SUPPORT AND DELIVERY APPARATUS

Patrick J. Downey, 283 4th Avenue West, North Bay Ontario, Canada

Filed Jan. 25, 1990, Ser. No. 470,376
Int. Cl.[5] D04B 3[illegible]/06
U.S. Cl. 66—1 A 9 Claims

1 A dual spindle yarn support and delivery apparatus comprising

a lower horizontal rectangular framework and a vertical rectangular framework pivotally mounted to and internally of the horizontal rectangular framework, and

a respective right and left linkage means mounted between the respective right and left side portions of the lower horizontal framework and the vertical framework for pivotally positioning the vertical rectangular framework relative to the horizontal rectangular framework, and

a shaft rotatably mounted to the vertical rectangular framework adjacent a rear terminal end of the shaft, and

a propeller brace orthogonally and fixedly mounted to a forward terminal end the propeller brace medially of the propeller brace, and

a respective first and second yarn container mounted adjacent respective opposed terminal ends of the propeller brace.

HOSIERY FINISHING APPARATUS

Stanley H. Moss, Strabane, Northern Ireland, assignor to Adria Limited, Northern Ireland

PCT No. PCT/GB88/00760, § 371 Date Mar. 12, 1990, § 102(e) Date Mar. 12, 1990, PCT Pub. No. WO89/02947, PCT Pub. Date Apr. 6, 1989
PCT Filed Sep. 19, 1988, Ser. No. 469,522
Claims priority, application United Kingdom, Sep. 26, 1987, 8722695
Int. Cl.[5] D04B 15/32
U.S. Cl. 66—149 S 3 Claims

1 Apparatus for finishing hosiery articles (37) including a chamber (10) for causing relaxation of articles (37) in it, means (31) for connecting the chamber (10) to a take down tube (4) of a knitting machine (2) for receiving articles (37) from the knitting machine (2), and means (25) for controlling the exit of articles (37) from the chamber (10) in synchronization with a knitting cycle of the knitting machine (2) characterized in that a fan (5) is connected through a valve (6) to the take-down tube (4) and to the chamber (10), the valve (6) having a first position in which the fan (5) draws air through a by-pass (9) from the take-down tube (4), and a second position in which the fan (5) draws air through a trap (8) from the chamber (10) and blows air through the by-pass (9) into the take-down tube (4).

5,005,382

ELECTROMECHANICAL MOTOR REVERSING

John P. Duve, Brookfield, Ill., assignor to Eaton Corporation, Cleveland, Ohio

Filed Jan. 16, 1990, Ser. No. 465,832
Int. Cl.[5] D06F 37/40
U.S. Cl. 68—12.16 6 Claims

5 A motorized reversible drive comprising

(a) an alternating current drive motor having plural stator coil segments and adapted to have the rotor shaft of said drive motor connected to a device to be driven,

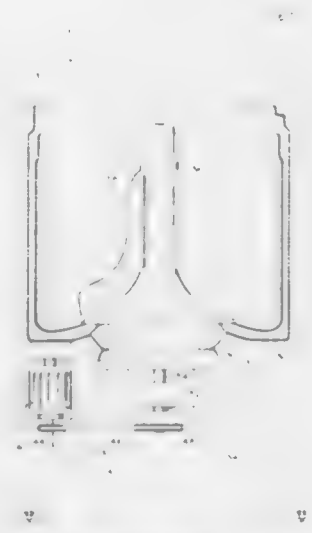
(b) electromechanical programmer means operable to effect timed intermittent operation of said motor, said programmer means having

(i) a timing motor,

(ii) a rotatable cam,

(iii) advance means driven by said timing motor, said advance means operable to effect timed advancement of said cam,

(iv) switch means having a movable contact blade means operably movable between a first state closing a first set of electrical contacts and a second state opening said first set and closing a second set of contacts, said switch means series connected with said drive motor such that said second set of contacts reverses motor rotation from said first set,



(v) follower means operative in response to said advancement of said cam to move said contact blade means between said first and second states with said cam configured to provide a predetermined time delay not less than 1.30 second between said first and second states.

5,005,383

WASHING MACHINE MOTOR WITH HIGH ROTOR RESISTANCE

Lawrence G. Clawson, Dover, and Joseph R. Adamski, Sudbury, both of Mass., assignors to Raytheon Company, Lexington, Mass.

Filed Feb. 12, 1990, Ser. No. 478,314
Int. Cl.[5] D06F 37/30, 37/38
U.S. Cl. 68—133 5 Claims

1 A washing machine comprising

a clothes basket having a clothes agitator,

a permanent split capacitor motor having first and second stator windings,

a speed reducer linked between said motor and said agitator,

control means for alternately switching line voltage to said first and second stator windings of said motor to drive said motor and said agitator in alternately reversing direction, and

said motor having a high resistance rotor for increasing starting torque and reducing starting current to minimize the heat generated in said first and second stator windings while starting said motor wherein the ratio of locked rotor amps to idle amps of said motor is less than 2.5.

5,005,384

MECHANISM FOR A COMBINATION PADLOCK

Tzung-I. Lo, and Teng-Yun Wang, both of P.O. Box 96-405, Taipei 10098, Taiwan

Filed Jun. 29, 1990, Ser. No. 546,[illegible]
Int. Cl.[5] E05B 37/02
U.S. Cl. 70—25 3 Claims

1 An improved mechanism for a combination padlock comprising

a body portion, which including one end having a bigger diameter with a shackle hole, and the other end thereof having a main shaft with a smaller diameter to be mounted with a combination wheel assembly, and a T-shaped slot being provided on said smaller diameter shaft for receiving a T-shaped block therein, and said main shaft having a round groove to be mounted with a retaining ring, and said main shaft having a center hole for mounting two lock tumblers and a spring therein, and said main shaft having a shackle hole of which the lower portion has a screw hole for receiving a screw therein, and one end of said main shaft being mounted with a cap,

a shackle having a longer end with a flat part and a round groove, and said flat part having a semi-circular recess, and a short end with a semi-circular recess,

said combination wheel assembly including several combination rings, driving rings and partition rings, and said driving rings each having a plurality of teeth on one side of the outer surface thereof, and having a driving-ring hole with a recess, and said partition rings each being a thin ring with a recess and a lug on an inner edge of said partition ring, and said partition rings being installed between two said driving rings, and the inner surface of said combination rings having a plurality of inner teeth to be engaged with the teeth on said driving rings,

said T-shaped block being movably installed in said T-shaped slot, in which at least two springs are installed, and the lower end of said T-shaped block being extended into said center hole of said main shaft and into a space between said two lock tumblers,

said two lock tumblers each having a stud, while other ends thereof being formed into semi-spherical portions, and said spring being mounted between said two lock tumblers upon the same being installed in said center hole of said main shaft,

said cap having a round hole for mounting on said main shaft after said combination wheel assembly is mounted in place, and at one side of said cap, a round hole being provided and being aligned with said shackle hole, and said cap also having a cylindrical hole on the bottom of said round hole for receiving the lower part of said screw, and

said center hole being in communication with said T-shaped slot, and said T-shaped block being mounted within the inner diameter of said combination wheel assembly, and said recesses in said driving rings being used for providing said T-shaped block with a space to move upwards upon said combination wheel assembly rotating to a given position so as to have said two lock tumblers and said spring moved freely, and said padlock able to be locked up by moving said T-shaped block downwards until being engaged in said space between said two lock tumblers so as

to have said semi-spherical portions of said two lock tumblers retained in said two semi-circular recesses respectively

---

Patent Not Issued For This Number

5,005,386

PADLOCK WITH AN IMPROVED LOCKING STRUCTURE

Charlie Y. Chang, 293 Pei Tun Road, Taichung, Taiwan

Filed Jun. 26, 1990, Ser. No. 543,334
Int. Cl.[5] E05B 67/22
U.S. Cl. 70—39 **1 Claim**

1 An improved locking structure of a padlock, comprising

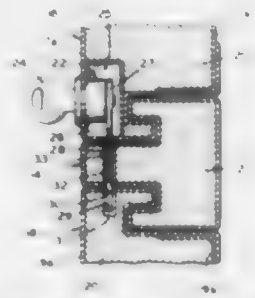
a lock body, being hollow and cylindrical in shape, having an opening at front end thereof and two shackle receiving holes located at appropriate positions thereof to receive shackle arms which have locking notches located at end portions thereof, a locking plate manufactured in proportion to inner diameter of said lock body and assembled inside said lock body and capable of sliding axially inside said lock body and having two shackle engaging slots thereon with locking semi-circular sectors at one end thereof to facilitate a locking engagement between said locking notches and said locking semi-circular sectors,

a receiving block, which is assembled firmly inside said lock body, being semi-circular on other end thereof with axial pin recess therein and a semi-circular retaining groove thereon to facilitate a locking spring,

a sectored disk, assembled between said locking plate and receiving block, having a cam sector thereon and an oval hole thereinto;

an axial spring resisting the circular cross-sectional end of said receiving block, and,

a locking core member, capable of sliding axially inside said lock body for an appropriate distance, having on one side thereof a rotating bolt whose one end is firmly assembled with said locking plate and sectored disk, and having on other side thereof a locking head with a key hole thereinto and a sliding groove therein of an appropriate length,



therefore, without using a key to drive said locking core member of a padlock, it is possible to achieve a speedy and ensuring locking mechanism by employing integral structures mentioned above and by simply pushing said U-shaped shackle arms into said shackle engaging slots of said locking plate and then pushing in said locking core member, causing said locking spring to be engaged with locking spring catch in order to refrain said locking core member from moving about and in the meantime driving said locking plate to slide axially in order to cause said locking semi-circular sectors to be in an engaging position with said locking notches of said shackle arms

5,005,387

CABINET LOCKING DEVICE

Robert J. Cuffr, Swanton, Ohio, assignor to Meilink Industries, Inc., Whitehouse, Ohio

Filed Nov. 20, 1990, Ser. No. 616,215
Int. Cl.[5] E05B 65/46
U.S. Cl. 70—86 **12 Claims**

1. A locking device for a cabinet having a housing with at least a first and a second drawer slidable into and out of the housing and a mullion attached to the housing and positioned between the first and second drawers, the locking device comprising a rotatable locking means mounted on a first drawer, a cam means having one end attached to said locking means and cam receiving means formed on the second drawer and a mullion, positioned between the drawers and attached to cabinet housing for the drawers, whereby when said locking means is in an unlocked position, said cam means is completely disposed in the first drawer and the drawers are free to move into and out of the cabinet housing and when said locking means is rotated to a locked position, said cam means engages said cam receiving means thereby locking and preventing movement of the drawers in the cabinet housing

AUTOMOBILE STEERING LOCK

Tsung I. Lo, 5th Fl., No. 76, Ai-Kuo E. Road, Taipei, Taiwan

Filed Apr. 6, 1990, Ser. No. 505,425
Int. Cl.[5] B60R 25/02
U.S. Cl. 70—209 **7 Claims**

1. An anti-theft device for attachment to the steering wheel of an automobile comprising

(a) an elongate tubular member having an open inner end, a closed outer end and an elongate passageway extending along its longitudinal axis from the open inner end towards the closed outer end;

(b) a first L-shaped member secured to the tubular member and defining a first hook spaced from the open inner end of the tubular member and open towards the closed outer end of the tubular member for engaging a first inner portion of a steering wheel,

(c) a housing means including an inner end, an outer end and a passageway extending therethrough from the inner end to the outer end, the outer end being secured to the open inner end of the tubular member to place the elongate passageway of the tubular member in axial alignment with the passageway of the housing means,

(d) a lock means including a downwardly extending locking member having first and second surfaces,

(e) an elongate compartment formed in the housing means the compartment extending from the outer end of the housing means towards the inner end thereof and disposed in parallel to the passageway of the housing means,

(f) an elongate actuating member slidably disposed in the elongate compartment, the actuating member including at least one notch formed therein and defined by a vertical side wall and a sloping side wall, the vertical side wall being positioned closer to the outer end of the housing means than the sloping side wall, and a recess formed in the actuating member and defined by a stop side wall for engagement by the locking member,

(g) a first spring means disposed in the elongate compartment for biasing the actuating member towards the inner end of the housing,

(h) first means for retaining the actuating member and the first spring means in the elongate compartment,

(i) means for securing the lock means to the housing means, whereby the locking member is rotatable between an unlocked position, in which the first surface thereof engages the stop side wall of the recess of the actuating member, and a locking position wherein the second surface thereof engages the stop side wall of the actuating member,

(j) an elongate rod member provided with a plurality of longitudinally spaced notches and telescopically receivable within the axially aligned passageways of the housing means and tubular member, and a second L-shaped member secured to the rod member and defining a second hook open in a direction opposite to the first hook for engaging an opposed second inside portion of the steering wheel,

(k) at least one transverse passageway formed in the housing means and extending across the elongate compartment and intersecting the passageway in the housing means,

(l) a locating member slidably received within the transverse passageway, the locating member including an opening sized to receive the actuating member therethrough and positioning the locating member within the notch of the actuating member, and a second spring means disposed in the transverse passageway for urging the locating member towards the passageway of the housing means, whereby when the actuating member is in the locking position, the locating member engages a notch of the rod member, and when the actuating member is in its unlocked position, the locating member is disengaged from the notch of the rod member, and

(m) second means for retaining the locating member and second spring means within the transverse passageway

---

5,005,389

STEERING WHEEL LOCK

Mao-Hsiung Wang, No. 29-27, Hsu Tsuo Kang, Nan Kang Tsun, Ta Yuan Hsiang, Tayuan Hsien, Taiwan

Continuation-in-part of Ser. No. 284,384, Dec. 14, 1988, abandoned. This application Apr. 20, 1989, Ser. No. 340,766
Int. Cl.[5] B60R 25/02
U.S. Cl. 70—209 **1 Claim**

1 A steering wheel lock comprising

(a) an inner tubular member connected at one end with one leg of a first U-shaped member and having an outer stop shoulder at an other end, said first U-shaped member having two legs each defining a first hole in alignment with said inner tubular member,

b) a hidden tubular member having a first outer stop shoulder at one end and adapted to be inserted through said inner tubular member,

c) an outer tubular member connected at one end with one leg of a second U-shaped member and having a second outer stop shoulder at an other end, the second U-shaped member having two legs each defining a second hole in alignment with the outer tubular member, said outer tubular member adapted to receive said inner tubular member so as to prevent said inner tubular member from detaching from said outer tubular member by engagement between said inner stop shoulder and said second outer stop shoulder

(d) a lock core disposed in a leg of said second U-shaped member, and,

e) an elongated latch rod having a handgrip at one end and circular grooves disposed toward an other end, said latch rod adapted to be inserted through said second holes in said second U-shaped member, said outer tubular member and said inner tubular member so as to push said hidden tubular member toward and into the first holes of said first U-shaped member of said inner tubular member such that said lock core may engage at least one of said grooves

LOCK FOR QUICK RELEASE MECHANISM ON BICYCLE WHEELS, SEATS AND CAR RACKS

George R. Giannini, 6419 Longridge Ct., Foresthill, Calif. 95631, and George G. Giannini, 500 Mansion Ct., Apt. No. 203, Santa Clara, Calif. 95054

Filed Apr. 30, 1990, Ser. No. 516,572
Int. Cl.[5] B60R 25/00
U.S. Cl. 70—225 **6 Claims**

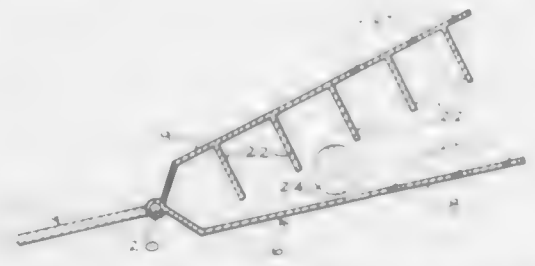
1 For use with a bicycle having a frame, a front fork, a front wheel with a hub rotatably mounted on a hollow axle spanning the space between and engaging the front fork, a cam actuated

quick release mechanism including a drawbar shaft extending through the axle, a lever shaft and a cam actuating lever connected to the drawbar shaft for selectively securing and releasing the front wheel relative to the front fork, a lock device comprising

a a torque limiting nut mounted on one end of the drawbar shaft;

b a lock housing positioned on the other end oft he drawbar shaft;

c a lock mounted on said housing and including a blade movable between a first position in non-interfering relation with the cam actuating lever and a second position in interfering relation therewith; and,



d lock engaging means for selectively moving said blade between said first position and said second position with the cam actuating lever in front wheel securing relation

5,005,391

VEHICLE ANTI-THEFT DEVICE

Gerald L. Gibson, FM 772 W., P.O. Box 1202, Kingsville, Tex. 78363

Filed Oct. 1, 1990, Ser. No. 590,738
Int. Cl.[5] E05B 65/12
U.S. Cl. 70—238 5 Claims

1. A vehicle anti-theft device for connection between the steering wheel and one of the floor controls such as a brake, clutch or gas pedal for immobilizing the use of the vehicle comprising,

an elongate body having first and second ends,

said first end including a connection for engaging one of the floor controls,

said second end including first and second jaws, one of the jaws pivotly connected to the body,

a plurality of spaced generally parallel dividers positioned between the jaws and connected to one of the jaws thereby providing an adjustable connection for attachment to a steering wheel, and

means on both said jaws for receiving lock means for locking said jaws together

5,005,392

SWITCH DEVICE IN CAR LOCK DEVICE

Tboru Shibata, Utsunomiya, Japan, assignor to Mitsui Kinzoku Kogyo Kabushiki Kaisha, Tokyo, Japan

Filed Jun. 14, 1990, Ser. No. 537,970
Claims priority, application Japan, Jun. 22, 1989, 1-160238
Int. Cl.[5] E05B 65/36
U.S. Cl. 70—264 1 Claim

1 In a car lock device consisting of a body, a cover plate fixed to a surface of said body and a back plate fixed to a back of said body and fixed to a door, the improvement comprising

a lock lever disposed between said body and said back plate, rotating with a center shaft in a longitudinal direction being the center and switching said lock device to a lock state and an unlock state,

a switch member fitted to an outer surface of said back plate, having a rotary shaft on the same axis as that of said center shaft, connected electrically to lock devices of other doors and sending a switch signal of at least either one of lock and unlock states to said other lock devices

a switch arm fixed to said rotary shaft, rotating between said lock state and said unlock state and equipped with an engagement hole at an end portion thereof,

an arcuate hole formed at an end portion of said lock lever and having its center at said center shaft, and

a rod having one of the end portions thereof meshed with said arcuate hole of said lock lever and with said engagement hole of said switch arm, and having the other end portion thereof interconnected to a key cylinder;

said arcuate hole having the length half the moving distance of said engagement hole of said switch arm by said key cylinder

5,005,393

ELECTRONIC KEY LOCKS

Johannes M. Ewalds, Delft; Johan C. Hordijk, Oosterhout, and Evert Nieuwkoop, Pijnacker, all of Netherlands, assignors to Chubb Lips Nederland bv, Dordrecht, Netherlands

Filed Apr. 10, 1990, Ser. No. 508,340
Claims priority, application United Kingdom, Apr. 13, 1989, 8908386
Int. Cl.[5] E05B 47/00
U.S. Cl. 70—277 10 Claims

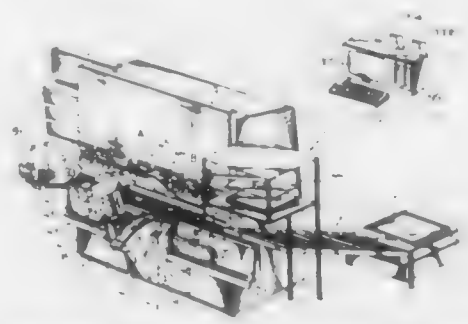
1. A lock comprising a bolt, a rotatable thrower for retracting the bolt, an electromechanical-release mechanism which normally prevents retraction of the bolt when thrown but which can be actuated to permit such retraction, a rotatable barrel defining a keyway to receive and be turned by a proper coded key, reading means associated with the keyway for electronically transducing the code from a proper key, and processing means to receive the code transduced by said reading means and to issue a signal to actuate said release mechanism upon the recognition of a correct code,

said bolt, thrower, and release mechanism being housed within a main casing of the lock,

said barrel and reading means being housed within a cylinder unit distinct from said main casing,

said processing means being disposed within said main casing or being in communication therewith from a remote location

said thrower and barrel having respective cooperating mechanical coupling means and said main casing and cylinder unit having respective cooperating electrical connector means



whereby the lock is assembled by attaching the cylinder unit exteriorly of the main casing thereby to establish a rotary driving connection from the barrel to the thrower through said mechanical coupling means and to establish an electrical connection from the reading means to the processor through said electrical connector means

5,005,394

PROGRAMMING SYSTEM FOR THE SINGLE ARM BENDING ROBOT

Franco Sartorio; Fabrizio Grassi; Gianpaolo Prunotto, and Francesco Sgandurra, all of Turin, Italy, assignors to Amada Company, Limited

Filed Dec. 14, 1988, Ser. No. 284,440
Claims priority, application Italy, Dec. 15, 1987, 68073 A/87; Dec. 15, 1987, 68074 A/87
Int. Cl.[5] B21J 13/10
U.S. Cl. 72—10 15 Claims

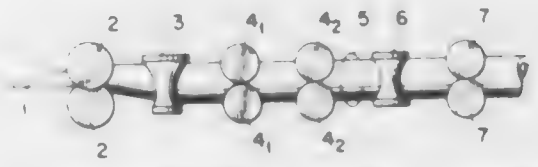
1 A device for controlling a manipulator for handling a workpiece processed by a press brake which is equipped with a side sensor for detecting a position of the workpiece in a horizontal X-axis direction parallel to a longitudinal direction of upper and lower dies of the press brake, the manipulator being arranged to be movable in the X-axis direction, and a head of the manipulator being arranged to be rotatable about a first shaft and a second shaft of the manipulator, comprising:

means for inputting a position of the workpiece for an initial bending stage,

means for inputting an angle of rotation of the workpiece about the first and, or the second shafts of the manipulator for each of a plurality of bending stages;

means for sequentially calculating a position of the workpiece for the second and subsequent bending stages, based on the initial position of the workpiece which is input from the workpiece initial position input means, and the angle of rotation of the workpiece about the first and/or the second shafts at each of the bending stages which is input from the workpiece rotation angle input means

means for producing a first instruction data for rotating the workpiece about the first and/or the second shafts of the manipulator for each of the bending stages, based on the position of the workpiece at each of the bending stages, and



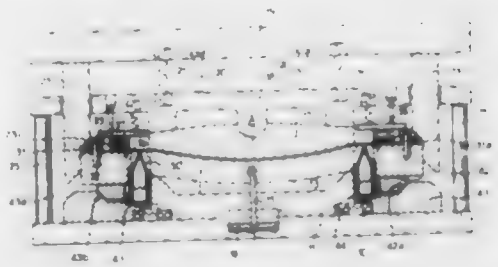
means for producing second instruction data for detecting a position of the workpiece in the X-axis direction by means of the signal from the side sensor at a bending stage for bending a long side of said workpiece

5,005,395

METHOD OF MANUFACTURING ELECTRIC WELDED PIPES UNDER HOT CONDITIONS

Ichiro Yasumura, and Kuniharu Fujimoto, both of Ibaraki, Japan, assignors to Sumitomo Metal Industries, Ltd., Osaka, Japan

Division of Ser. No. 225,191, Jul. 28, 1988, Pat. No. 4,945,743.
This application Mar. 27, 1990, Ser. No. 499,908
Int. Cl.[5] B21D 5/12; 51/00
U.S. Cl. 72—128 43 Claims



1 A method of producing an electric-welded pipe by continuously shaping a steel sheet as it passes from upstream to downstream along a constant pass-line into a tubular form in a hot condition, said shaping step being performed with a forming roll arrangement comprising a series of roll stands of a constant pass-line type in combination with a downward bending system said shaping step including positioning the sheet so as to substantially lie in a horizontal plane and bending the sheet with respect to a vertical plane extending perpendicular to said horizontal plane such that a central portion of the sheet is bent upwardly away from said horizontal plane and edges of the sheet which are joined together are bent downwardly away from said horizontal plane, said pipe formed after said shaping step having a central axis substantially coplanar with said horizontal plane

5,005,396

METHOD AND DEVICE FOR FORMING A SHEET-METAL BLANK IN PARTICULAR FOR MAKING A CATHODE TUBE MASK, AND CATHODE TUBE MASK OBTAINED ACCORDING TO THIS METHOD

Gabriel DeSmet, Nogent sur Oise, France, assignor to Sollac, Puteaux, France

Filed Oct. 4, 1989, Ser. No. 416,918
Claims priority, application France, Oct. 5, 1988, 88 13042; Jan. 18, 1989, 89 00545
Int. Cl.[5] B21D 22/26
U.S. Cl. 72—309 20 Claims

1 Method for forming a sheet-metal blank (1), in particular for making a cathode tube mask, on a press, comprising

arranging the sheet-metal blank (1) between a deformable punch (17) and a deformable die (13),

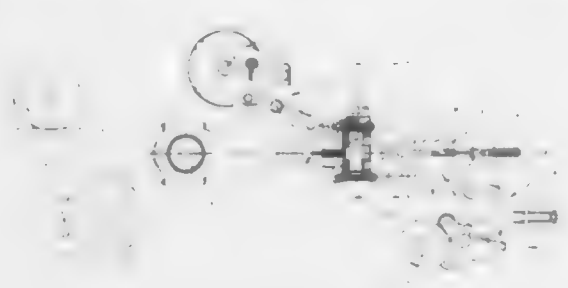
holding a peripheral part of the sheet-metal blank (1) over a small width in a peripheral clamping member (30),

clamping a central part of the sheet-metal blank (1) between the deformable punch (17) and the deformable die (13),

forming the central part of the sheet-metal blank (1), according to a given curvature, by deforming the punch (17) and the die (13) through the action of an upper bearing plate (19) so as to place a mean axis of the sheet-metal blank (1) in a given position, relative to a neutral axis of the punch

(17), the die (13) and a press assembly which holds the punch and die, such that it is possible to produce, at least in localized zones of the sheet-metal blank (1), an adjustable internal stress,

exerting a mechanical force on localized zones of the clamping member (30), moving closer together the opposite elements of the clamping member so as to produce on the peripheral part (1b) of the sheet-metal blank (1) situated between the punch (17) and die (13) assembly and the clamping member (30), a controlled buckling directed by a thrusting force on the peripheral part of the sheet-metal blank (1), while ensuring that the thickness and perimeter of the sheet-metal blank remain substantially constant,



simultaneously applying and unfurling a peripheral zone (1b) of the sheet-metal blank (1) along the walls of the punch (17) or the die (13), by a relative movement of the clamping member (30) with respect to the punch (17) or to the die (13) so as to obtain a final flanged edge.

5,005,397

METHOD FOR PROVIDING PROGRESSIVE FORMERS WITH QUICK-CHANGE TOOLING

William H. Hite, and Gene E. Allebach, both of Tiffin, Ohio, assignors to The National Machinery Company, Tiffin, Ohio

Division of Ser. No. 230,327, Aug. 9, 1988, Pat. No. 4,898,017.
This application Nov. 13, 1989, Ser. No. 434,301
Int. Cl.[5] B21J 13/08, 13/12
U.S. Cl. 72—405 4 Claims

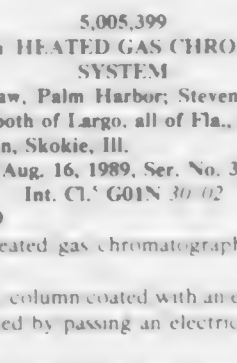
1. A method of providing progressive formers having a frame and reciprocating slide with quick-change tooling comprising providing a plurality of tooling sets each including

(a) a die breast with a plurality of dies therein for mounting on said frame,

(b) a transfer assembly including transfer fingers for progressively transferring workpieces to said dies and which includes transfer adjusting means for adjusting operation of said transfer fingers,

(c) a separate tool assembly for mounting on said slide providing tools operable in cooperation with each die to progressively form said workpieces, said tool assembly including second adjustable means for adjusting the position of said tools with respect to said dies in all directions,

(d) adjusting said transfer adjusting means and said second adjusting means while said die breast, transfer assembly, and tool assembly are in said machine to fine-tune said tool set, and



(e) removing and reinstalling said die breast, said transfer assembly and said tooling assembly without changing said adjustment of said transfer and said tool assembly whereby fine-tuning of said adjustments performed prior to removal of a tool set is retained when said tool set is reinstalled so that reinstalled tooling sets may be used without further substantial fine-tuning.

5,005,398

HEMMING MACHINE

Owen C. Evans, Birmingham, Mich., assignor to Craftmation, Inc., Troy, Mich.

Filed Jun. 1, 1990, Ser. No. 531,920
Int. Cl.[5] B21J 9/18
U.S. Cl. 72—450 6 Claims

1. A machine for hemming the edge of a relatively flat panel comprising

a base,

a fixed die supported by said base in vertically spaced relation thereto and having a contour complementary to an edge of said panel,

an arm pivoted on said base and extending generally vertically therefrom,

a die head having a hemming die thereon with an edge contour complementary to the edge contour of said panel,

a pair of parallel links spaced from one another and having one end pivotally mounted on said arm, respectively, and an opposite end pivotally mounted on said die head, respectively, so as to support said die head for movement relative to said arm,

a first cam surface on said base extending at an angle to the vertical,

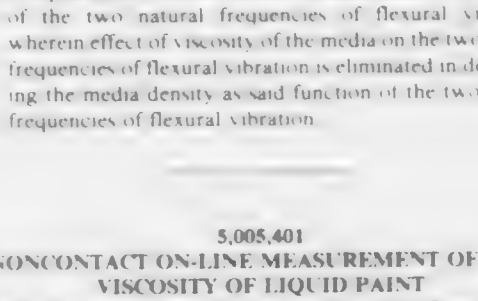
a cam follower on said die head and engagable with said cam surface to effect lateral movement of said die head relative to the vertical, and

an extendable fluid actuator having one end secured to said base and an opposite end controlling movement of said die head, energization of said fluid actuator effecting both vertical and lateral movement of said die head and hemming die relative to said fixed die.

5,005,399

RESISTIVELY HEATED GAS CHROMATOGRAPH SYSTEM

James R. Holtzclaw, Palm Harbor; Steven J. Madry, and R. Craig Lashley, both of Largo, all of Fla., assignors to Brunswick Corporation, Skokie, Ill.



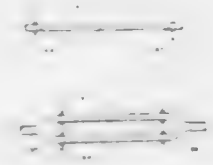
Filed Aug. 16, 1989, Ser. No. 394,758
Int. Cl.[5] G01N 30/02
U.S. Cl. 73—23.39 12 Claims

1. A directly heated gas chromatograph column assembly comprising

a fused capillary column coated with an electrically conductive film heated by passing an electrical current through said film,

a pair of electrical conductors each connected to said film,

an insulating low thermal mass support carrying said column for minimizing heat loss and permitting rapid heating and cooling of said column, and



control means electrically connected to said conductors for selectively developing a current through said film to directly heat said column.

5,005,400

DUAL FREQUENCY DENSITY METER

Hyok S. Lew, 7890 Oak St., Arvada, Colo. 80005

Filed Jul. 18, 1989, Ser. No. 380,820
Int. Cl.[5] G01N 9/00
U.S. Cl. 73—32 A 13 Claims

1. A method for measuring density of media comprising in combination

(a) creating two different natural frequencies of flexural vibration of conduit containing the media by laterally vibrating at least one conduit providing at least one flow passage,

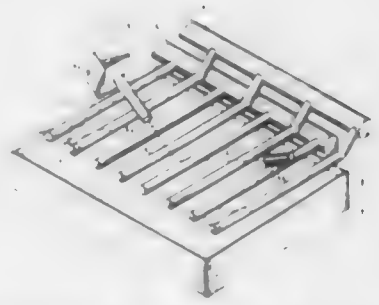
(b) measuring the two natural frequencies of flexural vibration, and

(c) determining density of the media as a function of a ratio of a parameter to a differential combination of the squares of the two natural frequencies of flexural vibration, wherein effect of viscosity of the media on the two natural frequencies of flexural vibration is eliminated in determining the media density as said function of the two natural frequencies of flexural vibration.

5,005,401

NONCONTACT ON-LINE MEASUREMENT OF THE VISCOSITY OF LIQUID PAINT

Brian M. Pierce, Moreno Valley, and David B. Chang, Tustin, both of Calif., assignors to Hughes Aircraft Company, Los Angeles, Calif.



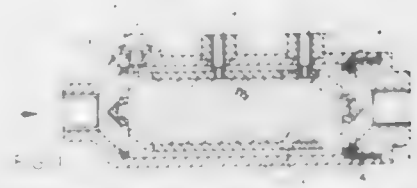
Filed Feb. 12, 1990, Ser. No. 478,893
Int. Cl.[5] G01N 11/00, 13/02
U.S. Cl. 73—54 19 Claims

1. Apparatus for measuring the measuring the viscosity of a liquid, comprising

means for initiating a surface wave of predetermined wavelength in a fluid sample of known depth,

frequency signal generating means for generating a frequency signal as a function of the surface wave frequency,

decay signal generating means for generating a decay signal as a function of the rate of decay of the surface wave magnitude, and



computing circuit means connected to received the frequency and decay signals for computing the viscosity of the fluid as a function thereof.

5,005,402

MEASURING CELL FOR DETERMINATING THE ALCOHOL CONTENT AND/OR CALORIFIC VALUE OF FUELS

Franz Pischinger; Ernst Scheid; Ulrich Hilger, and Gunter Schmitz, all of Aachen, Fed. Rep. of Germany, assignors to FEV Motorentechnik GmbH & Co. KB, Aachen, Fed. Rep. of Germany

Filed Dec. 6, 1989, Ser. No. 446,780
Claims priority, application Fed. Rep. of Germany, Dec. 22, 1988, 3843243
Int. Cl.[5] G01N 27/22, F02D 41/04
U.S. Cl. 73—61.10 R 11 Claims

1. A measurement cell for determining the alcohol content and calorific value of a fuel, the cell including a housing having inner walls defining a cavity for a flow of a fuel in a particular direction, the measurement cell comprising

a symmetrical flow body located within the cavity, said flow body and the inner walls of the housing being parallel and thereby defining a passageway for the flow of fuel through the cavity in the particular direction and around the flow body, whereby the flow body is wetted by the fuel,

a first electrode located on the outside of said flow body, and

an electronic measuring circuit connected to said first electrode to measure the capacitive dielectric of the fuel.

5,005,403

PROCESS AND APPARATUS FOR THE DETERMINATION OF THE CONCENTRATION OF A SUBSTANCE DISSOLVED IN A SOLVENT BY MEANS OF AN OSMOMETER

Ernst Steudle, Dorotheenstrasse 3, D-8581 Eckersdorf, and Burkhard Stumpf, Trebgast, both of Fed. Rep. of Germany, assignors to Ernst Steudle, Eckersdorf, Fed. Rep. of Germany

Filed Jul. 25, 1989, Ser. No. 385,324
Claims priority, application Fed. Rep. of Germany, Jul. 25, 1988, 3825208
Int. Cl.' G01N 13/04
U.S. Cl. 73—64.3 40 Claims

1 A process for testing a test solution, said test solution comprising a solvent and at least one solute dissolved in said solvent, said process employing a first chamber defining a first volume, a second chamber defining a second volume, said first volume being less than said second volume and a membrane interposed between said first and second chambers, said process comprising the steps of

(a) introducing an osmometer solution into said first chamber;

(b) introducing a reference solution into said second chamber;

(c) determining a reference pressure P_0 established in one of said first and second chambers.

(d) replacing said reference solution in said second chamber with said test solution.

(e) limiting the amount of fluid exchange between said first and second chambers to a value equalling approximately zero.

(f) limiting the amount of deflection of said membrane to a preselected value.

(g) maintaining a constant fluid pressure in one of said first and second chambers.

(h) determining at least one pressure change characteristic occurring in the other of said first and second chambers, and

(i) using said at least one determined pressure change characteristic to determine the concentration of said at least one solute dissolved in said solvent

5,005,404

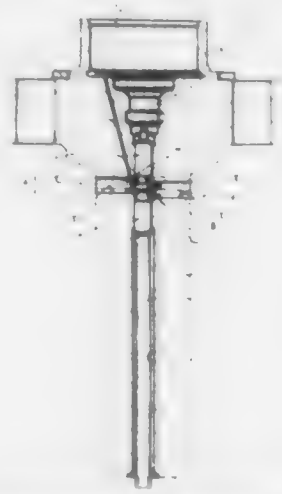
SYSTEM FOR DETERMINING AXIAL DISPLACEMENT OF A ROD, PARTICULARLY THE PLUNGER OF AN ELECTROMAGNETIC FUEL INJECTOR

Mario Ricco; Vincenzo Damiani, both of Bari, and Michele Picciallo, Palese, all of Italy, assignors to Weber S.r.l., Turin, Italy

Filed Apr. 10, 1990, Ser. No. 507,653
Claims priority, application Italy, Apr. 12, 1989, 67263 A/89
Int. Cl.' G01M 19/00
U.S. Cl. 73—119 A 7 Claims

1 An apparatus comprising

a body including a seat portion and a housing in communication with said seat portion,



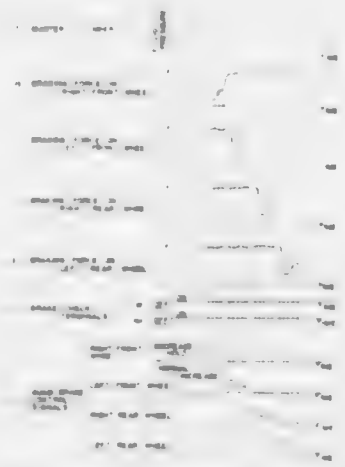
a rod disposed in said seat portion, said rod having surface portions;

said body and said surface portions defining two chambers for high pressure fluid, said rod including a separating portion disposed between said two chambers

said seat portion enabling fluid communication between said two chambers,

said separating portion slidably coupled with said seat portion, said separating portion including a pair of annular grooves defining an annular surface portion of said rod, and

a proximity transducer disposed within said housing of said body, said proximity transducer for determining displacement of said annular surface portion



5,005,405

METHOD OF TESTING AN ANTI-LOCK BRAKE CONTROL SYSTEM OF A MOTOR VEHICLE

Seiichi Ishizeki, Tokyo, Japan, assignor to Fuji Jukogyo Kabushiki Kaisha, Tokyo, Japan

Continuation of Ser. No. 304,175, Jan. 31, 1989, abandoned. This application Jan. 16, 1990, Ser. No. 464,689
Claims priority, application Japan, Feb. 3, 1988, 63-23528
Int. Cl.' G01L 5/28
U.S. Cl. 73—123 1 Claim

1 A method of testing an anti-lock brake control system for a motor vehicle mounted on a test stand having rollers to support each of a plurality of wheels and a dynamometer to measure and indicate a braking force, the vehicle having brakes for applying said braking force to each of said plurality of wheels, a hydraulic pressure source in said anti-lock brake control system for providing a hydraulic fluid to said brakes, modulators connected between said hydraulic pressure source and each of said brakes for modulating said braking force, wheel speed sensors for detecting a revolutional speed of said plurality of wheels and for producing wheel speed signals, and a control circuit responsive to said wheel speed signals for controlling said braking force to said plurality of wheels, the method of testing said anti-lock brake control system which comprises the steps of

turning said plurality of wheels by said rollers at a predetermined speed on said test stand

depressing a brake pedal to keep said braking force indicated on said dynamometer to a predetermined constant value,

generating a set of quasi brake control signals representing a predetermined sequence of increasing, decreasing and holding said braking force in said control circuit,

delivering said set of the quasi brake control signals to each of said modulators in a predetermined order of one by one within a set time period so as to cause the increase, decrease and holding of said braking force in said predetermined sequence; and

checking whether variation of said braking force indicated on said dynamometer is within an allowable range of deviations from said predetermined constant value

5,005,406

MONITORING DRILLING MUD COMPOSITION USING FLOWING LIQUID JUNCTION ELECTRODES

Raymond Jasinski, Tulsa, Okla.; Philip Fletcher, Hardwick, and Claude Vercoemer, Cambridge, both of England, assignors to Schlumberger Technology Corporation, Houston, Tex.

Filed Nov. 28, 1989, Ser. No. 442,954
Claims priority, application United Kingdom, Dec. 21, 1988, 8829758
Int. Cl.' E21B 47/00
U.S. Cl. 73—153 7 Claims

1 A method for the determination of a chosen ionic component of a drilling mud, in which, using an electrode selective for the chosen ion together with a reference electrode of the type having a liquid junction formed by a liquid electrolyte connectable via an aperture within the reference electrode containment vessel, there is determined the potential difference generated across the two electrodes by the ion in the mud, and thus the concentration of that ion in the mud,

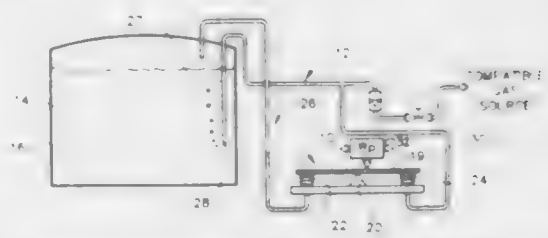
and in which, during the determination, the electrolyte constituting the reference electrode's liquid junction is caused to flow through the electrode containment vessel's aperture and out of the vessel into the mud

5,005,407

FLUID LEVEL SENSING SYSTEM

Terry D. Koon, Florence, Oreg., assignor to Level Electronics, Inc., San Jose, Calif.

Continuation of Ser. No. 256,605, Oct. 11, 1988, abandoned. This application Jul. 2, 1990, Ser. No. 547,419
Int. Cl.' G01F 23/26
U.S. Cl. 73—290 R 9 Claims



1 A level sensing system for use with a storage container constructed of low dielectric constant material holding a stored medium, the level of which is to be sensed to determine the quantity of the medium therein, said level sensing system comprising a single, unitary conductive sensing member adapted to be arranged on the exterior of the container along the height of such container for a distance corresponding to the level of the stored medium to be sensed, means for securing the sensing member to the container exterior surface, and circuit means having a source of electrical power connected to said sensing member for energizing said sensing member and effecting an electrostatic field therefrom, whereby said field emanating from said sensing member will vary in accordance with the level of the medium in the container, and wherein said circuit means further includes means for sensing variations of said electrostatic field, and means for indicating the level of the medium in the container responsive to such variations, wherein said circuit means includes an oscillator detector circuit with a variable amplitude output, and wherein said sensing member is associated with said oscillator detector circuit as a capacitor component thereof such that variations in said electrostatic field are adapted to correspondingly vary the amplitude of said output of said oscillator detector circuit, wherein a change in the amplitude of the output of said oscillator detector circuit indicates a change in the level of the stored medium

5,005,408

GAS WEIGHTS COMPENSATION METHOD FOR LIQUID DEPTH GAUGING SYSTEM

Eugene A. Glassey, San Diego, Calif., assignor to Fluid Data Systems, San Diego, Calif.

Filed Sep. 25, 1989, Ser. No. 411,873
Int. Cl.' G01F 23/14, G01N 9/26
U.S. Cl. 73—301 16 Claims

1 A method of measuring a liquid level in a body of liquid, comprising the steps of:

sensing the hydrostatic pressure at a submerged level close

to the bottom of a body of liquid to produce a pressure signal dependent on said hydrostatic pressure,

applying the pressure signal as an input to a pressure responsive instrument having an output proportional to the pressure input,

calculating an error compensation factor to compensate for predetermined errors in the pressure signal including gas-weights errors,

connecting the output signal of the pressure responsive instrument to compensation means for amplifying the output by said calculated compensation factor, and

connecting the amplified output to a data acquisition means for monitoring said hydrostatic pressure

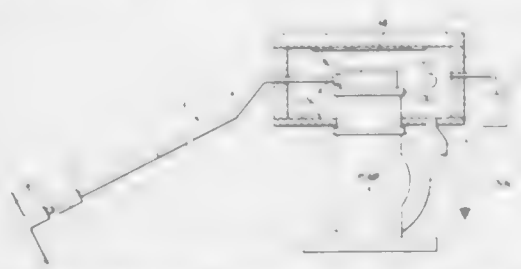
5,005,410



HIGH TEMPERATURE HUMIDITY DETERMINING DEVICE AND PROCESS

Jeffrey Webster, Augusta; Stephen Richey, and Robert Tuttup, both of Battle Creek, all of Mich., assignors to Kellogg Company, Battle Creek, Mich.

Filed Dec. 20, 1989, Ser. No. 453,915

Int. Cl.[5] G01N 25/56

U.S. Cl. 73—335 25 Claims

1 A high temperature humidity determining device comprising

an insulated sample chamber

means for inducing a heated air sample from a region whose humidity is to be measured to flow into said insulated sample chamber, said inducing means including a sample conduit connected to said region and having at least a cool down portion, whereby the heated air sample is cooled before reaching said insulated sample chamber,

heating means for controlling the temperature of said heated air sample such that said heated air sample always remains above the dew point thereof in said insulated sample chamber and said inducing means,

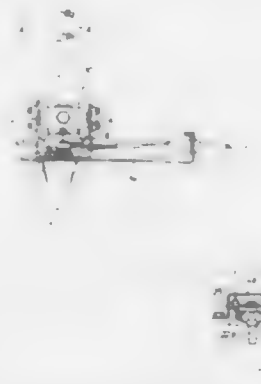
sensing means for sensing at least the temperature and relative humidity of the air sample in said insulated sample chamber, and

means for determining a humidity parameter of the air sample based upon at least the sensed temperature and relative humidity

---

5,005,411

SHIFT CONTROL ARRANGEMENT FOR MANUAL TRANSMISSION



Junichi Miyagi, Aichi, and Isao Shimazu, Anjo, both of Japan, assignors to Toyota Jidosha Kabushiki Kaisha, Toyota and Banno Kogyo Kabushiki Kaisha, Okazaki, both of, Japan

Filed Nov. 17, 1989, Ser. No. 437,614

Claims priority, application Japan, Nov. 17, 1988, 63-290736

Int. Cl.[5] G05G 9/00, B60K 41/00, F16C 1/10

U.S. Cl. 74—473 R 9 Claims

1 A manual transmission shift control arrangement adapted for use in combination with a remotely operated shift mechanism operatively connected thereto by means of a pair of push-pull cables comprising

a support shaft horizontally mounted on a vehicle body structure for rotation about a first axis,

a manual shift control lever having a lower end mounted on said support shaft for rotation about a second axis orthogonal to the first axis,

a drive bevel gear integrally mounted to the lower end of said control lever for rotation therewith

a pair of axially spaced driven bevel gears mounted on said support shaft for rotation therewith and being in meshing engagement with said drive bevel gear, and

means for operatively connecting said driven bevel gears to said push-pull cables

ACCELERATION SENSOR

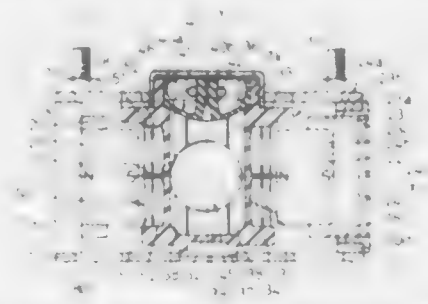
Takeo Kushida; Hideyasu Takefuta, and Hajime Muramatsu, all of Higashimatsuyama, Japan, assignors to Diesel Kiki Co., Ltd., Tokyo, Japan

Continuation of Ser. No. 375,886, Jul. 6, 1989, abandoned. This application Aug. 29, 1990, Ser. No. 574,522

Claims priority, application Japan, Jul. 28, 1988, 63-99151

Int. Cl.[5] G01P 15/08

U.S. Cl. 73—517 R 5 Claims



1 An acceleration sensor comprising

(a) a body,

(b) a tubular casing supported on said body,

(c) a magnetic member received within said casing so as to be movable along an axis of said casing,

(d) a pair of magnets supported on said body and disposed radially externally of said casing, said casing being interposed between said pair of magnets, magnetic forces of said magnets holding said magnetic member in a reference position within said casing, and said magnetic member in a reference position within said casing, and said magnetic member being displaceable from said reference position along the axis of said casing against the magnetic forces of

said magnets when said acceleration sensor is subjected to acceleration

(e) detection means mounted externally of said casing so as to detect displacement of said magnetic member from said reference position, and

(f) position adjusting means for adjusting the position of at least one of said magnets in a direction perpendicular to the axis of said casing, said position adjusting means comprising a threaded portion formed on said body and a support member engaging said threaded portion and supporting said at least one of said magnets

ACCELEROMETER WITH COPLANAR PUSH-PULL FORCE TRANSDUCERS

Mitchell J. Novack, Kirkland; Brian L. Norling, Mill Creek, and James R. Woodruff, Redmond, all of Wash., assignors to Sundstrand Data Control, Inc., Redmond, Wash.

Filed Feb. 27, 1989, Ser. No. 316,399

Int. Cl.[5] G01P 15/13

U.S. Cl. 73—517 AV 12 Claims

1 In an accelerometer of the type comprising a support, a proof mass, flexure means connected between the support and the proof mass such that the flexure means mounts the proof mass for rotational movement with respect to the support about a hinge axis (HA) in response to acceleration along a sensitive axis, and first and second force transducers physically separate from the flexure means, each force transducer having opposite first and second ends and a longitudinal axis extending therebetween, each force transducer having its first end connected to the proof mass and its second end connected to the support, the force transducers being connected in a push-pull arrangement wherein for a given acceleration along the sensitive axis, one force transducer is subjected to a compression force along its respective longitudinal axis and the other force transducer is subjected to a tension force along its respective longitudinal axis, the improvement wherein the transducers are positioned such that their longitudinal axes are located in a common plane that is approximately perpendicular to the sensitive axis, and wherein the hinge axis is normal to the sensitive axis and parallel to but spaced from the common plane

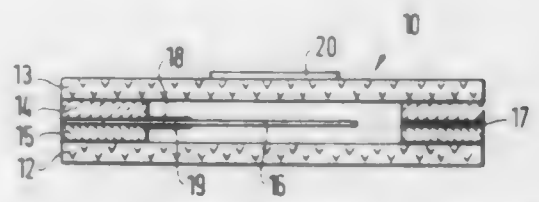
ACCELERATION PICKUP



Martin Holland, Tubingen; Botho Ziegenbein, and Dieter Seipler, both of Reutlingen, all of Fed. Rep. of Germany, assignors to Robert Bosch GmbH, Stuttgart, Fed. Rep. of Germany

Filed May 3, 1989, Ser. No. 347,330

Claims priority, application Fed. Rep. of Germany, May 3, 1988, 3814950

Int. Cl.[5] G01P 15/12

U.S. Cl. 73—517 R 5 Claims

1 An acceleration pickup for releasing occupant protecting devices in power vehicles, comprising a housing, a ceramic plate which forms a bending spring and is clamped at least at its one end in said housing, and expansion-sensitive resistances arranged on said ceramic plate, said housing being composed of several layers of ceramic parts and produced, together with said bending spring and said resistances, by a thick film technique

METHOD AND APPARATUS FOR DETECTING VARIATIONS IN A PROCESS BY PROCESSING EMITTED ACOUSTIC SIGNALS

Trevor J. Holroyd, Derby, England, assignor to Stresswave Technology Limited, Derby, England

Filed Oct. 6, 1989, Ser. No. 417,920

Claims priority, application United Kingdom, Oct. 22, 1988, 8824793

Int. Cl.[5] G06F 15/46

U.S. Cl. 73—587 19 Claims

1 A method of processing electrical signals derived from an acoustic emission activity in order to recognize signal features indicative of variations in a process producing the electrical signals, comprising measuring the minimum value of the electrical signals, measuring the mean value of the electrical signals, determining the ratio of the mean value of the electrical signals to the minimum value of the electrical signals, monitoring said ratio for variations of the ratio which are indicative of variations in the process producing the electrical signals

INSECT DETECTION USING A PITFALL PROBE TRAP HAVING VIBRATION DETECTION

Kenneth W. Vick, Newberry; J. C. Webb, Gainesville, and Carl A. Litzkow, Newberry, all of Fla., assignors to The United States of America as represented by the Secretary of Agriculture, Washington, D.C.

Continuation-in-part of Ser. No. 332,901, Apr. 4, 1989, Pat. No. 4,937,555. This application May 18, 1990, Ser. No. 525,016
Int. Cl.[5] G01N 29/00
U.S. Cl. 73—587 29 Claims

1 A process for detecting insect infestation in an agricultural commodity comprising

providing an insect pitfall probe trap including

an insect-permeable trap portion including a first wall portion defining therein a first interior chamber, said first wall portion defining at least one aperture dimensioned to permit ingress of an insect through said at least one aperture into said first interior chamber, a reservoir portion including container means for containing at least one insect and defining a container means interior surface, said container means defining therein a second interior chamber dimensioned to contain therein at least one insect, said container means including on at least said interior surface thereof a non-stick material upon which insects cannot readily climb, said insect-permeable trap portion being connected to said reservoir portion whereby said first interior chamber is in insect-tight communication with said second interior chamber so that an insect may move from said first interior chamber to said second interior chamber, means positioned between said first interior chamber and said second interior chamber for permitting movement of insects from said first interior chamber to said second interior chamber and for inhibiting movement of insects from said second interior chamber to said first interior chamber, and detector means positioned proximate a lower terminus of said second interior chamber for detecting vibration,

orienting said insect pitfall probe trap substantially vertically within an agricultural commodity, and,

determining if said detector means detects vibration.

DETECTING FLAWS FORMED IN SURFACES OF ROTATING MEMBERS WITH ULTRASONIC WAVES

Keiji Kawasaki; Michio Sekiguchi, both of Nagoya, and Tadaaki Matsuhisa, Kasugai, all of Japan, assignors to NGK Insulators, Ltd., Japan

Continuation of Ser. No. 172,244, Mar. 23, 1988, abandoned. This application Oct. 20, 1989, Ser. No. 423,723
Claims priority, application Japan, Mar. 31, 1987, 62-78277
Int. Cl.[5] G01N 29/04
U.S. Cl. 73—593 20 Claims

1 A method of detecting a defect formed in a surface of a rotating member having a circular cross-section with the aid of a focusing-type probe for emitting an ultrasonic wave toward the rotating member and receiving an ultrasonic wave reflected from the rotating member, comprising the steps of

setting the focusing-type probe with respect to the rotating member in an ultrasonic wave propagating medium such that a center axis (a) of the probe is displaced from a normal axis (b) which passes through a center axis of the rotating member and extends parallel to said center axis of the probe by such a displacement about (x) that the ultrasonic wave is made incident upon the rotating member substantially at a critical angle of reflection, such that a portion of the ultrasonic wave is refracted thereby to propagate substantially along a surface of the rotating member as a surface wave, said probe being set at a dis-

tance from the surface of the rotating member which is substantially equal to the focal length of the ultrasonic wave emitted from the focusing-type probe, such that the ultrasonic wave to be projected from the probe is focused on the surface of the rotating member,

projecting the ultrasonic wave from the probe toward the rotating member, and

receiving an ultrasonic wave reflected from a defect formed in the surface of the rotating member.

THREE DIMENSIONAL IMAGING DEVICE USING ELLIPSOIDAL BACKPROJECTION

Forrest L. Anderson, P.O. Box 1400, Bernalillo, N. Mex. 87004

Continuation-in-part of Ser. No. 221,534, Jul. 19, 1988, abandoned, which is a continuation-in-part of Ser. No. 106,577, Oct. 7, 1987, abandoned, which is a continuation-in-part of Ser. No. 858,6[illegible], May 2, 1986, Pat. No. 4,706,499. This application Feb. 12, 1990, Ser. No. 480,324
Int. Cl.[5] G01N 29/04
U.S. Cl. 73—625 26 Claims

1 A three dimensional active imaging device with multiple transmitter, using a reduced number of transmitted pulses to produce a three dimensional image, and capable of generating a three dimensional image of reflecting points on or within objects in a three dimensional volume within which the propagation velocities of the transmitted energy and the echo energy are known, said volume being external to a sparsely spaced two or three dimensional array of plural transmitters and plural receiver elements, comprising

(a) A Transmitter means for transmitting a pulse of energy which radiates through a wide solid angle within the three dimensional volume,

(b) A Receiver means for detecting echoes, from the reflecting points within the volume, caused by said pulse of energy, simultaneously at three or more of the sparsely spaced receiver elements,

(c) An Echo Time History Memory means for sampling said detected echoes from each of the receiver elements of said receiver means whereby an Echo Time History echo sample set is created which is associated with the transmitter which transmitted the pulse;

(d) A System Timing and Control means for repeating (a) through (c) with other of the plural transmitters whereby a set of echo samples from each of the receiver elements becomes associated with each of the transmitters within the array of plural transmitters,

(e) An Image Reconstruction Processor means for selecting and combining with each other, for each image of a reflecting point, one echo sample from each receiver element from each of the echo sample sets associated with each of the transmitters, whereby an image is created of the reflecting points on or within objects in the three dimensional volume, said Image Reconstruction Processor utilizing for selection, the sum of: distance from the transmitter to the image point divided by the known propagation velocity of the pulse of energy, and distance from the image point to each of the receiver element divided by the known propagation velocity of the echoes, said Image Reconstruction Processor means therefore operating in accordance with the equivalent of the formula

$$PR(xr,yr,zr) = \sum_{\text{echo}_i(sn)\,\text{for}\,CORTE+CORPE} \text{echo}_i(sn)$$

for each of the transmitters $t_1, t_2 \ldots t_i \ldots t_{tn}$ and for each of the receivers $c_1, c_2 \ldots c_j \ldots c_{cn}$

where

i is the transmitter index

j is the receiver element index

PR (xr,yr,zr) is the image of the point at the location (xr,yr,zr)

t_{tn} is the number of transmitter elements

c_{nc} is the number of receiver elements

$\text{echo}_i(sn)$ is the echo sample at location "sn" in the echo sample set, st_i, where the echoes resulted from the pulse transmitted the transmitter i, and the echoes were detected by receiver element j

ds is the time interval at which the echo samples are taken

Ct is the transmitted energy propagation velocity

Ce is the echo energy propagation velocity which may be equal to Ct, or different from CT

and where

$$RTP = \sqrt{[(xr - xt)^2 + (yr - yt)^2 + (zr - zt)^2]}$$

$$RPE = \sqrt{[(xr - xc)^2 + (yr - yc)^2 + (zr - zc)^2]}$$

where also

(xti,yti,zti) is the location of transmitter element i

(xrj,yrj,zrj) is the location of receiver element j
